Ten Cents a Copy.

NEW YORK, THURSDAY, AUGUST 13, 1874.

Volume 3, Number 1.
17 Chatham St. (City Hall Sqr.)

A DOG'S DAY.

BY ANNA C. STARBURCK.

I'VE sneaked through all the city's streets
Without my leather maul;
I've lapped up water as I ran,
From trough and hydrant nozzle;
My legs are tired, my back is weak,
And yet I meant to do it.
In spite of city ordinance
That said my hide should me lie.

I've snapped at heels of passers by
And caught their look of loathing;
'Twas fun to see their horror, when
I only tore their clothing.
One child was looking through a gate,
I stopped, and in he darted;
You should have seen the thirst for blood
That little villain started!

The men came rushing from the house
With rusty guns and sabres,
The women bore the little child
In blankets to the neighbors.
They chased me long with dire intent,
But all their market dishes
Went off with the pan, and left
No trace of canine ashes.

At last my speed outstripped them all.
I reached a friendly harbor;
I met a man whose ragged coat
And whickers all unshaven
Betokened care and poverty;
And yet he stooped in pity,
And stroked the hair where ching the mud
And jeers of all the city.

He shared with me his crust of bread,
He shared with me his sorrow;
No home has he beneath the sun,
He leaves me on the morrow;
He may not rest his aching head
Within this dusty city;
Suspicion eyes his threadbare coat
And shuts the door of pity.

I can but wail my gratitude,
And whine my fond affection;
I lift no shadow from his heart,
Nor share his soul's dejection;
But yet I lean to steal away
And follow, on the morrow;
I'll guard his steps from lurking ill,
Nor seem to see his sorrow.

Rochester, N. Y.

The Comanche Indians.

[The facts in this communication are due to Horace P. Jones, the military interpreter at Fort Sill, Indian Territory, who has lived with and near the Comanches for the past fifteen years. There is no living man who has a more thorough knowledge of their language, habits, traditions, and customs. He is a man of intelligence, character, and integrity, and the facts stated can be thoroughly relied upon.]

THE word Comanche for many years conveyed to the mind scenes of terror and bloodshed. Even at the present day a Comanche raid in Texas is much to be dreaded. Nomads by nature, the efforts to confine them to a reservation have only been partially successful, and some of the chiefs, with their followers, are frequently in open defiance of the Government.

Well known as the word is, but little actually is known of them by the public, and strange and exaggerated notions exist in regard to them and their numbers. For instance, it is generally supposed an Indian is always a stolid, dignified creature, never coming down to the level of fun and frolic. Let me disappoint such high expectations by stating at once that a Comanche is nearly as vivacious as a Frenchman, and as full of fun as an Irishman. They always see the ludicrous side of a subject, and are mostly on the broad grin when talking to you. They tease their squaws, get jokes off on each other, and, on the whole, are very generous and free hearted to one another. This

view will hardly suit the high-flown notion of a Comanche, but truth compels it to be written. In all talks and councils he is, nevertheless, very dignified and formal.

Lippincott's Encyclopedia says "A Comanche differs from other Indians in his intense dislike of spirituous liquors." Perhaps he did long ago. Jones says "the author must have seen them before my day." All I know is, that almost all Comanches will get as "drunk as a lord" if they can get the whiskey.

Before, however, explaining any of the traits or habits of the individual, let us say something of them in general. In the first place, the name "Comanche" is a word unknown to their language—to them it possesses no original meaning, and is only accepted and used by them after many years of application by the whites. Their tradition of the word is, that it was first applied to them as "Comanch" by the Mexicans. What the origin of it may have been I do not know. The name by which they call themselves is "Neum," meaning people, or, as used by them, more properly speaking, it means "our people," or the "true people," though in saying our people they would say "te-witche neum," the "te-witche" standing for "our," and meaning "our people certain." Perhaps some of your readers can give information in regard to the word Comanche.

The Comanches of to-day have more or less Mexican blood in their veins, and quite a number of pure Mexicans, captured when children, are counted as Comanches, though these latter occupy an inferior position among them, acting usually as servants; yet it is not impossible for them to arise to the dignity of a warrior, or even that of chief. The whole number of Comanches is a little over three thousand—not fifteen or twenty thousand, as is generally supposed—and are divided into seven bands, as follows. I give also the name of the head chief, or the oldest:—

Band.	Chief.
Noconees, or Wanderers.....	Te-heh-ga-qui, or Horse-Back.
Yampericoos, or Root Eaters.....	Boo-e-wa-too-yah, or Iron Mountain.
Cooch-cho-tetkias, or Buffalo Eaters.....	Malhay, or Hand-slaking.
Pena tetkias, or Honey Eaters.....	Poss-weeth, or White-handled Knife.

Qua-ha-las, or Workers in antelope skins.....	Paracoom, or He Bear.
Titchah-Kenas, or Sewers.....	Taher-nan-ka, or His name is Sun.
Tenem-er-auds, or Liver Eaters.....	Pe-ha-tetukha, or "Something big
	Ret to eat."

Another band, now in fact extinct, were called "Pohoneums." Here you observe the word "neum."

The names of two of the above bands have become changed by usage. Properly, the "Yampericoos" are "Yampe-tetkias," or eaters of "yampe" root, and the "Qua-ha-las" should be "Quahada-titchahkos," the "titchah" being sewers, and the whole word meaning "sewers, or workers in antelope skins." You will notice the same "titchah," as used in "Titchahkenas," or "sewers."

The others chiefs whom I suppose I had better mention, for fear they may feel slighted, are as follows:—Titchah-kenas, Quirty-Quip, or Cheving Elk; Yampericoos, Cheevers, Howeha, Little Crow, Pena-tetkias, Essa-habet, or Milky Way, and Assa-toy-et. This comprises all of the head chiefs.

The name Assa-toy-et is incapable of English translation in a few words. The best idea I can give you of it is that an Indian would call a *shoddy blanket* Assa-toy-et. It means poor, shabby, and was given him as expressive of his poor and pitiable condition on his return from a long and unsuccessful raid. The name is correct in its application no longer, though he still retains it, for he is a well dressed, well fed old buck, and fortunately one of the most peaceably disposed. He is looked upon as the most reliable of all the chiefs.

The sign of the Comanche is the snake, the hand being made to imitate the snake's motion. This is the same sign as that of the Shoshones, or Snake Indians, whom the Comanches claim as their fathers. I do not know whether the Shoshones acknowledge them as lost children or not. The Shoshone language, however, is said to be similar in many respects. The Comanche language is spoken more or less by all the tribes on the southern plains. It is in fact the *Court* language, all councils with Kiowas and Plain Indians being held in Comanche. It is harsh and guttural

and, while the use of words may easily be acquired, to converse fluently is an art but few have attained.

Texas has been their home as far back as they can recollect, or have tradition. Some of the older living chiefs speak of having seen sugar cane and monkeys, showing that in their younger days raids were made as far as lower Mexico, and west through Sonora to the Pacific Ocean, for they speak of having seen "where the sun goes down in the big water." There is nothing improbable in this, for even now they make trips into Mexico, remaining away months at a time.

As is well known, they are the Arabs of our Plains, more at home on horseback than on foot, and owning large herds of horses. Their principal wealth is ponies. When chasing buffalo, or racing, they ride bareback, casting off all clothing except the breech clout; but at all other times they ride a saddle, with short stirrup, crowding the knees well up on the horse's withers. The saddles used are mostly of American make, though the old home made one is used by squaws frequently, and also for packing. It is similar to a Grimsley pack saddle—straight, flat sides, high pommel and cantel, and looks most terribly uncomfortable. It is made of wood, and covered with thinly dressed raw hide.

The natural dress of a Comanche consists of moccasins, leggings, and buffalo robe. The robe or blanket is tied around the waist and held up over the shoulders by the arms, or allowed to fall over the hips or legs at will. The moccasins are made of buckskin, with buffalo skin sole. The leggings are made of buckskin, old blanket flannel, or strouding, fitting tight to the leg, and fastened at the upper thigh with strings. A wide flap runs down the outside of the legging about an inch wide at the top, frequently a foot wide at the bottom, and fringed along the edge. This is not simply for ornament, but has a peculiar value as a protection from rattlesnakes, a very large species of which are plentiful in the Comanche country. In walking or riding through high grass a snake in striking at the leg—the part most exposed—is almost certain to strike this flap. No head dress is worn, but a lock of hair, braided or bound with red flannel or fur, and adorned with beads and feathers, is called the scalp lock; in addition the breech clout is always worn. These few articles compose the bucks' ordinary outfit, though in these degenerate days most of them wear cotton shirts, some waistcoats, and some even have a dress coat, and are capped with a felt hat most gorgeously decorated with feathers, ribbons, and military insignia. The dress of squaws is similar to that of the bucks, the legging and moccasin, however, is made in one piece, like a long stocking, ornamented on the side with silver and beads, and is made without the snake flap. In addition they wear a sacque shirt, made of dark calico, and in place of the robe worn by the bucks, many of them wear hand-some bright colored shawls, tied in the same manner. No portion of the body is left exposed, for, be it remembered, that the Comanche maiden is very coy and modest; but more of this when I come to their moral condition. The faces of all bucks, squaws, and papooses are painted; the squaws and children usually one color, red, sometimes yellow; but the buck's is painted red, green, or yellow, sometimes all these colors, and frequently is additionally decorated with blue or black stripes across his forehead, cheeks, and chin, or in curves from the corners of the eyes, mouth, or nostrils; indeed, the painting of a buck's face is like a kaleidoscope, forever changing. The colors were originally obtained from berries, vegetable juices, and various colored earths, but are now usually purchased of the traders. Chinese vermilion, bluestone, copperas, indigo, and ochre are bought by them in large quantities for that purpose.

The buck at all times has his ears ornamented with brass rings, bits of brass chain, or large beads. Those who can afford it wear a chaplet or brass plate, made of long slender white pipe, called hair pipe, strung like beads four or five in a row, and of twenty or twenty-five rows, forming quite an attractive ornament. This pipe is supposed to be made of clam shells. At all events, the making of it is a

The war rig somewhat different. The horse is painted most fantastically, and the rider wears in addition to his ordinary dress, a war bonnet made like a hood, ornamented in front with a pair of small buffalo horns, placed as the rider sits, so that the horns point straight up. The hood falls down the back, and is ornamented with row upon row of eagle feathers. Now armed with bow and arrows, shield and lance, our buck is ready for Texas, or wherever his fancy prompts. The lance is but little used in war; still it has its place. The credit of killing an enemy does not belong to the one who shot him, but he who first thrusts his lance into him takes the scalp and all the credit. The lance is a long pole, with a sharp iron point, practically, the lance is never used except on the dead or wounded who are unfortunate enough to fall into their hands. The weapons named compose his natural war outfit, but *unfortunately* he is now possessed of more formidable weapons. I have yet to see the first Comanche buck that does not carry a Colt or other six shooter, and, by the way, I have not yet seen a single Indian who does not carry the latest improved breech loader. In addition to the Spencer and Winchester carbines are common among them, over half of the bucks being in possession of one or the other, and the remainder own the old long Lancaster rifle, which, as you well know, at several hundred yards is a very good weapon. How these Indians have become possessed of these arms I leave for our Indian Department to explain, but I can tell you that the weapons of these "killed by Indians" in Texas accounts for far too many of them.

Fort Sill, Indian Territory, July, 1874.

CAMP LIFE WITHIN FIFTY MILES OF
NEW YORK—THE WILDS OF NEW
JERSEY.

"We can't find any woods worthy of the name in New Jersey, can we?"

As my friend had explored every corner of his native State, and as I had confidence in his judgment of what woods should be, having slept many a night beside him, under the great pine trees of Canada, with our camp fire

With sleep-heavy eyes, I stumbled out of bed next morning, and did not awake till I found myself on the wagon seat riding up the valley at a rattling pace. The morning mist rose slowly, and before the sun obtained the mastery, the most of the day's work was done and repaid for the wetting. As the great fog banks rose over the hills and the morning sun threw its stout rays across the valley, the scene was one of peaceful beauty. The magnificent rolling hills, green with the young crops and topped here and there with a great cotton-like bunch of mist; the little trim farmers' houses standing close along the river banks; the tall, straight, leafy trees, all seemed to be in the best of health and vigor.

We passed the inevitable headquarters of General Washington. You could not be landed anywhere in New Jer-

"Could we get a wagon to take our traps up the mountain?" It was possible, but not easy. At last it came, however, with its two horses, rough and scraggy, but nevertheless able to thread their way along—what could

Up the mountain we went with our scant baggage, playing a cheerful tattoo on the wagon bottom at each jolt. How far up we went I shall never know, but I made a rough calculation that for every mile of road traversed the actual distance above the clouds was about half a mile. The large rock we were struggling out of the space between two boulders. At last we cried enough, our things were dumped out, and we were left on the banks of a little bubbling stream. A fire and fried salt pork mutually helped in that momentous undertaking, dinner, and then the hard work began—lugging our things up the mountain, one by one, to the place where the place was to be found for a camp. After much walking we came to rest, and in a few minutes the white sides of our little tent rose

On the way we do not forget Mr. Garrison, and again that apple jack makes glad the heart of man. We have a drive of twenty miles before us, and while we are enjoying it we agree that if people would only try a few days of such life they would find that existence off a hotel piazza was possible, and even agreeable. We go in search of health in crowds to the fashionable watering places, we breathe vile air and eat vile food, and pay heavily for the privilege, forgetting the while that Nature has made a temple far grander than any built by the hands of man, and that to it we may go and live a life free as air, and as happy as the day is long. B.

A NIGHT WITH WOLVES

Well, I want to kill a wolf, and I tried the experiment, put a good sized pill in each of my moccasins, and for two weeks I trod the woods with my rifle in hand looking up and down, but no animal took sufficient interest in my labors to follow me home. The cold, the snow was dry and crisp, and I presume the scent was not very strong, or perhaps no. A hunt happened to cross my track when fresh. I became distrustful in the matter and gradually took longer tramps from camp without my gun until finally I became thoroughly convinced that the whole thing was a humbug. But I never forgot the fact that the wolf from my moccasins had forgotten it altogether. It must have been three weeks or more, when having occasion to go down to the Point for our mail and a supply of provisions, that early in the evening of a bright moonlight night with an empty bag thrown over my shoulders I started on our sleds. I fired the first shot at a distance when my attention was attracted by a distinct howl that seemed to come directly from my rear. I had heard cries occasionally all the evening, but it being such a common thing I had paid no attention to them, but somehow this last sound was of a different tone. It seemed to cut the crisp evening air like a knife. I then turned round and listening right in to it, I stopped and listened a moment and it was answered on the hill to my right; again that yelp went up and a reply from the left. It struck me then that perhaps there might be an interest in that direction toward your humble servant and that a little more celerity in my movements might advantageously result. I then went on my hands and feet, as well as I conveniently could in the snow and found the blazes; there was of course no path or road.

Now our line to the settlement ran across a lake of about three-quarters of a mile or more in diameter and I thought after crossing that I would be able to tell if I was really the object of this infernal concert. I reached and had nearly crossed on the ice when I looked back, and sure enough, there were two land bodies moving with that long fireless lope (so peculiar to the wolf family) on my track. They were soon joined by a third, and then a fourth, and five. Their muscled bodies cut the terrible sound, they were answered either side, and another brute bounded from the side of the lake and joined in the race. I began to feel decidedly uncomfortable. Miles from camp or a settlement, with only a pocket knife as a weapon of defence, and

On my way back I didn't have any of the odorous gum with me, no sir. And though I have tried the thing several times since, always carrying my gun with me when away from camp, I have never met with like success in towing the varmints in. I leave it to others to judge from the above true statement of a genuine experience whether it was the assafoetida that night that put me in such peril of my life.

JACOBSTAFF.

THE BEAVER RIVER COUNTRY, N. Y.

LAST Summer, from the 9th of July to the 20th of August, I made, with my family, my headquarters at Fenton & Hillman's, No. 4, Lewis county. This angler's home accommodates fifty people. It is pleasantly situated on a plateau surrounded at first by hills, and then by a series of rapids, and is a most interesting place. The outlines in the distance, at from twelve to twenty miles to the north, east and south. Half a mile to the north is Beaver Lake, which is a mile and a quarter long, about one third of a mile wide and forty feet deep in its deepest part; and through which the Beaver River flows. Half a mile, and through the middle of the lake, is a small creek, all gold from streams, empty their pure waters into the lake or river near by. Eagle Falls (twenty feet perpendicular), two and a half miles below the lakes and the intermediate falls and rapids, are as picturesque and beautiful spots as the wilderness affords. Up the river, and above the falls, are several rapids in the stream; there are nineteen distinct falls and rapids; some of the larger falls being from thirty to forty feet in height. This part of the river can be descended in a boat, with a skilful guide, by carrying around the heavy falls and lower rapids about a mile. One and a half miles below the falls, is a small lake, called by the name of Francis Lake, a pleasant sheet of water one and a half miles long, more noted for deer than for trout. The house is eighteen miles from the Utica and Black River Railroad.

The road is good for thirteen miles, and the whole distance is usually travelled over by teams, with passengers and baggage, in five hours.

Our party, consisting of myself, wife and three children, and two young men on the college expedition, reached its destination at 2 P. M., on the 9th of July, last year. After getting our dinner I walked half a mile west to Beaver Meadow Brook, where I caught thirteen small speckled trout with worm, as there was no room for the fly. The previous season, on the 10th of July, with higher water and a drizzling rain, I took at the same spot 135 trout, weighing nine and a quarter pounds.

The day's success terminated on my arrival, July 10th, a party of us went to Burnt Lake, three miles south by trail through the woods. The writer killed thirty small trout on small flies, principally the Abbey and this; Mrs. Hill took with the worm, on a nine ounce rod, thirty-five.

Saturday, the 12th, my daughter of thirteen and myself, with Chaucery Sylvester Edwards as guide, fished Sunday Creek with bait; she taking sixty-two trout, and I eighty-eight.

Monday, the 14th, went with guide up Alder Creek. About five miles up the stream we built a shanty and proceeded to fly fish. The day was dark and showery, and favorable for both trout and black flies, rendering frequent applications of oil of pennyroyal and sweet almonds quite indispensable. Smudges were also necessary to keep off the midges. Forty speckled trout were killed during the afternoon, weighing seven and a quarter pounds, largest three-fourths of a pound.

After breakfast the next morning we fly-fished down stream, taking by the time we reached the house at night, eighty-eight trout, eight and a quarter pounds. In about this manner we employed most of our time. Occasionally we made a more extended trip.

Monday, the 21st, Mrs. H. and myself, with a team, and Danford Knowlton for a guide, started for Wardwell's, which is the new lake east of Fenton's, eleven miles, then up the Beaver River, on the Stillwater, and the last house in the wilderness in that direction for about fifty miles. We arrived at the Stillwater at 2 P. M., and after satisfying to the fullest extent the cravings of our appetites, we went after some sparkled beauties for supper. Our confidence was rewarded by the capture of twenty-two, four and a half pounds, on the fly.

Next day, after a good rest at William Wardwell's, which, by the way, is in a very comfortable shape for a place so far back in the forest, and is kept neat and tidy by Mrs. W. and her daughter, Rosa, which little lady can fish and row a boat as well as she can talk—we put our baggage and camp equipage into our boat of seventy-five pounds, and rowed down Twitchell Creek one third of a mile, to its confluence with Beaver River. Thence we pulled up stream six miles, where we pitched our tent. On the way we passed Tuttle Lake outlet, coming in on the right bank three quarters of a mile above Twitchell Creek; Wolf Creek, the outlet of Wolf Ponds, on the same side, three miles further up, and the Slough Spring Hole, on the opposite side, three and a quarter mile below our camping place. The result of the day's fishing was nineteen trout, four and a half pounds, on the fly.

Wednesday, the 23d, we rowed twenty-two miles up the river, taking seven trout. From our camp of last night to Dutch Gap (a noted trout resort in high water) the distance is one quarter of a mile; to mouth of Red House Chain of Lakes, right bank, three and a half miles; to Burnt Lake Carry, right bank, one half mile; to mouth of South Branch, left bank, ten miles; to Little Rapids, five miles; carry around rapids, right bank, one third of a mile; Still River to foot of Albany Rapids, where we camped, two miles.

Thursday, 24th, we took on small flies before breakfast, in the spring holes on the two mile level, at the head of which our camp was located, twenty trout, three pounds. After breakfast we crossed the Albany Carry, left bank, three quarters of a mile to Albany Lake; thence rowed our boat three and a half miles to the south side of the main part of the lake, where we pitched our tent near a cold stream which would afford us water for drinking, and also for fishing. In the evening we took ten trout.

Friday, 25th, we spent on Smith's Lake, which is three miles long, very wide, deep and beautifully situated, and is a good place to go to fish. Returned in the evening to camp on Albany Lake. The carry from Albany to Smith Lake is around the right bank of the stream, and is three quarters of a mile long.

Saturday, the 26th, we returned to Stillwater, killing *en route*, on the fly, one speckled trout, weighing eleven and one half pounds, being the best day's fishing so far. The next day we went by team to Fenton's. Distance from head of Smith's Lake to Fenton's, fifty miles.

Some days after the completion of this trip, two of us, with a guide, Boyd Sylvester Edwards, made an excursion to the Red House Chain, and visited in order as follows, viz.: Big Burnt Lake, Salmon Lake, Witchopple Lake, Clear Lake, Clear Pond and Crooked Lake, the latter being the head of the Oswegatchie River; killing just enough for our culinary wants. We remained on Clear Lake a good part of three days, attracted by the large speckled trout and pleasing natural surroundings. A trip was also made up the right bank of Beaver river, by land, from Fenton's to Wardwell's, and back on the other side, a distance of thirty miles, consuming five days, and affording us good sport with the fly.

The next day, eleven trout, weighing four and three quarter pounds, were taken, all on very large flies and in still water. The day after, in the rapids or rifts of Twitchell Creek, fifty six, six and a half pounds, were taken, all on small flies, and the last fishing day, Saturday, forty-one trout, eleven and five-eighths pounds, were killed in the heavy rapids of Beaver River.

In conclusion, I have to say that upon the completion of our sojourn in the wilderness we found ourselves so much improved physically that we feel much better able to again assume the duties and responsibilities of a more civilized life. Yours, respectfully, W. W. HILL.

Albany, August, 1874.

For Forest and Stream.

THE VERMONT WOODS.

THERE is a portion of Vermont, the northeastern corner, which is comparatively a wilderness, several townships being entirely without population, and a number of the organized, cleared and populated chiefly in the valley of the Connecticut River. In fact a greater portion of Essex county is forest. It is well watered by lakes and

ponds, some of which are miles in length; all contain fish, the largest, the lake trout, (called there huge), the brook trout and steelhead, a sort of sea trout, the small white perch, trout, or pickerel. In the lakes the "Averill," where the largest speckled trout are caught, a new fish was caught last summer, weighing from one to three pounds, taken principally on a spoon while trolling. I have talked with the parties who caught them and am satisfied that they are salmon—now become land-locked salmon—and can account for their appearance there only in one way: a party from Sherbrook, Canada, was there fishing for trout, five or six years ago, and caught a number of the fish, which he thought were young trout from the river St. Francis at Sherbrook for live bait, and finishing their fishing turned loose the youngsters, who have become of suitable size to stock the lake. An old friend who fishes there every year also informs me that the large trout he has taken withing a year are filled with those little fish that quite resemble a trout, but are not trout, and says the largest have three spots on the gill covers.

The lake trout are of a large size, sometimes taken upward of thirty pounds. I have caught them as large as twenty-four pounds, and they are found everywhere from one to seven pounds.

In the woods are found a few moose, an abundance of deer, rabbits, partridge and duck, occasionally a bear and lynx; other, muskrat, mink, sable and black cats are quite plenty. Grey squirrels are but rarely found.

Living ten years in that part of the State, and having a passion for angling and hunting, I have enjoyed most excellent sport during that time, my chief companion being "Hod" Morse, an old hunter, trapper and angler, one thoroughly acquainted with that whole country, who could travel further, pack more, cut more wood, camp better and warmer than any other man I know of. For ten winters I have been with him camping out one to three nights, taking nothing but provisions, save the usual wear, including a gun, and a twelve inch pistol, muzzle loading, size balls, 130 to the pound, mine a Colt's navy cartridge. Among the many splendid times I have had with Hod, I have often thought of a winter hunt we had for deer ten years ago. The snow was deep and we had waited until it became good snow shoeing. Taking an early start to get over the mountain into East Haven, seven miles, we found ourselves at day light upon the "Lapack," a place where, and exactly where, I find "sign" of deer, now were disappointed. We stopped long enough to take a substantial breakfast from our knapsack and drank "death and confusion" to the deer. Followed the browsing until we came to tracks, and very soon started up three within one hundred yards of us, both firing at the same moment. One remained with us, the other two bounding down the mountain with tails erect. We immediately dressed our new found friend and packed up carefully under the same and started in pursuit of the runaways. They "took" down the mountain, following the east branch of the Passumpsic several miles far ahead of us. They left the river as soon as they came to the settlements and passed through the yard of Judge Root, where they were seen taking up another mountain. Following on we did not get a glimpse of them again until about sunset, when they had separated. Hod got a crack, striking the deer in the hind quarter, and the deer, in its fresh scare. We then gave up the chase for the night, determining to start early in the morning and make short work with our wounded and tired deer.

Now it so happened that that very evening there was a sewing circle in full operation a mile below, where there are several houses, and the news was as fully given through that district as it was sent by the Associated Press, over the ground that whoever got the deer could in honor claim and hold them, and said furthermore that there were so many after them he guessed the "new recruits" were able to take the game, and take care of themselves besides, his son being one of the number. We left him, disgusted with his sentiments, but unwilling to throw up our hands. He was hardly out of sight before we heard the voice of one of our opponent's dogs in chase, making for the river below. We struck out on a two forty pace to intercept the dog and kill the deer, and were just in time, for as soon as the deer struck the ice the dog had him by the nose and threw him. It was only a moment's time to beat off the dog, secure and kill the deer. We had but fairly dressed the deer and commenced dragging him to the road when four of our competitors came upon us, and a more chop-fallen set could hardly be imagined.

By their lack of wood craft and their anxiety to cut us out of our game they entirely missed the trail of the wounded deer, which we immediately started for, and within a half hour I had the satisfaction of shooting in the head. After we got the two together we gave them two forequarters, not from any good will we bore them, but because they were so anxious to buy some to fill the orders that they had engaged at the sewing circle! The evening before.

About a year afterwards we told them of the dog's capture of the deer, and the owner of the dog was mad enough to have killed his dog for not maintaining and defending the dog's right to the capture.

For Forest and Stream.

HINTS FOR THE ADIRONDACKS.

AS I have often been asked lately how to get to the Adirondacks, and what to take, expense, etc., I will give also to the readers of FOREST AND STREAM some of my experience in the last ten years in the mountains. First pack up an old strong woollen suit, felt hat, a pair of strong boots, an extra pair of shoes, a couple of *neglige* shirts, your winter underclothing, some woollen stockings, a woollen night cap I have found most welcome during the cool nights, as one's hat will come off while sleeping. Pack up also some silk thread, buttons, needles, pins, court plaster, a bottle of ammonia, also a bottle of the best brandy, a compass, pencil, some writing paper, envelopes and postage stamps, and a few other minor articles of like weight and bulk.

As to the manner of getting to the Adirondacks, the best is, as I have said, by the lake, and the lake is the best, as the luggage is transported on the backs of the guides from lake to lake over the "carries" and will save oftentimes a wonderful deal of extra labor, and not a little grumbling.

Proceeding on a good loading ride, (I prefer a finely finished Allen's game carriage, or one 200, a good strong one) with a book of flies, hunting knife, have a leather sheath made; better carry also with you a couple of heavy woollen blankets, as they are not always easily obtained in the supplies at the woods; also by all means carry a medium thick over coat, old and strong, and with these packed up with an India rubber blanket, another indispensable article, you may consider yourself equipped for your camp life. Now, when you have your baggage packed up, and are arriving there early next morning, take the Saratoga train through to Whitehall, on Lake Champlain, up the lake to Port Kent, arriving there about half past four. A short ride on the stage brings you to Keeseville, where after a good supper, night's rest and breakfast at the Adirondack Hotel, next morning finds you at half past six seated on the stage, bowing over the road towards "Martins," on the Lower Saranac Lake. A few miles drive finds you at the Sunble Forks, where after changing stages, awaiting the arrival of the train from Plattsburgh, and by the way, one advantage of this route is, that the Keeseville passengers have the choice of seats upon the coach, and that is a great thing when you have a long ride before you, and wish to have a good view of the passing scenery. I always secure the top seats, or the one next to the driver, and upon a clear calm morning this is perfectly delicious, this ride upon an old fashioned mail coach, as those are of Harper's famous line, and then rolling off with a rumble and the crack of the whip, you are on your way. Over mountain and hill, through dale and valley you ride breathing the pure air, enjoying the mountain vista. You at last roll down the hill toward the Saranac Lake, and are at "Martins," the pioneer hotel of the wilderness, that has grown from a small log cabin, to the largest and most commodious hotel in the woods, complete with every convenience, and with a table of the best, where you can leave your families if you desire while you are in camp in the wilderness. You will be surprised to find so many ladies board here, as so many remain, preferring to do so, to going off to camp with their husbands. Board is fourteen dollars per week, two fifty per day, and is very low with all the accommodations furnished, large airy rooms, parlors with piano, billiard, and croquet, and a large dining room, furnished supplies for the camp, every thing necessary and complete. The guides this season are all independent ones, and command three dollars per day and found. They furnish a boat, hound, and carry a rifle. The expense of a guide, and the average expense of cost of living while in camp, will amount to four dollars per day, (three dollars for guide, and fifty cents a piece for self and guide), so a couple of weeks will cost you about fifty dollars while in camp, then a few dollars to pay for the expense of the "carries," and the stoppage at a hotel on the road, and your fare from New York to Martins and back, say will cost you about twenty-five dollars, and then extras, etc., will come not far from one hundred dollars, but that should cover completely every necessary and comfort. If parties would rather have a private conveyance than the public stage, they could hire a private stage, stage property will engage you a comfortable team.

And now leaving you at Martins's, where after changing your city suit, leave your money and jewelry with him, reserving some few dollars for odds and ends. Your guide selected, your best way through is to write to Martin and have him secure you, a few days in advance, a good guide. You step into your boat, the stores and luggage is put in, and yourself and friends are off for the wilderness.

Brooklyn, Aug. 2, 1874. CHAS. C. MARHAM.

× CHAMOIS HUNTING.

NEW YORK, July, 1874.

EDITOR FOREST AND STREAM:—

Chamois hunting is not a pleasure that the majority of hunters wish to undertake; it is not alone fatiguing to the utmost, but very dangerous, for one false step up and down a precipitous and slippery precipice, often in the dark of night, may hurt the adventurous sportsman in a bottomless abyss. Chamois are nowhere found in abundance, and as they are extremely shy the hunter can find proof if he is rewarded by a shot after a good deal of hard climbing, walking, and camping out on rocks, and often in snowdrifts. There are only a few persons who, for some reason or other, are fond of this sport, and they frequent belong only to the richest land owners of Austria and Bavaria, amongst whom the emperor and the king have the best stocked grounds. Last fall the king Ludwig had given permission to the Prussian General Von Schweinfelt, now traveling in this country, to hunt at Berchtesgaden, and had given special orders to the head gamekeeper to be on hand to kill the chamois, and to be on hand to bring about good feelings between the German crowned heads. In the evening the General was shown a projecting rock half way up the Alps, where three years ago a Prussian prince had in half a day fired seven shots without doing any harm to the chamois, and where the chamois would certainly pass again, if disturbed in the higher regions, provided a favorable wind would withhold from them the presence of the concealed hunter. That spot the General reached, after six hours hard and dangerous climbing, at 9 o'clock A. M. Already at midnight a game-keeper and three hunters had also started for the summit of the Alps, where the chamois roamed undisturbed throughout the year, and from whence the whistling of the few hunters would chase them down ward over impassable rocks and chasms. After the General had waited for an hour, annoyed by some farze, listening to the faint signals above him, he was suddenly gladdened to see eight chamois jumping down ward from point to point and steering directly toward his hiding-place. About eighty yards above him the herd halted on a little plateau, and tried to make out the whereabouts of the hunters. They all had their heads turned mountain up, and the General had the best opportunity for an accurate shot. He fired, and the chamois, who stood far from him, at the report the buck disappeared in a precipice, and the General could hear only that he had been successful by the knocks that sounded from the precipice when the body struck several rocks in succession. As the wind came at that moment directly from the mountain top, the herd apparently not heard the report; they remained motionless and gave Mr. Schweinfelt time to kill the next chamois. After the first shot, the first lying on the rock, the six remaining chamois came in tremendous leaps down the declivity; however, the speed was not fast enough; the jumps riled showed again the superiority in such emergencies, and a third buck had been trampled over before even the last doe had come out of rifle range. After patiently waiting an hour more a single buck came, and he was not far from the chamois, and the General fired. At the report the hunters came in heaving distance; the general could distinctly understand their conversation. They related to each other that four shots had been fired, and they were in hopes that they would be rewarded by at least one trophy, knowing full well that a good purse of coin would be their well-earned reward for that hard day's work. To the General, however, the chamois were so common that he could not see the slaughter, is impossible. For a long time to come the clever Prussian will be put up as an example for good sportsmanship to all high persons who miss their game or chase it off by unguarded notions.

ists' Association.

FLASHES FROM THE "BLUELIGHT."

FOURTH WEEK.

TWO weeks must be covered in this letter to bring my letters to date, they have been busy ones. Late hours in the laboratory have been necessary to enable the naturalists to classify and preserve the immense quantity of material that the Bluelight's dredging and trawling has, in eleven trips, brought in. Nearly every day has been utilized, for the weather has been fine and our time is growing short. Our investigations have covered considerable ground; extending our field of research by degrees, from six hour trips, we now count them from twelve to thirty-six hours' duration. To the westward as far as Saybrook, and in the brackish mouth of the Connecticut, to the eastward some way beyond Watch Hill, and to the southward, we have worked in Gardiner's Bay, Peconic Bay, and Block Island Roads, and along the northern coast of Long Island, and the deep waters of the Race, have been well overhauled. As in previous weeks, many additions have been made to the known fauna of southern New England. Our champion haul took place on the 31st ult., about three miles to the southward of Watch Hill, where, in eighteen fathoms, we struck cold water, and our trawl came up so heavily loaded that it cost us all of our ingenuity to bring it safely on board. Over twelve hundred pounds of creatures were torn from their retreats—hardly a peck of dirt, but our deck was covered with skates, flounders, sponge shells, and countless minor varieties; skates predominated. Among the flounders were one or two of a rare variety.

Two bushels of the "Pecten" (scallop) were included in the haul, and were eagerly bucketed. To say nothing of their value, in a scientific point of view, their very pretty shells were in demand for collection, and their contents for the table, as when nicely prepared we found them decidedly good, the meat white and firm, and with a slight gout of parsnip. We rated them as ahead of clams, though not up to oysters.

An interesting discovery was made in connection with the *Pecten*. This is a little fish, the lump sucker (*Liparis lineatus*), which is rare, and all that have ever been found have been from north of Cape Cod, their limit extending, I believe, even to the Arctic waters. Last year in Casco Bay, Professor Putnam found one or two attached by their suckers to the roots of the Laminaria. We found numbers of this little fish, living at their ease, within the shell of the *Pecten*, and swimming about in the liquor of the shell fish. They were each about three fourths of an inch in length, with large heads and tapering tails, somewhat like an ordinary river bullhead. On the belly of each there is a round disk, which constitutes an apparatus by which it clings to roots, etc., when free swimming. We found also, in the *Pecten* shells, little crabs (*Pinnotheres*) very like those found in the oyster, and in some of them the whole family of three creatures were living in apparent peace together.

The warm water of Peconic Bay furnished plenty of material, but nothing, I believe, that could not be expected to be found in that locality. With the temperature of the water reaching 71 and 72, no northern fauna nor algae were to be expected, and none were found, although I believe that one or two species of the latter were added to the known list of the productions of the New England coast. Off the Connecticut liver we brought up but little animal life—a few very young skates and a shell fish or two. But I think it very likely that our trawl did not reach the bottom, and instead slid along, supported more or less by the immense laminaria, of which it brought up some magnificent specimens. Professor Eaton collected a few very fine ones, with roots and fruits, to transmit to Europe, in exchange with a distinguished naturalist there.

In the department especially assigned the fish investigations, under the charge of Professor Goode, not many very important acquisitions have been received. A fine specimen of the conger eel (*Conger Atlantica*) was brought in by a smack from Block Island, and a very rare hake of the *Urophycis* species was captured in our trawl at Gardiner's Bay. Of this latter fish, but three or four have ever been captured.

The experiment of artificially impregnating the eggs of the sea bass has been twice repeated, the last time with some show of success, as on the second day after a number were found under the microscope to be thoroughly segmented, but unfortunately a larger proportion had died, and it is probable that their decay and decay will destroy the healthy ones, as they are so fine that it is impossible to separate them.

Blue fish are still scarce. About a hundred were taken in one of the pounds last week, but those who went trolling for them the next day, on the strength of the news, came home disappointed. I am assured, though, that "they will be here yet." I hope so. The fact is, that there is no good fishing in this inland water for the loss of our bass, black fish, and flounders, can be caught on the reefs and mackerel when they will bite, but the chances of a paying result are not great enough to compensate for the day's work. Lobsters are plentiful, and larger than those we got last year in Maine, but still finer ones are occasionally brought in from Halifax. The magnificent climate, though, with which Noank is blessed—never hot, nor cold, nor chilly—more than any other locality, for the loss of our sport, and shortly after I paid this visit, and found the fish being rapidly transformed into oil and manure. From the wharf at which the vessel lies, an inclined railway, on which travels a box on wheels, reaches to the upper story of the mill. The box full takes 4,000, and a pair of oxen furnish the steam to drag them up, where they are first emptied into great troughs and boiled for about fifteen minutes, then, with pitchforks, transferred to the presses,

which were not unlike very old fashioned cheese presses, the weight being hung on to the long arm of a lever. From the press a dark fluid, four fifths water at first, but richer in oil as the pressure continues, flows through troughs to receptacles in the open air, where, being separated from the water, the oil is left to bleach and purify through the action of sunlight and showers. The refuse "scrap" is sold for manure. The quantity of oil from the fish varies with the season. In the spring they are lean and poor, and one to two gallons per thousand is obtained. Now the fish weigh a pound or more each, and furnish about five gallons to the thousand; in the fall they give perhaps fifteen. It seems almost like killing the golden egg, and to turn them up in the spring, when the oil from a thousand fish together will bring but thirty-six to seventy-two cents, for the price per gallon is the former figure. The oil is in demand to mix with linsed oil, to which, although a fish oil, it assimilates. The mill has the capacity to work up about fifty thousand fish per day. With a little new fashioned machinery, and the introduction of steam for power and to fire the fish, four times the work could be effected at less expense—which, however, would be hard on preservation of fish.

On the 30th we ran over to Gardner's Bay, and made a number of hauls in it. We found there the United States ship Constellation, the practice ship of the midshipmen from the Naval Academy, and after seeing the midshipmen "furl sails" in good style the first classmen were permitted by Captain Breese to come on board and take a little trip with us, and see for themselves how dredging was performed. No great addition was made to our stock of valuables, but a good deal of interest was exhibited in the combative propensities of hermit crabs, and a "Noank Naiad" which came up in the trawl furnished considerable amusement.

Among our microscopic curiosities for this week we have added to the collection some specimens of the tadpole, from which the human race has developed! One of the professors attacks my name of "tadpole," and says that it is an *amphibian*, and that the appearance of vertebrae in the tail is caused by cells, etc.; but they attack so many reasonable and popular views of things, and in consequence calling by such absurd names things with which we have been on friendly terms all of our lives, that I don't always feel inclined to yield. I can admit that a clam may be a "*mya urtica*," or that a little sea urchin may stagger through life in the character of a *strongylocentrotus drobachensis*, but I do think that the little fellow, with whose portrait I furnish you, looks more like a tadpole than he does like a *cyphocentrotus*; but such is his scientific cognomen, and he is odd and mysterious enough in his habits to merit, perhaps, an extra name, and all of the groups to which they belong, while in comparative in-

The principal point of interest about this *ascidium*, to the naturalist, lies in the central axis or chord of the tail; this in the larval form is composed of a series of cells, which resemble closely the aspect of the back bone in the embryo of all of the vertebrates, man included. A German naturalist, Kowalevsky, first called attention to this singular fact, and the subject was deemed worthy by Agassiz of an extensive and elaborate article, published, I believe, in the "*Atlantic Monthly*" at about the date of the death of that great naturalist. Considerable excitement was produced by a comparison drawn by Kowalevsky between the larva of the *ascidium* and the simplest known form of the vertebrate, the lancelet. The resemblance was so close and startling as to excite astonishment. Whether these resemblances were the result of the conclusion of many Darwinians that the *ascidium* is really an ancestral form of the fishes, and of all the vertebrates, is a question that cannot be hastily decided. I have suggested that we turn our little ancestor over to Goode to hatch in one of his hatching boxes, with the idea that perhaps by bringing the lights of science to assist Nature we may eventually run him up a bit higher in the scale and make a sure thing of it.

Still going on my list of our party were had additions—Dr. Joseph Lidy, of Philadelphia; Dr. J. B. Holder, of the Central Park Museum; Mr. Coli, of Hartford, and Professor Putnam, of Salem; but we have lost one of our most congenial associates, Mr. G. Saltonstall, of Harvard, who has started on an investigating tour among the *Salmo fontinalis* in northern Maine. Professor S. I. Smith has arrived, and has taken our young fiddler crabs under his charge; but in spite of his almost universal solicitude they have all died. His microscope reveals that, small as they were—no bigger than a pin's point—they had become fairly covered with parasites, which had destroyed them. Smith proposes to introduce to his next family a gigantic crustacean of the shrimp family, which likes parasites, and

from its superior size—about an eighth of an inch long—will be able to protect the colony.

One of our late arrivals found a new route to Noank, by which he contrived to enjoy the scenery of three States, and travel from seven A. M. till five P. M., taking a carriage for the last few miles, when by direct railroad communication he might have come *via* New London in two hours. He will furnish a chart if desired. PISCEO.

WASTING SEED CORN.—A correspondent who recently visited Lake Ontario calls our attention to the great waste of seed there. He writes:—"Between Honey Island and the Jefferson county shore is a large pound net, and in addition to large hauls of lake fish the owners raise every morning about two hundred of the young shad which have hatched from the eggs that Seth Green placed in the lake near Rochester two years ago. The young fish are about six inches long, and I cannot discover any difference between them and the North River shad. I saw the net raised three times, but each time the fishermen took no pains to return the young fish, but shovelled them into their boats to die."

About 80,000 young shad were received at Elkhart, Indiana, a few days ago, by express, through Frank M. Clark, of Clarkston, Michigan, by order of Professor Spencer F. Baird, of Washington, superintendent of fish and fisheries. The fish were let loose in the St. Joe River.

Six inch shad, the same that were set at liberty a year ago, in the creek at Ashland, Ohio, are now frequently hooked from the water by anglers.

FISH NEWS.

NEW YORK, August 6th, 1874.

EDITOR FOREST AND STREAM:—

At this stage of pisciculture it seems to me that the fish-ladder question has become very important, now that so many streams have been stocked with anadromous fish. I think that every one who has been in other countries or seen successful examples of fishways, should disseminate the knowledge gained through the public press. I, therefore, would like to say that there is a salmon ladder on the Teeco-zoucha River, near Bathurst, New Brunswick, which is a complete success. This stream had been obstructed by a mill-dam about 30 feet high, for twenty years or more, and salmon had almost ceased to frequent the scanty two or three miles of lower river left there; a few did continue to run up from this water this short distance, to the foot of the dam. The fishway (now about four years old, costing about \$200, and constructed of heavy beams and planks) sloping at about an angle of 45° into the pool below the dam, is about 6 feet wide, 4 feet deep, and the descent of water is broken, as usual, by barriers, thus:—

On the apron of the dam, at the head of this fish ladder, is a reception house, ten feet square, six feet deep, high enough to admit a man, and with a sliding barrel gate at the entrance and another at the upper end. The water is let into the fishway only at night, and on each morning, after consulting the fish which may have ascended during the darkness, the miller lifts the gate and the salmon pool up stream. Owing to the smallness of the river above, the inhabitants were, at first, able to kill many of the new comers; and so no salmon are allowed to run up until the September floods, which raise the upper stream and its pools so that the fish cannot be easily cut out. Several hundred had passed up in 1872 when I first saw this ladder.

The plan of detaining the fish until the autumn floods, in the short distance below the dam, where they can be so easily protected by the local guardian, instead of scattering them for fifty miles up river to be killed by the settlers, in every pool where low water in summer may have caused them to congregate, is a good one, for small rivers especially. Now, Mr. Editor, this is the history of only one successful fishway. There are others in Canada. What has become of those which, I am told, there was an appropriation made by the Legislature for the Troy and other dams? They will be needed for the California salmon which were put into the Hudson this spring, as soon as they can be completed, judging by the slow progress of everything connected with our Fishery Commissioners, except shad hatching and the bull-pout distribution.

Yours,

MANHATTAN.

Natural History.

THE MICHIGAN GRAYLING.

THE London *Field*, in its issue of July 18th, gives a most faithful reproduction of the Michigan grayling, (*Thymallus tricolor*), as engraved by us last June. Descending on the appearance of the fish, the writer remarks:—

"The fish shows some qualifications which are very distinct from our grayling. The eye is much full, rounder and more prominent; in the British grayling this is lozenge-shaped and sloping back, so that the eye which the artist could hardly fail to remark. The dorsal fin, though large in our grayling, is very large in the Michigan one. The anal fin, too, is much more extended and lengthy, and the ventral fins longer and more lance-head shaped. The spots, too, only extend to half way along the dorsal fin, whereas in ours they run the whole length of the fish; and the description of the colors agrees with them to be more brilliant, varied and marked back, so that there is very little doubt that the Michigan grayling is not our grayling. But there is another grayling which it may claim a much closer relationship to, and that is the so-called Arctic grayling first discovered by Back in 1820."

Jackson Gillbanks, Esq., of Carlisle, England, to whom we sent a proof of the grayling, writes us, (see FOREST AND STREAM of July 9th.) "I have compared your wood cut with Yarell, and other standard works, and find that your fish is somewhat slenderer than his, and has a larger fin in proportion, but not at all so different as to justify me in pronouncing them to be distinct varieties."

The *Field*, with its usual thorough acquaintance with such subjects, is inclined to give the *habitat* of the grayling

a wider range in America, even in the United States, than was at first supposed, and we are constantly receiving from our correspondents confirmations of the accuracy of this opinion.

Says the Field:—

"The habitat of Black's grayling is, we are told, in the MacKenzie River. We are further told that it is never found south of the 62d parallel of latitude; and that we take to be a rather rash statement. MacKenzie River is a very large and wide river, and so far as we can roughly estimate it, from its earliest source or tributary to its mouth, runs through some 1,200 to 1,300 miles, and is the outflow of Great Bear Lake, Great Slave Lake, Athabasca.

Now, if we note the ramifications of the MacKenzie River's headwaters, we shall find that they very closely approach in many places some of the affluents of the Winipig, which again communicate by other streams and chains of lakes with Lake Superior, and so to Michigan and Huron."

Professor Agassiz, to whom one of the first of the Michigan graylings was sent on February, 1833, writes:—

"Thus far this species has only been seen by one American naturalist, Prof. Cope, of Philadelphia. It is a species of grayling. Before Prof. Cope's discovery—this genus of fish was only known on the American continent from the Arctic regions, about MacKenzie River, where it had been discovered by Sir John Franklin, &c." (See Hallock's Fishing Tourist, p. 209.)

The argument deduced by our learned contemporary in regard to the increased range to be given the American grayling, wants no further confirmation than that found in our columns. In Montana, Vermont and Canada, as may have been noticed by our readers, grayling have been found. We are even inclined to believe, from a very careful description given us of a fish by a thorough ichthyologist, that grayling have been caught in the northern section of our own State.

As to the slender appearance of the fish in our engraving, we do not think it exceptional, though some may be more bulky in form. We have had a private letter from Mr. Mather assuring us of the faithfulness of our engraving. The high dorsal fin, flaunting like a horse's mane, we know was purposely distended by the artist in order to give it its exact size. When swimming, as Mr. Mather informs us, the grayling allows its dorsal fin to wave somewhat on one side. In our collection we have some specimens of these dorsal fins. The largest, taken from the average run of fish, measures one inch and five-eighths in height. We trust before long to be able to add still further information in regard to the habitat of the grayling, believing that the range of the fish will be found quite as wide as that of the other smaller species of the salmonidae, and that the judgment of the London Field in this respect will be fully substantiated.

NEW YORK, August 7th, 1874.

EDITOR FOREST AND STREAM.

I thank you for a specimen of a fish taken by me July 10th from the Jacques Cartier River while fishing for trout in the rapids. It was one of a dozen caught, for they rose voraciously to the fly, and in fact were a source of great annoyance, for no sooner did the fly touch the water, than one of these little fellows, often not more than five inches long, would dart at it, and persistently follow it up to the very edge of the canoe, in its vain endeavors to swallow what was almost the size of its own body.

I should have at once proclaimed them to be smolt, did not my intimate knowledge of the river preclude the possibility of salmon ascending above Sullivan's Falls, some ten miles below where these fish were caught. The fall is some thirty feet high, and at the top there is a dam some eleven feet in height. Six years ago, I took these fish in just about the same locality. The male had them "rapid trout" as they are only caught in swift running water. They seldom exceed ten inches in length.

Mr. Boswell, of Quebec, the lessee of the river, had several of these fish sent him some years past for the purpose of having them classified, but we have never heard from them since. Now, Mr. Editor, if you can throw any light upon this matter you will greatly oblige your correspondent and many others.

G. M. FAUCETT, JR.
We should pronounce the specimen before us a smolt, or young salmon of second year's growth. We have seen hundreds of them, and caught them precisely as our correspondent describes, while fishing for trout, and cannot see wherein this differs. Perhaps some of our Quebec readers can inform us if salmon have not been planted in the Jacques Cartier river, above Sullivan's Falls. We can account for their presence in no other way.—ED. F. & S.

No. 170 W. BIDDLE STREET, BALTIMORE,
August 8th, 1874.

EDITOR FOREST AND STREAM.

Dear Sir—The last number of your paper contains a letter from H. DeNelesnova, with regard to a bird he saw being fed by a much smaller one, and asking what birds they were.

The larger bird was a young cow-bunting bird (*Molothrus*), and its foster mother was probably a Maryland yellow throat (*Geothlypis trichas*).

Audubon, in his birds of America, gives a full and very interesting account of the bird and its habits.

G. H. M.

"Fred Beverly" says the bird is a cow-bunting, and so does R. S. N., a prominent naturalist of Salem, and several others, who refer the writer to "Samuel's Birds of New England," and "Wilson's Ornithology" for full information.—ED.]

EDITOR FOREST AND STREAM.

I had to-day an opportunity of observing a queer course of instinct in an insect. A large black and red hornet (*Pimpla ruficornis*) I think, had secured a locust (*Cleroda putoana*), which was nearly twice its own size, and was trying to carry it to its nest, but the locust being too heavy to carry directly its instinct came to the rescue. It would grasp the locust round the body with the two last legs of its body, then, with the use of its other legs and wings, it would climb up the trunk of a tree, post, or other object, and having reached a desirable height, would suddenly fly

off, forcing itself and lost in an oblique direction towards its destination, and in that way could take it several yards each time. Having reached the ground it would crawl rapidly to the next tree and repeat the operation, stopping every minute or two to take a short rest. Is this not a remarkable instance of insect strength and instinct? ADVOCATE.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, {
NEW YORK, Aug. 9, 1874.

Animals received at Central Park Menagerie for the week ending August 31, 1874:

One Badger, *Taxidea americana*.
One Gnu, *Oryx capensis*. Hob. Africa.
One Polar Bear, *Ursus maritimus*. Hob. Polar regions.
Two Seals, *Phoca vitulina*. Hob. North Atlantic.
One Kling Kung, *Gyparephus papu*. Hob. South America.
Sixteen Cockatoos.
Two Monkeys.

W. A. CONKLIN.

Woodland, Lawn and Garden.

CARNATIONS AND THEIR CULTURE.

"The cultivation of the carnation ever new—always yielding its varied blossoms.—OLD MSS.

"They may read, and read, and still find something new.
Something to please, and something to instruct."

BY the early carnation pink culturists, and old Scotch growers of this beautiful flower, the carnation was set in three distinct classes. This, for convenience, was found to be one of the best arrangements that could have been made. These classes, of which but one color only was retained. They were then called, as they are known to-day, by the names of the bizarres, flakes, and self-colored. The bizarres are those having two or more colors, in addition to the white or ground color—these colors always run in distinct stripes through the petals of the flower. The flakes, as the second class are designated, have but one color only, besides the white, running the same way. The third class, or self, are those having one color only. The colors of the bizarres are crimson, purple, and scarlet; the flakes have purple, scarlet, and rose color, and the selfs run mostly to pink, purple, and crimson. Then we have that other beautiful variety called the picotee carnation, which differs from the above very materially in its markings. The flowers of this variety consist in edgings of one or more colors running round the edges only of their petals, the remainder of which being of one color, either white or yellow. These were the old standard colors in 1860, and for several years were considered, as they are to-day, the finest flowers. Of late years some few good varieties have been added to these, besides many other varieties have been grown, both in Europe and America, unworthy of the notice or attention of the cultivators of good flowers. One reason which should be sufficient to deter the growers of this beautiful species of the pink from over encouraging what we term a "fraud" is that these new varieties, nine times out of ten, are complete failures—mere floral abortions, without compactness or symmetry. The first grand requisite to a fine carnation will always be found wanting in the "new varieties," viz., a pure snow white ground. The well grown carnation flower should never be less than four inches in diameter, and I have seen them four inches in diameter, and such flowers will amply repay any one for the extra pains bestowed upon them in careful cultivation. The centre or crown of the flower should be prominent, and well filled with petals. The ground color pure, clear, and free from all spots, and the edges of the petals smooth, without notches. If you would have first class flowers grow them in pots, the soil to be two parts of good loam to one part of road sand or grit, and two parts of old stable manure.

As all lovers of this plant will be quite likely to wish to know how to grow and blossom their own plants, instead of buying of the florists, a few plain directions will enable any one to have as fine flowers of their own raising as can be obtained anywhere else. To have your plants bloom well you will about the 1st of April place them in the pots in which they are to bloom; these are to be eight or ten inches in diameter, and in each pot you can place four good strong plants, having first enlarged the hole in the bottom to four times the usual size. Now place two or three pieces of broken potsherd over the hole, and upon these a little coarse compost from the heap; then fill up with the compost as first directed. Now your pot for the reception of these four small plants being half full of earth, you are ready to begin planting. Press the plants moderately with the hand to prevent too much settlement of earth after your plants are inserted. Take your young plants carefully from the small pots without breaking or disturbing the bulk of roots, and so place them in the large pots that the lowest leaves shall be about one half an inch below the edge of the pot. Now very carefully fill the residue of the pot with your compost, give it a gentle shake, and your work is done.

If you have a garden frame or cool place, you can now water them gently and place them in free air until the middle of May, when the pots may be placed out of doors if the weather is not too cold; yet you must be careful not to give them too much sun or heat at first, as this would be fatal to them. A partially shaded place is better than full sun, and you are ready to begin watering. Two hours of the morning and evening sunlight are to be sought—the mid-day or meridian rays always to be avoided.

These pots will bloom good flowers, and here remember to give some protection to the sides of the pots, but be sure never to sink them into the ground. You will now stake your carnations with round neat sticks, and tie up neatly with bass matting. An experiment I have frequently tried with pleasure to myself is to tie up the plants with fine plants, but the means usually employed to preserve fine varieties are by "layerings," "cuttings," and "pipings." This is the only truly reliable method of preservation of choice varieties, for from the same seeds of a flower I have had every variety above named, some six different varieties. Cuttings or pipings may be cut and rooted at any time of the year, hence an article upon the carnation is always in

season, and, like their beautiful flower, is welcomed at all times. The manner of growing them the easiest is as follows.—Select the cuttings you desire to propagate from the parent plant, and cut them with a sharp knife, just below the third pair of leaves from the top of the cutting; this done, cut off half the length of every leaf on the cutting except the two lower ones, which are to be removed altogether. Now, you will fill quite a small pot with one half soil and one half sand; make it smooth, and insert your cutting in the centre from one to one and a half inches in depth. Water well, place a hard glass or tumbler over it, and set aside. This class will gather moisture, and should be removed every day and wiped dry, and again replaced. You can by this means stake your cuttings in a room of your house with as much ease, and with as much certainty of their living, as within a greenhouse. Cuttings thus prepared may be readily rooted in a window or in a room, from May to October, without failure. I find a very good way to start cuttings to be in a basin box of sand filling the same with the cuttings half an inch apart, and keeping them well watered.

Layering is not so certain, and requires more care than the above method, nevertheless it is well to know how you are to do it. With a sharp knife you will remove the leaves from the second or third joint of the plant, without separating the same from the parent stock; having done this, carefully cut a slit close under and half through the joint, being very careful not to separate the shoot from the main stem. Have ready your small pot sunk in the ground, in the soil which you cover your layer with. You will now peg the layer down with a small ivory book, and your work is done. Shade these from the sun while rooting, and when rooted sever from the parent plant, and you have an independent plant, thrifty and reliable. Very many little acquisitions and accessories for the exhibition and beautification of the carnation are frequently noted, but as they are the creations of fancy, and have no real value, we pass them over, as any one of our friends, if they have sufficient confidence to follow our written experience in carnation culture, can go and do likewise, and we can give them full assurance that their labors will yield them a rich and pleasant reward.

OLLIPUD QUITL.

THE SNOW PLANT OF THE SIERRAS.—One of the grandest of our snow plants, says the San Francisco *Belletta*, which meets the eye of the traveller in our mountains is the exquisite plant, the snow plant of the Sierras—the *Sarcodes sanguinea* of John Torrey, the botanist. It is an inhabitant only of the high Sierras, being rarely found below an altitude of 4,000 feet, and its glorious crimson spike of flowers may be seen early in May forcing itself through the snows which at that period cling about the sides of our pine forests. The portion of the plant which is visible above the soil is a bright rose crimson in color, and presents the very strongest contrast to the dark green of pines and shinner of the snow. Its root is succulent, thick, and abundantly free of moisture, attaching itself to the roots of other plants, principally to the species of the pine family. Hence it is among these curious members of the vegetable world which are known to the botanists as parasites, and is consequently entirely dependent for its sustenance upon them. It is extremely fond of it, and it is not an uncommon circumstance to find a number of these plants uprooted and robbed of a portion of their underground growth by these animals. It belongs to the natural order *Orbanchaceae*, and is met with through the whole of the Sierra region, becoming rarer as we approach the south.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

Salmon, *Salmo Salar*.
Trout, *Salmo fontinalis*.
Land-locked Salmon, *Salmo gairdneri*.
Black Bass, *Micropterus salmoides*.
Striped Bass, *Morone chrysops*.
Bluefish, *Merluccius labrax*.
Salmon trout, *Salmo gairdneri*.
Michigan Grayling, *Thymallus tricolor*.
Micropterus nigricans.

One of the Roadways, fishing in his sea-buck, took two ten-pound sheepshead at once. In Canarsie Bay there is no fishing to speak of; a few small bluefish outside the bar. The same on the Atlantic side of Long Island, with occasional intervals or spurts of good luck. In the Sound the trawls of the Fishery Commission, drawn a half dozen times daily, are almost barren of food fish. About Nantucket, however, the bluefish are abundant, and so also in Massachusetts Bay. Striped bass are caught in the vicinity of Newport in considerable numbers, and sell in market at twenty cents for small and fifteen cents per pound for large. We saw some large fellows on the slabs that weighed sixty pounds. Bluefish are abundant, chiefly from Hyannis, Massachusetts, and are quoted at six cents. Pompano still in market, from North Carolina, at sixty cents. One fine specimen weighing three and a half pounds. Spanish mackerel, from South Side of Long Island, selling at twenty cents. Sheepshead in moderate supply, from New Jersey, at twenty-five cents. Salmon very scarce, from Miramichi, New Brunswick, at forty cents. Weakfish, from Long Island and New Jersey, plenty at six cents. Fresh mackerel, from Boston, at twelve to fifteen cents. Halibut plentiful, from Georges, at fifteen to twenty cents. Soft crabs are very scarce, and sell at \$1.50 to \$3.00 per dozen. Brook trout, wild, from Canada, are sold at fifty cents. Frog legs, from Canada, scarce; sold at sixty cents. Green turtle, from Cedar Keys, very plenty, at fifteen to eighteen cents.

Cat-fishing mackerel with hook and line on the New England shore is fast becoming obsolete. A fleet of 150 vessels on the Maine shore, last week, were all sciuers.

—A sloop brought 10,000 bluefish into Newport the other day, caught off Nantucket.

—The bluefish have been mackerel into Boston harbor, so that in some points there is fine sport in catching them. On Saturday one party caught 100 mackerel at Hull's wharf, at the end of Chelsea bridge.

—On Thursday a fine specimen of the tarpon (*Megapops thalassidion*) was caught off Hog's Inlet, Rockaway, and was on Friday sent by Mr. Blackford to the Smithsonian Institution. Professor Baird's wish to have a cast of this remarkable fish added to the Smithsonian collection, can now be gratified. Perhaps the fish which we saw was a trifle smaller than the one described some time ago in the FOREST AND STREAM, but the specimen was perfect in every way, not having lost a scale.

—A striped bass two feet three inches in length and nineteen inches in circumference, was caught with a hook and line at Kingston, on the Hudson on the 7th.

—Good catches of striped bass are made off the Railroad bridge at Cohasset Narrows, Mass. Alexander and Henry Hathway will furnish bait and all necessary attendance at reasonable prices, also boats for blue and squeteague fishing, and will soon be able to furnish accommodations for the angler.

—A correspondent, "Tori," writes from Nonquitt Beach, Buzzard's Bay, Mass., Aug. 7th: "Our fishing here for large game is not very good at present. Blue fish, tautog &c., seem to have made a flank movement, and are now disporting in Vineyard Sound; however, they are easily reached from this place in a few minutes sail. Fishing parties are loud in their praise of this location as a rendezvous. A steamer makes three trips a day to and from New Bedford, seven miles distant, making a delightful sail of one hour down the glorious old Buzzard's Bay."

—The old dam above Shaw's tanneries, on Grand Lake Stream, being unsafe is being removed by the corporation to be replaced by a new one of stone.

—A party of four gentlemen from Providence, R. I., on their route through the entire chain of the Rangeley Lakes, stopped for a day's fishing on the Moosewaukegic Lake, and off Sandy Point and Bagle Cove, captured fifty-eight trout, which averaged one and a half pounds each. Among this lot was one of four pounds, and two of pounds, one of one and three quarters pounds, two of one and a half, one of one and a quarter pounds, and eleven of a pound each. Heavy showers have prevailed the entire first weeks of this month, and the thermometer has ranged from seventy to eighty degrees in the shade. Although it suddenly fell on the morning of the 2d inst to fifty-nine degrees, it has now returned to its former position.

—E. A. Meneely, Esq., President of the Mohawk Game Club, writing us from Wallingford, Vt., says:—"Yesterday I fished down a brook and caught forty-nine speckled beauties. I hear on all sides that ruffed grouse or partridge as they call them here, are very plenty."

—The latest favorite among the Virginia mountain resorts is the Mont View Hotel at Front Royal, a handsome, new house, just opened for visitors. The black bass fishing in the Shenandoah, near this place, is as fine as we have heard of, these fine fish seeming to prefer the pure water of this branch of the Potomac.

—The "trout" of Florida (properly black bass) were caught with fly a hundred years ago. This fact we accidentally discovered last week while perusing an antiquated copy of Bartram, imprinted of 1764. Perhaps we ought not to claim that the device used was a genuine artificial fly, though it and the method of using it are as nearly akin to flies and fly-fishing as they can well be. Bartram says of these trout:—

"They are taken with a hook and line, but without any bait. Two people are in a little canoe, one sitting in the stern to steer, and the other near the bow, having a rod ten or twelve feet in length, to one end of which is tied a strong line, about twenty inches in length, to which is fastened three large hooks, back to back. These are fixed very securely, and tied with the white hair of a deer's tail, shreds of a red garter, and some parti-colored feathers, all which form a tuft or tassel nearly as large as one's fist, and entirely cover and conceal the hooks, that is called a 'bob.' The steersman paddles softly, and proceeds slowly a long shore; he now ingeniously swings the bob backwards and forward, just above the surface and sometimes tips the water with it, when the unfortunate cheated trout instantly springs from under the reeds and seizes the exposed prey."

The "bob" is in use at the South at this day.

—Lord Dufferin, Governor General of Canada, has just returned from the Nepigon River, where he spent several days. His Excellency is one of the most ardent sportsmen in the world, having made a yacht cruise to Spitzbergen, Iceland, and other points in high latitudes. His proclivities are constantly shown in his travels through Canadian wilds, and in his liberal patronage of field sports, he having given competitive prize medals to several different associations within the past year.

—We have seen allusion made to the mortality of fish in Washoe Lake. The Virginia City Enterprise, of Nevada, says that there is a windrow of dead fish nearly a mile long on the eastern shore of the lake. They are of all sizes. On the surface of the lake they are floating belly up everywhere, and it is believed that not one live fish remains, as the pelicans and gulls that have hitherto frequented the lake, have all left. Already a great stench arises. As there are no mills or deleterious substances near, and as the water is high and very pure, the mortality can be accounted for only by the supposition that there has been an eruption of deleterious gas from the bottom.

SPORT IN NEWFOUNDLAND.

HARBOR GRACE, Newfoundland, July 20th, 1874.

EDITOR FOREST AND STREAM:

I know that you are always glad to hear about Newfoundland. During warm July we suppose that New York is up among the nineties (in the shade), speaking thermometrically. Well, I heard that the thermometer here in our beautiful little town of Harbor Grace, once reached so high as 88° in the shade. I can assure our American and other friends that it would be quite an enjoyable change for them to visit our cool country during the summer months, any time after the 20th of June, when the sun turns and draws the wind from south and west. Harbor Grace is surrounded with a large amount of beautiful scenery, many a hill and mead, many a pleasing grove, many a murmuring stream, made silvery under the rays of a July sun, do add a charm to the landscape.

It's hard work travelling round the north. Is it fair to sail a pond 12 miles, or 50 miles long, a pond? I don't think so. We have our Ocean Pond, 12 miles long; St. George's Bay, 10 miles long; Grand Pond, said to be 50 miles long, more or less, as lawyers would say. There are great trout in our ponds. Big Island Pond, ten miles northwest from this place, has splendid red trout. Of course men have to fight through mosquitoes, snipers and other flies, which seem to be well acquainted with the qualities of good blood, just as rats are said to know the best butter. Lady Lake is where the regattas are held. Banerman Lake is the source of water supply to the town, which is neat and clean, with some fine shops and business premises. We have a fine system of coastal steam north and south, and we offer fine scenery, recreation and good fishing to the tourist. Yours, C.

TAKE THE LADIES.

If married men would take kindly the suggestion herein given, and more frequently follow it, we doubt not that greater pleasure would be added to their own santerings, while we are positively certain that they would contribute much to the enjoyment of those indulgent, patient bodies who so reluctantly permit their absence and so anxiously and lovingly await their return.—E.N.

NEW YORK, July 18th, 1874.

EDITOR FOREST AND STREAM:

I have read your paper with a great deal of interest for nearly a year, and enjoyed very much the contributions from sportsmen who go to the wilderness in different parts of the continent for their amusement and recreation; but I find the nearly all ink in two respects. Perhaps you can account for it—I cannot.

After a long tramp through the woods, or it may be a long pull or paddle in a boat, the weary sportsman sits poles and bark and builds a hut. It seems to me the weary sportsman would find it just as easy to put up a tent (and certainly as comfortable), and if suddenly overtaken by darkness or a storm, making time an important item, he must feel very much like a foot runner about in the darkness after the material to build his hut, when he might in three minutes be housed under a tent.

I presume all your contributors are bachelors or widowers (or they are a selfish lot) as they never allude to the ladies. "Bill" did this, "I" did that; but what did the ladies accomplish? Were the ladies left at home to look after Biddy, while the lord of creation went off hunting or fishing to have a little sport? I may not have seen a good country as some of your contributors, but that which I have seen has also been seen by my "better half," and she not only enjoyed seeing but doing. She has caught as many fish and killed nearly as much game as her lord and master, and many a night we should have gone to bed hungry but for her "luck with the fish."

By explaining these enigmas you will confer a favor on

A BENEVOLENT.

Yachting and Boating.

All communications from Secretaries and friends should be mailed not later than Monday in each week.

THE CORINTHIAN YACHT RACE.—The weather for the last two or three days had been stormy, that the Corinthian yacht race, open to all recognized yacht clubs, had to be postponed until August 10th. The schooner yachts in this race are handled entirely by amateurs, and no professional sailor allowed on board. The race took place off Newport, R. I., at 9 A. M., last Monday, and the course was from a stake-boat anchored off Fort Adams and Dumpling Rocks to Block Island buoy and return. The start was a flying one, the five yachts then entered crossing the line as follows: Azalia, 11:56:10; Fearless, 11:59; Tempest, 11:59:5; Idler, 12:13:30; Foam, 12:13:20. They started on the port tack, made short stretches for the whitewashed rocks, Azalia leading Tempest and Fearless close together, and the Idler beautifully handled. The yachts now started out of the harbor, beating dead to windward, and making for the Beavertail light, the Idler closing up at the gap between her, the Tempest and the Fearless. Within a short distance of Point Judith, the Idler passed the Azalia, and was now leading the whole fleet. The yachts worked well out from Point Judith, and made for Block Island buoy, which was dead to windward, and rounded the buoy in the following order: Idler, Azalia, Tempest, Fearless, Foam. The schooners now squared away and made for port, running before the wind, which held good up to Point Judith. The Idler was now increasing her lead every minute, and passed the Point a long distance ahead of the fleet, and arrived at the home stake-boat an easy winner at 6:32:45. The Azalia came in about 55 minutes afterwards. The following gentlemen composed the crew of the Idler: S. J. Colgate, captain; J. J. Alexandre, mate; Frederick Thomas, Jr. DeP. Foster, Giraud Foster, J. W. Beekman, Jr., W. Foulke, Jr., B. L. Foulke, William Krebs, Henry Steers, M. Roosevelt, Schuyler Hobart, C. W. Roosevelt, A. Roosevelt, J. F. Roosevelt, J. B. Duer, A. Remson, L. D. E. F. Woodruff.

We have received the following letter from our yacht editor, who was one of the crew of the Idler:

YACHT IDLER,)
OFF NEW YORK, August 9th.)

The cruise of the New York Yacht Club has been most successful up to the present time. The first day's run from Glen Cove to New London was a pleasant one, but owing to the uncertainty in the direction and strength of the wind, there was no fair test of the relative speed of the yachts. The "Magic," of the schooners arriving with a

long lead in her class, was preceded some twenty minutes by the "Vision" sloop, which was the first vessel in.

On Friday, the 7th, a start was effected at nine o'clock, and with a splendid wind and all kites set, the run to Newport was accomplished in the shortest time on record, sailing in squadron. The "Magic" led the schooners until past Point Judith, when the latter vessels crowded up abreast of her. The "Dauntless," which was unfortunate in her start, getting off the last of all, did herself great credit upon this occasion, and soon reached through the fleet, taking her place among the leading boats, where she and the Wanderer had a most exciting contest for the lead, the former, in addition to her kites, showing a large square sail, which seemed most effective, and the latter a spinnaker, which also did good service. In passing Fort Adams, the Wanderer had the lead by about a ship's length, but in huffing around the north end of Goat Island, the "Dauntless" got the better of her, and let go her anchor a few seconds in advance. The little "Magic" had in the meantime taken in kites, and hauling her wind, passed in the south entrance, and was the first of the fleet to anchor. The Wanderer came in a short distance astern of her, and the balance of the fleet were but a short distance behind.

Of the sloops the "Vision" was the first in, but was hard pressed by the "Vindex," which did not secure as good a start, and came to anchor one minute after her fleet antagonist. The new sloop "Wayward," Mr. Edgar Morris, showed great speed, and gave the "Qui Vive" a sound beating. The "Gracie" was unfortunate, carrying away her jib boom at the start, but although working under this disadvantage, secured a good place at the finish.

Newport harbor at present contains forty-one yachts, principally from the New York, Seawanhaka, and Eastern yacht clubs. Tuesday, the 11th, has been fixed for the regatta for Commodore Bennett's cups, and the Eastern yachts having been invited to contend, a splendid race is anticipated.

The decision to postpone the Corinthian race set for Saturday the 8th, was unquestionably a wise one, for it blew a gale of wind, and the sea outside Point Judith was being enormous; the worst feature, however, was the blinding rain, which was almost as impenetrable to the sight as the densest fog. I will send you a full account of this race in time for the next issue of the FOREST AND STREAM, if too late for this week's paper.

K. NEWMAN.

—The New York Yacht Club squadron, accompanied by the fleet of the Eastern Yacht Club, sail for Vineyard Haven to-day. On the way up there will be a scrub race for sloops for a set of colors for each class, the race to begin at Benton's Reef Lightship, and end at Oak Bluffs.

LYNN YACHT CLUB.—The first of a series of races under the auspices of the Lynn yacht club for three champion cups—one for each class—was sailed on Monday, August 3d, at Lynn, Massachusetts. Fourteen yachts entered—seven in the first class, six in the second class, and five in the third class. The start for first class was made at half past three P. M., immediately followed by the other classes. The course for first class was twelve miles, and for second and third classes nine miles. The winners were the yachts Haymaker, Fleetwing, and Mabel. The regatta committee were Messrs. Q. A. Townes, Allen Hay, W. B. Phillips, John Moran, and J. W. Haines. The next regatta will take place on Tuesday, August 18th.

DORCHESTER YACHT CLUB.—The yachts of this club will start from Hull, Massachusetts, on their annual cruise Saturday, the 22d instant, the captains of the participating yachts reporting to Commodore W. H. Bangs, Jr., on board the yacht Wivern, at Hull, on Friday evening, 21st instant, to get under way at an early hour on the following morning. The direction of the cruise will be along the north shore of Massachusetts Bay, stopping at Gloucester, Pigeon Cove, Annisquam, and possibly going as far as the Isle of Shoals. The Eva, Wivern, Kelpie, Elsie, and Starlight had on Monday signified their intention of participating in the cruise.

—The Isle of Shoals sailing regatta, to take place August 20th, referred to in our last issue, promises to be a very successful affair. Nineteen yachts had, up to Monday, 10th instant, entered at Boston alone, with Commodore D. R. Beckford, No. 20 India street, Boston, and many more had signified their intention of entering to compete for "The Oceanic" prizes. Following is a list of the Boston entries:—

FIRST RACE.				
Rig.	Yacht.	Owner.	Adm. A. B.	Club.

"	Gertrude.....	Capt. J. W. Tuttle.....	K	S. Post

—The Albany, New York, yacht club have given on their annual cruise. The fleet consists of ten yachts, under the command of Captain Baker. The club have adopted a very fine uniform, consisting of blue suits, with a white duck cap. Their cruise extends to Newport, and will last two weeks. They participate in the yacht race at Newburgh.

—The Northwestern Regatta Association has made extraordinary strides this last two years. The principal object of the officers to extend boating as a pastime, and to elevate the standard of the amateur oarsman. The large number of clubs extending along the great water front from Detroit to Chicago, most of whom are members of the association, are uniting in their exertions in order to make the coming regatta a sailing regatta.

—The yacht Nellie arrived at Halifax, Nova Scotia, from Newfoundland, on the 6th, having on board the Rev. Geo. H. Hephworth, of New York, and friends.

A WEEKLY JOURNAL,
DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS,
AND THE EDUCATION OF MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY
Forest and Stream Publishing Company,
17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.] PHILADELPHIA,
113 SOUTH THIRD STREET, COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 22 cents per line. Advertisements on outside pages, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column, 35 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent.; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 13, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, AUGUST 14th.—Mystic Park, Boston—Utica Park Association, Utica, N. Y.—Rochester Driving Park Association, Rochester, N. Y.—Hartford vs. Taunton, B. C., Taunton, Mass.—Wabeka Trotting meeting, Ill.—English Eleven vs. Eighteen at cricket, at the Oval, London—New York Yacht Club cruise.

SATURDAY, AUGUST 15th.—Saratoga races, Saratoga—Hartford vs. Pickled Nine B. C., Martha's Vineyard—Americans vs. English at cricket, at Sheffield, Eng.—New York Yacht Club cruise—Practice day, Harlem boat clubs, Harlem, N. Y.

SUNDAY, AUGUST 17th.—Mutual vs. Olympic Boat Club, Albany—Americans vs. English at cricket, at Sheffield, Eng.

TUESDAY, AUGUST 18th.—Hull-fish Cricket Tournament, Halifax, N. S.—Saratoga races, Saratoga—Hamden Park Association, Springfield, Mass.—Trotting meeting, Burton, Ohio—Trotting meeting, Grand Rapids, Mich.—Americans vs. English at cricket, Nottingham, Eng.—Lynn Yacht Club regatta, Lynn, Mass.

WEDNESDAY, AUGUST 19th.—Hull-fish Cricket Tournament, Halifax, N. Y.—Trotting meeting, Wilkesbarre, Penn.—Isle of Shoals Regatta, N. Y.—Trotting at Agricultural grounds, South Norwalk, Conn.—Trotting meeting, Hornesville, N. Y.

INDEX.

The Index of our Second Volume is now nearly completed, and will doubtless be ready for distribution with our next issue. The amount of absolutely new ground covered by our one year's publication is really surprising. Some of the freshest material was contributed for our earlier numbers, when our circulation was very limited, and has therefore escaped general attention. We would advise a cursory review of the entire volume.

Since our paper was first printed, we have published the first full and authentic information with regard to the Island of Anticosti, the Nepigon country, the Salmon rivers of Newfoundland, the Game of Colorado, the Salmon of the Pacific Coast, the Geography of Newfoundland, the Zoology of the Northwest, Lake Okechobee in Florida, the Coulonge District of Canada, the Ichtye Fauna of Humboldt Bay, California, the Angora Goat Culture of Guadalupe, the American establishment in the Island of

Formosa, and the Upper Saguenay. We have first called attention to the presence of the American Anchovy, and we have printed the first photographs ever made of the Octopus and the Michigan Grayling, concerning which latter pretty much all that is known has been gathered through our correspondents. As politicians say, "this is glory enough for one year." Besides all this, we have disseminated a vast amount of information not generally known, so that our two volumes really comprise a cyclopaedia of useful knowledge that can scarcely be matched in this country. We bow before the approval of an appreciative constituency.

THE U. S. FISHERY COMMISSION.

WE trust our readers will set a proper estimate upon the valuable papers which we are printing in this journal under the department of Fish Culture, detailing the weekly operations of the United States Fishery Commission in Long Island Sound. These papers, it is proper to state, are prepared by Commander Beardslee, U. S. N., the officer in charge of the steamer "Blue Light," which the Government has placed at the disposal of the Commission, and who is assisted in his efforts by the scientific gentlemen on board, and notably by Prof. Verrill, of Yale College, and by Prof. Baird, Chief of the Commission, to whom our readers have always been indebted for contributions of a valuable character.

The importance of this work to science can scarcely be estimated, while at the same time its influence upon the industrial economy of the country must be sensibly felt for good. It is but the continuation, too, of the work begun on the coast of Massachusetts, thence extended to Maine, and hereafter to embrace the entire coast line of the Atlantic to Florida. Not only are new marine species discovered, and the identity of others established, but the habitat and breeding places of food fish are ascertained, and their habits so studied as to enable the men of science, by their mechanical appliances, to prevent waste and multiply numbers, thereby giving guaranty for years to come of a continuance of that fish food which it so recently seemed was about to disappear forever. Besides, by the study of sea temperatures and experiments with the ova and small fry of fishes, and the test of water of various degrees of purity and saltiness, the Commission are enabled to transplant, propagate and adapt the several varieties to new elements, so that they will thrive as vigorously as under their normal condition. To aid in the accomplishment of this great good, the United States appropriated last Spring the hardly sufficient sum of \$15,000, but what is lacking in money is more than made up by the enthusiasm of the scientific gentlemen of the expedition, who give gratuitously their time and labor to the cause. There are, perhaps, two dozen in the corps, and we doubt not that all, or nearly all, have contributed their largess or mite to the interesting material that is weekly prepared for our readers. This material is most of it new. It is furnished to us at first hand, before the savans have so tortured and befogged it with incomprehensible terms and Latinized names, as to render it simply as "clear as mud" to those who dwell any lower than the seventh heaven of human intellect. All the little parts, characteristics and performances of the numerous creatures that are brought to our notice, are made so interesting and intelligible, and are so interwoven with homely illustrations and plain instruction, as to be eagerly read by children and men of simple habits of study. These find that the "Professors," when stripped of the sombre robes and mysticism of their occult studies, and brought down to the plane of ordinary comprehension, are no "humbugs," but very companionable fellows; and the consequence is that all the fishermen and coasters of Long Island Sound, and the dwellers around Noank, become voluntary recruits and willing foragers to bring in new species and "queer critters," which like the dreams and visions of the Persian kings, seek interpretation.

Two weeks ago, July 30th, we gave engravings in our paper of the egg and young of the skate, (the printer transposed the two, so that the embryonic egg assumed to be the living fish), and also an engraving of the full-grown fish dissected, showing the eggs in their natural position, and the use of those curious horns that pertain to the egg, and by which they cling to the ovaries and hold the egg firmly thereto. This, we are informed, is the only illustration of the kind extant, and is considered a great rarity and very valuable. Prof. Agassiz, in dissecting a skate in the presence of his class last year at Penikese, discovered the eggs in their natural position. He expressed the greatest surprise and gratification at the discovery, and announced to the students that this was a sight seldom vouchsafed to mortal eyes; that in all his experience he had seen but one case previously.

We have now ready for publication two equally curious subjects. One is a young squid (or octopus, cephalopod, ink-fish, cuttle-fish, *calappa*, *atidia*), just emerged from the egg. This we shall print next week. The other appears in our article of to-day, and represents the famous tadpole, from which the human race is facetiously said to be descended, its structure bearing close resemblance to the human anatomy, and the peculiar appearance of the cell work of its tail having caused him to be considered as the lowest of the vertebrates.

We take especial pride in forestalling the scientific book-makers in producing these rare and curious things, and owe, with our readers, a lasting obligation to those gentlemen of the Fishery Commission who have enabled us to do so.

THE PIGEON SHOOTING TOURNAMENT.

WE have been advised by the President of the Niagara Falls Shooting Club that said club will hold a pigeon shooting tournament at Niagara Falls on the 9th, 10th, 11th, and 12th of September, with money prizes of value from \$3,000 to \$5,000, classed in each shoot as one, two, three, four, and five money—ties of ten shot off for first, and so on through; then a grand "free for all," say \$2,000 in money, in the same way. Birds are ordered, coops are building, and committees are appointed on railroad reduction of rates, and all are vigorously preparing for the event. The International Hotel will reduce their rate one dollar, making it \$3.50 per day. Carriages and all other charges in and about the place will be materially reduced to rates that cannot fail to be satisfactory to all. By resolution, all the members are appointed a reception committee.

Under the auspices of this strong and very energetic club, the tournament cannot fail of complete success. Enthusiasm of rival organizations throughout the State, it is determined not to be outdone at Syracuse, Oswego, or Watertown, and we have no doubt that more pigeons will be shot, better scores be made, bigger prizes be won, more money be spent, a larger assembly be present, and a better time generally be had, than at any other similar meeting hitherto held, or to come for the next half century. Certainly, the incidental surroundings of Niagara Falls are sufficient in themselves to make the tournament attractive. One thing, however, we do regret, and that is, that this club should have selected the day assigned for the meeting of the National Convention as the first day of its shoot. No side show of this kind is necessary to tempt the attendance of gentlemen who propose to meet for the sole object of devising the best method to protect and preserve our game. Not one serious, earnest delegate the more will be present in consequence of the tournament. The club might just as well, and with greater propriety, have postponed its festivities until the following day, without in the least degree jeopardizing its mechanical harmony or its prospects of success. We shall always oppose the mixing up of business with pleasure and the association of holiday pastimes with the proceedings of a deliberative body. We regard the action of the Niagara Falls club in bringing these two widely diverse and divergent objects into juxtaposition as impolitic in the extreme. Its direct tendency, as we know from conversation with gentlemen that might be named, is to alienate those persons whose intelligent co-operation and knowledge of the subject are most valuable, and really indispensable. There is not the slightest kinship or harmony between the destruction of pigeons at a trap and the legislating for the protection and propagation of game. We make no objection to the pastime of pigeon shooting, though not enthusiastic in that line of sport. We hope for the Niagara Falls tournament every possible success; but we wish the localities of the Convention and the Tournament were as wide apart and remote as their objects are divergent.

That the objects of the Convention have received the consideration of sportsmen at large, and that the call has a widespread approval, we doubt not. This is manifested in the haste of at least one Western State to respond, namely, Ohio. This State has appointed a delegation for the September meeting composed of Colonel C. W. Wooley, of Cincinnati; Hon. A. T. Brinsmade, of Cleveland; C. P. Brigham, of Toledo; Harvey H. Brown, of Cleveland, and C. A. Logan, of Cincinnati, each delegate being empowered to elect a sub-delegation of five.

We trust that other States will be as fully and as ably represented. It is important that the Convention should be full, for this can scarcely be regarded as anything else than a preliminary meeting to devise some basis for future action, and some general ground plan upon which to construct that legislative contrivance, so much desired, which shall essentially remedy the evils and objections that now attach to existing game laws. It is equally important, too, that the Convention should adjourn to a day sufficiently distant to ensure a full consideration of the subject and the receipt of such schemes as wisdom or ingenuity may suggest and present.

ENGLISH GENTLEMEN HUNTING IN THE WEST.—Private advices from Denver inform us that the Earl of Dunraven is hunting in the neighborhood of Estes Park, and that lately the Earl had a contest with a mountain lion, which with the assistance of Dr. Kingsley, was handsomely despatched. The Earl of Dunraven will possibly later in the season push further West. English gentlemen on the plains just now may have an opportunity of witnessing quite warm work, and of acquiring that knowledge of Indian warfare which M. Le Comte de Paris states is the cradle, or the primary school of the American soldier. We should strongly advise that in certain regions of the far West, great precaution should be used. The Indian is no respecter of nationalities, and we should regret to hear that any gentleman from the other side had lost his scalp. Three years ago, a party of seven, two of them English gentlemen of rank and fortune, the party fortunately under command of a well known Indian fighter, had a gallant but rather hair breadth escape from the Apaches. It was a stand up fight for one day, and a running one for three days, and excessively "jolly" no doubt. The Indians were finally whipped off, but a very ugly scar, somewhat disfiguring the part of the hair, will be a memento of adventure which a plucky English gentleman will carry with

him to his grave. We will repeat his modestly told account of the affair, as he related it. Said he—

"I couldn't tell exactly how I got it. Just think of the beggars bagging almost every horse we had. Two of us went in for reprisals, and wanted at least some of their ponies. They were pushing us hard, and two bucks (that is the approved phraseology) let their little horses cut ahead of them as a lure. They were bold, because they thought they had us. I had a Wesley Richards, and I had a Henington. The bucks were absolutely basted. I wanted a horse to take home, so badly. We made a bold face and pitched in to them. I fared at a handsome fellow, and I think only grazed him, but I fancy I fetched the other, (that's the phraseology again I believe), and I made for the pony, that was somehow tangled up in his bridle. I thought both of the Indians were down, and had my hand on the horse's head, but he didn't like me, and snorted, and kicked when the other red skin, wounded as he was, (for I had only touched him), fired at me at almost point blank. I never knew I was hurt until I found a kind of warm oozy shower-bath of blood most blinding me. Poor devil of a savage, I didn't have the heart to kill him, some body else did, but I got the little beast. I think killing those two young braves took the heart out of them as it did out of me, but they were the aggressors. Bestly practice, sculping, is it not? Well, sir, would you believe it, I lavished my affections on that Indian horse, but it was love's labor lost. I wanted to take him home, but at Omaha I swapped him off for a jack knife, (phraseology again, excuse it). That horse hated civilization, white men, and law and order. But I assure you, I would not have missed that little skrimmage on the *Coché la poudre*, for a great deal, though having seen the pleasure of it once, I give you my word of honor, once in a life time a matter of that kind is quite sufficient. Sculping is bestly. Your people ought never to sculp."

THE PINNATED GROUSE IN ENGLAND.—Since printing our statement last week regarding the failure of the first attempt to plant pinnated grouse in England, we have received the following note from Mr. Valentine, who first instituted the experiment, to which we have lent what co-operation we could. We are glad to know that Mr. Valentine is determined not to give it up, and that he does not despair of eventual success.

JANESVILLE, WIS., August 7, 1874.

EMORY FOREST AND STREAM.

Yours of the 30 containing result of our experiment with grouse eggs in England is at hand. I am very sorry they hatched so badly, but considering all things, it is not to be wondered at. The season was well advanced when the eggs were gathered and the weather was warm. There had been a hard rain storm a few days previous, which had soiled them badly, and I have since learned that they could have been packed better. The hatching of the three partridges at least that the eggs can be shipped great distance and be hatched, and next year I shall try it again, and take more pains in packing. I shall now make arrangements for gathering a goodly quantity of eggs early next spring. Also for obtaining this fall some live birds of both pinnated and sharp-tailed varieties, which I propose sending to Mr. R. J. L. Price, North Wales. I can obtain any quantity of live birds. I propose to introduce these birds into England, and shall keep at it until I make a success of it. Yours, truly, RICHARD VALENTINE.

P. S.—I have received several letters from commission merchants in England requesting shipments of eggs or birds to them. If you have any such inquiries, please say that I am not interesting myself in this matter for the purpose of making money. If any gentlemen in England, however, desire to obtain a lot of live birds, I will procure them for them, and if necessary accompany them in *transit*, and see them well cared for. Birds are reported selling this season all through the West. We have more here than for several years past.

A RARE OPPORTUNITY.—We desire to call attention, through an advertisement that appears in our paper, to an opportunity seldom offered to sportsmen for the purchase of Canadian shooting and fishing leases, offering the very best facilities for sport in both branches. There are three of these leases. As to the reserve at Point Pelee, in Lake Erie, our readers have been repeatedly informed through our columns. The fishing can hardly be surpassed. The shooting on all three is among the best that Canada affords, and game can be multiplied indefinitely by protection. The leases run for twenty-one years, and, as they are for Ordnance Lands, will probably go at a low figure. This matter is really worthy the attention of our sportsmen, most of whom spend more time and money, annually, in search of desirable ranges than is required to purchase either one of these valuable tracts.

WISCONSIN STATE SPORTSMEN'S ASSOCIATION.—The prominent sportsmen of Wisconsin, who are interested in the preservation of fish and game, have called a convention at Portage City, August 18th, for the organization of a State Sportsmen's Association. All sportsmen are invited to attend, and contribute to the success of the enterprise, which we trust will be such a one as the State may well be proud of. Everything appears favorable for a large and successful gathering.

Messrs. G. & H. T. Anthony, photographers, of No. 591 Broadway, have published a series of views of objects of interest in Blooming Grove Park, including the Club House, Deer Park, Game-keeper's Lodge, &c. These beautiful scenes of hunting, shooting and fishing are now on sale at the Messrs. Anthony's gallery, and can also be purchased of the President of the Association, Edward R. Wilbur, Esq., No. 40 Fulton street.

TO ADVERTISERS.—We print but three pages of advertisements this week, having cleaned out every particle of dead wood and discontinued several yearly favors which have expired with the close of the volume. Should our patrons desire a renewal, they will oblige us by an early notification, as we shall keep the matter standing for a short time.

Sporting News from Abroad.

[FROM OUR SPECIAL CORRESPONDENT.]

THE English *Daily Telegraph* is again the laughing stock of the London press, for alas, the story of the fight between the man and the bull dog has turned out to be but a delusion and a snare, and but the dream of their special commissioner. I was wrong in attributing it to Mr. G. A. Sala, and I hasten to correct my error. The article in question was written by a Mr. Greenwood, and he is well known in London circles as the "Amateur Casual," from a lucky hit he made a few years ago by disguising himself as a tramp and visiting a metropolitan workhouse, the description of what he saw there being published in a sensational letter in the *Times*.

As it may be imagined, his paper on the scene witnessed at Hanley made a great noise, and the authorities in the town made every effort to discover the originators of this brutal diversion, but without the smallest success. The policemen knew nothing about it, and a liberal reward has failed to tempt any of the pitmen to disclose anything about it, though they have nothing to fear and every thing to gain by the disclosure. Lastly, the secretary of the society for the prevention of cruelty to animals has taken Mr. Greenwood down to the scene of the combat, but when there he failed to recognize the spot and could only point out the inn where he first met the dwarf who fought the dog. The landlord of the tavern denies this fact, and the public journals have arrived at no other conclusion than that the story is an entire fabrication.

To a sportsman, or rather to a sporting man, there are several glaring inconsistencies in the simple tale. The fighting dog of the pitman is not the bull dog, but the bull terrier. The bull dog is a quiet, good natured brute, with no mouth that can punish his antagonist. He can only howl on tight and allow himself to be cut to pieces joint by joint without a groan. But the bull terrier is a very different animal. Quick and active as a puma, brave as a game cock, and strong as a mastiff, he can use his level mouth and sharp teeth like a surgeon's knife, and open gashes which soon let out the life of the creature he attacks. This is the dog that the collier would have pitted against "Brammy, the dwarf." But "our special commissioner," evidently a Londoner, believes a bull dog to be the proper thing, and forgets all about the instinct of the breed which makes him "hold on," and so he represents him as biting and then letting go. The fact of the man being chained also looked suspicious and written for effect.

The amateur championship of the Thames was decided on Wednesday, the final heat being rowed between Mr. A. C. Dicker, of St. John's college, Cambridge, the holder of the sculls, and Mr. W. H. Eyre, of the Thames Rowing Club, and it resulted in the easy defeat of the latter. The river was very smooth, there being but a slight breeze, sufficient only to cool "the heated atmosphere," as the cockneys call it, and there were plenty of those who came to see and be seen. The umpire was a Mr. Brickwood, who in former days has held the palm himself, and was therefore well qualified to judge who should hold it now. At thirteen minutes past seven Mr. Searle gave them the word to go, and straightway the Cambridge man, getting to work at once, drove his light craft a quarter of a length ahead in the first three or four strokes, Mr. Eyre seeming stiff and slow to begin. At the steamboat pier Mr. Dicker led by half a length, and was sculling with great power, while his opponent pulled short and in bad form. A little farther on it was evident that there was only one man in the race, and when Mr. Dicker passed under Hammersmith Bridge in 10m. 3s. he led by a clear five lengths, and his backers were shouting themselves black in the face. Opposite Biffen's Wharf the behindmost sculler spurred vigorously, but could not catch the catboat, who, however, lost some ground by making a mistake in going too near the Middlesex shore. After this Mr. Dicker drew gradually away, and when the wished for goal was reached he had won by 100 yards in 25m. 45 2-5s., the race being rowed out by Mr. Eyre, who had not the smallest chance.

The sale of Mr. Richard Garth, C. C.'s, pointers and setters was very interesting to sportsmen, as the great celebrity, Drake, well known at field trials, where he had won a large quantity of important prizes, was to be put up without reserve. This fine old pointer, though seven years and upwards, has not lost his extraordinary powers, and is as good in the field as ever, though he has not lately appeared in public. He has been in his day most popular at the stud, and he boasts a long and excellent pedigree, tracing back to the Spanish breed. The peculiarity in Drake was "dropping" on his point instead of standing to birds, and since he introduced it this practice has become much adopted, as a dog is far steadier when "dropped" than when standing, though this steadiness is acquired by the loss of all "style," and there is no grand picture in the sportsman's foreground. Besides this, a "dropped" dog cannot be seen if the cover be at all high, as it often is, on the moors. The chief point in Drake's performances was his wonderful speed, which has never been surpassed. After much competition, he was knocked down to Mr. Lloyd Price, of Bala, North Wales, at 150 guineas, and as Mr. Price owns Belle, the champion pointer bitch, he will now have as good a pair as any man in England, or perhaps the best. Mr. Garth's entire kennel sold for £685. Of the setters Rob, by Mr. Statter's celebrated Rob Roy, fetched thirty-seven guineas. Bloom, with two puppies, brought thirty-seven guineas, and Bess, by Pawke's Rap, £35.

Doll, a pointer bitch, sold for fifty-five guineas; Major, by Drake, went for sixty-seven guineas, and the average price for setters was £22, and for pointers £32, but some puppies brought down the average, and at auction pointers and setters seldom fetch large prices, as there is no opportunity for trying them in the field.

The *Field* has reproduced this week a copy of the engraving of the Michigan grayling, which appeared in *FOREST AND STREAM*, and I may venture to add that this paper is very much increasing in circulation among English readers. The article on the grayling identifies the Michigan fish with the Arctic grayling, but the writer is at a loss to account for its having got into its present waters, and it seems there is a way for accounting for the hair on the cocoon, but not for the milk inside. Mr. Francis Francis has been writing some interesting papers on salmon fishing, and he seems to have had much sport with the blue and yellow phantom minnows in Loch Tay and other lakes and streams. He says that a lady actually caught two fine fish in one day, whilst her husband had no sport for three weeks. So the vicissitudes of fishing seem precarious.

In the parish of Oddington a vixen has chosen for an accompaniment hospital the pulpit of an old unseal church, and her cubs are allowed to be unmolested in the strange place where they first saw the light. There seems to be an abundant supply of foxes, as I read that nine cubs were found in one litter last week at Devizes, but they fell into bad hands. Otter hunting is still in full swing. Mr. Chertton's hounds met at New Bridge, on the river Taw, last week, and after an exciting hunt of two hours the otter, a fine old dog of twenty-five pounds, was broken up, but not until he had shown them fine sport, and led them a merry dance down the stream. On Saturday these same hounds met again, and I can well believe that there is no sport so thrilling as otter hunting, though you don't want horse-flesh, and have to get up very early in the morning. This time "the varmint" was killed in an old quarry pit, which had been improvised by Lord Fortescue as a shelter for fish. Perhaps no better compliment could be paid his lordship's judgment than the fact that this beast took up his quarters there, for it showed that the fish also frequented it. One of the spectators says it was a grand sight to see the waters of the still, black pool lying placidly in the midst of a wealth of yellow gorse and purple heather foam again, as the hounds drove through the water "to a gaze," and hunted the quarry fromholt toholt and strong-hold to stronghold. These rough hounds are exceedingly picturesque, and the Carlisle pack have often formed the subject of charming sketches by Landseer, Frederick Taylor, and other animal painters of "ton" and genies.

INSTONE, JR.

The Kennel.

THE SENSATION OF HYDROPHOBIA.

I was surprised to see appear, from a black cabinet, people who spoke to me; then enormously long rats ran along the furniture, always by the side. The illusion was such that at first I often changed my position to convince myself whether it was an illusion or a reality. Afterward falling stars appear at a moment when I least expected them, always from the internal to the external angle of the eye, which forced me instinctively to turn my head. Simultaneously I was seized with trembling of the skin and a feeling of unspeakable horror. In the place of darkness, or during the night, my room appeared illuminated as by a flash of lightning. At last, seeing that nothing would arrest the mysterious agent, I had recourse to the *admirum streuendum*, or thorn apple of Peru. A Catholic missionary had informed me of its wonderful efficacy fifteen years ago. I took a strong dose of it, four or five leaves, and commenced to write, although with some difficulty. Half an hour after the remedy had not taken effect, when suddenly a strong electric convulsion, like fireworks, or rather like a puff of steam, ran through all my limbs, from head to foot, producing in the entire surface of the skin a general trembling and sensation of heat, accompanied by a disposition to fly, and an indomitable feeling of terror. It seemed to me as if I had fireworks in my eyes. I rebounded as if impelled by a string. It seemed to me I was engaged in a deadly combat between the vital mortal principles, the latter of which endeavored to impose itself, tyrannically, like a denominating power, against which all the active forces reached with a superhuman energy. At the same moment I became delirious, and lost all consciousness.

The patient remains in the delirium the dominant idea of restraining himself, and of endeavoring to repossess his faculties. Nevertheless, in this state the convulsions became more frequent. They are always accompanied with the same sentiment of fear, and the necessity of reaction and flight. The muscular force is prodigiously increased; he is tired, fatigued, the weight of the body is no impediment to the limbs; it seems only necessary to make one attempt to skim over the earth, as in certain dreams. The contraction of the muscles of the legs causes a sudden fall, when he becomes perfectly rigid. He realizes he has fallen, when he is restored to consciousness by the shock of the fall, and he arises quickly. The nervous excitement is such that he is very nearly insensible to pain. The figures of the most familiar persons appear before him, threatening and provoking; and contrary to the general sentiment of terror which one feels internally from convulsions, one is intrepid and ready to brave all exterior dangers. The paroxysms commenced at half past two in the afternoon. At ten o'clock in the evening the remedy began to take effect, and the next day only a great prostration is felt. The invalid attributed all the phenomena of the delirium to the gall produced in the organic tissues by the influence of the virus.—*Courrier Des Etats Unis.*

JUDGING ON THE SHOW BENCH.—NO. 4.

THE BULL-DOG.

Head wide between the ears; ears small, disposed to fall forward and set wide apart; eyes black, wide apart; forehead prominent, making a deep "stop" or indentation between the nose and the forehead. The face as short as possible, deeply wrinkled; muzzle deep and broad; nose large, with open nostrils, lower jaw projecting; neck strong; shoulders broad; chest deep and wide; fore legs muscular and straight; hind legs straight, hocks scarcely bent at all; feet round; back set on loin, not so well developed as in appearance as in other breeds, the immense width of shoulder taking the strong appearance off. Nothing is more hateful than the waspy and "cut-in-two-in-the-middle" appearance that some of the great crabs have, having the appearance of two distinct breeds put together. Houndquarters well formed; tail going off fine at the point often twisted.

THE OTTER-HOUND.

The head should be at a mixture in appearance of the fox-hound with the rough-and-ready appearance of the real old large rough Scotch terrier breed of thirty years ago; but still at the same time ought to have a certain amount of dignity; I would go so far as to say the otter-hound's head should have all the dignity of the blood-hound's; forehead long, with a crashing look in the jaw, so that he may lay hold of the loose-skinned otter on a regular basis; the head should be broad, with nostrils large; lips pendulous; neck strong, long, and muscular, with a certain amount of throatiness; chest deep, rather narrow, but well ribbed up, but a little laxity is allowed in the looseness of loin; shoulders powerful, sloping well back; arms and thighs strong and muscular; feet a little open and webbed between the toes; coat hard, wiry, and plenty of it, close and thick at bottom, but not over short, the stern should be moderately rounded, but not so, as to be termed flared, and should get less towards the tip; colors black, white mixed with pale tan, or grey free from brown and buff; general appearance "harum-scarum," or "devil-may-care," giving the impression of a scamp neither afraid of land, rock, or water, but at home anywhere, and able to take his own part.

—Hawley's Gazette.

— "Mohawk" seems determined to have at least some of the best blood of England and Ireland in his kennel. He is expecting by the next steamer from Liverpool a bitch called "Vivid," one of Mr. Macdonald's kennel. "Vivid" is sister to "Music," winner of the puppy stakes at the Vandyke Field trials of 1872. She is by Plunket, Broma, &c. "Vivid" is in whelp to the celebrated dog, "Ranger." We shall now have some of the progeny of the wonderful animal which has won nearly every field trial he ever was entered for. Plunket's get has been almost equally good on the show bench and in the open at field trials. This combined strain ought to produce great wonders.

—We may expect a fine litter of puppies from Mohawk's Macdonald's setter, Kirby, and Raymond-Lavarrack dog, Pride of the Border. Also, Mohawk's pointer bitch, Naylor, presented him by Mr. Macdonald, and Mr. Sum. Col's black pointer dog, "Phil."

BRAINED, Crow Wing county, Minn., August 10th, 1874.

EDITOR FOREST AND STREAM:

For the benefit of your readers, I send you a copy of a prescription for the cure of distemper in dogs, given me by Mr. Hicks of Xenia, Ohio, viz: Extract of belladonna 1 grain; nitre, 4 grains; James powder, 1 grain; tincture of acetone, 1 drop; conserve of roses, a sufficiency. Make into four pills, and every other day, to be given the dog at night. It is the best remedy I have ever used, is easy to give, and is a sure cure, if the animal is cured for in other respects, diet, &c.

About two weeks ago I received from M. McKoon of Franklin, Del. county, N. Y., a very fine single pointer pup, a small, liver-colored, little chap, with tan feet and eye spots—a thoroughly undoubtedly with which I expect to have sport among the raffish breeds this fall. I notice McKoon advertises some more pups of the same breed in your paper. He knows where to do his advertising evidently, and any one who orders a pup from him may be confident that they will be fairly and squarely dealt with. Such, at least, has been the experience of yours truly.

HAYLAND.

The Horse and Course.

—The Buffalo Park Association closed its ninth annual meeting on August 7th, with the following events. The first race was a dash for the 231 class. Eleven horses were entered, ten of which started for a purse of \$4,000. Fleety Goldsmith won the race in three straight heats—time, 2:32, 2:20, 2:24. The second race was for a purse of \$7,500 for 220 horses. Red Cloud won the three last heats in 2:18, 2:14, 2:21. The great event of the meeting was Goldsmith Maid's extraordinary performance of beating her unmatched time of 2:16. Goldsmith Maid, accompanied by running mate at her wheel, trotted the first heat in 2:18. In the second heat she made one skip, and came in under the wire in the wonderful time of 2:15. The excitement on the course was immense, the spectators on the stand rising en masse, cheering Budd Doble, her driver, as the fastest time ever made by a trotting horse in the world.

—The Saratoga Racing Association held the first day of the second meeting on Saturday, August 8th. The heavy rain of the night before made the track heavy, and the race made by the winners was consequently indifferent. The first event was the Kentucky stakes. Chesapeake won in 1:18, with James A. second, and Willie Burke third. The second race was the fifth renewal of the summer handicap, a dash of two miles. There were seven entries. Survivor had a little the best of the start, but was soon overtaken by Lizzie Lucas and the Zaidéeilly, which to-

gether led, being several lengths ahead of Culpepper. Lizzie entered the home stretch three lengths ahead, the Zaidée next, Lizzie Lucas came in first, Culpepper and Catesby following. Time, 3:39.

In the steeple chase handicap, George West, Bullet, Vesuvius, and Lobelia started. The race lay between West and Bullet, both of which jumped the last two hurdles together, and ran a neck and neck race up the home stretch. West was just able to win by a short head in 5:14. The rest nowhere.

The races continued at Saratoga on August 11th. The first race was the Kenner stakes, distance two miles, for three year olds, \$100 entrance, the association adding \$1,000. Out of the fifty-four nominations only four horses came to the post. Stampede won the race by three lengths; Acrobat second, and Reform third. Time, 3:43. The second race was a mile and a half dash. Fellowcraft came in first, Katie Pence second, Governor third. Time, 2:42. The third event was the selling race, and was won by Catesby, B. F. Carver second and London third. Time, 2:11.

—The Utica Park Association held the first day of the meeting on August 11th. The city is full of strangers at tending the races, the weather is delightfully fine and the track in splendid condition. It is understood that either Smuggler or Goldsmith Maid will trot against time for a special purse of \$5,000. The following horses are here and have been entered: Monarch, Jr., winner of the 234 race at Cleveland and Bufile; Thomas Jefferson, winner of the \$10,000 stallion race at Buffalo; Bodine, winner of the 234 race at Cleveland; Magnolia, winner of the 238 purse at Cleveland; Fleety Goldsmith, winner of the 231 purse at Buffalo; Nashville, Jr., winner at Cleveland; Lucille Goldsmith, winner of the 229 race at Buffalo; Kansas Chief, winner at Cleveland; the bay gelding Castle Boy, Buzz, Kitty Wells, Berkshire Boy, Nellie, Vanity Fair, Thomas L. Young, George B. Grace, George B. Daniels, Huntress, Major Rock, Music Spotted Colt, Stewart, Maloney, Brother Jonathan, H. H. Mitchell, Sensation, Smuggler and Henry. In the pacing race for \$1,000, Copperbottom, Billy Hooper, Defiance and Sleepy Dave have been entered. We are indebted to Charles W. Huchins, Esq., of the Utica Park Association for the kind courtesies extended to us. The opening race, purse of \$3,000, for horses that had never beaten 2:34, mile heats, best three in five, was won by Monarch, Jr., Reserve second, time, 2:27, 2:24, 2:24. The second race, same day, was for a purse of \$4,000, for horses that had never beaten 2:24. Bodine won in three straight heats, Thomas Jefferson second; time, 2:21, 2:21, 2:21.

—The Board of Directors of the Rochester Driving Park Association will give a purse of \$1,000 to any horse that will beat Goldsmith Maid's time of 2:15 on their track during the meeting.

The above purse has been increased to \$6,000, and the horses entered for it are Goldsmith Maid, Judge Fullerton, American Girl and Henry.

—At Montreal, on August 5th, the fifteen mile trotting race at Decker Park, between Quebec Boy and Girda was won by the latter in 47 minutes and 20 seconds.

—Col. Richard Tenbroeck, the well known race-horse owner, was killed by Gen. Walker Whitaker, at Gilman's Station near Louisville, Ky., on August 5th, and it is reported is mortally wounded. It will be remembered that Col. Tenbroeck took several horses to England some years ago. Among the number was Umpire, who ran fourth in the English Derby, also Prior and Priores, the latter winning the Zaratovitch stakes.

—Mr. C. H. Mosher, the driver of Joe Ripley, at Lowell, last week, had reached the half-mile pole, when one of the traces broke, but he carefully reached down and secured the end of the trace, keeping his horse down to work, acting in a manner which kept his chippers throughout the heat, and winning it in 2:37.

—The Monmouth Park Association will hold an extra meeting on August 26th and the three following days. Appended are the particulars:

First day, Wednesday, August 26. First race—purse, \$250, for all ages; \$50 to the second horse. Dash, three-quarters of a mile.

Second race—Steward's Cup, \$500 in gold for three-year-olds. Mile heats, winners five pounds extra. Those beaten twice allowed five pounds. \$100 to the second horse.

Third race—Purse \$500. Purse \$500, \$25 to the second horse, \$25 to the third horse. Mile heats over four hurdles. Horses to carry welter weights of 28 pounds. Three or more to start.

Second day, Thursday, August 27. First race—Selling race, purse \$500 for all ages, one and one-half miles, winner to be sold for \$1,000.

Second race—Purse \$500, for two-year-olds, one mile. Third race—Purse, \$1,300 for all ages, four mile heats, \$1,000 to the first, \$200 to the second, \$100 to the third horse.

Third day, Saturday, August 29. First race—Purse \$500 for all ages, mile heats, winners excluded, \$400 to the first, \$100 to the second horse.

Second race—Consolation purse, \$350. Dash of mile and a half for beaten horses.

Third race—Steeple chase, purse \$500, over the usual course, \$400 to the first, \$75 to the second, \$25 to the third horse. Three or more to start. Entries to be made up by 4 P. M., August 26. It will be so that a heat race will be run each day, and in addition to the above a two-year-old stake has been opened, the date of which is not yet fixed.

CHASE OF A HORSE.—Recently, says the Detroit Free Press, as the engineer of the morning passenger train going west from the Detroit and Milwaukee Road had reached a point three miles beyond the Junction, he saw a horse on the track ahead. He "tooted" at the animal, but the horse waited until the locomotive was at his heels, and then turned and ran. The bell rang and the whistle screamed, but the horse kept the track for a full mile, and then leaped off and let the iron monster rush past him. He was there next morning to repeat the same operation, and continued it with the greatest regularity until Wednesday morning, when he extended the race further than usual, being in unusually good spirits. Coming to a cattle guard, he hesitated an instant before making the jump, and the cow-catcher caught him. He was in the air making the leap when he was struck, and thrown as high as the smoke-stack, but came down in a pond of water, and was seen to jump up and gallop off as if unhurt.

Shot Gun and Rifle.

GAME IN SEASON FOR AUGUST.

Woodcock, *philobeta minor*. Squirrels. Pinnated grouse, *capitator capta*. Snipe and Bay Birds.

Pinnated grouse, or "prairie chickens," are in season in Missouri, Illinois, Indiana, Wisconsin and Ohio, August 15th; Iowa, August 25th; Maine, New Hampshire, Massachusetts, New York, and Pennsylvania, September 1st, and in Connecticut and Kentucky, October 1st. In New Jersey there is no grouse shooting until 1881.

Details of pigeon shooting and scores of rifle matches, and other interesting matter, should be mailed so as to reach this office on Tuesday morning in each week.

—A quail district which we know from observation to be good, is at Barnegat, New Jersey, via Tuckerton Railroad, where we spent two days last week. We could hear the birds whistling in all directions, and permission can readily be obtained from most of the farmers to shoot over their ground. Here also a few English snipe are to be found, with curlew, yellow legs, bay snipe, willets, &c., in abundance a few days hence. We saw a flock of curlew numbering a hundred or so. In its season, Barnegat Bay is one of the best ducking points known on the coast, being filled with duck, geese, and brant, and there are innumerable good points and thoroughfares where they can be stooped. A flock of two hundred black ducks passed over the bay on Friday last. Selection can be made of a dozen experienced gunners, who are provided with yachts, sneak-boats, and decoys. From its accessibility Barnegat Bay ought to be a preferred resort of sportsmen from New York to Philadelphia. The Bay can be reached by Southern Railroad of New Jersey, or Pennsylvania Central R.R. Trenton.

—Bay birds have made their appearance at Salem, Massachusetts, scattering in and small bunches.

—A few friends have had some rare sport during the past month along the base of the Short Hills, which face the eastern slope of the Blue Ridge, in Loudoun county, Va., not far from Snicker's Gap, after woodcock, comparatively a new field, and very prolific. The oldest inhabitant (colored) in that section says the swamps are very little hunted except for the coons and opossums. A Mr. Walker of Washington City, bagged thirty cock in a half day's shooting. There promises to be fine sport in quail season; in that section the whole country is alive with them.

—Bedford writes from Shelbyville, Tennessee, Aug. 10th, that quail are very abundant in that vicinity this season, there being no rain in June and July to drown the young ones.

—The Buckeye Shooting Club of Warren, Ohio, held their tournament on August 6th and 7th. In the single-bird sweepstake of five single rises at twenty-one yards, E. C. Hinsdale, of Syracuse, took the first prize, and E. H. Hudson of Syracuse the second. The regular match, ten single birds, twenty-one yards, was won by E. H. Hudson of Syracuse, prize, \$100; second, \$75, won by M. D. Phelps of Bristol, Ohio; third, \$50, by F. Wilson of Warren, Ohio; fourth, \$25, by J. S. Kennell of Warren, Ohio, and the fifth, \$10, by W. J. Fournier of Cleveland, Ohio. Hudson having made the best average during the tournament was awarded a prize of \$25. The last day was devoted to single and double sweepstake shooting.

We have received from E. B. Barnes Esq., the Secretary, a copy of the constitution and by-laws of the Tecumseh Sporting Club of Nebraska, organized last month, and to which we have referred in a previous issue. Last week, Saturday, this club had a grand match hunt, nine members each side, in which "our side" scored 619 points to 315, the losing party paying for supper for all. In scoring, grouse counted 5 points and hawks 10.

—The following note from J. H. Batty will be read with interest by his numerous friends:

FOOT BENTON, MONTANA, July, 1874.

EDITOR FOREST AND STREAM:

I arrived at St. Paul's after the Survey had left, and followed on after them, and shall overtake them in a few days. Game is very plentiful out here, and I have secured a large number of skins. Cary will have to look out when he tries to join us, as the Sioux will "take in out of the wet" any single man found on the plains.

Mr. Fox of the New York Herald is trying to get with our party, but I don't think they will take him along. He wanted me to write for the Herald, but I told him I could not.

There is a great deal more material here for article and sketches than in Colorado. The scouts tell me I will be among the buffalo in ten days, and you may guess how anxious I am to get a shot at them. I will write you again in a few days.

J. H. B.

MASSACHUSETTS BIRD LAWS.—Chief of Police E. H. Savage of Boston, has caused to be printed in poster form and freely distributed the following extract from chapter 501, statute of 1870, as amended, concerning birds. This is very opportune, and a timely warning to all who are disposed to violate the laws.

"Whoever kills or takes any wild bird, (except as herein stated,) at any season of the year, or wilfully disturbs or destroys their nests and eggs, shall forfeit for each offence double the value of the bird."

The following are exceptions: Marsh, shore and beach birds, such as plover and sandpipers, may be killed after 15th of July, till April 1st; black duck, summer ducks, and teal, after September 1st; other fresh water ducks, geese, all sea ducks, birds of prey, crow blackbirds, crows, herons, bitterns, Wilson's snipe, black breast, red breast and chicken plover at any time of year, and a license can be obtained to shoot wild pigeons.

SHELLS.

SHREWSBURY, August 4th, 1874.

EDITOR FOREST AND STREAM:—In answer to your correspondent Herbert, in regard to the difference in the sizes of the bore of metallic and paper shells, I will state my judgment was formed (and I see no reason to alter it) from a careful measurement of the Sturtevant and Berdan shells, and Eley's green and blue shells, and judged the measurements by the table of the sizes of the bores of guns, as given in Greener's book on Modern Breech Loaders.

I have used the paper shells made by the T. M. C. Co., and find them good, but do not like the thin single anvil used in them. I believe it is not steady under the blow from a vertical striker, and think the same reason will apply to the complaint of mis-fire in the Sturtevant shell.

As to carrying loaded metal shells, surely no one can doubt the danger from an accidental discharge of one, as compared with paper ones; but because it is thought not likely to occur does not lessen the danger, hence the reason of my position: "Does it pay to take such chances?"

I can join hands with Herbert in the desire of having sporting matters discussed. Sportsmen, as a class, I am sorry to say, are not well posted in regard to sporting matters, and to prove I lay no claim to be an exception, I will ask friend Herbert to give the particulars of the system of choke boring, as mentioned by him as being applied to the guns lately tested at Chicago. CINCINNATI, Ohio.

CREEDMOOR.—On Wednesday last, Aug. 5th, the sixth competition for selection of the riflemen to compete with the Irish team took place. The following will show the scoring made, including the shooting of Wednesday:—

Name	Score	Name	Score
Henry Fulton	126	E. H. Sanford	129
J. S. Conlin	155	General T. S. Dakin	128
A. Anderson	142	W. Yale	124
A. V. Canfield, Jr.	139	L. Becker	124
L. L. Hepburn	134	Col. Gildersleeve	123
J. T. B. Collins	132	M. Ballard	119

The following are the scores made on Wednesday, fifteen shots at 800, fifteen at 900, and twenty at 1,000:—

Name	800 Yds.	900 Yds.	1000 Yds.	Total.
Henry Fulton	52	54	49	155
Lieut. Col. Gildersleeve	43	52	54	149
A. V. Canfield, Jr.	49	49	49	147
J. S. Conlin	46	41	49	136
L. L. Hepburn	41	46	49	136
P. S. Gardner	49	44	44	137
J. T. B. Collins	35	39	56	130
Leon Becker	51	35	43	129
E. H. Sanford	38	36	49	123
General T. S. Dakin	31	39	51	121
G. W. Yale	43	45	33	121
L. M. Ballard	40	33	33	106
J. E. Whitely	43	39	32	114
A. Anderson	34	35	36	105
W. W. Skiddy	30	35	36	101

On Thursday, the 1st Battalion, Col. Webster, were at Creedmoor. The following are the eight best scores:

Name	300 Yds.	Total.	500 Yds.	Total.	700 Yds.	Total.
Private Zettler, Co. H	2 2 3 2 2	11	2 3 4 2 2	13	3 4	34
Private Schmitt, Co. G	0 3 2 3 3	11	3 0 3 3 3	12	3 3	33
Captain O'Brien, Co. B	2 2 2 2 2	10	2 0 2 3 4	12	3 3	33
Private Gorton, Co. G	2 2 2 2 2	10	2 0 3 3 4	12	3 3	33
Private Schaefer, Co. B	2 2 2 2 3	13	3 0 3 0 3	9	3 2	32
Private Scott, Co. A	3 2 2 2 3	13	3 0 3 0 3	9	3 2	32
Sergeant Twillier, Co. A	3 2 2 2 0	13	3 0 2 3 3	13	3 1	31
Captain Spencer, Co. A	2 2 2 2 0	8	3 2 2 2 3	13	3 1	31

—There were two matches at Creedmoor, Long Island, on Saturday August 8th, the contest for the "long range badge," open only to members of the Amateur Rifle Club, and the Remington diamond badge, open to all members of the National Rifle Association. There were only eight entries for the first contest, but the shooting was the best that has ever occurred on the range. Some of the members of the Amateur Club state that the average of the six best scores made equals 80.5-6 per cent., or, in other words that the shooting shows a higher excellence of merit than that of the champion team at Wimbledon this year. Mr. L. L. Hepburn won the badge presented by the Amateur Rifle Club. The following is the score of the first six entries:—

Name	800 Yds.	900 Yds.	1000 Yds.	Total.
L. L. Hepburn	18	19	17	54
Henry Fulton	18	16	16	50
A. V. Canfield, Jr.	13	17	18	48
Captain J. Bodine	17	17	13	47
General T. S. Dakin	16	16	14	46
A. Anderson	18	15	13	46

The fourth contest for the Remington diamond badge opened at three o'clock. There were fourteen entries, distance 800, 900, and 1,000 yards, two sighting and seven scoring shots, any position within the rules. The badge was won by Mr. A. V. Canfield, Jr., of the Twenty-second Regiment, by a score of seventy-three out of a possible eighty points. As will be seen by the scores, Mr. J. T. B. Collins also made a score of seventy-three; but, under the rules of the association, Mr. Canfield was declared the victor, as his score at the previous range exceeded that of Mr. Collins by two points. The badge was previously in possession of Capt. Bodine, and was won by a score of sixty-nine points. Mr. Collins, the second in the list, becomes the possessor of a "Whitworth" rifle. The following is the score of the first six entries:—

Name	800 Yds.	900 Yds.	1000 Yds.	Total.
A. V. Canfield, Jr.	24	26	23	73
J. T. B. Collins	26	24	23	73
C. Bodine	23	25	24	72
L. L. Hepburn	24	27	18	69
General T. S. Dakin	24	25	16	65
A. Anderson	26	20	19	65

—An Irish-American Rifle Club was organized last week for the purpose of promoting rifle practice. The rules and regulations adopted are similar to those of the National Rifle Association. The following officers were elected for the ensuing years:—Gen. F. F. Millen, President; Bethel Burton, the inventor of the Ward Burton rifle, Vice President; Adjt. W. H. Murphy, Secretary and Treasurer. The Executive Committee, in addition to the foregoing members, includes the following:—J. J. O'Kelly, Major P. M. Haverly, and Dr. McGuire.

Capt. Karl Klein with the separate Troop Cavalry and Lieut. Barlow with the Washington Grey Troop were at Creedmoor on Thursday, July 30th, and tried their skill at the range. This shooting is worthy of particular comment, as regulation military carbines were used, an arm, by the way, which when handled is capable of very excellent shooting, as may be seen by the scores. Ranges, of course,

were shortened to 100 and 300 yards. We are pleased to state that the order of the members of the two troops was excellent. The team of the troops made, with five shots at each range, 330, which is excellent. We append the scores of the first fifteen:

<i>Names.</i>	<i>100 yds.</i>	<i>Total.</i>	<i>300 yds.</i>	<i>Total.</i>	<i>Grand Total.</i>
Sergeant Nagel.....	4 3 4 3 4	18	3 2 3 4 2	14	32
Bugler Specht.....	4 2 2 4 3	15	3 2 3 3 3	13	28
Corporal Kimpel.....	3 3 2 4 2	14	3 4 4 0 3	14	28
Private Imhoff.....	4 2 2 4 3	16	3 0 3 2 3	12	28
Quartermaster Müller.....	3 3 4 2 3	15	2 3 3 3 2	13	28
Major Aery.....	2 3 2 4 2	11	3 2 3 3 3	14	25
Private Bonner.....	3 3 2 2 3	13	3 4 0 4 3	14	27
Private Dillenburgh.....	2 3 3 3 3	14	3 0 3 0 4	13	27
Corporal Fulton.....	4 2 3 3 3	15	3 4 0 2 3	12	27
Sergeant Kelsey.....	3 3 2 2 3	13	3 0 2 3 3	11	24
Private Walter.....	3 3 2 3 4	15	2 0 3 3 3	11	26
Captain Karl Klein.....	3 3 2 3 3	11	2 0 3 3 3	11	22
Sergeant Regeleisen.....	3 3 3 3 2	14	2 2 3 2 2	11	25
Corporal Schwerdt.....	2 3 3 3 3	13	2 0 3 3 3	12	25
Private Weygold.....	2 3 3 3 3	13	3 0 2 3 2	12	25

The team of the Washington Greys did not make as high a score, but it must be remembered that many of the men are using their arms at the range for the first time. We append the scores of the best twelve:

Name	100 Yds.	300 Yds.	Total.
Corporal Trimmer	13	17	30
Private King	14	13	27
Private Montgomery	12	14	26
Private Decker	14	11	25
Ex-Captain Wylie	13	9	22
Sergeant Van Baron	13	9	22
Lieutenant Baterson	11	9	20
Private Kelsey	12	8	20
Private Fuller	12	7	19
Private Hovey	13	6	19
Sergeant McElhugh	9	10	19
Private McKnight	10	9	19

OFFICE NATIONAL RIFLE ASSOCIATION,
93 Nassau street, New York.

EDITOR FOREST AND STREAM:

The twenty-ninth regular meeting of the Board of Directors National Rifle Association was held on Tuesday, August 4th, at the office of the association, at 2 o'clock P. M. General Alexander Shaler in the chair.

The Prize Committee reported and presented a badge for employees of the association.

On motion the matter was referred back to Prize Committee with power.

General Shaler offered the following resolution, which was adopted.

Resolved, That the Committee on Prizes, or a majority thereof, take immediate action in relation to badges for directors and life members.

On motion of the Secretary, the matter of straightening the boundary line of the Range at Creedmoor, on the side adjoining the Kissam estate, was referred to the Range Committee, with power.

Offered by the Secretary and adopted:

Resolved, That a ticket office and shelter at the entrance to the Range be erected by the Range Committee at an expense not exceeding \$100.

Offered by the Secretary and adopted:

Resolved, That the Range Committee be instructed to erect a shed and refreshment stand in rear of the 1,000 yards firing points, similar in construction to those already erected upon the Range.

On application from G. B. Shepherd, photographer, for permission to place his apparatus upon the Range and photograph groups, scenes, &c., was referred to Range Committee.

H. A. GILDERSLEEVE, Secretary.

A. H. WESTON, Ass't. Sec.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly make their contributions not later than Monday in each week.

RULES FOR ARCHERY.

NUMBER THREE.

TARGETS.

TARGETS are generally made of straw rope, upon it is sewn the facing, a piece of canvas, having four bands next to that of the rope or scarlet; then blue; black; then white; outside this last is the *petticoat*, of green, merely to make the edge of this ring distinct. The diameter is four feet, consequently each ring is four inches and eight-tenths in width.

The targets are usually, for gentlemen, placed at one hundred, eighty, and sixty yards distance from each other; and for ladies, at sixty, fifty, and thirty yards. It is recommended that beginners should commence with the shortest distance, and increase it in proportion to their improvement.

Targets of different sizes may be bought ready-made, with iron stands for supporting them. The legs of these are bevelled off to a narrow edge, so as to present as small a surface as possible to the arrow; this gradually reduces the chances of their being struck.

Whatever the distance may be that you intend to shoot, you should always have two targets, one at each end, otherwise you will be tempted to shoot more than three arrows, which are quite enough at one time, before you go for them, or send a person to fetch them; whereas by having two targets, in addition to the exercise of walking from one target to the other, you give a relaxation to those muscles you have just exercised, by calling a different set into play. The centre of the gold should be four feet from the ground. The value of the different circles is generally allowed to be, for the gold, 9; red, 7; blue, 5; black, 3; and white, 1.

Ladies' targets differ in no other respect than in being much smaller. The only objection to their shooting at targets four feet in diameter is, that at fifty yards, the distance generally shot by ladies, the targets would be soon worn out by constant piercing. Where this objection does not exist, we would recommend the large ones, as it is encouraging to beginners to get arrows into the target.

Where circumstances will admit of it, it is advisable to erect butts for the purpose of practice. These should be made of layers of turf. They may be made of any height within the archer's reach, and placed opposite each other

at any distance at which it is desirable to practice. A level meadow should be chosen, and it is better that the butts should face more to the north and south, than to the east and west, as the sun in the summer evenings will be shining low in the west, and thus in the eyes of the archer, when standing at the east butt. The shape of them is immaterial, the object being to receive such arrows as would after missing the target, light on the ground. The targets are suspended from a peg placed in the upper part of the front of the butt.

After practising at butts, the archer will find considerable difference in the appearance of targets when placed on stands; but this may easily be surmounted by a few hours' practice at them, which we would recommend particularly previously to any great occasion or exhibition. Ladies especially will be induced to shoot more frequently at butts than at common target stands, as the necessity of stooping for the arrows is in a great measure removed; independence of which there is a very considerable saving of time as well as expenditure for arrows, the expense of erecting butts not being equal to the prime cost of half a dozen arrows, and in the country where the use of butts would most probably be adopted, it is not always possible to procure arrows. Where it is practicable, we would recommend that targets or butts should be placed with the ground beyond sloping towards them; as in the summer, when the surface is dry and hard, arrows are very liable to glance along the ground for a considerable distance without sticking in where they alight.

THE GUARD.

In old times used to be formed of a piece of stout leather, which was buckled round the left arm, to prevent the string of the bow from hurting it. Now, the best sort of guard is made of patent leather, which draws on over the hand and requires neither buckles nor straps to keep it in place. Ladies' guards are still made of leather lined with silk and padded, and are buckled round the bow arm.

THE GLOVE.

Formerly this resembled a glove more than it does at present; it consists now of three little leather tubes, each sewn to the three ends of a piece of leather cut into three strips, and fastened round the wrist. It is used to save the fingers from being cut by the string. We are of opinion that the use of two fingers in drawing is preferable to that of three; two must divide the string more equally, and the loose is generally better. A person who draws with two fingers only, is seldom guilty of holding the bow when drawn to its greatest extent. The advocates for three fingers argue in his favor, that the use of the third finger gives a great deal of strength. We do not deny this, but still recommend the first two fingers only to be used, and these kept in as straight a line as possible with the elbow.

Some beginners draw the string with the first two joints of the fingers bent, in order to keep the string from slipping off; when this is the case the fingers alone sustain all the strength, whereas if they are kept in nearly a straight line with the elbow, with the first joint only bent, it is possible, the muscles of the body and arm may be advantageously exerted.

Beginners, as they commence drawing, will frequently find that the arrows will leave the bow, and after describing a segment of a circle, of which the string seems to be the centre, will fall on the ground to the left of the bow arm. This is caused by the fingers being put too far over the string, which makes them turn from the bow, whereas when the fingers are put in the proper position for drawing the string, it has a tendency to twist towards the bow, and the neck of the arrow fitting the string participates in a like movement.

THE BELT.

Some means of carrying the arrows is necessary, and for this purpose a belt which buckles round the waist has been found convenient; from this is suspended a pouch, or tube, covered with leather, into which the points of the arrows are put; the part on which the feathers are, projecting outward, is less liable to injury.

THE TASSEL.

This is suspended from the belt, and its use is to remove any dirt from the point of the arrow. It is generally made of worsted.

THE GREASE BOX.

This is a little box suspended from the belt and contains a composition of suet, or any grease; the object of it, is to make the string slip more easily from the fingers, for which purpose a little may occasionally be put on the finger stall. It is, however, rarely used, and may be discarded. A tin case or cover, generally painted green, is recommended for keeping such arrows in as are not required for immediate use; being very susceptible of injury, it is highly desirable to protect them in every possible way.

—Cricket is flourishing in England this year as it never has before. The *London Telegraph*, in a recent editorial on the game, says:

"Cricket, whether deservedly or not, is certainly of all English games the most popular and universal; nor is its acknowledged supremacy even now being disturbed. It is true, as yet, somewhat altered since the introduction of overland bowling and the abolition of the old rules, which regulated the height of the delivery. Day by day our quick bowlers appear to grow quicker, and season after season pads and gloves have to be more and more carefully constructed. The bowling, too, in its turn, has reacted upon the batting, and our champion batsmen now hit hard and true, and are seldom to be trusted to play up to their real mark, unless matched against a deluge of force and accurate as to seem a shot from a gun. Slashing batsmen, again, have improved the quality of the fielding, and altogether the game has so altered that the champions of half a century ago would now find it somewhat difficult to hold their own in an ordinary county match. What India rubber cushions and the side stroke have been for billiards, and for cricket, the introduction of great national games, and the result is that, whereas in the good old times everybody played cricket more or less 'indifferently well,' the game now needs not only a quick eye and a steady hand, but also considerable courage and nerve and very long and continuous practice. Yet, notwithstanding this process of 'specialization,' its old supremacy remains indisputable, and so far from showing any symptom of dying out, the game has, on the contrary,

definitely established itself—not, perhaps, in America, where "base ball" has nearly supplanted it, but at any rate in all the English colonies and even under the tropical skies of India, Ceylon and China."

—In the cricket match played at Lord's August 3 and 4, between the eleven of the Marylebone Club and twenty-two base ball players, resulted in the success of the Americans. When the first day's play in this match had terminated, the English eleven had scored 88 runs, with the loss of wickets only, and no doubt they calculated upon getting nearly as many more for the loss of the remaining five wickets, which would have given them about 160 for their first inning's score; and being well aware that the majority of their opponents were novices at cricket they felt sure of disposing of them for 100 at most, if not half that number. So when on Tuesday the weather opened with a threatened rain storm, which made it probable that the match would not be played out, and that a draw would necessarily be the result of the contest, the eleven proposed to Harry Wright to decide the match by the result of the first innings, thereby insuring, as they thought, a victory for themselves, instead of an unsatisfactory draw. This, by the way, made all bets on the match depend upon the result of the first innings play, and, therefore, those who bet on the English side, meaning, lose. This arrangement was not objected to, but when they went to win, and by improved play, they disposed of the remaining five wickets of the English eleven for 17 runs only, thereby limiting the total score to 105. The twenty-two then went to the bat, and when their tenth wicket fell they had scored 24, Spaulding playing in fine style for 23, though it was his first season at cricket. They had four wickets to fall when their score reached one hundred and seven, the twenty-two winning the match by two runs, with four wickets to spare, greatly to the surprise of the English players, who had underrated the base ball players' ability at the bat.

—In August 7 and 8 the twenty-two played against the Princes club eleven at Princes grounds, and in the first innings they not only disposed of the eleven for 21 runs only, but they ran up a score of 110, and putting the eleven out for 39 in their second innings, the Americans came in victorious in twenty-two, with 40 runs to spare. On August 8th they played the Richmond club eleven at the Old Deer Park Grounds at Richmond, and they disposed of the eleven for 103 runs, and when the first day's play ended they had scored 45, with the loss of five wickets.

—As a matter of future reference we give below a summary of the international cricket matches played in this country during 1859, 1869 and 1872, in which United States twenty-two resident cricketers took part against English representative twelves. The statistics below were taken from Mr. Chadwick's American Cricket Manual, recently published:

In the match played at Hoboken, October 3, 4 and 5, 1859, between the English eleven and twenty-two of the United States, the eleven scored 156 in one inning to 38 and 54 by the United States twenty-two in two innings, the latter winning including the best resident cricketers of New York, Philadelphia and Boston.

In the match in Philadelphia by the same eleven against twenty-two of the United States, October 10 and 12, 1859, the eleven scored 126 in their first inning, against 94 by the twenty-two, the latter scoring 60 in their second, the eleven getting the required 29 to win, with the loss of three wickets.

In the match played at Rochester, October 21, 24 and 25, 1859, the same eleven scored 171 in one inning against 59 and 62 by the twenty-two. Harry Wright's 13 was the best score on the part of the twenty-two, and he took the most wickets. The English eleven included Hayward, Carpenter, Diver, Cuffyn, Locker, Grundy, Stephenson, John Lillywhite, Wiston, Jackson and Parr.

In the match played at Hudson City on September 16, 17 and 18, 1868, the English eleven scored 175 in one inning, against 61 and 88 by the United States twenty-two.

On September 28, 1868, the same eleven played a United States twenty-two in Boston, in which the eleven scored 109 to 39 in the first inning and 71 to 37 in the second, George Wright's 12 being the best score on the part of the twenty-two.

In the match played immediately afterwards, in Philadelphia by the same eleven, the English scored 92 to 37 in the twenty-two's 88 in the first inning, and 36—with three wickets to fall—to 35 in the second inning, the twenty-two being all Philadelphia players.

In the match played at Germantown October 8 and 10, 1868, between the same eleven and twenty-two of New York and Philadelphia, the eleven scored 117 to 47 in the first inning, and 64 to 63 in the second, the eleven having 181 to 100.

On October 13 the same eleven defeated twenty-two of New York, Philadelphia and Boston by a score of 143 to 70 by the twenty-two, rain stopping the match. The eleven included Jupp, Charlwood, Rowbottom, Lillywhite, Freeman, Wilsner, Smith, Shaw, Ponley, Tarrant and Griffith.

In 1872 the "gentlemen's twelve" came to the United States, the team including W. G. Grace, Ottaway, Appleby, Hornaby, Hindaw, Lord Harris, Francis, F. Lubbock, A. Lubbock, Rose, Pickering and Fitzgerald. On September 12 and 14 this team played against a United States twenty-two and won by a score of 249 in one inning to 66 and 44 in two by the twenty-two, George Wright's 14 being the best score of the twenty-two, he also taking the most wickets.

On September 21, 23 and 24 the twelve played against a twenty-two of Philadelphia, scoring 105 to 63 in the first inning, and 34—with three wickets to fall—against 74 in the second.

On September 26, 1872, the last international match in this country took place in Boston, when the same twelve scored 51 in the first inning against 51 by the twenty-two in Boston, the twenty-two scoring 43 in their second inning, the twelve scoring 22, with six wickets down, including Grace, bowled by Eastwood for 5 only—the game being "drawn," as there was not time to complete it. In this match four of the Red Stockings men played—George Wright taking the most wickets. This was the smallest score made by an English team in America.

—The Mutual base ball players had a game of cricket with the Chicago Cricket Club, and the ball tossers scored 41 and 45 to 44 and 43, the cricketers winning by 87 to 86, with four wickets to fall. Hatfield led the score of the Mutuals with 30, Malone's 13 being the best on the other side.

—The Toronto Cricket Club of Toronto, and the Peninsulars of Detroit, played a match game last week. During the game several of the players were hurt. In the first innings of the Peninsulars they made a total of 118, in the second innings 24, making the aggregate 141 runs. The Toronto's scored 56 in the first and 97 in the second innings, showing the Toronto's the winners by 12 runs.

—The international cricket tournament will commence at Halifax, Nova Scotia, on the 18th instant. There will be four teams—Canada, England, America and Halifax. The English team is composed of officers of the army. The American team comes from Philadelphia.

—The Philadelphia twelve left town August 10th for Halifax, where they play next Monday.

—Two important results are likely to follow the tour of the American base ball players to England, results, too, beneficial alike to base ball and cricket; the one being a full recognition of the claim of base ball to the title of the American "national game," and the other a decided increase in the popularity of cricket in America, for we all of us take a fancy very soon to that in which we stand a chance of excelling, and the promise is that our returning base ball heroes will be able to play any cricket eleven out English resident cricketers can place in the field against them, and that, too, eleven vs. eleven, equal sides, base ball players vs. cricketers. Though the exhibition games of base ball played in England have thus far evidently been below the standard of the leading matches played here between professional experts, the English audiences have been greatly delighted with what they have seen of our game, the "splendid fielding of the Americans" eliciting the highest praise from the English press and loud plaudits from the spectators. Thus far the record of the base ball games played in England up to the time of our going to press is as follows:—

July 30—Athletic vs. Boston, at Liverpool..... 14 to 11
July 31—Boston vs. Athletic, at Liverpool..... 23 to 11
Aug. 1—Athletic vs. Boston, at Manchester..... 19 to 12
Aug. 1—Boston vs. Athletic, at London..... 24 to 7
Aug. 2—Boston vs. Athletic, at London..... 14 to 11
Aug. 3—Athletic vs. Boston, at London..... 13 to 3
Aug. 3—Athletic vs. Boston, at Richmond..... 11 to 3
Aug. 4—Boston vs. Athletic, at Crystal Palace..... 17 to 8

These exhibitions, interesting as they have not yet been, have, however, been thrown into the shade by the success of the twenty-two in their matches at cricket, it being entirely unexpected both by the Americans, as well as English. The result, of course, has been to elicit a high respect for a game that admits of such skillful fielding. The London *Field* of July 25, in a lengthy and ably written article explanatory of base ball, says:—"Base ball is a scientific game, more difficult than the game we are in the habit of judging hastily from the outward semblance can possibly imagine; it is, in fact, the cricket of the American continent." "In the cricket field," says the editor in question, "there is at times a wearisome monotony that is utterly unknown in base ball." "The theory is not unlike that of rowders, in that bases have to be run, but the details are in every way dissimilar." "To see the best players field even, is a sight that no one who does a cricketer's heart good, the agility, dash, and the accuracy of turning and catching possessed by the Americans being wonderful."

—The New York Athletic Club will hold their annual fall games on the new club grounds at Mott Haven on September 26. The competitions are open to all amateurs in the United States and Dominion of Canada. The entries will close on September 19, and must be accompanied by a guarantee from some club or person known to W. E. Sinclair, Secretary of N. Y. A. C.

—The Putnam's, of Troy, have reorganized, and would be pleased to play any amateur or professional clubs that may choose to visit them. The Nationals, of Washington, play there early in September at Troy, as do also the Philadelphians. The Harvard Bush, of the Harvard club, is the captain of the Putnam's.

—On August 1st the new Cincinnati "Red Stockings" defeated the Milford nine at Milford by 12 to 4.

—On August 3d, the Lees of New Orleans defeated the Lone Stars by a score of 16 to 6, rather a different score from that of their last fine display.

In the match at Easton on the 7th of August between the Easton nine and the Nassau of Brooklyn, rain stopped the game at the close of the third innings. Eastons 6, Nassaus 3.

On August 7th the Dauntless club, of Watertown, N. Y., defeated the Ogdensburg nine by 19 to 6;

—On August 7th the Harvards defeated the Grafton club by 12 to 7.

—The Athletics of New York defeated the Stars of Newark by 20 to 14 on August 10th, at Brooklyn.

—The Nameless and Chelsea clubs played their first match at the Union grounds, Brooklyn, August 10th. Scores 11 to 5 in favor of Chelsea.

—The Hartford's whipped the Philadelphias by 5 to 3 August 10th at 1st Avenue. The "Nassaus" made 10 to 2 in the first innings, closely contested afterwards. Stearns pitched for Hartford.

—The Brooklyn amateur ten for the grand match on the Union grounds, August 17th, New York vs. Brooklyn, was selected on Monday night. It includes Grierson, Britt, Dodge, West, Doerschler, Kohler, Clane, Rule, Dunn and Bunce. The New York nine will be chosen from the Fly Aways, Arlington, Keystone, Waverly, and Silver Star nines.

—The best played professional match of August thus far was the Mutual and Chicago game, of August 8th, won by the Mutuals by 3 to 2.

—A very pretty played game took place at New Haven August 3, in which the Madison nine of New Haven defeated the Unions of Bridgeport by 7 to 6 only.

—The best game out West this season by local club nines was that played August 4th at Louisville between the Eagle nine and the Westerns, of Keokuk, score 5 to 3 only, in favor of Eagles.

—The best game at Prospect Park this season was that played August 4th—Nassaus 4, Keystone 1.

—The Baltimore base ball club defeated the Baltimore cricket club at Newburgh Park, August 6th, by a score of 94 to 70, in a full four innings game.

—The postponed game between the Wynkoop & Hallenbeck nine and the Harpers' Brothers nine will come off next Saturday afternoon at Prospect Park.

—The sports at St. Anne's, near Montreal, last week were in every respect remarkably successful. J. Anderson took the first prize in the running long jump, covering eighteen feet. McGillivray won the running high jump, clearing five feet three inches. In the boys' race—quarter of a mile for boys under fourteen years, John McRobie won; for boys under twelve years, W. McIntyre won; for youngsters under ten years, J. McIntyre won. In the quarter of a mile hurdle race W. L. Allen came in first. There were several other races and aquatic sports. A novel feature in the day's programme was a canoe race, paddled by darkies. The captain of the winning birch-bark is known as "Black Francis." The day's pleasure concluded with a dinner given by the President, B. Devlin Esq.

—President Grant's two sons, Ulysses Grant jr., and Jesse Grant, Lieutenant Harry Otis, and a son of Thomas Murphy, ex-collector of the port of New York arrived at Pittsburg, Penn., August 9. They had been on a pedestrian pleasure tour through the Alleghany Mountains, and had walked all the way from Huntingdon, Penn., a distance of two hundred miles. This is another good example in the proper direction.

—The Nationals of Washington intend visiting New York the first week in September, playing the Baltimore and Philadelphias on the way. They will play the Mutuals and Atlantics in New York on the Union Grounds on successive days.

New Publications.

BOOKS RECEIVED.

OSGOOD'S MIDDLE STATES AND NEW ENGLAND. Two volumes. A handbook for travellers, with maps, plans, &c. Boston: Jas. R. Osgood & Co.

THE TROTTER HORSE OF AMERICA. By Hiram W. Woodruff. Philadelphia: Porter and Coates.

This new candidate for the favor of the public in general, and the lovers of good horses and well trained animals in particular, comes to us at a fitting time, and in a garb every way adapted to the work. Who is there, all over America, that loves a good, spirited, well trained horse, and the man in which he should be an earnest, die-hard devotee, either personally or by reputation, H. W. Woodruff? Emphatically he was entitled to the well merited title he so long here unquestioned, of the "great horse trainer and crack groom of America." In this book will be found the full particulars, the whole art of how to get the most out of a horse. We have often seen Hiram put a good steed over the course, and the mere recollection of the same still on his mind, and this we well write, and with very comprehensive and realisation upon horse and horsemanship in all its departments, and when we recommend it as a book which every man who owns a good horse should also own, we do not hesitate to give the endorsement of the FOREST AND STREAM to a book worth a place among their choicest sporting works.

HOW TO BECOME AN EXPERT SHOT. With Regulations of the National Rifle Association, with Blanks for Recording Matches. New York: Mercantile Publishing Co., No. 1 Park Place, 1874.

We greet with pleasure all accessions to our rifle literature, and the neat, handy volume under review we think will be found of the greatest use to our riflemen, military or otherwise, who practice at rifle ranges. While giving us excellent advice to the marksman, may be found incorporated the allowances necessary for effects of wind, weather, to the right or left, and all the minutiae necessary to make good shooting. A very necessary addition to the book is a complete copy of the regulations in force at Creedmoor, and there is also to be found blank pages with the targets to be used on the ground for recording the scoring made.

THE SPORTSMAN'S CLUB AFLOAT. By Harry Castlemon.

Philadelphia: Porter & Coates.
This is one of the most readable books of the day for a seaside companion or a friend to take to the shady wood, the car, or at home; you will be pleased with this best of good conversationists. First he speaks freshly and quaintly. Well, we shall not tell you of what. Get the book and read it and you will then say you have had your money's worth in just the kind of reading for shore or woodland hours.

Popular Science Monthly for August. New York: D. Appleton & Co.

Another of these aids to scientific investigation and philosophy, the arts and hidden mysteries of our inner life, is received, and in it will be found much food for profound thought, and much instruction upon subjects not usually found, even in the best of our literature. To put it in a literary point of view, this well known and established publication would be praise unneeded. We would therefore only call the attention of persons who may not have read or seen this monthly work that they should for once purchase the last number and read very carefully article No. 1 upon the discovery of oxygen gas, and thank old Dr. Priestly for his world wide benefit. No. 11, "The Physics of Ice," is an illustrated paper, and gives a full and interesting history of this now great commercial staple of luxury. Its history, in 1833, is like an old romance, and not like a dry commercial fact. The whole phenomena of freezing and what takes place, is well worth the price of this number. We would be gratified to notice all the leading articles and the miscellany also, but unwillingly close our notice of this number with an earnest recommendation of its high position and value to the student and general reader.

CORRECTION.—In a recent notice of "Under the Trees," a book published by Harper & Bros., we spoke of its author as the same person with "The Fishes." This is a mistake. The author is the editor, S. I. Prime, instead of W. G. Prime who is the author of the latter book.

TO RESTORE THE DROWNING.—It may be of service to some of our readers to bear in mind the following standing directions of the Massachusetts Humane Society for the resuscitation of persons apparently drowned.—Convey the body to the nearest house with head raised. Strip and rub dry. Wrap in blankets. Inflate the lungs by blowing the nostrils with thumb and finger, and blowing into the mouth forcibly, and then pressing with hand on the chest. Again blow in the mouth and press on the chest, and so on, for ten minutes, or until breathing begins. Keep the body warm, extremities also. Continue rubbing—do not give up so long as there is any possible chance of success.

—The meteorological record for the month of July, kept by George F. Alden, Esq., Observer at New Smyrna, Florida, shows a maximum temperature of 93 degrees, a minimum temperature of 76 degrees, and an average noonday temperature of 85 degrees and 23 minutes, which is very equable weather, and by no means insufferable. Rain-fall for the month a little over 5½ inches.

A WINE CARD.

Babbling and sparkling, like the dew of morn;
Cold as the ice from whose embrace 'twas torn;
Brightest of amber, streaked with foamy fleck—
Bring me some nectar! Bring me Pommery Sec.

Guide for the Summer Tourist.

Collingwood and Lake Superior.
THE FOUR POWERFUL FIRST CLASS
SIDEWHEEL, UPPER CURVE STEAMERS
Chicago, Frances Smith, Cumberland and Algo
ma, running in connection with the Northern Rail
way of Canada, leave Collingwood every Tuesday
and Friday, calling at Ower Sound, Bruce's Mine,
Sault Ste. Marie, Michipicoten, Nipigon, Silver
Islet, Prince Arthur's Landing, and Duluth. Direct
connections with

Fort Garry and the Red River Country.
This route embraces a most picturesque and enjoy
able Summer tour, with many made with great com
fort and at moderate cost. Open excursions during
the season. State rooms halat Toronto.

Ask your Dealer, or send direct to our works for a supply of PURE Tobacco.

VIENNA, AUSTRIA, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.:

I am a friend of your great cigar, with a transport of Indian Shells, two pounds of "Vanity Fair," which I declare to be the best Tobacco I ever smoked. We have very good tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair" is the King of all, by its aromatic flavor and the right sort of strength. My friend in New York got an appointment in California, by that reason I apply immediately to you, begging you to send me for the enclosed ten dollars, a supply of "Vanity Fair," and send with the next steamer to Germany. If there is a German firm that sells your excellent "Vanity Fair," I beg you to enclose me the address.

WARD BURTON
MAGAZINE SHOOTING AND TARGET
RIFLE.

Five Walnut Oil Finished Checked
Pistol Grip Stock.
Orthoptic, "Verrier" Scale Sig. his.
Graduated up to 1,100 Yards.

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified, than any other tried by them or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field." (See Ordinance Report.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, carrying from 3 to 8 cartridges, 20 to 24 grs. powder, 350 to 400 grs. lead, 4 to 10 lbs. weight, from \$50 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 30 grs. of powder, 450 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upward. Magazine gun for general use, carrying 3 to 8 cartridges, 40 grs. powder, 350 grs. lead, from \$40 and upward. Single Breech-Loader, Creedmoor shooting, for long range, 30 grs. powder, 450 grs. lead, from \$40 and upward. Single Breech-Loader for general use, 6 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be .45-110.

All communications should be addressed to
W. G. BURTON,
Care Ward & Co., 54 Wall St., N. Y.

PAMPAO—Lovellier than the Bay of Biscay; more magnificent views, the Ocean dimly seen in the distance; the Lighthouse; the islands dotted the bay, with their beautiful green carpets, ships at anchor, passing the light; the steamers likewise receding from the sight bound for foreign ports; yachts dancing; the gaily decorated barges, the clubs, companies, among which are the scarlet of the Tritons, the magenta of the victorious Argonauts, the blue of the Bayonnes, and the blue of the Claret; the Claretists and the Claretists, and lesser crews. Do you want fishing? Here it is in its exuberance. Old Robins Reef can tell you that around her rocky sides sport all kinds of views of fish to suit divers tastes, and in prolific supply. Yachts are in two hours loaded with the blue fish and are now so live, that in these waters, Health reigns supreme. The census lately taken shows New Jersey to rank first in the United States. The rate of increase of this country (Hudson) is 13 per cent., in New York less than 3 per cent., Brooklyn only 5 per cent. But twenty-three minutes from Liberty street and Manhattan, the city of the future, and lots for sale for cash, by instalments, or terms to suit. Inquire for JOSEPH HALLLOCK, Forest and Stream office, 111 Chatham street.

TROUT JERKS.

For Forest and Stream.

MR "JOLLYBOY," wearied of city ways,
Of his treadmill tramp, in the rounds of trade;
And as he perspired, through summer days,
He thought of the country, and cooling shade,
Until the purpose grew strong in him
To do a bit of rural sport;
So at it he went, with accustomed vim,
And hence this most veracious report.

He had heard of the trout, and resolved to try
And whip a few of the mountain brooks;
For, says he to himself, "It's all in my eye,
This talk about skill in the use of hooks;
I ain't such a clumsy boob-de-hoy
As not to know how a nibble feels;
I used to catch "shiners" when a boy,
And was some on cutfish, suckers and eels.

Then he bled away to a tackle vender,
Where an angling outfit he bought complete:
Some lines were stout and some were slender,
With hooks, and flies that could not be beat.
He bought a little of everything
That the dealer suggested, nigh "come in play,"
From a bamboo rod to a "clearing ring,"
And a creel of a size to last all day.

He had wading boots to reach the thighs,
And boxes for various kinds of bait:
A pair of goggles to shade the eyes,
And tourist's books of the latest date.
His clothes were "the color of forest trees,"
(He had always heard that such were best);
His breeches buttoned below the knees,
And his coat had pockets in flaps and breast.

After four and twenty hours or more,
An old stage stopped with sudden lurch,
Where the landlari stood at his open door,
And villagers lounged about the porch.
The city man (wishing to seem *au fait*),
Thought the trout on the dinner table small,
And arranged for a lengthy trip next day—
"He'd show some fish to beat 'em all."

Then full of zeal, with nerves all steady,
He got his bran new tackle ready;
With eager eye, and careful tread, he
Essayed work piscatory.
He plunged through holes and climbed o'er boulders,
He barked his shins and bumped his shoulders,
Unseen of critical beholders,
Gallied of victims gory.

Thus, till the noon-tide hour drew nigh,
He faithfully the stream did try,
Mosquitoes bfr, but trout were shy;
The prospect was most gloomy.
He stopped to lunch, and smoke, and muse,
Waited for t'n coat and easy shoes,
And grnally rubbed his latest brude,
And viewed his creel, so roomy.

While waiting in this doleful plight,
A barefoot urchin hove in sight,
Jerking the trout from left and right,
With sure manipulation.
His pole was a crooked alter string,
Hook dangling from a bit of string,
Careless he seemed at every fling,
In juvenile elation.

Spying the stranger where he sat,
The urchin in the torn straw hat
Flipped over the brook to have a chat
And ask "what luck a-dahin,"
He saw the gentleman's kinky line,
The shiny reel and rod so fine:
"Oh! polly!" says he, "if them was mine—
Just what I always was wishin'."

Well, they made a compact by the brook,
The would-be angler some lessons took,
The lad got lines, with many a hook,
And a shiny, silver dollar.
Then they tramped the stream with song and shout,
By jerks alternate they "yanked" the trout—
A couple of Jollyboys, no doubt,
The teacher and the scholar.

T. W. A.

Sunday Pastimes in Havana.

For Forest and Stream.

The Sabbath a Holiday—Mass-Valle de Gallos—Bishop's Garden—Street Scenes—Grand Ball at the Captain General's.

AS in all Spanish countries, the Sabbath is a general holiday in Havana. The first sound that greeted us at early dawn was the clanking of the irons as the chain gang passed up the street from their hard beds at the Presidio. Our Coolie waiter brought us a cup of delicious coffee, which we sipped while making our toilet. As we had a round of sinful pastimes marked out for the day, including a cock-fight and a ball at the Captain General's, we concluded to compound for some of them by attending mass at the old cathedral where the ashes of Columbus repose. One by one the worshippers file in—chiefly females—with neatly attired slave girls bearing rugs in their arms, on which the Senoras devotedly kneel in front of the altar. Sombre-looking padres, attended by several juvenile and not sombre-looking incense bearers, officiate in the chancel, while a choir of eunuchs chaunt music of bewildering sweetness from away up under the stained arches in the gallery. A portly priest ascends a little pulpit on the right, and rehearses the service in pure Castilian, and then passes to a pulpit on the left and concludes the service in the same round, swelling, and sonorous dialect. Then the audience retires one by one; a venerable padre at the door condescending to show strangers the tomb of Columbus, and accepting with Christian humility and gratitude any consideration thereof which the recipients of his courtesy may choose to bestow. There is an interesting history connected with the transfer of the ashes of Columbus to Havana; but as I am recording Sunday pastimes, I must hurry on, and leave the "great Colón" in his ivy-crowned mausoleum.

Returning to our hotel, we find breakfast almost over, and, with the dispatch for which our countrymen are noted, we do ample justice to the bill of fare, which embraced fish, beefsteak, corn cakes, oranges, plantains—fried and raw—Catalan wine, and coffee. After breakfast we took a quitrin for the "Valle de Gallos," or cock-pit. It is related in this connection—and with how much truth I cannot say—that the priests not long ago were in the habit of hurrying through with their morning service in order to get good seats at these great popular spectacles! An American friend, who kindly offered to act as a cicerone for our party, insisted on purchasing tickets of admission, which were twenty-five cents each. The place consists of a round, covered amphitheatre, with seats like those of a circus. Overhead, and commanding a full view of the entire arena, is a little gallery, occupied by the august judges. Adjoining this structure is another, almost its counterpart, where the negroes are engaged in the national diversion—a refreshing evidence that civil rights bills have not yet disturbed the social life of the "ever faithful isle," so-called. As these spectacles have been dignified as national pastimes among the Spanish people, I surveyed the crowd with some interest, but looked in vain for any considerable element save the lower classes; and, to the honor of the Cuban ladies, not a single female was present in the motley assemblage.

The chickens were brought in and weighed, and the ring was cleared of all save the trainers, who proudly held the birds up for general inspection, and bantered the crowd for bets. The feathers had been clipped from their tails, wings, and necks, and I was told that they had been regularly trained and dieted for the contest with as scrupulous care as an athlete is prepared for a prize fight or a foot race. They are permitted to fight with their natural spurs, which is a commendable refinement on the American barbarism of murderous gaffs. As they were turned loose, they each alternately flapped their clipped wings with the most ludicrous *sang froid*, and fairly made the welkin ring with brave carols of defiance. Now the fight begins, and

it is so much like all other gallinaceous disputes that I need not rehearse its details. Blow after blow is struck with beak and spur, until one sinks staggering, blinded, and bloody under the superior prowess of the other. A truce is called, when aguadiente is squirted on their wounds from the mouths of their trainers, who also wipe them with the most delicate tenderness with the most spotless of white handkerchiefs. Meanwhile, the crowd is wild with excitement. The din of hundreds of voices produces such a jargon of noises that bets are made by the most ludicrous signs and gesticulations. I can compare it to nothing ever seen or heard save the New York gold room or stock board on a "field day" between the bulls and bears. At a given signal the birds again confront each other, and the conflict is renewed. Bets run high, and the confusion grows wilder and wilder as they struggle through the brief moments of the second round, when they are again cooled and refreshed by their trainers as before. Bets now grow less active, as the waning powers of the weaker bird have already almost decided the wager of battle. Bets are here and there taken at large odds on the faint hazard that a lucky stroke may yet turn the scale against the favorite. The third and last round is very brief—a well aimed thrust from the more vigorous chicken penetrating the breast of his plucky foe, and laying him dead in the arena. The whole contest lasted twenty minutes, and to me they seemed like almost as many hours, so dimly oppressive and disgusting were all the elements of the scene. The victor chicken was borne off in triumph, his trainer wiping the blood from his wounds, or affectionately *sucking them between his lips!* A few moments of confusion attend the settling of bets, in which the harsh tones of execrable Spanish and the jingle of gold and silver distract the disgusted ear, when another pair is brought into the ring, and another round of similar diversion gives zest to the occasion.

It is creditable to the Cubans that these spectacles are losing their attractions for the better classes, and are now chiefly patronized by the rabble. The youth of the island, however, retain a fondness for the excitement of the cock-pit, and a game chicken is quite essential to the happiness of a Creole boy, though he is taught to shun the vulgar accessories of these public contests.

"Valle de Gallos," like the "Corrida de Taurus," or place or bull baiting, is licensed by the government, and Sunday is, I was informed, the day fixed by law for the exhibitions. At any rate, custom has made that the popular day for their indulgence.

Having gratified our curiosity to see a cock-pit, our little party—which, I should have observed, consisted of a gentleman from New York, one from Portland, Maine, two from Wilmington, N. C., and the writer—stroled back toward our hotel, that we might get a better view of the customs of the day than could be gained from the hooded confines of the quitrin.* Shops and stores were open; workmen were at their benches and tradesmen at their wares; donkeys were plodding along the narrow streets, almost hidden beneath the great loads of fodder, palms, or fruit piled upon their backs; carts, drawn by sugar oxen, with yokes attached to their horns, loaded with great molasses, rolled lazily toward the wharf, and there was nothing but the almanac and our "inner consciousness" to remind us that it was the Sabbath. Little shows were open at almost every corner, and the peculiar strains of the hand organ invited visitors to see some great monstrosity or other device of strolling mountebanks who infest the city. As many of these are from the States, I should perhaps be a little blind to their insidious snares.

After dinner, weary of the sights and sins of the city, I take an omnibus for the "Cerro," a suburban resort three or four miles distant. Our party have some other diversion on foot, and I urge them in vain to join me. Here,

*A quitrin is a two-wheeled vehicle, like the old fashioned "one horse shay" of Holmes, with long shafts, and a curtain in front to keep off the sun.

—A Buffalo paper announces that by the recent burning of an ice house there, twenty thousand tons of ice were 'reduced to ashes.'

again, was presented a sensible distinction between the races, in separate stages, bearing the flag, "Gentle color," for Sambo and his sisters. These stages, or amib-bu-bu, are of American blood, and convey passengers to the Carro, to Marianni, Jesus del Monte, and other suburban villas—fare, 12¢ cents. We passed near Fort Atares, a beautiful conical elevation covered with grass, and with cannon yawning around its circular crest. This is near the Bay of Atares, and is memorable as the scene of the execution of Cristóbal, and his companions. As the battle along the coast, the mazes of strange, green, and the eye on every hand. Bright-eyed senoras are standing in the windows, which are protected by prison-like grates of iron, and here and there a smitten swain stands outside the grating, gazing in silent admiration at the prisoned beauties. I was surprised to learn that such conduct is not deemed impolite or offensive, but is a popular mode of paying homage to beauty. I have seen strangers stand with one foot on the hub of a quinn, gazing at the senoras who occupied it, and who fanned themselves in complacent appreciation of the compliment. Great gateways, opening into broad court yards, reveal on one side the family house, munching his fodder, and on the other, a few feet away, the family discussing their Sunday dinner. And seldom for a moment, in town or suburb, are we unable to see one or more soldiers—footprints, if you please, on the despoil's heel, which are stamped with all the "good" of the Antilles." Soon beautiful country villas greet us, with their rich outlines of orange groves, and majestic palms marking their borders. Reaching the vicinity of the "Bishop's Garden," I leave the omnibus and make a short cut across an open field to survey that notable ruin. Clumps of bamboo fifty feet high grow along the borders of a bold stream, which flows in an artificial channel through the grounds. This garden was, once the residence of Juan de Espada, a prelate of vast wealth, and was a place of great interest to residents as well as strangers. The hurricane of 1844 destroyed the mansion, tore up the trees, and broke many of the statues which ornamented its grounds, and now it is quite an unsightly ruin; but as such is still an object of interest to tourists. Long avenues of mango, almond, and palm trees open out from the crumbling old mansion on three sides, and away in the distance, along a third of a mile distant, and was a scene of statues of mythological characters and Spanish nobilities of the old time. Immense parks, where formerly wild animals, collected from every part of the world, were to be seen, are now grown up to tangled wastes, with here and there a green plaza, on which a few cattle were tethered to graze. The immense fountain is dry, and the great circular basins, in enduring cement, which once contained fish of almost every known kind, are now empty, and the stone, and inhabited only by frogs. The flower garden, once the envy even of royalty, is grown to a tangled hedge, with here and there a plant of rarest beauty and fragrance, lingering to remind us of the past. I could not resist the inclination to gather a few of these as souvenirs. This curiosity proved in several respects expensive and hazardous. The moat was deep and half filled with mud, where I soon found myself down to my ankles, and the flowers I sought, like the apples of Tanalua, seemed to recede from my grasp as I pressed for them amid the tangled undergrowth. And when I had succeeded in gathering a few, and was scrambling for others, I put my hand within a few inches of what proved to be an immense snake, seven or eight feet long. I became suddenly disgusted with gardens and flowers, and hurried out into an old pathway that led back to the road, where I sought refuge for a safe place for the day. I had gathered the notice of a villainous looking montero, who seemed to have some sort of charge of the grounds, and he commenced an assault on me with the most violent sounding gibberish, which my limited Spanish made wholly unintelligible. He mixed the word "dollar" with his mutterings, and what between the villainous snake and his villainous aspect, I readily threw him a dollar, and he retired. He insisted on pre-empting me with a bamboo cane, which he more than intimated was of priceless value, though the street pedlars in New York sell much better for a dime. I know that infernal montero has had many a laugh at the incident, but the pleasure of the wild adventure more than compensated me for the fright, the torn toggery, and the pecuniary outlay, and he is welcome to his dollar and his gait.

My interview with the snake and the man of canvas had made me a little indifferent to other matters, and as I took leave of the garden I observed that the sun was just sinking behind the horizon. While I was waiting for a stage the blackness of darkness enveloped the whole face of Nature, and called to mind the old familiar lines of Rokeby:—

"No pale gradations quench his ray,
Nor twilight hush his wrath away;
With dusk like battle target red,
He meets his hurrying band,
Dyes the wild waves with bloody light,
Then slinks to rest—and all is night."

It is but a moment from sunset to darkness in the tropics. On reaching the hotel I found my friends uneasy lest I had fallen a prey to some of the outlaws who infest the suburbs; and in spite of my most solemn assurances that I should not be hurt by my snake story.

After tea, which is a simple repast, consisting chiefly of fruits and *dolces*, we prepared for the grand banquet. At eight o'clock the American Consul called at Mrs. Brewer's for the Americans who through him had received invitations, and proceeded with them to the "Plaza des Armes," the beautiful little square on which the Palace is located. It is a two-story structure, of a simple, elegant, and hollow square, and especially noted in appearance. Until quite recently the lower story was partly occupied by small shopkeepers. Passing the guard we proceeded up a long stairway to the reception rooms on the second floor. To the right and left on each stair bloomed a vase of exquisite flowers, of every hue, while along the banisters blazed a bright array of gas jets a few inches apart. The effect of this brilliant light, blazing among the gilded walls and a carpet of beauty, and richly embroidered and foreign consuls, dukes, marquises, and distinguished Americans, with their ladies,

made up an *élite* assemblage well calculated to impress an unprejudiced provincial from the States. After the formalities of presentation were over the hands struck up, and "the joyous dance" began, and was prosecuted with the most commendable perseverance by a large portion of the assemblage. Grave diplomats gathered here and there to gossip of the political outlook, while circles of admirers gathered around such wall-flowers as wearied of the dance, often standing many minutes without a word being uttered. Such is the polite mode of paying homage to the sex, referred to in another chapter of the beauty of the ladies, or of that other topic ever near to their hearts—their toilets—I must forbear to dilate. There were many of rare personal charms, and wardrobes which in taste, elegance, and cost, would have graced the richest European courts. The supper was bounteous, epicurean, regal, and was duly discussed from one to three o'clock, when the guests began to take their leave, and your correspondent sought his cool bed of down, and his last Sunday's experience of pastimes among the Havaneses.

S. A. ATKINSON.

× ZOOLOGY OF THE NORTHWEST.

THE CERVIDÆ.

IN my last communication I confined the cervidae of the Northwest to the elk and the smaller species of deer, but since that was written I have made a tour to portions of the country not previously visited, and have learned that our more northern forest and mountains are the resort of both the moose and caribou. The remark will apply specially to Idaho and Washington Territory, where they join the British line on the north, and in a more general sense to Montana and Dakota, but the precedence in numbers must be conceded to the latter and Idaho. In this enumeration I exclude Alaska, as the caribou is more abundant there than in any other section of the country, especially along the Peace and Yukon rivers in the circumpolar region of the north. The caribou is also more numerous in the extreme north, but the place is too distant to be much sought, for many years at least, by sportsmen, so the presence of the animal there is interesting only so far as it displays the geographical range or distribution.

The Nimrod who wishes to enjoy the amusement of slaying the moose or caribou would find Idaho about as promising a field as he could desire, as they are very common in the Kootenay and Coeur d'Alene Mountains in the extreme north. This region is occupied exclusively by the Kootenay, or long-knife tribe of Indians, and perhaps an occasional adventurous-seeker after the golden treasure. There are no white settlers, so the hunter must be content with the companionship of a very soiled band of the "Sons of the Forest" if he would indulge his taste for the chase among the larger cervidae. Should he be possessed of ample means, he can engage a party of Nez Perce guides to accompany him, and they will not only protect him from all bodily harm, but give him such lessons in hunting that he can truly boast of his experience after this. This tribe has the reputation of being the most famous body of hunters in the west; and as for courage, that is proverbial, for during the annual buffalo hunt the warriors march from three to five hundred miles to reach the ground, and then capture not only more animals than their hands can ever dispose of, but also in every respect. This much I have said of these Indians for the benefit of such hunters as may think of visiting the country for its wild, rugged and grand scenery, and the splendid sporting it presents. My knowledge of the range of the large or woodland caribou, (*rangifer caribou*.) I obtained from the Chief of the non-treaty or roving Nez Perces, that is, those who will not stay on reservations and who live on their herds and the fruits of the chase. According to him, the caribou is abundant in the dense coniferous forests of the Northern Mountains of Idaho, and extends to the sub-Arctic regions of British Columbia. The best time for hunting it, is early morning or evening, when herds go together for water or protection while grazing; for it is often assailed by a hungry bear, or a ravenous pack of those large gaunt wolves indigenous to wooded, alpine plateaus. By keeping to the leeward of a herd, and so as to approach it from the windward side, so many fall easy victims to an ordinary adept in rifle practice. The Indians of Alaska and British Columbia kill large numbers with arrows, and still more by digging pitfalls along their watering runway. Being the largest animal in their forests, it forms their leading article of food, and its hide is used for making wakiups or wig-wams, while its bones are used for arrow tips, spoons and knives. The caribou is known to be common in the mountain ranges, so I have also also detected a difference exists between the species of the west and that of Europe. I am inclined to think that the American is the largest, for an adult varies from six to six and a half feet from the nose to base of tail, and from three and a half to four feet in height. The face, which is quite long, ranges between twelve and fifteen inches from nose to ear; the ears will average five inches in length; and the vertebral portion of the tail will average four and a half inches. The color of the southern species changes considerably at certain seasons of the year, but its spring garb is always the most gaudy. Its general hue, then, is a brownish red, the tips being a light gray. The nose, ears and exterior surface of the legs are brownish; the neck inclined to be the whitest portion of the body. The belly and tail are white, and a whitish band extends around each hoof. It makes a fine, wild study on the forest ground of an evening scene among the mountain tapers of the Northern Idaho, as it fulfils the ideal description of the Northern Indian, by Scott and other writers. To see a herd together is enough to make a follower of Diana indulge in rapturous exclamations of delight.

The moose, (*Alce americana*.) is found from Manitoba to the Upper Columbia River, between the parallels of forty-eight and sixty-five, hence it is a deer in portions of Dakota and Idaho, and a moose in the northwestern section of the Columbia, or rather the headwaters of streams flowing into this river from the north, such as the Spokane and Yakima. The principal hunting, after this species is done by the Indians of the mountainous districts of Idaho, as the white men are too busily engaged in delving for gold to enjoy the luxury of the chase. The Blackfoot of Montana do not hunt it late in the autumn, and I have not my knowledge of the latter Territory does not extend beyond the Yellowstone or National Park, I am unable to be very explicit as to the habitat of the animal in that region, or to what extent it is pursued. I learn from men of experience in such matters, that the western is somewhat larger than the east-

ern species, but has the same general form and characteristics. I have never seen but three of the animals: two of these I saw alive in Maine, and the other dead in a camp of Lummi Indians, in the northwestern part of Washington Territory. This tribe asserts that the moose is found along the Cascade Range north of Mount Rainier; and was formerly quite numerous around the base of Mount Baker, the most notoriously snow peak in the Territory. I am inclined to believe them, as they have a name for it entirely distinct from that applied to the elk. They also gave me another piece of information of no natural history, and was that the wild mountain goat (*Apharoceros*) is found on the Cascade Range, and that a white ptarmigan, (*Tetrao Albus*.) inhabits the same mountains.

These two described complete the Cervidae of the Northwest, which gives us seven species west of the Rocky Mountains, and by including this range, eight, as the Virginia deer is found on the eastern border. These are the wood caribou, (*rangifer caribou*), moose, (*Alce americana*), elk, (*cervus canadensis*), mule deer, (*cervus mule*), Columbia black-tailed, (*cervus columbianus*), white-tailed, (*cervus leucurus*), and the Virginia deer, (*c. virginianus*), found in western Nebraska. This list does not include the hybrid of Whidby Island nor the white deer of Oregon and Washington Territory. By giving these a place we have seven species and two varieties of deer in the great basin intersecting between the Rocky Mountains on the east and the Pacific Ocean on the west, and between the parallels of forty-two and fifty-five north latitude. This is the great animal belt of the country, and it must remain so for a long time, as the westward wave of immigration cannot inundate this extensive area for many years to come; it therefore presents the best field in the world for the keen sportsman, or, even enthusiastic amateur. In reference to the white and spotted deer found in the northwest, I may add that there is little doubt of their being a distinct variety, if not species; but as we have names enough already, it would be better, I think, to classify them under the former term. During a recent visit to Whidby Island I learned much of these animals and found they were quite common, the spotted variety being, however, the most numerous. This is kept as a pet in several houses along Puget Sound, owing to its peculiar markings, and that it differs from the deer now mentioned as a pet variety, and is not found on Whidby Island are marked more loudly, the cheeks being generally reddish, the face white, the sides with alternate large patches of brownish red and white; belly and tail white; legs, below knee, chestnut tipped with white; muzzle black. Some differ from this description by being more or less spotted with various colors. No spot on earth can, I think, exhibit more of a square than that on this island, and yet a large number belong to the hybrid. From my examinations I would be apt to classify it as a variety of the white-tailed deer, and thinking so, I have classified it as *cervus leucurus*, variety *variatus*, and this has been adopted by the Museum of Natural History in Portland. It could be called by the latter specific name quite appropriately, but it seems somewhat cumbersome to elevate every variety to the specific rank, and the capture of these animals associate together and produce their young spotted like themselves, so from this I should deduce that the color is not accidental nor caused by climate. The white deer is found on the island quite frequently, sometimes as high as four or five in a herd. This gives us, of course, the clue as to the origin of the spotted variety. Another question arises, and that is where did the white species come from? The capture of a deer throughout all the seasons, and according to the tales of hunters and Indians, are found in various portions of the country. I heard of several that had been domesticated on the island; one man having had four of them for two or three years. They were pure as driven snow from muzzle to tip of tail, and from ears to hoofs. My time did not permit me to visit the owner, owing to the length of the journey, but my informant was a captain of a tug, a younger brother of the owner of the Sound, and a man of probity. I learned from him also that the same species was found near the Snoqualmie Falls at the base of the Cascade Range. This assertion was verified afterwards by a Snohomish Indian, known as the *Moonfish* man, or deer hunter, among his tribe. He spoke of having frequently seen herds of ten and fifteen together on the high trail ridges east of the Sound, and that they, as a general rule, were captured in the snow. He also verified the statement that they retained their snowy coat at all seasons, and added that he thought them a distinct species. I asked him to kill me one, but as he thinks them wandering spirits, he would not do it. I heard of this same animal in Northern California and Southern Oregon as a denizen of the Sierran and Cascade Ranges, but it is not, apparently, as common in these as the mountain deer, and I am inclined to think it resembles the *leucurus* in general appearance, but to have slender limbs and body more lithe in outline. All who know of it think it a different species, so it is called the white or mountain deer. Not finding it mentioned in zoological works I have denominated it *a. albus*. I have given orders to hunters to procure me one if possible; and when I receive it I shall then make a thorough examination. I have given a general rule to the sportsmen of the Territory's staff, who has a good opportunity of hearing of and studying this animal, and as the subject promises to be interesting to naturalists I shall forward you such facts about it as I may learn from time to time.

MORTIMER KERRY.
For Forest and Stream.

TROUT IN NORTHERN MINNESOTA—THE VEXED QUESTION SETTLED.

THERE is no locality on the globe presenting to the tourist so many beautiful scenes as Minnesota. The visitor seeking some repose from the cares of business, and hoping for an atmosphere that may give renewed strength to a debilitated organism, the sportsman yearning for novelty, variety and greater facilities for game than he has heretofore met with, can leave St. Paul, the central commercial emporium of the northwest, by rail in every direction, travel twenty, fifty or one hundred miles, and at or between stations, find a game forest, or game forest. Along these numerous lines of travel, numerous are the arguments used by the particular admirers of that local locality, in favor of the game and fish abounding everywhere; yet for variety, excellence and number, the Northern Pacific Line, in my opinion, excels them all.

For all kinds of sport come to Brainerd. Here are all the

Fish Culture.

FLASHES FROM THE "BLUELIGHT."

FIFTH WEEK.

EVEN Noank, with its much praised climate, has not been proof against the bad weather, which for the week just passed has given us alternations of southerly blows, with fog and rough seas, and easterly gales and rain. The reservoir for the twelve inches of fresh water in our twenty-four hours falling from the clouds perceptibly increased the volume of the Mystic River, and much troubled the owners of cars full of sea bass and lobsters anchored near the wharves to await the sale of their contents. Sea bass pined, and lobsters by the thousand succumbed to the unhealthy flood, and departed this life unboiled. Our sagacious captain, however, saved his car load. Foreseeing the probable results, he towed them over to Ram Island, where in deeper water and stronger tides they survived the flood. In the laboratory the effects of the rain were equally disastrous—dying sponges, closed up and sick anemones, wilted hydroids and dilapidated algae, gave plain evidence that when Nature established them in salt water, Nature knew best, and was not to be tampered with. The "Blue-light" brought in breakers (if I spell that word correctly, *barraque*—Spanish little barrel—I doubt its being understood) of sea water, but went but a little ways for it soon grew foul, and lost its life-supporting power. Fortunately, though, the thorough system of labor adopted, by which each evening's or night's work clears away, classifies, and preserves the result of the day's dredging, as far as possible before rest is sought, saved us from serious losses. And there is no lack of work; our field is so rich that with but a few hour's work at sea enough is gathered for many more over the table.

Among the weather the "Blue-light" has made five trips in the six days. Upon one of the trips Prof. Alexander Agassiz accompanied us, and expressed himself as highly pleased with our appliances and methods of managing them. We landed him at the Pequot House, and a Noank Nabal, carried on shore by another of our guests for the day, created due sensation on the wharf, and as we showed off we could see that our friend was having considerable difficulty in making his way through the interested groups of fortunate people who spend the summer at the Pequot. One day when it rained hard—that is to say, with a heavy go-dredging, but just about right to go fishing—with Charles I tried for black fish (*holbrooki*), and in three hours caught about thirty nice ones, of from two to four pounds weight. Rock crabs, one half inch in diameter, was our bait, but lobsters and clams were equally effective, except that they attracted other fish—cunners, dog fish, and skates—and this was no better. The crab seemed to secure a greater proportion of the black fish bites. We fished Ram Island Lodge and the Sweepers.

No blue fish to speak of as yet. A fine specimen of the tarpon was sent to Prof. Baird by Mr. S. Powell. It was caught in Newport on the 12th, the card attached said, but although received on the 13th, showed strong evidence of decay. It was a regal fish—great silver scales, and well proportioned, five feet seven inches in length. It was the largest ever seen, except perhaps a big drum which I once caught on the coast of Africa, and told you about long ago.

In the laboratory every table has become interesting; each collector has, according to his specialty, added new and curious things to his stock. On one table, that of Mr. Trumbull, there lies in a large dish of salt water—or, rather, did till the freshened water was supplanted by alcohol—perhaps the finest cluster of eggs of the squid ever seen. The squid (*Loligo*) deposits its eggs in July. They are in the form of transparent, gelatinous capsules, two to three inches in length, a half inch in diameter, and each containing a great number of little white specks, which are the eggs in various stages of development, some even to the embryo state, and these, if examined through the microscope, are seen to possess more or less of the attributes and form of the more mature animal; they rapidly expand and contract, and their color changes, making a most beautiful sight. Hundreds of these capsules are united in one great cluster (the one we have is at least nine inches in diameter) like grapes. The little one, as seen still in the egg, shows plainly its large brown eyes, its mantle, and, projecting from its mouth, the yolk sac, upon which it lives by absorption. The squid is peculiar in this point, as in most fishes that have the yolk sac it is attached to, and absorbed through, the umbilicus. When free from the egg, the little fellow swims freely about by means of its siphon, from which it ejects jets of water, and by the reaction darts to and fro. The figure accompanying is of one hatched naturally, its yolk sac nearly absorbed, and in size about equal to one of the smallest spots on its surface in the cut. The young of the squid furnishes food to many fishes, and is found even in the inert, and apparently helpless *Cyanea Arctica*, or jelly fish. Later in life, when six inches to a foot in length, it turns the compliment, and while sought eagerly by bluefish, bass, etc., makes havoc with their young, and kills quantities of mackerel five to six inches in length.

Profs. Smith and Harger observed at Provincetown large numbers of squid capturing and devouring young mackerel which were in schools. The squid would dart rapidly backward into a school, turn suddenly to the right or left, and seize a fish by the back of the neck, cutting off with their sharp beaks a triangular piece, the bite reaching to the spinal cord and almost instantly killing the fish. If unsuccessful in his attempts, and the school become frightened, the squid would drop to the bottom, the reddish-brown spots fade out, and lying low in the sand, to the color of which it had transformed itself, it would lie in wait for the dispersed school to return. The little mackerel seemed to know that their safety depended upon being in the water, and kept there, for when in his backward dart the squid touched the shore he would instantly pump vigorously with his siphon, and at every jet force himself farther and farther ashore.

There are many varieties of the squid, one, the *Architeuthis* *odax*, growing to great size. It is of this species that old sperm whalers told most remarkable stories. The sperm whale is provided with immense teeth, and, unlike

the ordinary "night whale," who feeds principally on small crustacea, devours in large quantities the squid. When struck by the harpoon, and finally landed, he in his "fury," as his dying struggles are termed, frequently disgorges from his throat a large quantity of small, white, and large, more or less indigestible, of the arms and bodies of squid, and from the taper of the arms, as known in smaller species, estimations are made that the fish from which the fragments were torn out have been from one to two hundred feet in length. And many an old New Bedford man will swear to squid three hundred feet across. These stories are undoubtedly exaggerations, as were those recently passed down to us of the Kraker found on the Norwegian coast, who, with his immense arms, dragged down great ships. The length of the arms does not increase in direct proportion with the body.

Prof. Verrill has in his collection a portion of the body and all ten of the arms, and the beak of an immense squid, whose dimensions were—body, 8 feet; long arms, 24 feet in length. This specimen was captured in Logie Bay, Newfoundland, last fall. He has also photographs and measurements of one of the arms of another squid, which was thrown over a boat in Concepcion Bay, in which were two men fishing; the arm was cut off by the men with an axe, the part preserved measuring nineteen feet, and the whole length of arm estimated at forty-two feet. This individual has, I believe, already figured in the FOREST AND STREAM, the arm being now preserved in the museum at St. John. The beaks of the one in possession of Prof. Verrill resembles that of a parrot, is of a dark hue, horny, and over four inches broad at the base. The "devil fish," of Victor Huxto, by his description, is more closely allied to the octopus family, although considerable allowance would have to be made for imagination to class it with them.

Our trips this week have been three in the shallow waters of Fisher's Sound, one to the neighborhood of Block Island and Montauk, and one to the "Race" south of Fisher's Island. Many interesting and over four inches broad at the base. The "devil fish," of Victor Huxto, by his description, is more closely allied to the octopus family, although considerable allowance would have to be made for imagination to class it with them.

Among the new additions made to the fauna are a beautiful tubularian (*Thamnocephalus spectabilis*), growing in large pink bouquet-like clusters on the bottom of a vessel lashed up for repairs, and *Physalia* *physalis*, a peculiar Arctie animal, previously found on the coast of Maine, but originally in Greenland.

The meeting of the Association for the Advancement of Science, at Hartford, drew away a portion of our party for a few days, and some have left us altogether. Dr. Leidy, of Philadelphia, who has made most interesting researches in the terminology, Prof. Eaton, of Yale, who has devoted himself to the marine algae, Mr. Schuman, of the Smithsonian Institution, and Dr. Helder, of New York Central Park Museum, have left.

Natural History.

THE CRANES OF AMERICA.

BY DR. ELLIOTT COUES, U. S. A.

[Some of our correspondents having expressed a desire to be informed respecting the species of cranes of this country, we referred the matter to Dr. Coues, who sends us the following: Ed.]

THERE are but two well ascertained species of crane in North America. There may be a third, but I am not prepared to admit this without further evidence—the supposed third species being thus far only known by a single skin taken at Albuquerque, New Mexico. The two good species are the white or whooping crane, *Grus americana*, and the brown or sandhill crane, *Grus mexicana*. They were formerly considered by Audubon and other distinguished ornithologists, to be the same species—the latter being supposed to be the young of the former. This is not so, for however closely the young of the whooping crane may resemble the adult of the sandhill crane, the two species are unmistakable when in perfect plumage. The young sandhill crane is ashy, much varied with rusty-red; it loses this last color early, becoming a nearly uniform ashy, and so remains through its whole life. The whooping crane, on the contrary, grows at least pure white, with black-tipped wings; it is also considerably larger than the other; its bill is thicker and deeper in the terminal part, and though both species grow bald with age, there is a difference in the contour of the naked part of the head. In the adult whooping crane, again, the inner wing-quills become enlarged, curled and flowing, to a much greater degree than is seen in the other species. These are the principal external characteristics; the anatomical features are still more strongly pronounced. Prominent among these is the astonishing length and complexity of the windpipe of the whooping crane—a conformation which results in the hoarse and far-resounding cry of the bird, to which it owes its name of "whooper." This anatomical peculiarity may be thus described, as shown in a fine preparation I have lately had an opportunity of examining:—

The sternal keel is broad and tumid, and is entirely excavated. The greater part of the excavation is occupied by the singular duplications of the trachea, to be presently described, but there is a narrow anterior and a posterior large empty air cells in the bone, with smooth walls, and two other air cells—one superior and one along the edge of the keel—filled with light, bony meshwork. Excepting these cancellated portions, the whole keel is hollow, and is occupied by the folds of the windpipe, as follows: Coming down the throat, the trachea enters the sternal keel at its anterior inferior apex, and runs along the lower edge of the keel, inside, almost to the very posterior angle; curving abruptly upward and forward, the trachea, entering the apex of the keel, traverses the whole contour of the keel in a long vertical canal, emerges at the front upper corner of the keel, enters again at the lower corner of the keel and makes a smaller vertical canal in the centre, emerging again where it went in. On looking at the object from the front, we see three parallel vertical canals, side by side; the middle one is the trachea coming down from the neck above; on the left hand is the bulge of the first great fork, on the right is the windpipe passing to the lungs after it had made its second coil inside. Measuring loosely, with a thread laid along the track of the folds, I find there are about twenty-eight inches of windpipe coiled away in the breast-bone—certainly over two feet—from upper larynx to the entrance is about twenty-two inches, and there are about eight inches more of the tube from the exit from the larynx to the forks of the bronchi, altogether about thirty-eight inches. The whooping crane has a windpipe between four and five feet long—quite as long as the bird itself.

We may continue the subject with some observations on other points relating to the two species. The distribution of the whooping crane is somewhat peculiar. It is said to be found throughout the fur countries; but in the United States its dispersion is limited. I find no satisfactory evidence of its occurrence in New England, although it has been exceedingly rare in the Middle States, though it is said to have bred in New Jersey in Alexander Wilson's time. It is noted in Florida and Texas. But its principal area of dispersion and migration in the United States is along the Mississippi Valley—using this term in a broad sense. I have myself only seen it alive in Dakota and Minnesota, where in the Summer of 1873, I observed it frequently, as I have, also, this present season, (June 1874), while ascending the Missouri River in the vicinity of Fort Stevenson; and I saw it a few days ago in the neighborhood of Brainerd, Minn. I have no doubt it breeds in this region. In New Mexico, Arizona and California, where I became accustomed to large numbers of sandhill cranes, I never recognized any white ones.

Regarding the sandhill crane, I find no indication of the occurrence of this species anywhere in the Eastern or Middle States, nor in the vicinity of the great water tributaries, excepting in Florida. There it is abundant, according to several observers. Dr. Bryant refers to its breeding, stating that two eggs are laid, from early in February until about the middle of April. I have met with it in various parts of the West, finding it breeding in northern Dakota, quite plentifully, on the broad prairie. Late in September and early in October numbers of this species and *G. americana* were seen on the prairie near Fort Union, where they appeared to journey chiefly by night. Often, as we lay encamped on the Mouse River, the stillness of midnight would be broken by the hoarse, rattling croaks of cranes coming overhead, the noise finally dying in the distance, to be succeeded by the shrill pipe of numberless waders, the honking of geese, and the whistle of the pinions of myriads of wild fowl that shot past, sounding to sleepy ears like the rushing of a heavy shower.

We have accounts of the sandhill cranes from the whole extent of the Mississippi Valley (in the broad sense of the term), and of their breeding in Iowa and Minnesota, as well as in Dakota. In Alaska, Mr. Dall says, it is a common bird at St. Michael's and around the mouth of the Yukon, but less so in the interior, as at Nulato. The eggs, obtained June 17, on the Yukon River, are laid in a small depression on the tundra, without any attempt at nest. He adds that the fubla is a favorite pipe-stem with the Indians, who, also, are fond of domesticating the young; the birds eating up vermin and insects, as well as refuse scraps of food about the settlements. Further south, on the Pacific coast, says Dr. Suckley, sandhill cranes are very abundant at Puget Sound, on the Nisqually plains, in autumn. They there commence to arrive from the summer breeding grounds about the last week in September, from which time until about the 10th of November they are quite plentiful. After this they disappear, probably retiring to warmer latitudes during the cold months. In the fall they are found on all the prairies near Fort Steilacoom, but are not indifferent to choice or certain spots. These are generally old "stubble-fields," or spots of ground that have been ploughed. They rise heavily and slowly from the ground, winging their flight in circles, at length reaching the desired elevation. When proceeding from one favorite resort to another, or when migrating, the flight is high, and not unfrequently their approach is heralded, before they are in sight, by their incessant whooping clamor. While feeding they are generally silent. To this account Dr. Cooper adds that the brown cranes are common summer residents in the Washington Territory, "arriving in the Straits of Fuca in large flocks, and their dispersal in pairs over the interior prairies to build their nests, which are placed amid the tall fern on the highest and most open ground, where they can see the approach of danger. They frequent, at this season, the mountains to the height of 6,000 feet above the sea. The young are often raised from the nest by the Indians for food."

"In the autumn and winter," Dr. Newberry observes, "it is abundant on the prairie of California, and is always for sale in the markets of San Francisco, where it is highly esteemed as an article of food. In August we frequently saw them about the Klamath Lakes, and early in September, while in the Cascade Mountains, in Oregon, the cranes were a constant feature of the scenery of the beautiful but lonely mountain meadows in which we encamped. We found them always exceedingly shy and difficult of approach, but not unfrequently the files of their tall forms

who are not accustomed to the use of the gun, or if they be, are too reckless to think of the effects of a careless shot. Sportsmen are more careful, because they know the extreme danger. Who ever heard of a sportsman aiming a gun at another when it was supposed to be empty, or snapping a cap upon the tube for the purpose of having a little fun? Yet scores have been killed by this extremely foolhardy act, boys generally being the offenders. Another way in which accidents almost daily occur is as follows: A couple of youngsters start out into the woods, one bearing the gun and the other on hand to act as game carrier. The boy who carries the gun wishes to be ready for any game that may appear, and consequently raises one or more hammers of the gun, as the case may be, and perceiving a squirrel in the underbrush, both boys give chase, each striving to get ahead, when suddenly the trigger comes in contact with the hand and is discharged, too often with fatal effect. An instance came under my observation a few years ago, where a young man of eighteen or twenty loaded a gun for a younger lad and put in a terrible chase, "just to see it kick." The result was that when the boy fired the gun it burst, and mutilated his hand for life, and came within a fraction of killing him outright. Many more instances might be quoted, but I think this is sufficient to prove that nothing is so dangerous as a gun in the hands of a reckless boy. Yours truly, Fred.

THE CHICAGO PIGEON TOURNAMENT.

BRANCH OFFICE OF FOREST AND STREAM,
CHICAGO, August, 1874.

Perhaps in the long history of pigeon shooting no tourney was marked with greater success than the one held last week at Dexter Park, Chicago. The shooting was on a par with the general excellence of the arrangements, and the managers, S. H. Turrill and Abner Price were complimented on all sides. The cash prize system seems also to have been a successful feature, as betting was almost strictly tabooed. The weather on the whole was favorable for the shooters, and the birds were good, strong fast flyers. All the shooting was H. and T. plunge traps, 21 yards, for single, and 18 yards for double birds. Ties to be shot off according to rules, at 36 and 31 yards rise. The regulation charge of shot was 14 ounces, measured by Dixon measure, No. 1106 or 1107. Charge of powder unlimited. The referee, at the request of any person engaged in the match, might examine the charge of any person challenged. Should it contain more than 14 ounce of shot, as above defined, the shooter to forfeit all his rights in the match.

The class shooting commenced on August 11th, ten single risks. Mr. Dow and Mr. Price acted as judges; Mr. Moore scored killed and missed; Mr. Stagg looked after the lads attending to the traps; Mr. Eggleston, finance committee; Mr. Clark, examiner of shells, and Mr. Farnsworth was the referee.

There were eleven ties killing ten straight birds. John Davidson and C. Felton divided the \$100 cash prize, having each killed all three birds at 36 and 31 yards.

Ties of nine—Twenty-three ties of nine birds each. John E. Long of Detroit, killing all his birds at 36 and 31 yards, was awarded the second prize of \$100 cash.

Ties of eight—Fifteen ties of eight birds each. T. J. South, killing all his birds at 36 and 31 yards, was awarded the third prize of \$75 cash.

Ties of seven—Fifteen ties of seven birds each. Mr. Wilcox, after a hard battle with D. Bates and J. H. Long, succeeded in gaining the fourth prize of \$50 cash.

Ties of six—Sixties of six birds each. Thomas Stagg won the fifth prize of \$15 cash.

Ties of nine—Nine at 21 yards. J. J. Klemm, killing nine out of ten, won the first prize of \$400 cash. H. J. Edwards second of \$30 cash.

Ties of eight—There were four ties of eight. H. H. Klemm won the third prize of \$200, S. H. Turrill the fourth, of \$100, and W. T. Johnston the fifth of \$50.

One hundred dollars offered for the best score, was taken by J. J. Klemm, he having killed 18 out of 20 single birds. Several express-stakes were shot after the day's sport was finished. Our special correspondent in Chicago says: "This tournament speaks for itself. It was the most successful and best managed shoot that I ever attended, and this is the opinion of every sportsman on the ground. Many thanks are tendered to Mr. Turrill and Price, and also their large corps of officials, for all the time and courtesies. All went home perfectly satisfied and well pleased."

THE NIAGARA FALLS PIGEON TOURNAMENT.—The following is the programme of the tournament given next month under the auspices of the "Niagara Falls Shooting Club," on the week at which the National Convention holds its meeting. Two thousand pigeons have been ordered, and if these do not suffice, the boys will send for more. The members of the club seem to be unanimous in the purpose to give every one a good time at the lowest possible expense, and we think we can safely promise it for all except the pigeons. There is a \$1,000 money prize.

The shooting will be conducted according to the rules of the N. Y. State Sportsmen's Association, except in the matter of miss-fire, where the gun has been properly loaded, the shooter has another bird, and the charge of shot is limited to 1½ ounces. The programme as arranged is as follows:—

First day, September 9th, for a purse of \$400—10 single birds each:—			
First Prize.....	\$150		
Second Prize.....	100		
Third Prize.....	50		
Fourth Prize.....	25		
Fifth Prize.....	10		
Second day, September 10th, purse \$500—10 single birds each:—			
First Prize.....	\$175		
Second Prize.....	125		
Third Prize.....	75		
Fourth Prize.....	50		
Fifth Prize.....	25		
Third day, September 11th, purse \$600—10 single birds each:—			
First Prize.....	\$300		
Second Prize.....	200		
Third Prize.....	100		
Fourth Prize.....	75		
Fifth Prize.....	50		

In the above shoot the entrance fees will be \$10, prizes to fill, and Captain A. H. Bogardus, Abner Klemm, Ira Paine, E. L. Tinker, J. Ward, and Mr. Close, of Pontiac, Mich., are excluded.

Fourth day, September 12th—purse \$1,000—20 single birds each—free for all:—

First Prize.....	\$400
Second Prize.....	300
Third Prize.....	150
Fourth Prize.....	100
Fifth Prize.....	50

The entrance fees in this shoot will be five per cent.—purse to fill. No betting will be allowed on the grounds. Shooting each day to begin at 10 A. M.

Entries may be made previously with the officers of the Niagara Falls Shooting Club, as follows:—S. T. Murray, President, Wm. Pool, Sec. & Treas., J. M. Winter, Chairman of the Board of Direction, or on the grounds, up to the time shooting commences, or by express, or by other sportsmen about who desire further information should address S. T. Murray, President N. F. S. Club.

Answers To Correspondents.

H. W. F. Boston.—No more of Roosevelt's "Superior Fishing."

Dr. G. L. H., Hartford, Conn.—Mr. Raymond has no Laverack pups for sale at present.

F. M., Boston.—Thanks for your compliment, and allusions to our journal and pledges of co-operation.

SCHNEIDER.—The rifle range at "Credmoor" is a broad meadow or moor, so named from the farmer, a Mr. Creed, who formerly owned it.

QUESTIONS.—Is there good fishing at Greenwood Lake, Monroe county, N. Y. Yes; but we cannot tell how abundant the fish are.

H. L. M.—Will you please tell me where I can get and what is the price of Ruxton's "Life in the Far West?" Ans. Harper & Bros., printed in 1854; possibly out of print. Price, \$1.75.

PSYCHIC.—Where is the best place to go in the country for quail shooting and where? Ans. If you will state what district you wish to travel, wherever you prefer the West, we will gladly give time and place.

BOYD, Reading, Pa.—Where can I get Peabody's metallic rim fire cartridges, No. 475 if that size is suitable for my gun, I will want 300 or 350? Ans. John P. Moore's Sons, 300 Broadway, N. Y.

OSCAR, Haute Falls.—Can Spratt's dog biscuits be obtained in New York? If so, where, and at what price? Ans. John Kridler, Philadelphia, Pa. What is the most killing charge for a 28-inch horn, breech loader? 35 drachms powder and 10 or 12 shot.

A. P. W.—Which is the best place on the East River for blackfish, haws, flounders, &c., during the months of August and September, and which months are best for the kinds named? Ans. See Fish Column in this week's paper.

J. A. B., Birmingham, Mich.—Can you inform me where I can get Spanish cedar for a boat, and the price. I want it about 5 inches wide, half an inch thick, and 18 feet long. If possible, put us in communication immediately. Ans. Mr. Ingersoll, boat builder, South-street, New York.

M. F. W., Basking Ridge, N. J.—A party of ten wishes to take a trip to camp out ten days or so, hunt and fish, &c. Where shall we go, over 100 miles from New York? How is northeastern Pennsylvania for birds, deer and fish? Ans. See reply to L. E. Ted in this column this week.

PAID UP SUBSCRIBER.—Please inform me of the best flea exterminator to use upon cats. Paid Subscriber, having tried carbolic acid soap, (dog-soup) has killed two cats? Ans. You might try the remedy we gave in last week's correspondent's column, or else the Persian insect powder, which last blow in with a rubber injector.

NORTHEAST PACIFIC.—Can you inform me of the method adopted by your marketmen to transport small game from the West? I mean prairie fowls and the like. Ans. Perhaps the best method is to pack your birds in a box filled with ice, and then place this box in a large one filled with sawdust.

J. N. R., Philadelphia.—A party of ten are going to camp out, and would prefer going to Monroe or Pike counties in Pennsylvania? What portion of either would be the best? Ans. Westbrook Tavern, Bloomington, Pike county, Pa. 2d. What time would be the best for all shooting and fishing purposes? Ans. September, 3d. What kind of game is to be found? Ans.uffed grouse, deer, bear, and a few wild turkeys. 4th. Where game is necessary, where could one be procured, and what would be charge for a month? Ans. There are two guides at the tavern.

CENTRE-BEARD.—Never knew of any effective preventive of sea-sickness, but we have had the following remedy in our scrap book for some time, and think it looks reasonable. Not being afflicted with sea-sickness we have never had occasion to test its efficacy. 1. While sitting avoid resting your foot on the floor. 2. Be seated so that the sole of the ship shall not pitch you forward or backward, but from side to side. 3. Whenever the premonitory symptoms of sea-sickness occur, do not fix attention on any near object; omit reading or writing; go to meals regularly; eat sparingly, of plain food.

L. E. Ted, New York.—Can you tell me of any reliable guide in the Muncey or Bald Eagle ranges of the Alleghenies? Ans. Write to F. A. Maxwell, of Lovell, Wyoming county, Pa. He knows every guide in the whole country. Would a party comprising in that region, say a fair chance of finding game and fish enough to live on? Ans. Very fair indeed; good hunting ground on Muncey Creek and the Loyalsock, Mahanoy, &c. Col. Rickett keeps a sporting house at Long Pond, on the Delverick turnpike leading to Susquehanna river, and through to Dushane, the present terminus of the Sullivan and Erie Railroad. Long Pond is the very heart of the wilderness, and can be easily reached from New York or Philadelphia by taking Lehigh Valley Railroad to Mahanoy Station, and thence by stage and rail.

WM. B. LIZ, Kennet Square, Pa.—Which would be the best trapping ground adjacent to north shore of Lake Superior? Is there any steamship line running via the north shore of that lake, from Cleveland? any Indians? Ans. There are several Hudson's Bay Posts, on North Shore of Lake Superior, but although they are trapped on an immense scale, they hardly do any business remunerative. The most successful post, indicating best trapping ground, is Fort William, Red Rock post-office, Mr. McKenzie factor. Our opinion is that it would not pay to trap in that country, more especially as the employees of the Hudson's Bay Co. might regard an intruder as an interloper, but it can be better posted by addressing at the Hudson's Bay Co., or to Fort Crawford, Red Rock, the Magnetawan district, on north shore of Georgian Bay, is by far the best game and fur country. Steamers connect with Cleveland to go both by Duluth and by Buffalo. Indians not troublesome.

GASKET.—What would a new cat-rigged, centre-board boat or yacht cost with everything complete? Ans. A twenty-eight foot yacht might cost as high as \$750; a sixteen foot one, say \$250. Your best plan is to buy a good second-hand craft, which are often advertised at very low prices, from \$75 to \$100. Would a Harriet boat be of more general use? Ans. This depends upon what you expect to place it to. A Barnegat boat is quite a different affair from a cat-board. The latter are properly pleasure boats, and are often built very large, while the regulation Barnegat is only 12 feet. For full description of latter, see FOREST AND STREAM, vol. 3, No. 11, page 174. They are sometimes known as "sloop-boats" from being used to approach wild fowl, though they are perhaps as frequently used for fishing. They are very crank, and in the hands of an inexperienced, very unsafe. One of the best of these boats that we ever saw can be bought for \$45 at Barnegat village of old San Perrine of long reputation as a builder of these craft, but now too old to make any more.

"GO TO THE CITY."

IN the Manchester (Vermont) *Mirror* is a suggestion to farmers which we like. It advises them now, when work is slack, to "take a vacation, and run into town, just for a change."

We, who are confined to counting-rooms and offices, and to closely-walled premises in cities, need extra elbow-room and a change of scene; so we go to the country. The eye and the mind find relief in new objects and new colors, and the more vigorous the pursuit after these objects, within judicious physical effort, the more robust and elastic the body becomes, and the more cheerful the disposition. We add five pounds per month to our live weight, and gain mental nourishment and stimulus sufficient to sustain that pressure and strain without which the highest duties of life could not be performed.

Now, that which clothes the citizen with flesh and muscles, is only "wear and tear" to the countryman. The low of kine, the babbling of brooks, and the rustling of leaves become monotonous to the farmer; his eye grows tired with the vivid green of the fields, and he who is always sowing seed, and turning over, and covering, gets morbid and heavy with waiting for things to "turn up." Did not autumn bring crimson and golden relief, the man would die of ennui produced by droning sameness and plodding monotony. But, take that ambiguous season of the summer hour which farmers designate as being "between hay and grass," when green things have done growing and the harvest is ripening, and send him to town for a month to do nothing but see "the sights," and he will actually grow fat. Even late hours will not hurt him, nor a temporary indulgence of the stomach make him thin. By mingling with large numbers of his fellows and seeing their handicraft, he will gather enlarged ideas of himself and them, and increased respect for both, if they deserve it. A host of new objects will fill his mind, and vivify his thoughts, and enliven his labors when he comes to the ingathering of the harvest, whose increased garnerings will be then required to pay for these expensive indulgences, which no regrets can follow, simply because he had a "good time," and is happy in the remembrance thereof.

Yes; let us all have change! Let us make some arrangements by which we can leave both farm and merchandise at a fitting time and opportunity and go somewhere. It matters little where we go, or how we go, so that we only get the value of our money in rest, rejuvenation and sound condition. There is oftentimes a year's recreation in a single week of exercise that is untrammelled by business cares. Sympathy should not alone attach to the unfortunate cant-get-aways of cities, but we should have some grain of compassion for the countryman, whose weary round of toiling years is employed in making gain for himself. So mote it be.

BEYOND DEPTH.

THE twelve published deaths by drowning within the past week is not encouraging to bathers whose ambition reaches beyond six inches depth of still water. Some persons are never satisfied in what they do, until they get beyond their depth; never pausing until they put themselves in a position where they are obliged to "tread water." It is a delightful sensation to them to know that they can't touch bottom, but that they can, nevertheless, contrive to keep their heads above water by novel devices and constant exertion. Thus, they not only show to others their superior powers, but they feel astonished at them themselves, and are possibly more than astonished if they get safely to shore. There is pleasure in danger. They like to test the problem of chances, which those who have studied it most have ascertained to be about 40 per cent. against success. It must be this that invests the ambitious efforts of our surf bathers with such great charms or inducements. It cannot be that they go out into the surf and the undertow and the neighborhood of sharks just because they think that a "good wash" in the ocean is wholesome, or conducive to longevity. This is not the rational converse of the fact that those bathers generally die young who are "washed ashore" by the breakers. Neither can it be that they hope to change natural laws, and become fish. Men cannot be fish and swim, any more than fish can walk about on dry land. Men have tried to fly, too, and have generally broken their necks in the experiment. Birds, fish, and men are created differently, with different organisms, different functions and different appliances for their several kinds of locomotion. Very likely, if men had feathers they could fly; but all the men we ever saw objected to feathers, especially if they were mixed with tail. So, also, as to fish, decent men dislike to be thought scaly, no matter how great their fondness for the briny deep. It is true that men can acquire the art of swimming quite beyond the usual gift of nature, and when so attained, it is a most valuable acquisition. But still, it is not wise for even the best swimmers to indulge temerity. Powers of skill and endurance have to be tested often enough by downright necessity, without being foolishly tampered with, to gratify vanity or excite the surprise and applause of other people. We seriously object to all attempts to swim extraordinary distances, at dangerous depths and in dangerous currents, even with means of rescue provided at hand in case of casualty; and we believe that the examples thus set, especially by young women, excite and provoke the emulation of many foolishly persons, who are certain to be drowned, when they might live to a good old age on dry land. This attempting to cross the English Channel,

this testing the undertow at Long Branch for thousand dollar purses, the swimming contests by men and women in the swift currents of our rivers, is all wrong and ought not to be encouraged. Yet one-half the world would wish to see Sam Patches leap water falls, or Blondins wheel their barrows on single wires two hundred feet above death, but possibly within one span of eternity, and gaily applaud, while the fools risk all.

By all means learn to swim, we say, it may save many lives from shipwreck or untoward accident; but swim discreetly, be not venturesome, for the bather who cannot swim at all is safer than the one who swims but little, for he is almost sure to keep within bounds and not go beyond his depth. However, as more lives are likely to be saved by remedy than prevention, we herewith repeat the directions, which we printed last week, how to restore the apparently drowned. They emanate from the Massachusetts Humane Society:

"Convey the body to the nearest house with head raised. Strip and rub dry. Wrap in blankets. Inflate the lungs by closing nostrils with thumb and finger, and blowing into the mouth forcibly, and then pressing with hand on the chest. Again blow in the mouth and press on the chest, and so on, for ten minutes, or until breathing begins. Keep the body warm, extremities also. Continue rubbing; do not give up so long as there is any possible chance of success."

THE FROG BUSINESS.

LAST year, in *Nature*, Mr. St. George Mivart wrote a series of very remarkable papers on the Frog, which were indeed masterpieces of profound learning. We do not imagine that Mr. Smiley, of Watertown, ever read them; but for a thorough acquaintance with frogs as an alimentary article, and the modes of catching them and preparing them for market, we are willing to pit Mr. Smiley against the world.

The United States and Canada possess a mine of wealth in frogs, for the family of the *Ranidae* are gloriously represented. If we can brag of the biggest rivers and the biggest lakes, we may talk in an exaggerated way about our frogs; for what batrachians can compare with our *Rana pipiens*, six to twelve inches long, and the northern bull frog (*Rana horvicensis*), somewhat smaller, and both famously musical?

"Would you listen to the peeping of the frogs,
As they chaunt a loud howl from the bogs?"

This is what Mr. Smiley told us:—
"Frogs are caught entirely with hooks. You take three hooks, lash them together, and bait them with a bit of red flannel. You use a cane pole, and some three feet of line. You see your frog in the marsh, you dangle the red thing before him, and he goes for it, but he doesn't swallow it; he sees it ain't good to eat, but is kind of curious like, just as a bull has a fancy for red colors. He is fascinated somehow. Then you work your hooks under his jaw and yank him. Another way is to go out of nights and have a light on the boat. The frogs come to see the illumination, paddle around with their heads up, and you hook them. Irish Creek, that runs into Lake Ontario, in Canada, is the great stamping ground for frogs. When we get as many as five hundred frogs we pen them up, and then dress them afterwards as they are wanted. A man handy at dressing frogs can prepare for market as many as 250 a hour. We slip their skins off by means of a pair of pincers. Frog time begins in June, and lasts until cold weather. The biggest frog that ever was caught in the Canada region weighed three and a quarter pounds, and when dressed turned the scales at two and three eighths pounds. I could not say whether their voices increase with their size. At nights they are awful noisy, and no doubt this big one was a boss musician. The biggest one I ever saw in Canada, and six or eight years of age, was about a yard long. I saw a good catch will be about two hundred a day. I send regularly about eight hundred frogs into the New York market every week, but the demand is larger than the supply. We ship them one hundred pounds to a box, and they come to the city sweet and fresh, packed in ice, in about twelve hours. Don't eat them myself. It ain't prejudice, but you see handling so many of them destroys the appetite for that kind of food. Don't think a single person in the region where they are caught eats frogs. Where they are caught is one of the finest places for fish and game in the country. The exact spot is on the Canada side, opposite to Wolfe Island, in the St. Lawrence, where it runs out of Lake Ontario, and Kingston, Canada, is the headquarters for frogs. Cape Vincent, in Jefferson county, is a great place for fish. This spring that place sent off every week to market sixty tons of fish, made up of pike, bull heads, trout and white fish."

"Do you ever have a surplus of frogs?" we inquired.
"Rarely, if ever," said Mr. Smiley.
"How would it do to can them?" we asked.
"If France takes all our surplus quantity of lobsters, and contracts for them years ahead, we have no doubt she would be pleased to swallow all the frogs you could ship."

Having thus, as we think, got to the bottom of the frog business, we left our intelligent informant, revolving in our mind the feasibility of shipping cargoes of canned frogs to France and the rest of the world.

A NEW ARTICLE FOR PAPER.—Years ago the paper manufacturers of this country placed before the public a very cheap and very poor quality of paper, made chiefly from straw. These last efforts in paper making were made up into small bags for grocers' use, and were used for a short time only, as they proved quite unfit for use, not bearing the weight of a pound of sugar without tearing. The paper wasps make a stronger and better paper in constructing their nests, and the striped hornets a far more durable quality of paper. Now we learn from a friend at Chicago that certain enterprising manufacturers of paper in England are importing from this country a kind of hay for paper stock. This is the well known "sloUGH hay," or prairie grass, grown in great abundance in many por-

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK.
[Post Office Box 2826.]
125 SOUTH THIRD STREET, PHILADELPHIA.
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tactician," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 20 cents per line. Advertisements in double columns 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 20, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to conduct a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, AUGUST 21st.—Trotting meeting at Wilkesbarre, Penn.—Trotting meeting at Hornellsville, N. Y.—Trotting meeting at South Norwalk, Conn.—Trotting at St. Paul.—Americans vs. Irish at Dublin, cricket and base ball—Chatham vs. Chelsea base ball club, Capitoline grounds—Haffax Cricket Tournament, Nova Scotia.

SATURDAY, AUGUST 22d.—Trotting meeting at St. Paul, Minn.—Trotting meeting at Potsdam, N. Y.—Rolling meeting at Saratoga, N. Y.—Americans vs. Irish at Dublin, cricket and base ball—Mutual vs. Atlantic base ball club, Union grounds—Cricket Tournament, Halifax, N. S.—Annual cruise Dorchester Yacht club, Mass.—Practice day Harlem boat club, Harlem, N. Y.

MONDAY, AUGUST 24th.—Trotting meeting at Potsdam, N. Y.—Americans vs. Scotch at Glasgow, Scotland—Fly-away vs. Competing clubs at Adams, Base Ball Tournament—Two-cored race—Mutual vs. Olympic at Albany, N. Y.—Cricket Tournament, Halifax, Nova Scotia.

TUESDAY, AUGUST 25th.—Trotting meeting at Penn Yan, N. Y.—Trotting meeting at Earlville, Ill.—Trotting meeting at Hartford, Conn.—Trotting meeting at Gardiner, Me.—Americans vs. English at Huddesfield, Eng.—Fly-away vs. Watertown club, N. Y.—Yacht race, Flidget vs. Lovell, Newburg Bay, N. Y.—Cricket Tournament, Halifax, Nova Scotia—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.—Match day, St. George Cricket club, Hoboken, N. J.—Trotting at Manchester, N. Hampshire.

WEDNESDAY, AUGUST 26th.—Trotting meeting at Penn Yan, N. Y.—Trotting meeting at Hartford, Conn.—Trotting meeting at Gardiner, Me.—Trotting meeting at Manchester, N. H.—Fly-away vs. competing clubs at Oaeds, N. Y.—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

THURSDAY, AUGUST 27th.—Trotting meeting at Penn Yan, N. Y.—Trotting meeting at Hartford, Conn.—Trotting meeting at Gardiner, Me.—Trotting meeting at Manchester, N. H.—Fly-away vs. competing clubs at Oaeds, N. Y.—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

OBITUARY.—Died, on Tuesday, August 18th, in Brooklyn, at the residence of her son-in-law, Charles Hallock, Esq., Editor of this Journal, after weeks of unremitting suffering borne without murmur, Mrs. Julia A. Wardell, relict of the late Oliver T. Wardell of New York, aged sixty-four years.

CANARIES.—Those of our readers who wish to procure these beautiful pets, are referred to the announcement of a large importation by Mr. Louis Ruhe, 98 Chatham street. The first shipment is expected to-day, and consists of first-class German Hartz Mountain birds, and will be followed by weekly shipments during the season. Mr. Ruhe has an established reputation in his business, and offers liberal inducements to cash or prompt-paying customers.

tions of our country. The first cargo ordered is now being shipped for English manufacturers. The recent irregularities in Spain having been the means of almost a complete failure of the Esparto grass, the English manufacturers have deemed this grass well worthy of an experiment with them. We hope they will succeed better in the manufacture of paper from this grass than our experimenters in the paper line have done with straw. This is a fair exchange, as a very large supply of our paper stock comes from England and southern Europe. Why should not the eccentricities of commerce give them grass for linen rags? We await with much interest the result of this experiment.

PRAIRIE FOWL IN ENGLAND.—From all accounts every experiment thus far to establish pinnated grouse in England by importing the eggs and hatching them there, has signally failed. Our readers have heard of the result of the efforts at Sandringham. Only one bird hatched out from two dozen eggs, which were sent to us by Richard Valentine, Esq., of Wisconsin, and shipped under our own eye, and forwarded with special care to the Prince of Wales. Sergeant Bates' experiment was even a more signal failure, as the following letter will show:—

EDITH FOUNTAIN AND STEVEN.

I have to report that the attempt of hatching the eggs sent by Sergeant Bates has turned out a complete failure with me, and I believe so with others that I gave some to. Having read in your paper that some eggs in America had hatched out after 25 days, I had a little hope of about half a dozen, which seemed heaven to me, tied up to the end of three weeks, and so gave them a full month, when they all turned black and like the rest. It is only right to say that a great many had been quite good and fresh when gathered. There are many reasons why this lot should fail. They were sent off from America a month later than the usual laying season. They were a month or more on the road. When they got to Liverpool it was three days before Mr. Cross could get possession of them. There is a delightful book—“*Game in the North*”—written by Ed. Johnston, Esq., of Wisconsin, and the result of great experience. I had the following, which I think, bears upon the point, and which I quote as follows: “The persons who breed very early poultry for the London market, have a secret for preserving the vital principle in eggs laid in the spring and summer till late in the autumn, when they are put under turkeys who have been kept sitting and hatched early in the winter. These persons are called ‘*egg-washers*’ and ‘*egg-washers*’ of more than one kind. To hatch, is strictly prohibited among them.” I know the above to be perfectly correct.

JACKSON GILLBES.

TEXAS—The Lone Star State is unprecedentedly prosperous, if we may judge from the following letter. We are gratified that there is one Southern State not groaning under an incubus of taxation and unjust exactions. The information herein conveyed is in part new to us, and, so far as relates to the inflow of immigration and money, quite beyond our ideas. The picture which our correspondent gives glows with warm colors, and notwithstanding the midsummer hour, is so refreshing as to make us almost desire to go to Texas for supreme enjoyment.—

EDITH FOUNTAIN AND STEVEN.

We have reached that period of the year when the sun exercises the warmest influence, when traders are anticipating a prosperous or gloomy season, when the “can't-get-aways” are seeking enjoyment for the want of wealth or the pleasure of a trip to Long Beach, to which the President and his ladies have just returned, and the secret of great success is being divulged. The rays of the sun are felt here in the forenoon, but the balmy south breeze of the Gulf, gently wafted towards us about noon, brings not only healing on its wings, but renders the nights delightfully cool. The period has passed for gloomy anticipations of an epidemic, the crops are reported as excellent from every county in the State, and those at home and abroad who hope for commercial success, are looking with delight at the glorious prospect of the best season Texas has enjoyed since the close of the war. The “can't-get-aways” are special objects of interest. Moonlight sails on the bay, fishing parties early in the morning, delightful drives on the beach, the sea bathing in the Gulf, and private parties of pleasure, render a residence in Galveston somewhat interesting. With the day on one side, the Gulf on the other, and a drive of twenty-six miles around on the beach, it far surpasses anything on this continent, and is the admiration of all strangers. The fruit crop has been excellent, and many a queen has been put down with luscious peaches and enormous eggs.

Since my last little epistle the fish have again returned to greet us, and many have gone to “where good fish all the year round.” Pompano, Spanish mackerel, with a considerable sprinkling of good sized trout, have been taken in quantity. Angler fish, also put in an appearance, say six inches long by eight inches in width, along with a little rascally pig fish, that, on being landed, equals like a young pig. It is a great annoyance to amateurs, and not much eaten after all. Some few sports are fitting themselves out with long bamboo fishing poles, costing five or three dollars, and not joined. The latter is an article they don't believe in, and somewhat hard to start them on. Sometime since, while fishing for trout at the railroad bridge which connects Galveston with the main land, I was somewhat surprised to hook a large red fish, some four feet in length, with a light jointed rod and a plaited line of line. Four times the monster was brought back, after taking thirty yards of line every time, but on the fifth, with the energy of note-books and never giving up, the monster took the last foot, and with one big jerk was again free.

This is truly an age of pleasure, when people have so many pastimes and so much money to give to amusements—picnics by rail to the woods, and picnics by steamer over the bay, excursions for hunting and fishing, balls, soirees, target shooting, fairs, base ball matches by the score, boat races and boating, the latter with the energy of note-books and never giving up. The State is the State with a vast immigration, and living here being cheap, with everybody making money, herein no doubt lies the secret of this age of pleasure.

J. L.

AS TO SHARKS.—From the Richmond *Dispatch* we take the following:—

“THE FOREST AND STREAM of New York, which by the way is the most pleasing and instructive of sporting papers, has published in this country a new series of intelligent notices to fish which we had not before known. We are very much interested in it, and take pleasure in communicating it to our friends.

THE FOREST AND STREAM states that Mr. Baird, Fish Commissioner of the United States, says that the most excellent fish he ever tasted was a blue shark about seven feet long.

We are glad to know that. For fifty years we have entertained towards the shark a vindictive feeling, and now, since he is good food, we can gratify our animosity to the fullest extent. We have read of his eating a great many sailors, and we have ardently desired to catch him and cook him; but why cook him? We thought he was not fit to eat; but now we learn that he is good food, we shall unquestionably put him over the coals.

When at Cobb's Island we caught a blue shark about seven feet long (the exact Baird dimensions), and being dismembered she was found to carry eleven young sharks each eighteen inches long, attached by the umbilical cord to the mother. Now, had we known that the mother shark was the best of fish to eat, and the young, according to Zetelle, would have come to a grand fricassee, or broil or stew or shudder, what a feast we should have had! What an opportunity lost!

With this information we shall now see who goes fishing for shark.”

We beg to state to our friend of the *Dispatch*, that in a week from now, we trust to revel in blue shark, and hope to eat some in company with Professor Baird.

Sporting News from Abroad.

BY FARRAN WYDE.

THE prerogative of Parliament is the signal for that stamped of the upper ten, which takes place in England on the eve of the Twelfth of August, which is said, in metaphorical parlance, to “empty” London; and which certainly, for a few weeks in autumn, introduces gaiety and life into the rural solitudes of the land. This annual migration of British pleasure-seekers takes place somewhat in the manner of a migration of birds. In Mississippi I have noticed how suddenly the palmpeeps, which come down from frozen latitudes in search of open water, put in an appearance on the scene. With what mystery they make their advent on the bayous and lagoons! With what resignation they seem to view their change of circumstances, and to settle down in their new quarters! One may happen to be crossing a corn-field in early winter, or skirting the edge of a wood, when suddenly he hears the bass warning note of some pioneer goose overhead, or the welcome quack! quack! of a mallard, which veers out of harm's way, followed by his bifurcate train. Yet, in a very few days, every pool of water will be covered by these far-travelled visitors. Very much the same thing may be said of the fortunate few unfeathered bipeds who, in England, possess country seats as well as town-residences; and who, taking the wings of the morning, find themselves, ere night, amid the stillness of nature, and enveloped in the aroma of the woods and valleys. The mansions in Park Lane are deserted, the doors are padlocked, and the windows darkened with sheets of brown paper to proclaim the tenantless condition of the domicile. An air of desolation falls on Hyde Park; the Row is forsaken; and many would rather forfeit a year's income than be seen in Pall Mall or Piccadilly.

No one would suspect such a migration was taking place, did it not manifest itself at the railroad depots, and at the way-stations and junctions, by signs too demonstrative to be overlooked. The confusion which prevails at such junctions as Rugby, Carlisle and Carstairs, in the beginning of August, is scarcely to be described. It is Chaos once again, and Babel revived, with a few novelties of sound thrown in, for which we are indebted to modern discovery and invention; for, in the steam-whistle, civilization is possessed of an instrument capable of producing the most wonderful effects, so long as sense of hearing lasts. Amid the arrival and departure of trains, which are unusually heavy, and of, course, unusually late—amid the shrieking of steam-pipes, the ringing of bells, the muttered imprecations of railway officials, and the louder oaths of cabmen, it needs great constitutional phlegm to remain outside the prevailing excitement. Everybody is seeking and shouting for somebody else, and in the search cruelly abuses his shins against the travelling impediments scattered around. This occasions strong language. Livered servants, overloaded with small parcels, fishing-rods, gun-cases, my Lady's Scotch terrier, and my Lord's hat-box, besides numerous nondescript encumbrances, run to and fro seeking some one to relieve them of their burdens. Gentlemen are shouting at the porters, ladies are shrieking shrilly at the gentlemen, children are screaming with might and main at both, and the din is made additionally perplexing by the prolonged howling of some unfortunate pointer whose paws have been crushed under a careless hobbled boot. The whole scene seems to be enacted by batches of frantic lunatics, let loose for a few minutes from one train as it arrives, only again to be securely locked up and packed off by some other train as it departs. In that way, however, London society issues from Mayfair and Belgravia, and scatters itself over the British Isles.

The sport of grouse-shooting is necessarily reserved to a very few members, comparatively speaking, of the upper classes. If one has no game preserves of his own, his only prospect of sport is to receive an invitation from some friend who has, or to lease a moor for himself. The last mentioned alternative is rarely a satisfactory one for the lessee, who, on some of the smaller moors, is allowed to bag only a stipulated number of birds during the season; while on the larger moors he has to pay very dearly for his sport. Nevertheless, on some of the small and understocked moors a very fair return for his money may be had by any sportsman who, like Mr. Froude, does not object to a mountain walk when he must work hard for his five brace of grouse. “I see no amusement,” says the historian, “in dawdling over a lowland moor where the packs are as thick as chickens in a poultry yard. I like better than most things a day with my own dogs in scattered covers, when I know not what may rise, a woodcock, an odd pheasant, a snipe in the outlying willow-bed, and perhaps a mallard or a teal. A hare or two falls in agreeably when the mistress of the house takes an interest in the bag. I detest battues and hot corners, and slaughter for slaughter's sake.” In his detestation of battues Mr. Froude shows himself to be a true sportsman; and, indeed, it must be confessed that the murderous work that is carried on at the Twelfth is falling into contempt among his countrymen.

The few lowland moors, that are to all intents and purposes mere poultry yards, are in disrepute; and there begins to be a healthy opinion that no man deserves the name of “sportsman,” who prefers a station in a hot corner to a tramp on the hill. Healthy activity resorts to the one; indolence prefers the other. Nearly all grouse moors are marked by the same general features. All are more or less hilly, and all more or less broken into minor inequalities by the action of rain-flores, or by the granite rocks which force their grey heads through the heath, or lie in fragments on its surface. A day's shooting on such territory means work, both of the lungs and of the limbs.

It hardly needs to be repeated, then, that an invitation to some hospitable country-house affords the sportsman the best opportunity of enjoying a fortnight's shooting, free from the responsibility of lesseship, and from apprehensions of disappointment. The recipient of such an invitation need not fear being killed with ceremony, or bored to death by the conventionalisms of society in the country home of his English host. Every guest enjoys a delightful freedom, and may do, or go, whatever or wherever his own sweet will points out. He goes down by rail to his friend's residence, let it be supposed, in time for dinner, the usual hour for which is seven o'clock. This meal, followed by tea and a little music, possibly, in the drawing room, a cigar out-doors in the twilight, and perhaps a game or two of billiards, will occupy the hours till bed time. About eleven the guest seeks his room; and while he is thinking of turning in, a servant makes himself heard at the door. John Thomas desires to know at what hour you will be called, and will prove a very valuable aid before your visit is over. There is nothing you may want which he cannot procure; nothing which needs to be done which he cannot do. He appears punctually in the morning with your shaving water, lays out your under-clothing, brushes your coat and pants, and makes himself generally useful. For these services he expects to be “tipped” to the extent of a sovereign or two, and will be very thankful for less. The hour for breakfast is under-stood to be eight, but late risers are apt to keep the cloth on the table for two hours' after that. It is best to appear punctually at the family hours, and very particularly if one is bound for the moor. Of course the guest provides himself with a game license, without which it would be an insult to the host, as well as an infringement of the law, to appear in the game preserves with a gun; but, armed with that authoritative scrap of revenue paper, you may shoot as many grouse as you can, after the Twelfth, for by eight o'clock on the morning of that day the birds are exposed for sale in all the game-shops in London, Liverpool and other large cities, at seven shillings and sixpence, and ten shillings and sixpence, a brace.

The movements of a sporting party on the moors are to a certain extent regulated by the number of gins, the nature of the ground, the course of the wind, and often by the dogs. Well-trained and obedient animals are indispensable in shooting grouse. However abundantly stocked a moor may be, inferior dogs will certainly marsport. A first-class game dog should be above all obedient to a gesture, and even to a glance; he should be a diligent ranger, going over his ground methodically from right to left, and from left to right; he should be steady at his “points,” and steady under fire; he should be careful never to rush through a covey; and, lastly, he should be a good retriever. One sportsman may prefer a pointer, and another a setter, while it may be no easy matter for either to give a reason for his preference; but an animal such as has been described, be it pointer or setter, dog or slut, will rarely indeed make a mistake, rarely flush up a covey, and rarely need a word of command to be repeated. Errors are more rarely committed on the moors by dogs than by their masters. A novice may frequently be seen to lose his nerve before a rising covey, to fire into the “brown of 'em,” or to take a shot at a bird that belongs properly to his neighbor; but such mistakes soon wear off, and when a greenhorn has once acquired the knack of covering one bird with his gun, it is hard for him to lose it again. On extensive preserves a party may walk from morn to dewy eve without going twice over the same ground; but on moors of ordinary extent it is well to divide the day by a two hours' rest about noon. By observing this rule the birds are not too much hunted from cover to cover, and more game will be bagged than if there was an incessant scramble after the dogs all day. Besides, in this interval lunch occurs very acceptably, especially if a hamper be sent down from the house. The dogs should not be fed at all till evening, or if fed, they should be fed very lightly. Many an afternoon's sport has been spoiled by some greenhorn, in the absence of the gamekeeper, throwing scraps to the dogs at lunch. Their diet, therefore, should be left to the keeper, who, knowing the disposition of each animal under his care, may give a morsel to one which he would withhold from another.

The contents of the game-bag, however large it may be, are soon disposed of. The birds are roasted, stewed and even made into a very excellent soup; and a few brace are consumed in this way at dinner. What remain after the house-larder has been provided for, are packed off, each with a pepper-corn in its throat, to the friends of the host. In a very few weeks the birds become wild and hard to shoot, the coveys gather into packs, and the sport becomes more of a hunt, and less of a massacre. Bad seasons, disease and over-shooting have done much to thin out the birds on the best moors, and game-preservers during the past few years have begun to be somewhat more conservative in the manner of their sport.

In the absence of our regular letter from “Idstone,” we print the foregoing.—Ed.]

In the beat down the harbor there occurred little change in position, the Vision, of the sloops, seeming to show a little more speed in the light wind, and the Wanderer slightly decreasing the distance between herself and the Magic.

All the yachts worked short stretches down the Narragansett shore. About 1:15 the Gracie broke tack with the fleet and stood to the southward. At 1:30 the Magic and Wanderer tacked to the southward off Point Judith, the Rambler at the time being well to the leeward, the three sloops, Vindex, Arrow and Vision, close together off the point.

The schooners now having a long leg to the southward, set their staysails and jib topsails, and succeeded in reaching the buoy with only one short board to the westward for about ten minutes. When the Gracie stood her about on her stretch to the westward, the wisdom of course in breaking tack with her competitors, was plainly shown as she crossed their bows to windward fully two miles. The Rambler held her stretch to the southward for some time after the Magic and Wanderer tacked ship, and lee bowing the tide, gained considerably on them. This, in connection with the fact that the other schooners had gotten too far to the windward of their course, enabled her to round the buoy just in advance of the Wanderer and not far astern of the Magic.

The time of rounding was as follows:—

TURNING THE BUOY.

	H. M. S.	H. M. S.
Gracie	3 30	3 17
Arrow	3 30	3 17
Vindex	3 44	3 31
Wanderer	3 46	3 33

Now came the run home off the wind, and this race was no exception to the rule that the run is always the most interesting part of a regatta.

The Magic increased her lead considerably, and the Rambler drew away from the Wanderer.

The Arrow sloop also passed the Wanderer and fell into position astern of the Rambler.

The following is the result of the race:—

Name.	Start.	Finish.	Elapsed Time.	Corrected Time.
Gracie	11 39	20 15	6 36	6 28
Arrow	11 39	20 15	6 36	6 28
Vindex	11 39	20 15	6 36	6 28
Wanderer	11 41	20 35	6 40	6 32

SLOOPS.

Name.	Start.	Finish.	Elapsed Time.	Corrected Time.
Gracie	11 39	05 13	6 30	6 30
Arrow	11 39	05 13	6 30	6 30
Vindex	11 39	05 13	6 30	6 30
Wanderer	11 41	05 13	6 32	6 32

The Gracie wins the sloop prize and the Magic the one for schooners.

THE FLEET OF THE NEW YORK YACHT CLUB CRUISE.—The 13th of August was fixed for the run from Newport to Oak Bluffs, Martha's Vineyard, and the morning was ushered in with a strong breeze and a cloudy sky, giving promise of plenty of wind through the day.

The prizes were a set of colors for the victor in each class, the race open to yachts of the eastern clubs; no restrictions as to canvas, and course from Brenton's Reef Lightship to the anchorage at Oak Bluffs.

From the harbor to the rendezvous at the Lightship most of the schooners had wind enough to do down a couple of reefs in their mainmasts, and the only sloops that found it advisable to start in the breeze then blowing, the "Vindex" and "Coming" went out under the snugest possible sail.

As they neared the Lightship, however, the wind moderated, and the Dauntless set her main topsail. The Idler then set the example to the rest of the fleet by turning out her reefs, and by the time the fleet hove to in line leeward of the flag-ship, in obedience to her signal, every one was under full sail. The yachts reporting for business upon this occasion were the Wanderer, Josephine, Idler, Alarm, Foam, Vindex and Coming. At 12:47 the signal to start was given, and the sloops were the first to gather way, the Coming getting rather the better of the Vindex in starting, leading her a couple of lengths. The schooners were also off immediately, led by the Idler, who ran up her jib topmast as she paid off, and within a few seconds had it taken in for her topmast, as her foremast lay by the board. She then had to huff and clear away the wreck, during which operation the rest of the fleet left her a couple of miles astern. At imminent risk to their sticks, the other schooners began to pile on sail, getting up jib topsails, gaff topsails and main top-mast stay sails. The Wanderer soon showed to the front of the schooners, and the Vindex was doing splendidly, hauling perceptibly upon her rival.

The fleet was accompanied by the "Alice" of the Brooklyn Yacht Club, and working schooner W. M. Van Name, both did well, the Van Name, however, gradually dropping astern of the yachts. Towards 2 o'clock the wind lighted up, and the Dauntless passed the Wanderer, who fell in line astern with the Foam and Alarm.

As they approached the entrance to Vineyard Haven it breezed up again and they had all they wanted, and the "Vindex" was acting as stake-boat, with the wreck of her top-mast hanging to leeward.

The time of arrival was as follows:—

SCHOONERS.

Name.	Finish.	Elapsed time.
Dauntless	4 53	4 46
Wanderer	4 56	4 49
Alarm	4 59	4 52
Idler	5 21	5 14
Josephine	5 25	5 18

SLOOPS.

Name.	Finish.	Elapsed time.
Vindex	5 18	5 11
Coming	5 19	5 12

Below is the time of the accompanying schooners:—

Alice	5 20	4 55
Van Name	5 10	5 30

It was a glorious race, and magnificently won by the Dauntless and Vindex in their respective classes.

THE CORINTHIAN RACE.—We regret that this race should have had no representations from the New York, Brooklyn, or Atlantic yacht clubs. It seemed to us an excellent opportunity for demonstrating that we have real live yachtsmen in our clubs. Boston had four yachts, the Azalia, Teunest, Fearless and Foam, and every one of them appeared and sailed upon the day appointed. New York entered several schooners and not one sent in a list of their crews as required by the committee, for the Idler, the winning yacht, sailed under the colors of the Seawanhaka yacht club.

—The yacht Seth Green won the first prize at the regatta held at Charlotte near Rochester. There were fifteen entries and the course of twelve miles was accomplished by the leading yacht, in one hour forty-five minutes and twelve seconds.

—Mr. Loubat, owner of the American schooner-yacht Enchantress, has issued a challenge to any member of any yacht club of Europe to sail a match with his vessel next July for a cup valued at 100 guineas over the Prince of Wales cup course.

—The Halifax yacht club, with characteristic courtesy, have made the American cricket deputation—now at the Halifax tournament—guests of their club. On Monday, they took the Americans on a cruise in Halifax harbor in the club yachts.

A YACHT WANTED.—The yacht Isabel, from Boston for Portland, went to pieces off Plum Island August 14th. Her master, R. H. Vixen, C. L. Vixen, and P. E. Puer, were rescued by a party of haymakers and carried to a hotel in an exhausted condition.

QUINCY YACHT CLUB.—A new yacht club with this name has been formed by gentlemen of Quincy, Mass., with the following officers:—

Commodore, James H. Slade; Vice-commodore, H. A. Keith; Secretary and Treasurer, H. M. Federhen; Regatta Committee, H. M. Federhen, John Shaw, Jr., Marcus W. White, Chas. F. Pierce and Freeman Whitmarsh. The club numbers sixty-nine members, having thirty-seven yachts. The first regatta took place on Saturday last.

Four first-class yachts, colored of 23 feet and upward, of which the sloop Vision, Captain E. Wooster, won; of second class, 18 feet to 23 feet, six entries, cat rig, Secret, Captain J. Bunney, won; third class, 14 feet to 23 feet, five entries, cat rig, Dolly Varden won; of fourth class, 14 feet and under, seven entries, cat rig, Captain J. Clarke won. It will be seen that most of the craft belonged to the mosquito fleet, but all were sailed under the Corinthian plan. Next regatta, 20th August.

Up to Monday of this week there were forty-one entries for the Isle of Shoals (Oceanic) regatta which takes place to-day, August 20, off the New Hampshire coast, and already referred to in two preceding numbers of this journal. Many more have signified their intention to enter. The Idler of the New York squadron, the Wivern, Wanderer, Eva, and Curlew of the Boston fleet, the Kittie Leslie, Mercury, Mabell, Starlight, and many other yachts arrived there on Monday, Tuesday and Wednesday. In our report of the regatta next week we shall give a complete list of yachts entered.

SOUTH BOSTON YACHT CLUB.—The deciding race of the championship of this club, and second prize of the first class centreboard yachts of this club, occurred Saturday afternoon last off their club house at City Point, South Boston, Mass., resulting as follows. Start, 3:10:—

Fannie	5 27
Naiad Queen	5 03
Eva	5 20
Ripple	5 04
Posey	5 11

Time allowance gives the first prize to the Fannie, and second to the Naiad Queen.

—The race for the championship of the Delaware, between the boats Willie McIntz and a Dager was sailed August 10th. The course was from Thompson's Landing at Gloucester, to Chester buoy and return, distance twenty-five miles. The McIntz won, beating the Dager sixteen minutes, getting in two miles ahead. Time—6:25.

—The first-class yachts Cutbush, of Coburg, Ontario, and Cora, of Detroit, sailed on Lake St. Clair August 10th, for the Goodwin Cup. The race was fifteen miles to windward and return. The wind was variable. The Cutbush won in five hours and forty-two minutes. The Cora came in eighteen and a half minutes later.

SPRING LAKE REGATTA.—The regatta at Spring Lake, Michigan, on the 12th and 13th August proved a great success. We regret our inability personally to attend the regatta. The first race was for the 1000 ft. class, the first race for double scull shells, Curtis and Yates came into position on signal, and soon afterwards, Williams and Alcock followed them, taking choice of position, and chose the north course. Both were off with a perfect start, Curtis and Yates rowing 35, and Alcock and Williams 34 strokes per minute. At 3:35 the mile buoy was passed, Curtis and Yates a trifle ahead. On the return both crews came spinning along at 34 strokes per minute, the Yates crew in just before supper, a mile of home both crews put on a splendid spurt, but too late for Alcock and Williams, Curtis and Yates coming in one length ahead, in 15:27.

The second race was for six-oared shells. Promptly at the signal the D. W. Buck, of Lansing, Michigan, started into position, her crew attired in a tasty blue and white uniform, and a few minutes later the crews of the Detroit boats, End and Evelyn R. Russell, drew into position. The Russells made the quickest start, but the Evids quickly drew ahead, passing the first mile in 8:15, the Russell second, and the Buck almost out of sight behind. The Russells turned the one and a half mile, easy four seconds ahead. On the return the Russells and Evids laid themselves out for some strong work, and did it, coming in at 34 to 38 strokes, the Russell p-sing the long four lengths ahead, in 15:59. The Buck came in just before supper.

The third race was for barges, and was contested by the Farragut Boat club and Chicago barge Ada M. Boyden, four oars; average weight of crew, 135 pounds; and the Grand River club, of Lansing, entered the eight-oar barge Wm. A. Barnard, the weight of the crew averaging 150 lbs. The Boyden is called a barge by courtesy, being really a barge built shell. At 5:11 both crews started. The signal, making a very even race, the Barnard turned the mile buoy three seconds ahead, and came back rowing 34 strokes per minute, leading by about four lengths, both crews working their best. The Lansing crew came in four lengths ahead, at a stroke of 33. Time—14:05. The Farragut was 21 seconds later, and was given the race on time allowance.

The fourth race was for junior single sculls. H. W. Pearson won the choice, and took the north shore; Williams second, Edelman third, Standish fourth, Wiley fifth. Pearson won in 15:45; Standish second, only half a length behind, the others struggling behind.

Probably 1,000 Chicagoans were in attendance, and large delegations from Detroit, Grand Rapids, and other cities and towns swelled the crowd to probably 8,000 or 10,000.

OUR YACHTS ABROAD.

—On July 25, two American yachts contended in the regatta held under the auspices of the Societe des Regates du Havre.

These vessels, the Enchantress, Mr. J. F. Loubat, and the Faustine, Mr. G. Peabody Russel, were here pitted against several well-known English yachts, among which were the Gwendolyn, Colonia and Corinne, schooners, and the Florida, Hironalde and Gertrude, yawls. Also, Scaphandre, Mesange, French yachts.

The day was so lucky that nothing could be determined accurately concerning the relative speed of the yachts, the English schooners seeming to hold the Enchantress off the wind, but dropping astern when the wind hauled forward of the beam. In one or two puffs, however, which gave the large vessels a momentary chance. The Enchantress showed more speed at reaching than any of her rivals.

The Faustine, although possibly in bad luck, never seemed to distinguish herself or get out of the race.

At the finish the Corinne, Florida and Colonia in the order named preceded the Enchantress; the Faustine was third from last.

—On July 27, the same yachts again met for a channel race from Havre to Southsea. This race was under the auspices of the Yacht Club de France, and the Royal Albert yacht club of England. The day again was unsatisfactory, there being no wind until just at the finish. The Enchantress, which had been considerably astern of the leaders, coming up on them in fine style after getting the breeze, and finishing first, not sufficiently in advance, however, to win, the Corinne schooner having the race fast enough on time, although she carried away both topmasts and main gaff. We hope some better luck, in the way of weather may happen to our yachts in their next encounters.

—The Saratoga rowing association will hold its second annual regatta on August 28, 29, 31. Entries for the amateur regatta have been received as follows: Single scull shells for the championship of the State of New York, 7; for the double scull shells, 5; for the senior single scull shells, 13; for the pair-oared shells, 5; for the junior single scull shells, 12; for the four-oared shells, 12. The crews are from the following clubs: Of New York city—Atlanta, Athletic, and Gramercy; of Bergen Point, N. J.—The Argonauta; of Hoboken, N. Y.—Atlanta; of Toronto, Canada—Argonauta; Albany, N. Y.—Beaverwick Mutual; of Buffalo, N. Y.—The Buffalo; of Norfolk, Va.—The Chesapeake; of Charleston, S. C.—Palmetto; of Chicago, Ill.—Chicago Scullers; of Allegheny city, Pa.—Duquesne; of Grand Haven, Mich.—Grand Haven; of Bath, Me.—Gleam; of Portland, Me.—Amateur; of Washington, D. C.—Potomac; of Greenpoint, L. I.—Seawanhaka; of Union Springs, N. Y.—Union Springs; of Savannah, Ga.—Union; of Sausalito, Mich.—Walwhusham, and the Saratoga Rowing Association. Mr. William Woods of New York has been appointed referee. All complaints against any entry must be filed with Commodore Brady previous to the 20th, accompanied by sworn affidavits. The racing is fixed to begin each day at 11 o'clock A. M.

—Sadler, the English champion has accepted Brown's challenge to row. The race is to come off on the River Bann, at Coleraine, Ireland, in October. Brown has ordered a new boat in England.

—The Halifax rowing club on August 17, agreed to accept the challenge of Ewen Morris, of Pittsburgh, to row against Brown for \$2,000, provided the race can come off at Halifax on or about the 3d of September, Morris to be allowed \$150 for expenses.

—The Potomac crew, of Washington, have taken up their quarters on Saratoga Lake. They have possession of the boathouse where Yale was located at Myer's Cedar Bluff Hotel.

—The State Rowing Association of Louisiana persist in refusing to allow the St. John Rowing Club to compete for the championship because it is not a member of the State Association. Contests for the State championship should be open to all legitimate boat clubs within the State.

—Another new club has been formed in New Orleans. It has been named the Southern Boat Club, and has already a good list of members.

—The Beaverwycks of Albany will have entries for nearly all the races at Saratoga Lake.

—The Mutuals of Albany intend doing their rowing this season at Troy, under the auspices of the National Association.

—Our Galveston, Texas, yachting correspondent, encloses us the following note, accompanied by a detailed account of a regatta held there on the 7th. We have to curtail the report of the latter:—

—GALVESTON, TEXAS, AUGUST 12th, 1874.

EXCUSE REPORT AND STREAM.

Our boat club, doing well, have expended something like \$3,000, and with nearly a full list. The last race was of considerable interest, and the wharf was lined with people. The ladies show, by their presence, how much interest they invest, and doting mamma's encourage their sons, lovers cast shy glances, and the men and gentlemen of leisure chance the grip encumbers upon their favorite crews. You have no doubt observed that the crew has always been in a hurry to occupy a position in the losing boat, but luck will chance some day, and the boys are yet hopeful that a crew will be found to pluck the laurels from the "Gipsies" brow. On the 23d September next, over a thousand dollars will be given as prizes, open to several classes of boats, both rowing and sailing. The merchants have contributed liberally, and all will try to make the occasion one of Galveston's gain days.

The assemblage on the 7th was larger than that which witnessed the last race. The ladies, especially, were out in great numbers. The distance rowed was one and a half miles—contests, the Jennie, Boyd and Gypsy; two races; weather clear and warm; gentle southerly breeze; water smooth; time, evening; prizes, Gold Maltese Crosses to each member of the winning crew.

FIRST RACE.—Judges—Messrs. T. K. Thompson; J. B. Van Llen, and Martin Harvey.
Crew—Jennie, four-oared boat, colors blue. John G. Hitchcock, bow; Wm. Bondies, No. 2; John Croty, No. 3; Frank Hitchcock, stroke, and Harry Lidstone, coxswain.

Gypsy.—Wm. Boyd, four-oared boat, colors red, A. L. DeMilly, bow; G. M. Van Llen, No. 2; R. P. Ball, No. 3; Leo Nicholas, stroke, and Nic. Hildner, coxswain.

Crew—Gipsies, four-oared boat, colors white. Manned by M. Gregg, bow; Ed. Boyd, No. 2; L. L. Higgins, No. 3; John Boyd, stroke; Ben Otway, coxswain.

SECOND RACE.

Crew.—Wm. Boat, four-oared boat, colors red. J. G. Wortham, bow;

Rational Pastimes.

Secularists and friends of Athletic, Base-Ball, Cricket and other out-door Clubswill kindly mail their contributions not later than Monday in each week.

—The London Post in its column report of the base ball match at Lords, played August 3, in speaking of the temperate habits of the American players, says: "The two nines were fine athletic men. As with our cricketers, out-door games seemed to have conducted to vigor and health; but, as is unfortunately too often not the case with our cricketers, they all were men who led an abstemious and moderate life."

Speaking of the fielding of the base ball players, the notice in the Post, says: "The admirable part of the play had all through been the fielding. Nothing hit up in the air escaped. The accuracy of the catching would have rejoiced the heart of old Clark, and made many a slow bowler envious of the pairs of hands. But the accuracy and skill of the catching was surpassed by the wonderful precision of throwing. A moment to look, a moment to get the proper equilibrium, and then the ball is hurled, sharp and low," quite straight to the basemen's hands. No fumbling, no half-volleys, no wide throws. So accurate was it that the exclamation of many a cricketer present was—With such throwing who would not be a wicket-keeper."

—Of the lessons taught English cricketers by base ball, he says: "The lessons taught were, as we suspected first, the importance of cultivating fielding. Could English cricketers throw and field as the Americans did we should see much less of mammoth scores, and matches would be far more interesting. Secondly, the advantage of losing no time. If the outside took the field with half the alacrity shown by the Americans during base ball, or when the time came for them to return to the basemen's hands. No fumbling, no half-volleys, no wide throws. So accurate was it that the exclamation of many a cricketer present was—With such throwing who would not be a wicket-keeper."

—The Atlantic was badly whipped in Philadelphia August 17, by 24 to 16, they having lost the previous game in Brooklyn by 11 to 10 only.

—Matthews' sickness prevented the Mutuals from playing in Philadelphia on Thursday, August 20.

—In a game of ball between the Harper Bros., nine and the Wynkoop & Hallenbeck, at Prospect Park last Saturday, the score stood 15 to 14 in favor of the former. The Wynkoop & Hallenbeck nine are preparing to receive challenges from any nine in the printing or publishing business. Please address HARRY C. HALLENBECK, Captain, 118 Fulton street.

—The grand match between representatives of ten of the leading amateur clubs of Brooklyn and New York, which took place August 17th, was in every way a great success. Next week we will give the full score, which we are now prevented from doing by an accident to our type.

Our Index to Volume, II, is in type, but will not be ready for the mail in time for this issue. It will be sent next week.

Macdonald's Dogs.
THE FOLLOWING VALUABLE DOGS have been just received from the kennel of Mr. Macdonald, and are offered for sale. The blood, as will be seen, is the very best in England:

Liver and white young pointer dog SEPTON, as handsome a pointer as was ever seen, thoroughly broken; 250. SEPTON is by Lord Sefton's dog Sam, for which he has refused 50 guineas, out of Sir Star out of Mr. Macdonald's Champion pointer bitch Miranda, by Coter, own brother of General Prim.

Handsome young pointer whelp between 7 and 8 months old SPIRE, unbroken; price 250. SPIRE is by field trial winner Squire, out of Captain May's bitch.

Young setter bitch WOOLPACK, 5 months old, by Ranger, out of Mr. Garth, Q. C.'s field trial winner. Best. Price 250.

NOTICE.—Until sold, SEPTON will be allowed a few bitches of pure blood at \$50 each. Address: WOLHAWK, 37 Park row, New York.

For Sale.

FOX HOUND for Sale—A large, strong, running dog, about four years old, color white, with black and white spots, a splendid hunter, has been used for Rabbits and Foxes. Price—Fifty Dollars. Address Geo. E. BRICE, Maplewood, Mass.

August 20.—21.

J. C. CONROY & CO.,

65 Fulton Street, New York.

IMPORTERS AND MANUFACTURERS OF

Fish Hooks and Fishing Tackle.

World invite the attention of amateurs to their large stock of fine goods, specially prepared for the wants of those visiting the Lower Island Clubs, the Adirondacks, Lake Superior, the Maine woods, and the Black Bass regions. A full stock of their unrivalled Fly rods for Trout and Salmon, and the famous "McGinnis" Black Bass Rods constantly on hand.

Nine Silver Medals and the only Gold one ever awarded were received by them for the superiority of their goods.

style which invariably characterizes his batting—three for thirty-four. Mr. Bird lost the company of Mr. Lucas, who was easily caught at point—at forty-one for four wickets—and soon after Mr. V. E. Walker had come in luncheon took place. The meal having been discussed, base ball was played until 6 p. m. On resuming cricket so freely did the batsmen hit that the bowlers changed ends at 46 up, and Mr. V. E. Walker driving McBride for two 4's from two following balls, he at 58 gave way to George Wright. In spite of these changes the score still continued to increase rapidly, several short runs being loudly cheered by the spectators. In fact it was palpable that the American were quite tired out. At length, just before 7 o'clock, Mr. Walker had his leg ball taken, he having played a lively inning quite in his own style:—

M. C. C.	
Courtenay, b. McBride	24
Lubbuck, b. H. Wright	24
J. Round, b. McBride	12
A. C. Lucas, c. Schafer, b. McBride	12
M. Bird, not out	25
V. E. Walker, b. H. Wright	27
D. Bess, c. Lucas	10

Total. 88

—It will be seen that the twelve included six of the gentlemen's twelve who came out here in 1873 together with Mr. V. E. Walker and the noted wicket keeper, Mr. Round, a member of Parliament. So the Americans had a very strong team against them.

FISHING, SHOOTING, ARCHERY, CRICKET,

FOOTBALL, AND CROQUET.

Offer the following prizes for the best of the year

Single Subscription per Annum \$5

Starting Clubs.—Agents, and others interested, are advised that we do not insist upon their starting with full clubs to secure our rates. They can send three or more at a time, and on forwarding the requisite number within 90 days will be entitled to same premiums as if all were sent together.

CRICKET.

For \$30 00 four copies, one year, with one best spring bat, one College bat, one Dark cricket ball; price \$7 30.

For \$25 00 five copies, one year, with a complete cricket set; one College bat, one polished bat, Clapshot; one Dark cricket ball, one set of stumps; price \$12 00.

FOOTBALL.

For \$15 00, three copies, one year, with one heavy football; price \$6 00.

FISHING RODS.

For \$15 00, three copies, one year, with one superior four foot light rod, suitable for all kinds of fishing; price \$7 00.

For \$20 00, twelve copies, one elegant rod; suitable for trout, black bass with fly, or for trolling bass or pickerel; as fine a rod as can be made; German silver tipped, with three tips; price \$25 00.

CROQUET.

For \$30 00, four copies, one year, with very handsome set of croquet; price \$7 00.

For \$20 00, six copies, one year, with the finest set of croquet made; price \$14 00.

REMINGTON RIFLE AND SHOT GUN.

For \$75 00, fifteen copies, one year, with one Remington rifle; price \$28 00.

For \$100, twenty copies, one year, with one Tazet rifle, 30-inch octagonal barrel, to be used for sporting, hunting, or target shooting; price \$86 00.

For \$100, twenty copies, one year, with one Remington double barreled, breech-loading shot-gun, one of the best made ever offered in American sportsman; price \$50 00.

SHARPE RIFLE.

For \$100, twenty copies, one year, with one Sharpe sporting or target rifle, best quality; price \$40 00.

WARD-BURTON RIFLE.

For \$300, forty copies, one year, with one Ward-Burton rifle magazine gun for large game, price \$0 00.

SINGLE AND DOUBLE BARREL MUZZLE LOADING SHOT GUNS.

For \$30 00, four copies, one year, with one American single barrel gun, perfectly safe, blue barrels, walnut; price \$10 00.

For \$30 00, seven copies, one year, with one American double gun, handy and reliable gun every way; price \$15 00.

For \$50 00, ten copies, one year, with one double boys the twist barrel gun, a safe gun every way for boys; price \$28 00.

For \$75 00, fifteen copies, one year, with double gun, English, laminated steel barrels, handsome finish; price \$45 00.

CASH PREMIUMS.

To those who prefer cash premiums a discount of 25 per cent. will be made on all clubs of three and upwards.

Every article is of the finest quality and will be sent free of expense.

Remitting Money.—Checks on New York City banks and bankers are best for large sums; make payable to order of FOREST AND STREAM PUBLISHERS COMPANY, 103 FULTON STREET, NEW YORK. Post Office Money Orders for \$500 less are cheap and safe also. When these are not obtainable, register letters, affixing stamps for postage and registry, put in the money and seal the letter in the presence of the postmaster, and send it by registered mail.

Send the names with the money as fast as obtained, that subscribers may get the paper at once.

FLORIDA.

Stereoscopic Views.

ILLUSTRATING THE SCENERY OF the East and West coast and interior of Florida. A complete set of views of St. Augustine, Gainesville, Central Florida, and Cedar Key, the terminus of the Florida Railroad on the West coast; New Smyrna, the great fishing resort; Mosquito Lagoon and Indian River, the game and fish section of Florida—the hunter's Paradise; the only pictures ever given of the wonderful Lake Okechobee, the largest lake in the south; a few views of the Seminole Indians; characteristic pictures of people, and the peculiar semi-tropical vegetation; principal points of interest along the St. John and Ocklawaha rivers. These views give one a correct idea of the most desirable portions of Florida.

Sent, post-paid, on receipt of price. 25 cts. each; \$2 50 per dozen; \$10 for five dozen; \$18 per gross. Jy23 CHAS. K. OBER, Beverly, Mass.

VIENNA, AUSTRIA, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.:

Sirs—A friend of mine sent me, with a transport

of India Shells, two pounds "Vanity Fair," which I deduce

to be the best Tobacco I ever smoked. We have very good

tobacco in Vienna. I send Hanger, but "Vanity Fair"

is the King of all, by its aromatic flavor and the right sort of

strength. My friend in New York got his appointment in

California, by its means. I apply immediately to you, begging

you to send me forth the enclosed in dollars, a supply of "Vanity

Fair," and send with the next steamer to Germany. If there

is a German firm that sells your excellent "Vanity Fair," I

beg you to deliver me the same.

By Capt. A. H. Bogardus, Champion Wing Shot of America. A valuable book for all sportsmen. Containing practical hints and instructions for marksmen of the present day, upon game and dogs, their habits, and habits of game birds, water fow, &c. &c. Large 12mo., cloth binding, 250 pp., \$2.00.

The **FOREST AND STREAM** will receive orders and will furnish Captain Bogardus' book when published, about October 1st.

This arm was submitted in competition with over one hundred different systems, American, European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1874, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It successfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be adopted which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them, of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field. (See Ordinance Record.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine rifle, gradually passing till for out of view: 70 to 85 grs. of powder, 320 to 400 grs. of lead, 8 to 10 lbs. weight, from \$90 and upwards, according to finish. Special Magazine rifle for Creedmoor shooting, 90 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs. from \$160 and upwards. Magazine rifle for general use, carrying 3 to 9 cartridges, 60 grs. powder, 320 grs. lead from \$40 and upward. Single Breech-Loader, Creedmoor range, for long range, 90 grs. powder, 480 grs. lead, from \$50 and upward. Single Breech-Loader for general use, 60 to 100 grs. powder, 320 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise ordered, will be .45-100 in.

All communications should be addressed to

W. G. BURTON,

Care Ward & Co., 54 Wall St., N. Y.

PAIRAPO—Lovelier than the Bay of Naples; most magnificent views; the Ocean dimly seen in the distance; the Lighthouse the island dotting the bay, with their beautiful green carpets of pine, gradually passing till for out of view; steamers likewise receding from the sight bound foreward; yachts dancing; the gaily decorated barges of the boat clubs, competition among which are the scarlet of the Tritons, the magenta of the victorious Argonauts, the blue of the Bayonnes, and the lively lures of the Claretiers, the Quakers, and lesser crews. Do you want fishing? Here it is in its excellency. Old Robin Reels can tell you that around her rocky shores sport all the variety of fish to suit divers tastes, and in prolific supply. Yachts are in two hours loaded with the blue fish that are now so lively rolled for in these waters. Health regains supreme. The census lately taken shows New Jersey to rank first in the States. The rate of increase of this county (Hudson) is 15 per cent. in New York less than 2 per cent. Brooklyn only 5 per cent. But twenty-three miles from Liberty street, and commanding eight cents. Houses and lots for sale for cash, by instalments, or terms to suit. Inquire for JOSEPH HALLOCK, Forest and Stream office, at Chatham street.

For Forest and Stream.
THE AGED AGRICULTURIST.

THE Aged Agriculturist
Sits in the dusky gloom;
The reason why he's sitting there—
His chairs are all at home.

Though sitting in, or on, a gloom,
I cannot see the sense of;
To say he sat upon a fence
Would be more onoffensive.

And then, he has a stern look
I never saw before,
Besides a gun, which, like himself,
Is an old-fashioned bore.

I know his aged entitle
So old, and grim, and stout,
Despite his "cold without,"

"Oh! aged agriculturist!"
I modestly exclaim,
"May I traverse your fair domain
In search of lawful game?"

"They was a man," the Granger grim
Irreverently said—
"I'm kinder waitin' round for him.
I hope he isn't dead."

"Ar you a city sporting man?
An' dew you know a know?
Don't pint yer gun around at me,
Or they will be a row."

"I've had experience before
Along of city chaps.
You want to cross my land, you do?
Wall, preaps you kin—pre'hape."

"Prehaps you'll tramp across my lands,
And preaps, again, you won't;
Prehaps you'll massacre my sheep—
Young man, I tell you, now'r."

"They was a man as travelled here,
Him and his puppy pup—
He doesn't travel here no more,
His sporting days is up."

"He used to shoot across my lands—
I know a city feller,
And d'r the kooks to hum, and put
The children in the cellar."

"And then I climb atop a tree,
And said I gnessed he mont,
I didn't know my sheep and hen—
Was lyine all about."

"I didn't know a city chap
Was so much of a fool,
I didn't know a city dog
Was meaner than a mule."

"I didn't know as much about
Some subjects as I do;
I've learned the valley of a dog
And of a donkey, too."

"Yes, you kin shoot across my land,
And sling your powder free—
Mutton is twenty cents a pound
And terms is C. O. D."

"My wife and me air life-insured,
And Accidental, too;
I've spiled a man with this yer gun,
Not half as big as you."

"The Granger wears a ghastly smile,
His eye is fixed and bright;
I do not like that smile's import,
That eye's unholy light."

I yearn no more for manly sport,
But rest in peace at home,
While he is sitting in, or on,
The said aforesaid gloom.

They say he once had friends and home,
They say he once was wise,
They say he joined a sporting club—
Perhaps they're telling lies.

—When does a windlass make sailors mad? When it raises their rancour

For Forest and Stream.
Down the Au Sable.

AMONG THE GRAYLING.

BY THADDEUS NORRIS.

EVER since the American grayling has been known to anglers, my friend Mr. Daniel Fitzhugh has urged me to come out to Michigan and join him in a trip in pursuit of them. It was not until the last week of July just past, however, that I could find time to break away from the city of Brotherly Love and make a fair demonstration against them on the Au Sable. By appointment, I breakfasted with Daniel, the aforesaid, in Bay City on the 29th ult. The plan agreed on by correspondence was to drop down the river some six or eight miles further than Mr. Fitzhugh had explored it, and after having a surfeit of sport to return to Grayling (formerly called Crawford), the station where the railroad from Bay City crosses it. This plan would have involved two days' hard pushing against a strong, steady current. In the course of our conversation, Daniel remarked that at some future time, if he could find a congenial brother of the angle to accompany him, he intended to take a trip on the Au Sable that would require no such labor in returning. That he would put his boat in at Grayling and run the river as far down as Thompson's, which is seventy-five miles by land, and much more than double that distance by the stream. At Thompson's he would get teams and haul his boats overland twenty-five miles to Tawas City, on Saginaw Bay, where a steamer for Bay City touches every day.

Think, my dear Mr. Editor, how provocative this was to one who had not camped out or slept on spruce boughs for five long years. Would you, then and there, have done otherwise than earnestly advocate such a trip *instanter* in place of that originally proposed? Daniel seconded the amendment as soon as I moved it, and we were unanimous.

After our matutinal meal we walked out, and on the street met Mr. Leonard, generally known as "Len" Jewell—not "Lem," as my ancient friend Seth Green hath it. Len is a brawny, broad-shouldered youth of sixty, six feet and an inch "in his stockings," and, as I found on our trip, a man of not over many words, but still cheerful and communicative, with a low down, pleasant laugh, full of expedients when one's flies form an attachment to the tops of the many cedars jutting out at a low angle from the banks of the river, the best cook I ever met with in camp, and, as Seth truly says, "the boat goes where he wills it." Dan had assigned Len to me as pusher. He cluded in with our change of plan immediately, and proposed that we should go see John Sharp, who was to push Dan's boat. We found Johnny at his fish house, busily engaged in putting up an order for white fish, cramming in ice and nailing up boxes, destined for the interior, and yet he had time to remove the ice in a large eldest and display at full length a lake trout of nearly four feet. After a while he laid down his hammer and saw, and said he was ready to talk on business. He jumped at our new plan for the trip. Johnny is a wiry young fellow of sixty-five. He and Len hunt, shoot, and fish with Dan and the rest of the Fitzhughs, and the ducks and deer they have laid low may be called "legion," besides a few "bar" and an occasional wolf or panther.

At half past two in the afternoon we were *en route* for Grayling, distant about ninety miles. This part of Michigan is an elevated, sandy plain, slightly rolling, and, except in marshy places, with a very thin soil, or no soil at all, on loose, coarse, white sand. The new railroad, running almost due north, was projected by the lumbermen, and within a year or two will cross some fine trout streams flowing northwest, north, and northeast. There are no trout in the grayling streams, as far as is known, except in Boardman's Creek. On our way we crossed the head of the south branch of the Au Sable, which rises in a shallow lake, is fed by swampy water, and consequently rather

warm. It has no grayling until within a few miles of its junction with the main stream, fifteen miles down from Grayling by land, and about thirty-five by water. Grayling is not far from the source of, and on, the main branch. The north branch comes in about twelve miles below the south branch, and of course from an opposite direction. It is well stocked with grayling, and about half the volume of the main stream. A dam for flooding the river to run logs, however, causes a discoloration of the water unfavorable to fly fishing, and after its waters unite with the main stream this provoking influence is still observed. Four miles west of Grayling is Portage Lake—abundantly stocked with large pickerel and black bass—one of the sources of the Manistee, and approachable by a good wagon road. It is the intention of Mr. Fitzhugh at some time to have his boat hauled to Portage Lake from Grayling, to descend the outlet into the Manistee, and explore it as far down as the crossing of the Indiana and Grand Rapids Railroad, returning thence with his boat by rail to Bay City. Mr. F. says that he has been told that grayling abound in the Manistee even more than in the Au Sable, but that the Hersey, where he first killed them, has been pretty well fished out. And yet we see by Mr. Ainsworth's letter to the Rochester *Democrat* that he killed nearly five hundred, during a sojourn of two weeks at Reed City, on that stream early in June. They were small, however, compared with our average catch in the Au Sable.

All the grayling streams, whether flowing east, west, or north, rise in the same elevated region of almost level, sandy country. The ascent from the lake shores from either quarter is so gradual as not to be perceptible to a traveller. Grayling is seven hundred feet higher than Bay City, and this inclination to the lake shore gives an average current of about three miles an hour to the Au Sable. The shores, especially near their sources, are but slightly elevated above the surface of the streams, which, of course, have in most places the appearance of being bank-full. Lower down there are now and then, at long distances apart, high sand bluffs abutting against the rivers. There is little or no water shed, and the rains falling on the sandy plains form small underground rivulets, which find their way to the rivers. The streams being replenished in this way with spring water, are always of a low temperature in summer, do not freeze over in winter, and are of very equable flow, not varying more than a foot in depth between high and low water even in the spring of the year.

We reached Grayling a little before sunset, and stayed all night at a new hotel, the only dwelling at the station, built mainly to accommodate the employees of the rail road. There came in the car with us a pleasure party, consisting of Mr. Mershon, his wife and children, and some lady friends of Bay City, to camp on the river a few days, fish, shoot pigeons, and have a good time. We passed their camp next day in descending the stream, and Dan hailed the ladies and held some conversation with them in the Chippewa language, which, I suspect, both he and they improvised for the moment. They were jolly, although it was raining. The Au Sable at the station is small, with low and apparently swampy banks, much obstructed with alders and fallen cedars, and affording but small opportunity for a fly cast. An affluent of half its volume comes in a few miles below, after which there is ample room to swing one's line.

On inspecting Mr. Fitzhugh's boats, and questioning my friend Len, I found that they were eighteen feet long, the beam (a flat forward of midship) three feet, sharp at both ends, flat bottomed, two feet six inches on the floor in the widest part, with a flare of three inches, making them, as just stated, three feet wide on top. There is a compartment, water tight from the other portions, extending from abeam two feet six inches forward, and the whole breadth of the boat. This is the "well," to keep the fish alive. It has three one inch holes in the bottom, and two on each side, to admit the water and keep up the circulation, the water being six or seven inches deep when the luggage and men are aboard, and will keep alive seventy or eighty fish,

averaging three quarters of a pound. It also has a movable, hinged cover, over which the angler slips, with a hole of about four inches in diameter on each side, into which he slips his fish on releasing them from the hook. The pusher stands in the stern, and with his ten foot pole directs or arrests the motion of the boat, which fully occupies his time and skill, leaving him no opportunity to assist the angler in landing his fish, a thing that requires coolness and dexterity when three lusty grayling are darting in as many directions as one draws them within dipping distance. The space between the well and where the pusher stands is used for stowage, with dunnage, or sticks or straws, for the fish to lie on, and a ramp or slipway from the floor if the boat should be leaky. The boats are not over eleven inches deep. And it is surprising to note the capacity and staunchness of these apparently frail little barks, made of half inch white pine.

July 30th.—About nine in the morning we commenced our voyage on this little river of sticks, pushing through openings in the alders, hauling our craft over logs, and dodging the cedars protruding from the low banks. It was our intention to tarry none on the way until we got to the great Halibut bar, but at the junction of the stream already mentioned, some three miles below Grayling, and a good open cast offering, Dan hailed me: "I say old man, put your rod to work and sample the grayling just to see what they are." So we uncased our artillery, and in a few minutes the old man and I were in a sharp tussle landed, a fish of six ounces or so. "Throw him in," said Dan, "we keep nothing under a half pound on this trip." Well, I looked at my first-captive from snout to caudal, and as it was still struggling, before I took the hook from its mouth, I put it over the side of the boat. "You can keep that," said Dan, "it is the first and markings of its magnificent dorsal in the sunlight beneath the placid surface. "Poor fishing up here," said Len, "too much spearing and netting; but still we must have some for dinner, so keep on." I thought it very good fishing, and at noon, when we stopped for lunch, I had secured some fish in my gill, and Dan had, without the same success.

We had occasional showers in the forenoon, and after our hunch a heavy rain, which, with a prospect of a wet night, drove us to camp early in the afternoon. Our india rubber were wet on the cloth side, our blankets were damp, and our stores were also somewhat wet. I expected to pass an uncomfortable night, but Johnny Sharp, fackling the huge stump of a Norway pine, some twenty feet high, laid it low, then splitting off the knots and other resinous portions, soon had a fire big enough to roast an ox. We opened the broad front of our shelter tent and its genial warmth, kept up our blankets and our feet in rubber boots, hung up our pots, put, put fish in the pan, and presently enjoyed culinary offerings discovered most excellent music.

We replenished the inner and dried the outer man, and between the puffs of smoke from his dudden Dan sang—

--But O, life is such
That it fades at the tech;
O think of all this
While you're smoking tobacco."

And then we took a "snifter," and turned in and "slept the sleep of the innocent."

July 1st—was awakened in the morning by Dan's query, "Feel any mosquitoes last night, old man." "No," I replied, "I forget that there were such things. Do you take mosquito nets and tar ointment when you camp out?" "None," responded Dan, "and what is more remarkable of the few such stragglers or black flies that may sometimes be found in this region they never attack you in a cedar swamp." I subsequently found that, as a general rule, the cedar "swamps" along the river had an elevation of from three to five feet above the level of the water. The water was not very stagnant water, the thirsty, sandy soil drinking up the rains as fast as they fell, and consequently there were no mosquitoes or punkies.

consequently I had heard the rain pattering on the fly of our shelter tent when we turned in, the sun rose bright, the skies were clear, and the morning cool. We embarked after breakfast with the determination of not making a cast until we got below the limit of Dan's former explorations. Of course we broke this agreement by an occasional cast as the boats glided along the whirling eddies of the rapids, and about eleven o'clock, coming to a deep, wide, well-shaded flow of smoothly-gliding water, which, by the by, Dan, who was in advance, had hurried through, I could not resist the temptation any longer, and commenced in earnest. I made havoc among the fins. No fish under fourteen inches found entrance into my well, though I had exhausted the pool, but Len, who, of course, had not been so lucky, was still fishing. "You can't get a big fish," I can see the fins as many as you have taken." I must have killed fifty from the head to the lower end of this water, a distance of twenty yards, and then pushed on to overhaul Dan. "What luck, my boy," I asked, as I came up with him a mile below. "Well," he replied, "I am ashamed to look a gray-coachman, and I gave up the bloody murder to them. If you go trolling the lower drop fly and stretcher through the pool and hooks two more for me. I am going to take one dropper off, two kills them too fast. It's slaughter." After lunch our sport still continued. In one whirling, eddying deep little ritt, close by the bank, while Len held on to the boughs of an overhanging willow, I hooked and landed a small fish, but not fifteen fish, and a small, round, fat fish, about four or five inches long, weighs so full that the fish commenced dying, and a little after four in the afternoon we pushed on to find a good camping place, that we might kill and salt them down, and have time to make things comfortable for the night, for there was muttering thunder and occasional lightning to be seen far up the river. With cutralls I killed a small fish, a hawa and a redfish. Those were the forty-pound fish fall, and those we had eaten and reserved for supper and breakfast, made each catch a little over a hundred pounds, gross weight.

A few words about the flies we used and the game qualities of our grayling. Fitzhugh's favorite whip is the Jewel fly, (named after Len,) for stretch, having lead-colored wings, red hackle for legs, and body of yellow floss, wrapped with flat gold tinsel; first dropper, black wings, body and legs, wrapped with silver tinsel; second or upper dropper, a plain brown palmer without tinsel, all on No. 9 hooks. I had for a greater part of the first day a Jewel fly for stretch; first dropper a black hackle, (No. 10 hook,) on yellow floss body; upper dropper, brown Pennell fly on No. 12 hook. On coming to the little rift where Len held on

as the cedar bridge. I looked and lost several good fish, as he supposed from the hooks being too small, and at his suggestion, changed them for larger, viz.—White-winged coachman for stretcher, brown hackle for first and lead-colored wing coachman for second dropper—all on No. 8 hooks. Throughout the trip I found the latter the most killing fly, using it as upper dropper; although the water cricket—*i. e.* a black palmer on a yellow floss body—was almost as killing when using it as a checker or bright. In the middle of the trip, the mouth of the north branch made the river quite turbid, we both used larger flies of the colors described. I fully agree with Mr. Ainsworth that in pluck and endurance the grayling is not a whit behind the trout. There is this difference, however, when the grayling is lifted from the water he seems to say: "It is all up with me," and is lifted aboard with pendant tail, and the trout, after a few moments' rest, comes back, believes in "fine perseverance," and struggles and flounders in air, *et idem* *prolix*. My experience in August on the Au Sable was not that of Mr. Ainsworth's in June on the Hersey. He had frequent rises to cue strike. I found them generally to strike with as much certainty as trout, and to hook themselves as securely. So much was the latter the case that after the first day I seldom used the landing net, but that the trout, once hooked, would jump as well as many salmon. The engraving in a book number of FOREST AND STREAM is a very true representation of the grayling, although of rather slender proportions even for a young fish; when they get to be a half pound and upwards they increase rapidly in breadth and depth, with very small proportional addition to length, and loosing somewhat in symmetry. The wide-spreading dorsal and long caudal fin, the small pectorals and ventrals, the long anal fin, all across the current. I could but admire the fine delicately-proportioned head and handsome prominent eye, as did Mr. Ainsworth. When I brought in two fish on the droppers—not more than fifteen inches apart—I frequently held them for a while beneath the surface of the limpid water to admire the colors and motions of the dorsal fin. It looked like a beautifully colored fan flaring in the air. The pectorals and ventrals also exhibited perfect metallic spots. As to their edibility, I rather think they are inferior to trout.

I hope I am not wearying you and your readers, Mr. Editor, with my description of these handsome fish, the tackle to take them with and the country and streams where they abound. I did not intend to write even this much, but I think the subject justifies it. I will try to hasten on to the end.

August 14.—We were now eighteen or twenty miles below Grayling, the stream had spread out to three times its width there. The general depth of the smoothly-flowing river was not exceed eighteen fathoms, a few of the more rapid places to ten fathoms. In the deeper parts of the bends there were some of the fish, our boats being held with the settling poles out in the stream while we cast in shore, or where it was contracted to half or a third of its usual width, washing out deep channels. We had passed over two or three miles of splendid ground in hurrying on to our camping place the afternoon before and were almost tempted to go back to the river and fish. The "white" water was not so much with our fish, and we had yet a hundred and thirty miles of the river to run? So we merely "took off the wire edge" by filling our wells full of grayling and then pushed on to find the entrance of the south branch; Len and John exclaiming in wonder at the schools of fish as we passed over them. The grayling, it is said, are not found above and below the falls, but in the rapids and slimes, no bass, no trout, and no cabs, of course, for they are not found above Niagara Falls. But well down towards the mouth of the river some of the smaller species of white fish are found at certain seasons of the year. We passed the mouth of the south branch eight or ten miles below where we passed under the first bridge we had seen, and where we found the mouth of the river on the bank, where we cured our consciences by giving away the fish in our wells. A little below we reached.

As our wellworn empty we fished occasionally, as we dropped rapidly down stream. Casting in towards the bank, in likely places, with a short line, and allowing our flies to come into the wake of the boat and frequently hooking fish within three feet of the stern. They did not appear to mind the boat much, and in the language of Alexander Selkirk I exclaim—

"They're so unaccustomed to man
Their timidity is shocking to me!"

Passing the mouth of the north branch we found the water almost too turbid for fishing, but at the foot of rapids, where it fell off into smooth, deep pools, picked up a few. It was evident that we had left the best of the fishing behind up stream. We pitched our tent at 5 P. M., made a good bed of spruce boughs, ate our supper, (how good the potatoes were. I never knew I was fond of potatoes before,) and turned in.

August 2d.—Our object now was to make time; our fishing, as we supposed, was over, and having had a surfeit of it, we accepted the situation cheerfully.

"How far is it to 'Thompson's, do you think, Len?" asked Dan as he sipped his coffee.

"Can't say," responded Len, "we must have come over sixty miles by the river, and I don't think we will get to the mouth of the creek that comes down from his house before to-morrow noon. This is a mighty crooked river, it doubles itself up terribly, if you could stretch it out straight I believe it would reach across the State of Mich-

part of Len's profession is to look up and estimate timber land, and he carries in his pocket a map showing the sections of lands and courses of the rivers. Producing it and counting the sections as laid down—so many east and so many north—he estimated that we were about forty-five miles from Thompson's, in a straight line, and remarked, "that he wouldn't wonder if it was a hundred by the river." We struck tent, stowed luggage and started. The river was now laid an average width of a hundred and twenty feet, with a deep, steady current, in many places no bottom to the water, which was 34 the first day had risen to 65, so we looked for good springs along the bank. Stopping at one to take "sulphur to drink," Dan asked Len to let him look at his map.

"What creek's that that puts in on the right?"
 "Some call it Spring Creek, some call it Miller's Creek."
 "Were you ever there?"
 "Once."
 "Pretty sizeable stream, eh?"

"And freshens up the water considerably? We'll get some good fishing there."

Dan, as everybody knows, is a rigid Presbyterian, "as touching the law, a Pharisee," and "after the strictest sect." He fishes frequently with the Reverend Mr. Schuitzes, his pastor, on week days. Was he going to fish on the Sabbath? Being of a persuasion that allows such things, he was not at all troubled by the question. He told him as to his *engaging* in the sport. "What would his straight-laced family and relatives think of it?" He seemed to be convinced of his wrong intentions and expressed his determination to push on "to make distance," as he said, "before the Lord's day comes." He was a member of the Creek, some eight or ten miles below. Dan had gone ahead. There he was, as John held the boat in two feet of water, hawling in the grayling hand over fist—three at a time. I held up my finger reprovingly. He said there was a destitute little settlement of wood-choppers at the mouth of the creek, and he was going to get them a supply out of fish, and ended his excuse by quoting those memorable words:—"Wherefore it is lawful to do well on the Sabbath day." There was no resisting such argument. I joined him. For a half hour it beat all the fishing we had ever seen. Then we stopped at the boat, where we captured and held no more than a gross of the kind that were being sold to the people at the floating bridge.

"How far to Roque Vaughan's?" asked Len of the man as he picked up the fish we threw on the bridge.

"'Bout ten miles," was his reply.

Len knew Roque Vaughan; had been at his house on a surveying expedition and stopped with him on a deer hunt. We lunched, and as we ran down stopped to take an occasional cast, just because it was comparatively difficult now to get a rise or hook a grayling. Presently we saw a "dug-out" in shore and a man and boy gathering raspberries. "Here you are," said Roque, "and I say, 'Don't be too close to them as if you were going to shoot and rob us; come out and show yourself plainly or I'll put a load of buckshot into you.' " "Who is it, Len," I asked. "Why that's the Roque Vaughan, as clever a fellow as ever lived." Roque came down to the bank of the river, "Why, is that you, you darned old transgressor? I didn't know you." Roque had been in search of fish with his spear. His string consisted of a grayling, a sucker and a small chub. After chatting awhile with us, he took a sudden leave, leaving him to be estimated as a fisherman. I could estimate the weight, about forty pounds of fish from our wells. He opened his eyes in astonishment, asked us how we were off for pork, said he had plenty and pressed us to stop at his house, a hundred yards below, and get some milk, fresh butter and eggs. Dan told him we wanted to make distance, and declined his hospitality. "How far to Thompson's," asked Len, in parting. "Twenty-four miles by land," and "and by water?" "Twenty-four miles by water," we found an old brook plunging from a bank eight feet high into the river and pitched our tent on a bed of moss six or eight inches deep. It was a fairy-like place, that "Cedar Swamp," where we camped.

August 30.—Having still sixty or seventy miles to run we determined not to linger on the way to fish, but killed a good many grayling, as I have before described, by casting in shore with a short line as we ran the bends of the river, and then allowing the flies to swing with the current into the wake of the boat. About 3 P. M. we passed under a bridge with a squad of lumbermen's lodges on the banks. They said "Len," I know where I am." Just three miles from the creek we pushed up to get to Thompson's. We found, on enquiry, that there was a drive of logs just ahead, and that the creek running down from Thompson's was full of logs. We bargained with a man who was hawking away to wagon our boats and luggage to Thompson's, whose house was three miles away. We gave him all our dead fish, say about twenty pounds, and he took us to his place, where he had a nice as many for our landlord. We were told by the man at the floating bridge and also by Roque Vanghan that the grayling were quite plenty there, in May, but that they had run up above the north branch, where they were not disturbed by logging driving, in June, and yet Dan and I each of us must have put two dozen or more onto my wells as we ran the creek. So before we left the kill we sawed off the bows of our boats, we lifted our boats out of the water. There was no telling how far we had run since leaving Grayling. Johnny Sharp was positive it was at least a hundred and eighty miles. Len expressed no opinion, but Dan, who is rather given to underrate in such things, thought it was fully a hundred and sixty miles. In summing up the fish we had packed, given away and eaten, (none spoiled) on the trip, we counted one hundred and thirty-two pounds, and yet the actual time of fishing did not amount to two days of ten hours each. If the time spent in running the river had been devoted entirely to angling above the south branch I am confident we could have taken from six to seven hundred pounds. We killed a great many fish of a pound, some of a pound and a quarter, but none larger. I do not think that the trout are so large here as in the lower part of the river; we saw twelve inch and one hour. Dan leveled his gun at a splendid dove size juv. and shot it. He would have been very proud to have lowered the muzzle, as she likely had fawns by, and was out of season.

We reached Thompson's with our boats about sunset. This gentleman is, as the term is applied, a "Scotch Irishman" by birth. He came when a small boy from Ireland and lived, until he had grown up, in the timber country of the Simanahoning in Pennsylvania. He then moved to Michigan, is a large holder of valuable timber lands, and keeps his place in the State of Michigan as much for the sake of it as anything else. His large, neat house and big Pennsylvania-looking barn bespeak thrift and good judgment. He is a splendid specimen of a man, still young—say thirty-five—over six feet, and well proportioned. He received us kindly, took a bottle of Cognac from its straw wrapper, gave us a good supper, and then, after a good breakfast, he took his boats and luggage on a stout wren, and placed us in one with springs and sent us rejoicing towards Tawas City, on a level road twenty-five miles long "and as straight as a gun barrel." We arrived in Tawas City to dinner, and then took the fast steamer Sherman for Bay City. I am sorry I have forgotten the name of the Captain, but he was the best and wisest and most generous of men, and he sailed with me for a quarter of a century. This ended from beginning to end one of the most pleasant excursions it has been my happiness to undertake.

SARATOGA, August 20.—The number of people on the course and in and around the grand stand was never exceeded in any year. This is undoubtedly owing to the admirable management of its officers and the efficiency displayed by the lessee. The first race was a purse of \$500; one mile and three quarters, winners at either meeting excluded. There were four starters. Reform, Dublin, London and Red Dick. Reform won easily in 3-05½, which is one second and a quarter quicker than the same distance was ever run before. The great event of the day was the two-mile race for \$1,400, in which the starters were Wanderer, Wanderer's Kid, Little Wonder and Little's Followcraft won amid intense excitement, and in the shortest time on record, 7:19½. The third race was a free handicap steeple chase for a purse of \$850. Bullet won the race easily; Vesuvius failed to go over the course.

—The extra days' racing at Saratoga on August 21st was for the benefit of the Saratoga Rowing Association. The first race was for a purse of \$500; distance three-quarters of a mile, which brought out the following starters: "The Grey's" Emily and Mack, "The Red's" Dan, "The Blue's" McKee, "The Green's" Minnie, Mack, Coffee, 1d. 10c. and the Dubs, Dublin, and Ayer's Erastus Cornett. Madge was favorite in the pools, and won easily by two lengths, Dublin second, and Minnie Mac third. Time, 1:45½. The second event was a selling race for a purse of \$600; distance two miles, which brought out the following starters: Daniel's Red Dick filly; Walden's Mildew, Coffee's B. F. Carver, Donahue's Wizard and Cariboo. The race was won easily by Cariboo by two lengths, Red Dick filly second, Mildew third. Time, 3:24½. The third race was a handicap for a purse of \$500, which started the following horses at two miles. The starters were: Dan's John, Faldaden, Donahue's Lizzie Lucas and Botany Bay, McDaniel's Galway, Moore's London, and Stearn's Frank. Soon after the start Galway threw his rider, who was seriously injured by his fall. Botany Bay took the lead and won easily by two lengths, Faldaden second, and Lizzie Lucas went to the front, and won by half a length, Faldaden second, Botany Bay third. Time, 3:33½.

—The races at Saratoga on August 22d embraced three events which ended the summer racing meeting. The managers of the association gave the entrance money of Saturday last to the public schools of the village, the funds to be especially devoted to the building of a gymnasium for the use of the children. The first race was for \$500, for all ages, distance one mile and an eighth. Only three horses started. McDaniel's Madge, Coffee's Carver, and Ayer's Erastus Coming. Coming got off first, but soon fell behind, Madge going to the front, where she stayed to the finish, winning by ten lengths. Carver second, fifteen lengths ahead of Coming. Time, 3:09. The second race was for \$600, for all ages, distance one mile and three quarters. The starters were Donald's Botany Bay, Desmond's Mollie Darling, and McDaniel's Gaywing. The three horses started well together, Botany Bay taking the lead and winning by a length, Mollie Darling second, five lengths in front of Gaywing. Time, 3:09. The third race was for \$400, for all ages, distance one mile and a quarter, for a purse of \$650. Four horses started, Lawrence's Lorillard's Bullet, Green's Daylight, Tully's Vesuvius, and McDaniel's Julius Colt. Daylight was favorite before the first heat, which he won by half a length, Vesuvius second, and Julius Colt third. Time, 1:56½. The second heat was won by Bullet by a length, Julius Colt second, and Bullet third. Time, 1:32½. In the third heat, Daylight and Vesuvius only started, Vesuvius winning the heat and the race by four lengths. Time, 1:54.

—The Hampton Park races closed on August 21st. The meeting has been one of unqualified success, and terminated in an admirable and most satisfactory manner. There were two postponed races to finish—the 2:38 and the 2:26. H. C. Hill won the sixth heat of the former in 2:28½; Nashville Girl second. Bella, the winner of the fourth and fifth heats, won the eighth heat and the race in 2:30½. Nashville Girl took second money, H. C. Hill the third, and Mac the fourth.

Fred Hooper, the winner of the first heat in the 2:26 race, also won the fifth in 2:26, and the sixth in 2:24½, giving him the race. T. L. Young gets second money, Mambrino Gift the third.

Gloster won the 2:20 race, the last of the meeting, in the third, fourth and fifth heats, Camors taking second money. Time, 2:20 1/4, 2:19 1/4, 2:21, 2:23, 2:27 1/4.

Kansas Chief won the 2:31 race in the second, third and fourth heats, Fleety Gold dust taking second money. Time, 2:25, 2:29, 2:25, 2:27.

The two mile hurdle race was won by Tabiatura, Crow's Meat second, and Ned Haulon distanced. Time, 4:51.

—The Fairbairn County Agricultural Society held its regular training meeting on their grounds near Norwalk, Conn. On the previous afternoon, \$3,000, and the afternoon of the following day, \$3,000, were collected. The first day, August 19th, there was a race for a purse of \$500 for the three minute class, best three in five. L. L. Allen's b. m. Laura won. The second race was for a purse of \$800, for 2:30 class. P. Mance's b. m. M. A. Whitney won in three straight heats. Time, 2:33 $\frac{1}{2}$, 2:34 $\frac{1}{2}$, 2:34. On August 20th the first race was for a purse of \$500 for 2:50 class. Walker's b. m. Bay Bird won the last three heats. Time, 2:54 $\frac{1}{2}$, 2:41, 2:41. The second race was for a purse of \$800 for 3:35 class. J. D. Gillett's g. g. Messenger Boy won the three last heats. Time, 2:37 $\frac{1}{2}$, 2:33 $\frac{1}{2}$, 2:33 $\frac{1}{2}$. On August 21st the first race was a purse of \$500 for 2:38 class. W. H. Nelson's Kitty won in three straight heats. Time, 2:40, 2:36 $\frac{1}{2}$, 2:38. Between the heats the pacer Copperbottom was matched against time to beat 2:35. He paced three heats as follows: 2:27, 2:24 $\frac{1}{2}$, 2:29.

EDITOR FOREST AND STREAM:—

Among the many suggestions to out-door enjoyment in your valuable paper, little reference seems to be made to that most exhilarating of all pleasures, horseback exercise. Summer will soon be past, and the cool air of autumn will be upon us with its delightful bright days, when this sport can best be enjoyed. To a person of sedentary habits to whom an hour from business at the most is the best he can spare, nothing is more beneficial than horseback riding.

It stimulates every muscle in the body, the horse is doing the work while the man makes the exercise, and the writer knows from personal experience that is a great cure for that American malady—dyspepsia. The trout may refuse to bite, and the game to start, but upon the horse there is a certain pleasure beyond all contingencies. The rider is above everybody else, he goes faster than anybody else. He has for a time at least a kind of ideal, and not actual being, forgetting himself almost entirely while enjoying the exercise. At one moment he imagines himself a general at the head of an army, at another an emperor making a triumphal entry into his capital, at another a conqueror, and now perhaps he leads a charge, in battle, or he is riding a fierce race, and he springs in his saddle as if thousands of dollars depended on the result. Not that he actually believes all this, but only that he feels some what as if it were so, or might be so.

By all means ride a trotting horse, and leave to the exclusive right of the ladies the gallop. Take good company with you, for coming the "solitary horseman" is the poorest of all medicines, if you have only your ills to contemplate while riding. Don't ask the livery man before you start if the horse you are about to mount is gentle, kind and don't shy, but spring into the saddle and look out for him yourself, thereby forgetting for the brief hour all business and care.

Use as light a saddle and bridle as possible, for handling a horse with heavy harness is like landing a brook trout with a bass rod.

These few ideas are the result of only fifteen years experience, but I well know that is short in comparison with many of the army contributors to your paper, but I can safely say, with that short observation, that horseback riding strictly adhered to (if only for an hour each day), will be productive of great physical good.

F. S. S.

—The National Association for the Promotion of the Interests of the American Trotting Turf, has appointed Mr. Vail their Secretary and Treasurer.

—We are sorry to hear that John Harper, the owner of the wonderful horse Longfellow and other celebrated racers, died at his residence near Midway, Ky., on August 19th. It is said he leaves a large fortune.

Secretaries and friends of Athletic, Base-Ball, Cricket and other out-door clubs will kindly mail their contributions not later than Monday in each week.

—The international tourney at cricket was opened at Halifax, N. S., on August 18th by a match between the eleven of American and an eleven of the Canada. The latter won the toss and went to the wicket. Mr. Phillips and Mr. A. Power, of Ottawa, took the bat against the bowling of Mead. The inning continued until 3 o'clock, the Canadian making a total of 94, of which Phillips contributed 52. The Americans then went in, and when time was called, they had made 133, with five wickets down.

The match was resumed the following day. The Americans concluded their first inning at 1 P. M., with a total of 191 runs. The Canadian team then went to the bat and scored 66, leaving the Americans the winners by one inning and 31 runs. On the 20th the American eleven began to play with the eleven of England, and at 1 o'clock play was stopped for the day, owing to the rain. The Americans, who went first to the wicket, had scored 181, with a loss of eight wickets. On the 21st the game was resumed at 11:30 A. M., the Americans closing their first inning with the following score:

Brewster c Gardner b Taylor.....	29
C. A. Newhall b Reid.....	29
E. S. Newhall c Mitchell b Singleton.....	29
Ashbridge b Reid.....	18
Larney c Davies b Singleton.....	7
Hopkinson run out.....	4
D. S. Newhall c Stubbins b Reid.....	30
Caldwell c Stubbins b Carpenter.....	8
Bald run out.....	3
Magee c Stubbins b Caldwell.....	13
W. Ashbridge, 1 b w b Reid.....	9
Meade not out.....	5
Byes, 0; leg byes, 6; wides, 9.....	21
Total.....	205.

The English team then went to the wicket, and at lunch (2 o'clock) four men were out (Mitchell, Davis, Barker and Reid) for a score of 50. After lunch the English team went again to the bat. The following is their score:

FIRST INNING.		SECOND INNING.	
Lieut. Mitchell c Meade	3	et Baird b Meade	21
Lieut. Tournour c Magee b Meade	10	et Welch b McGee	13
Lieut. Davies c and b Meade	5	b Meade	12
Lieut. Brewster c Meade	7	et McGee b Newhall	1
Lieut. Reid c B. C. Newhall	2	et Hopkinson b C. Newhall	0
Capt. Wallace c D. S. Newhall b	1		
		et Hopkinson b C. Newhall	0
Lieut. Gardiner c Hopkinson b			
Brewster	10	run out	0
Mr. Hubbard run out	20	Meade	4
Capt. Twiss Hopkinson b Meade	1		
Lieut. Carpenter run out	1	run out	0
Lieut. Singleton b Meade	2	et Brewster b C. Newhall	1
Lieut. Farmer not out	0		
Byes, 3; leg byes, 2; Widess, 4; no			
balls, 1.	16	Byes, 6; leg byes, 3	5
Total	112	Total	25

This was a brilliant result for the American cricketers.

—The Brooklyn Scottish games came off in Myrtle Avenue Park on August 20th. The following athletes were awarded prizes as follows: Putting heavy stone—John Anderson, 35 feet 4 1/2 inches; standing jump—A. Rennie, 9 feet 7 inches; throwing heavy hammer—A. McKay, 87 feet, 6 inches; tossing the caber—A. McKay, 37 feet 1 1/2 inches; running jump—A. Rennie, 19 feet 11 inches; running high leap—A. Rennie, 5 feet and 6 inches; hilch and kick—a tie—T. Munsella and A. Reid, 8 feet 7 inches each; short race—A. Rennie; three-legged race—M. E. Moore and S. Duke; broadsword dance—J. Kennedy; boys' race—Alfred McAdam; egg race—M. E. Moore; reel dancing—Alfred McAdam; crowing; light hammer—A. McKay, 9 feet 9 inches; vaulting—T. Munsella, 9 feet 1 inch; putting light stone—John Anderson, 41 feet 10 inches; long race—A. Reid; Highland fling—James Atclison; standing high leap—A. Reid, 4 feet 3 inches; hurdle race—A. Reid; sack race—E. B. Fleming; wheelbarrow race—Peter Reid; extra boys' race—A. D. Edgar.

—The Boston nine again defeated the Athletics at Dublin on August 24th by 12 to 7. This is the sixth victory in succession by the Bostons in their English games with the Athletics.

—The grand match between representatives of ten of the leading amateur clubs of Brooklyn and New York, which took place August 17th, was over at a great success. The match was played under Mr. Chadwick's new rule of ten men and ten innings, and it was umpired under professional rules by Burdock of the Mutuals in fine style. The advantages of the improvement in the game were made plainly apparent, the additional facilities given for field plays by the second baseman being a feature of the ten men rule. The Brooklyn side was a model display of skill both in batting and fielding, and after the fourth inning the Brooklyn party played finely. The following is the full score of this model contest:

NEW YORK.					BROOKLYN.					
	C	R	P	A	E	C	R	P	A	E

Atlantic.....	9	23	32
Baltimore.....	6	22	28

—The following is the record of the victories of the Fly away club, so far as heard from:

August 17—Fly-away vs. Mutual, at Saratoga.....	21 to
August 18—Fly-away vs. Ku Klux, at Onelda.....	12 to
August 19—Fly-away vs. Star, at Syracuse.....	21 to 1
August 20—Fly-away vs. Excelsior, at Little Falls.....	21 to
August 21—Fly-away vs. Adams, at Adams.....	

—The English base ball nines who have learned the game cannot be tempted to play with either of the American clubs. There has been considerable practice among the cricket clubs, but still they do not wish to tackle either of the nines; offers of eighteen men and five outs even will not tempt them, and so to keep up the advertisement promises the boys have to work very hard.

The correspondent of the *Boston Journal* says in reference to the match at Princes : "Friday noon the American went to the bat, and ran up a score of 110 in about two hours. After lunch the Prince's Club took their second innings, which finished for 39 runs, and thus were they beaten in one inning and 50 to spare—the whole performance on their part. The score is not worthy of being published, being mostly loose eggs. The odds should have been given the other way—eighteen of England to American eleven. A number of good cricketers were in attendance and were much irritated, although a few sought to excuse the conduct of the club by saying it was out of season, and the players were at country cricket matches, as if they had not known of this match for months. If Americans can cross the ocean to play, cannot they take an hour's ride to keep an engagement? Most of the expressions were of disgust, denouncing the conduct of the cricket club as disgraceful, and saying they would catch it in the papers. Although it was spoken of as very unfortunate in the *Times* and other leading dailies, the censure was very mild."

The same writer says :

"Among other things that interest an American is the Skating Park. This is a large space, partly under cover, and with very large marble tiles, and used for skating on parlor skates. Mr. Plimpton, well known in Boston, is here, and superintending the completion of a large rink for winter use. The English ladies as a rule, are far ahead of the Americans at this exercise, some being remarkably expert and graceful. Although the Americans are so exclusive in most of their having titles, it is comparatively easy for an American to obtain an invitation to the private portion of the ground."

"Land and Water," of August 8, in its comments on base ball, says: "Of the game itself, as seen during the week in London, little can be said, except in praise. It was generally fancied that cricketers would be rather inclined to deprecate and ignore, but the cricket world has been the first not only to welcome, but to applaud. To cricketers, indeed, baseball presents many lessons that might judiciously be taken to heart and respect alone the Americans have shown Englishmen what they are capable of doing in throwing. Here you rarely find a cricketer who can be relied upon for consistent accuracy in returning the ball to the wicket-keeper. It is returned somehow, and that somehow seems quite enough. Sometimes at the head, and more often at the feet, it comes in at a great pace probably, but still in a manner calculated to disturb the whole system of the batsman. The cricketers, however, are not vain at all in attempting to reach the ball in an impossible position. With the baseball players matters are altogether different."

—Mr. Asa W. Smith, brother of Mr. Mark Smith, the actor, and an old and most highly esteemed member of the Union Base Ball Club of St. Louis, was drowned in the surf, while bathing off Biddeford Poole, Maine, on the 18th ult. He was a thorough Southern gentleman, and tried his best to keep up the high status of base ball as a gentleman's game.

—The match between the professionals and amateurs for the benefit of the Mills family at Brooklyn, August 24, resulted in a one-sided and uninteresting match, the score standing at 14 for the Mutual nine to 1 run by the New York Amateur ten. The game yielded about a hundred dollars to the fund.

—The Chicago nine defeated the Baltimores at Chicago on August 24th by a score of 4 to 3 only in a ten innings game—the best contest yet.

—On August 22 the Nameless nine defeated the Nassaus at Prospect Park by a score of 13 to 9. Nearly 3,000 people witnessed the contest.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FLASHES FROM THE "BLUELIGHT."

SIXTH WEEK.

THE past week has added five to the Bluelight's record of dredging trips, and brought the number of successful hauls of dredge and trawl up to one hundred and thirty-five for the season. One trip was a long one, leaving Noank on Tuesday forenoon, spending the night at Block Island and returning the next evening. During this trip an opportunity was afforded to the party to draw a strong contrast between in-shore and off-shore work. Fifteen miles out in the Atlantic, to the south of Block Island, the long ocean swell played the mischief with science, and only a quick return to smoother waters saved lives and dishes. Pale Professors staggering about, clinging steadfastly to the corks of broken jars, could not contribute much to the good cause, and since our return there has seemed to die away the oft expressed longing for a good outside trip to deep waters.

Yesterday, on our trip, in which we had the pleasure out at sea, of the company of Mr. Wyckoff, of the Tribune, Dr. Bessels and Captain Dutton of the Ordnance Corps, the sound was boiling with leaping fish; the pilot called them "all bluefish." I haven't been able to find out how a live bluefish looks yet this season, but should have declared them to be bonitas.

The Commission has chartered a roomy, comfortable job-boat, with a cabin and fair sailing qualities, and in this, with Captain Chester to man, Professor Goode is working hard, seining and trawling in the places where the Bluelight cannot well go, and with good results. Sleeping as best they may on board the boat, and depending on their selves for their chowder, they have spent several nights away working with success in Buzzards Harbor, on the reef near Montauk Point, Shagwam Bay, Cobscook Bay, and New Shoreham, and nearly circumnavigating Block Island, setting the "scrawl," a long line, with baited hooks at intervals, in suitable places, and capturing great numbers of fish, a large proportion being skates.

Several new species were added to the list of fishes found in this vicinity, among them several *Engraulis vitellus*, a fish closely resembling that in Buzzards Harbor, and there, a fine specimen of the bill fish, (*Tetrapturus albidus*) five feet in length, and a curious sucker fish, the *Rhinobichirus ostochir*, with an apparatus in the back of his head resembling the rasp with which a shoemaker removes pegs, were among the captures, and a large sturgeon was sent to us.

The pounds are doing very little now, the season being considered over. Several have been taken up, and in the last standing, but for the season, Spanish mackerel being the principal catch. The smacks, that, when we first began work, arrived almost daily with full fares of cod, mackerel, weakfish, &c., are now mostly laid up, receiving repairs and refitting for next season's work. The skates' eggs, that we bring up in our trawl, are no longer filled with a living occupant, but are mere husks from which the life has sprung. Everything marks the approach of the end of our season, and fills us all with regret that so delightful a summer should be so short a one.

A most interesting and valuable set of experiments have been, and are still, at the date of this letter, 22d, noon, being carried on at the Fish House, in attempts to raise young shad in waters containing various proportions of sea-water—from pure fresh to entirely salt. The shad, (about fifty thousand), were taken from the hatching boxes at Holyoke at five A. M., on the 15th instant, about one hour old, and were brought to Noank by Mr. Milner, Assistant Fish Commissioner, arriving here at 11.30 A. M., the water having been changed three times. At 9 P. M., all being lively and in good order, they were divided into lots and placed in earthen jars containing each 128 gills of fresh spring water. Jars No. 1, 2, 3 and 4 were devoted to experiments with salt-water. No. 5, 6, 7 and 8 to experiments on temperature. No. 9 and 10 with spring water, changing every six hours. No. 11 pure sea-water, and No. 12 spring water at low ebb.

Jar No. 1, had taken from it at the end of every three hours two quarts, and the loss was made good by replacing two quarts of a mixture of fresh and salt water, beginning with fifteen gills of fresh to one gill of salt, and on each successive change increasing the salt and diminishing the fresh by one gill, until at the end of forty-five hours the fifteenth change, and every three hours after, the water had been pure sea-water, that in the jar being nearly so. At the end of sixty hours, they having been for fifteen hours in nearly pure salt-water, the shad began to show a little weakness, lying at the bottom of the jar. At 6 P. M., 18th, at the twenty-fourth hour in sea-water, they succumbed, and about ninety-five per cent had died; a few still living were taken from the jar and placed in a mixture, half fresh and half sea-water. They revived and are still in good order at date, (noon 22d).

Jar No. 2 was the same experiment as No. 1, except that the sea-water was added in one-half of above proportions, taking ninety hours to bring the mixture to nearly pure sea-water, and from that time, 3 P. M., 19th, the change has been with pure sea-water, they have gradually died, but at this date about ten per cent are living, but rather dull, having been in nearly pure sea-water sixty-nine hours, and in water more or less salt 156 hours.

Jar No. 3 had salt-water added in same proportion as in No. 1, until at the end of fifteen hours the water was nearly one-third salt to two-thirds fresh, and this mixture has since been supplied every three hours, two quarts at a change.

Jar No. 4, supplied in same proportions as in No. 2, bringing the mixture nearly to half fresh, half salt in forty-eight hours, the changes being continued since with mixture of same proportions.

At date No. 3 has had its full proportion of salt, nearly one-third for 144 hours. No. 4 has been at nearly half and half 111 hours; and in each jar the fish are lively and but few have died. Those in No. 4, where, although the salt in the water, the salt-water was added more slowly, seem to be livelier than those in No. 3.

In the above experiments the temperature varied from 65° to 70°, no artificial means being employed to alter it,

the adding of the sea-water, of course, bringing it down a little—the temperature of the room raising it. It is originally intended that No. 5, 6 and 7 should be kept at 65°, 60° and 55°, respectively, by the addition, as necessary, of fresh ice-water, but Mr. Milner, having been compelled to leave us, we were, till the arrival of Mr. John Vealey, to assist Mr. C. D. Griswold, who was left by Mr. Milner in charge, rather short-handed, and it is probable that the average temperature of each jar has not been below 62° or 63°, although each has been temporarily lower. In these jars the shad are all lively and well now, at the end of seven days and seven hours since they were taken from the hatching boxes, three hours more, and there is no sign but that they will last longer, and we will have beaten the longest time as yet on record, as occupied in the transportation of shad, viz.: the journey of Seth Green with a stock to California.

Jar No. 8 averaged about with 5, 6 and 7, being under same treatment, until last evening, when the temperature was suddenly reduced to 50° and carefully kept at that point. This was too cold, and the last of the lot died in seven hours, they having begun to die at about three hours.

Jars No. 9 and 10 have been left at natural temperatures, subject only to such changes as the changes in the temperature of the room and the changing of the water might cause, the water being fresh spring water, and changed every six hours; the fish are all doing well.

One small jar, No. 11, was filled with sea-water several times and a few fish transferred to it; in each case they all died in from two to three hours.

Jar No. 12 was filled with surface water at dead low tide, the river being unduly fresh on account of late rains, but the water was perceptibly brackish to the taste. The water was changed every three hours by adding surface water taken at low ebb. This, however, became much saltier than at first, owing to a southerly gale, and by noon of the 21st they had all died—all having kept well for about forty-eight hours.

In all of these experiments the temperatures were noted with one of Green's standard thermometers, and the proportions of sea-water calculated by the amount placed in at each change, this, however, would not give exact proportions, as in taking out each time two quarts of the mixture, more and more salt each time was removed, and the proportion of fresh water left a question of much closer calculation. It, however, approximated, and I have used the qualifying word nearly in speaking of the degrees of saltiness. The method of this first systematic experiment in rearing shad in salt-water was devised by Mr. Milner, and it is to be regretted that circumstances prevented him from staying to carry it out. Mr. Griswold and Mr. Vealey have, however, taken every pains and done all possible.

Professor Baird has ordered made by Tagliabue some hydrometers, the whole length of whose scale will cover but twenty per cent, thus embracing pure fresh and pure sea-water, and with them we will be able to determine exactly on future occasions. I am watching our little nursery with great interest, and will give you next week the final results; they have occupied so much of my leisure time, that I have not noticed much the work in the laboratory, where, however, there has been the usual late hours and busy investigation. So you must wait till next week for the notes I have promised in regard to the actions of various poisons on the lower forms of animals.

One typographical error in last week's letter I must ask to be corrected. I wrote, "the supercilious Captain," not "own," which rendering makes me guilty of self praise. It was Captain Rathbun who towed his lobsters to sea, and not PISCO.

P. S.—And "night whale" should be right whale, and kraker should be kraken.

THE CALIFORNIA EXPERIMENTS.

U. S. FISHERY,
REDDING, Cal., August 10th, 1874.

EDITOR FOREST AND STREAM:—

Permit me to enclose you some proofs of pictures taken by my photographer here, around the camp, just to give you an idea what the place and fish look like. We are getting along as well as could be expected. Our working force now consists of ten white men, one Chinaman and the Indians, and we have had very busy at work ever since we came here—the first of last month. We have got up our tents and our buildings, and have not the need to raise the water into working order. It works splendidly, and raises 15,000 gallons of water an hour into the hatching-troughs. We are just completing a bridge and trap across the river. This has been a great undertaking, on account of the depth and fastness of the current. The salmon are extremely abundant in the river; (the last haul we made with the net we caught a ton of salmon. We have also caught quite a number with a hook baited with salmon roe, and have taken out one with the artificiality. I do not know how many eggs we shall eat in taking this year, but we are going to get things in readiness for taking five millions. Yours truly,

LEWIS W. STONE.

We certainly feel much interested in these photographs, and are very thankful for them. We recognize the old salmon settlers readily by the specimens of the California salmon which we find in our markets, although we have not had the pleasure of seeing full grown ones alive. We do not think the facial expression of either variety as amiable as that of our Canada fish. They have a kind of ragged respectable look, something like that of an old Forty-niner. The camp shown in the photograph is embowered in a dense foliage of tall trees and luxuriant shrubbery, and backed by the gray cliffs of the ravine through which the McCloud River runs. There are two board houses, several tents, an awning, the American flag pendant, and the cold, rushing river. We can almost fancy we can distinguish John himself in the party.—Ed.

GRAYLING AND TROUT FOR STOCKING PONDS.—We are informed that Mr. E. L. Fraser, of Grand Traverse, Michigan, is able to procure, at certain seasons, any given quantity of young grayling and trout, which he will dispose of to fish culturists at given figures. He is thoroughly conversant with the habits of the grayling for seventeen years past; and is well recommended by those to whom he refers. A misfortune has incapacitated him from hard labor, so that those who need him will do him a kindness by patronizing him.

—An association for the protection of game and fish is to be formed at Geneva, Ill., and will be composed principally of persons residing in the vicinity of Fox river. The association will make special efforts to preserve the fish in Fox river and tributary streams.

—The last New York legislature passed an act for the construction of a fishway in the dam of the Mohawk above Schenectady, and work on the structure will be presently commenced.

POUND NETS.—In the Connecticut Fish Commissioners' Report for 1874 are many allusions to pound nets, which ought to be abolished forever. No rivers can be made self-supporting so long as pounds are permitted. The incalculable damage they do is summed up and their prohibition urged in the following reasons:

"First. They are nuisances on the high seas, placed in the water without a shadow of right—a continual obstacle to the navigation of both large and small craft.

"Second. They prevent the free passage of the fish to their spawning grounds, and destroy them in such quantities as to threaten complete extermination.

"Third. They impair vested rights, in that they inflict immense injury upon all the fishing rights on the river, not only in our own, but in sister States, and this without any compensation. Were such rights injured in any other way, as for example, by a dam thrown across the river, no one would question the right to some compensation.

"Fourth. Justice and equity demand that the preservation of fish at the public expense should be for the benefit of the public. The right to a free passage of the fish into and up the river, is a public right, and it is subject to legislative control. This control should be exercised for the greatest good of the greatest number, and should prevent pound fisheries from being a virtual monopoly of the fish. All our people alike upon the river are entitled to a fair proportion, as the fish ascend the river. There should be no exclusive privileges permitted, either in time or moieties of fishing. But all should be so regulated and adjusted that the legitimate claims and rights of all are protected."

Natural History.

× CANADA LYNX. (*Lynx Canadensis*.)

DURING the Winter of 1869, a very severe one in Quebec, the lynx were driven by thousands from their mountain and swampy fastnesses by the great scarcity of their natural prey, the hare, (*Lepus Canadensis*) who were either destroyed by the severity of the Winter or were carried off by some contagious disease, which it is well known will sometimes deplete a country for miles around.

The lynx, naturally a shy animal, retiring before the advance of man and civilization, but now emboldened by the keen pangs of starvation and oblivious of all danger, swarmed through the settlements devastating the sheep-folds of the settlers. Hunting singly or in pairs they hesitated not, even to entering the barn yards during the day, watching the opportunity when the farmer and family were within doors to commit some depredations among the stock. Active measures were taken for their extinction and a determined and relentless warfare was waged against them. Extra precautions were taken to protect the sheep and other animals. As the Winter progressed, the lynx, reduced to sore straits to procure food, entered even the city of Quebec, along the cape above the river and through the fencibles. Great was the excitement, and such a furnishing up and clashing of arms, that had a stranger chanced to enter the city at the time he might have thought a Fenian raid was again imminent.

One lynx, after an exciting chase, was killed in the garden of the Archbishop's Palace; another in the rear of a restaurant, attracted by the savory odor from cooking viands. I forget whether it was afterwards served up to its patrons in the guise of hash or not. Many more were shot in the trenches by the soldiers and one even penetrated to the citadel itself, but paid with its hide for its temerity, and now doubtless graces some officer's sanctum as a trophy of his prowess.

I remember vividly one which we captured at Cap Rouge, and after dispatching and skinning I solicited the hind-quarters, determined to test the culinary qualities of the beast. Its appearance was certainly in its favor. Packing my acquisition in brown paper I trudged into town, and on reaching my boarding house I presented myself before my landlady and showing her my game, I requested that it might be roasted for my dinner the following day, paying no attention to her evident repugnance to cook such a nasty thing, as she termed it. Prompt to the minute next day I reached home and opening the door a fearful odor assailed my olfactory organ. The dinner bell sounding I made my appearance at the table, and before my seat was my leg of lynx, beautifully browned and tempting. I heeded not the jokes cut at my expense, but carving myself a portion I took my first mouthful. Bait it was the last. Take away the thing; it is not fit for human beings. Reader, no more lynx for me. My landlady, with disgust depicted in her face, said she had been obliged to have every window and door opened in the house, and the thermometer 30° below zero.

The Canada lynx is about the size of a setter dog. Hair long and of a mottled grey color. The head resembles a cat's, though somewhat shorter. Its triangular ears have an erect tuft of coarse black hair growing from their extremity. Its paws are large and spreading, with powerful claws which enables it to climb. The tail is short and bushy.

Its Canadian name, *Loup carpi*, is descriptive of one of its characteristics; that of creeping upon its prey from the branches of some tree close by where it will pass. It will

sometimes attack as large an animal as a caribou, and often successfully. It is exceptional, for they are of a very cowardly nature, though immensely powerful for their size. Its most common prey is the hare, (*Lepus Canadensis*) which overrun the swamps throughout the country. I once had an opportunity of observing their manner of pursuit. I had been out hunting hares on snow-shoes to white away a morning, and in crossing a swamp on a point of the river I came upon a fresh track, and while slowly and carefully following it up so as not to disturb the hare before I could get within shooting distance, the track was suddenly joined by a lynx's, which in passing across at right angles had seemingly made up his mind to pursue the same course I was following. I only hesitated to increase my charge of shot, determined to witness the denouement. A dozen rods further on, the hare had evidently become aware of the near presence of its implacable enemy and had made prodigious efforts to escape, as its immense leaps testified. The long regular strides of the lynx began to tell, and the hare in its terror must have turned to double and thereby ran into the danger it was trying to avoid. The lynx had made short work of it, for scarcely a vestige but a few hairs and the blood-stained snow were left to tell the tale. I followed the lynx for some time, but he had too much the start.

Very many lynx were captured during the winter in steel traps, baited with meat and drug. It is easy then to dispatch it with a gun, but approach it then not too closely, for it maddened by pain is treacherous and wicked. One man at Cap Rouge, Bellevue by name, had his arm so badly lacerated by one which he had caught in the above manner that it was found necessary to amputate it. He had approached it with an axe to dispatch it, when it sprang forward and fastened upon his arm. It was with the utmost difficulty that he tore himself from the fearful hold of the lynx.

Not unlike the fox, the lynx will oftentimes gnaw their paw off to escape from the trap. This happened to one which my friend, Mr. John Neilson had captured, and singular to say, escaped him entirely, though he followed its track a day.

Col. Rhodes of Quebec, one of the finest sportsmen in Canada, once related to me, while a travelling companion of his from New York, several adventures and methods of taking the lynx, which he and his son had. He has had reproduced many of the scenes in a series of photographs gotten up at a considerable expense and outlay of time, representing sporting life in Canada.

G. M. FAIRCHILD, JR.

VARIETIES OF BASS.

INDIANAPOLIS, IND., August 20, 1874.

EDITOR FOREST AND STREAM—

We have in the waters of this State a fish which I had always supposed to be the black bass. Messrs. Scott and Roosevelt both recognized it as such, but Mr. Norris says it is not. Now the bass of the Potomac are called black bass, and it was stocked from Western streams and not from Northern lakes. Our fish rise to the fly and are game; their average weight is about two pounds, and although fishermen hereabout claim to have killed five and six pounds, I never saw a fish that exceeded four pounds weight but once. Any information on this point will be thankfully received. Yours, truly,

ALEX. C. JAMISON.

Investigations by the best scientists have determined that there are but two distinguishable forms of black bass—the *Micropterus Salmoides*, or the small-mouthed bass, and the *M. nigricans*, or the larger mouthed variety. Both of these species occur naturally over a greater part of the United States, with the exception of New England and the Atlantic seaboard of the Middle States, although only one, the small mouthed, seems to have been originally an inhabitant of the hydrographic basin of the Ohio. The difference between them is so appreciable that the veriest tyro, seeing them side by side, must admit their distinction. It is not to be understood, however, that there are no variations from the standard type to be observed in the bass of these two groups in different localities, and it is not improbable that a careful criticism will reveal certain tridling peculiarities, which may serve to distinguish those belonging to a particular area.

As to this much vexed question of taking the fly, our abundant evidence proves that both of the varieties indicated above do rise to the fly in some localities, but not in others; that is, *Nigricans* will take the fly in one locality, lake or river, and not in another, and so also will *Salmoides*. We cannot tell why this is. Possibly, the food in one place makes the fish surface feeders, and in another keeps them at the bottom, though this conjecture would scarcely signify. It may be that difference in habit is caused by some variation from the standard type, as suggested.—[ED.]

BLIND SALMON OF THE GASPE (CANADA) RIVERS.

WASHINGTON, AUGUST 20th, 1874.

EDITOR FOREST AND STREAM—

As some interest has been excited by an article upon the blind salmon of York river, copied quite extensively from London *Land and Water*, I hasten to add a word upon the matter. In company with my genial friend Lazell, of Brooklyn, who will be recalled at once by scores of friendly anglers as the "man who can't make a lobster salad," I had the pleasure of fishing the York last month through the kind invitation of Mr. Reynolds, accompanied me as the friend of Fred Currier, Esq., of Boston. Later I fished the Dartmouth, and a friend the St. John, so that my facilities for a knowledge of these rivers was good.

The blind salmon are common at all points of the York, but found often in both the Dartmouth and at the mouth of the St. John. They are not often blind in both eyes, although sometimes found so. During our trip up to the "Narrowes," or highest accessible pools of the York, the head canoe man several times could approach a salmon near enough to touch

his side with the setting pole. After the fish had taken position on the other side of the pool, upon approaching him on the reverse side, he was as readily frightened as any other salmon would be. A large, fine, male salmon was shown me, with one eye blinded by what was apparently a thin film or scale grown over its entire surface, while the other was slanting away. Upon a close examination the distinct whiteness of the gill net cut was found crossing the first eye, while upon the last was found a very recent, shallow, shallow cut, which extended from some little distance above the eye to a point directly underneath its centre. This salmon, which was, of course, "stone blind," was taken with a gaff a few miles above the nets, and his tail was split by the twine between the spines in several places, indicating the severe struggle he had in freeing himself. I presume none of your salmon anglers readers have seen the salmon, when recently caught in a net, braving himself with his tail against the twine to secure a purchase for freeing himself.

Many of the very large salmon, sent distinctly from the high banks of the upper pools of the York, have net scars upon their heads. In the water this scar looks like a white cord passing across the head. I remember, (without any notes) rather more than half the large ones we caught just under the falls of the Dartmouth, and the smaller ones have these white line scars where the twine had cut their heads.

Your present writer, as you well know, is neither a Naturalist nor a Piscicult, and much less a Troutologist, but yet ventures a common sense hypothesis, only stipulating that it shall not be found in *Bithune*.

These salmon, whether blind in one eye or in both, are usually of the largest size, for the reason that on any eye the largest will the mesh of the net generally strike across one or both eyes. The smaller fish, of course, pass the head farther through. Again, the larger the salmon the better the chance of his forcing himself out of the net and living, not to tell, but to show his tail, split by the twine, and his head scarred and eyes cut. It seems beyond a question that this blindness is *traumatic*, or the result of a wound. A sharp twine cut across the eye would, if not too deep, bring about, as a result of inflammation, a *hypertrrophic* condition, which would extend both sides of the cut over the entire conjunctiva, and would be of a slightly darker shade and somewhat opaque, especially after purulent infiltration. This hypertrophy would be permanent. These blind salmon starve to death finally in the rivers. When the main body of the fish, after the breaking up of the ice in the spring, go down to the sea, they are left blind. Several of my canoe men, coming from both rivers live directly upon the blunders, and every morning watch the salmon going down, about two months before any run up.

The number of blind fish increases yearly by reason of the better protection now afforded. Of course more fish go clear of the nets and poachers each year, and live to get large enough to have their eyes blinded. If you ask why these blind fish are more numerous on the Gaspe river, I can only speculate that they are more numerous in this stream as well protected, and in which the salmon average as large—provided, of course, a careful observer fished it. As regards the average of fish in the York, my score for one half day (six hours' fishing after 12 o'clock) was five fish, averaging 23 pounds. As I remember it, the average of all the fish taken by Lazell and myself was about twenty pounds. I took out not only a few of the common fish, but other matters, and will get at them and work them up for you before long.

Before closing, let me recommend to your anglers readers the most killing fly yet tried. Its name does not transpire, but it is used by the Government over-seer. One day I was fishing with the guardian of the stream, came up to our camp, "Fred Currier," remarking that he was a pretty successful angler, and had taken a fine, large salmon just below. A look at his rod and line, which could by no manner of means have killed a three pound sea trout, suggested a suspicious smell of *small-mouth*. Upon going to the canoe we found a salmon weighing thirty-three pounds, with one eye blinded by the twine, and the other eye "stone blind" salmon rise, his fortune was made. This fly was an old took with a few stubs of colorless feathers, its bend covered with an undisturbed deposit of rust; and in fact he had played his fish so skillfully that not even had the extreme end of his line been wetted. We were very glad that they had gaffed out the fish to save him the torture of lingering starvation, but to get caught in a *Yankee* for such an angling, the line should have been wetted, a good fly put on, and in fact tackle taken along with which it would have been possible to kill a fish. A hook should have been worked around in the cut in the jaw, and the recently wounded eye should have been gaffed as if by accident. Oh! Mr. Over-seer, as an angler you are *too thin*.

A. G. WILKINS-SON.

THE CALIFORNIA QUAIL.—A party camping on the McCloud River, in California, near where the U. S. Fishery Commission is at work, informs us in a private letter that quails are numerous in the woods round about, and by baiting them with rice they come so near the camp and become so tame that moving to and fro does not frighten them away. They come within fifty feet of where persons are sitting. It is very interesting to watch their movements.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
New York, Aug. 23, 1874.

Animals received at Central Park for the week ending August 22d, 1874:

One Corn crane, *Urea protensis*. Dub. Europe. Presented by Mr. deGruy.
Two Mare Hawks, *Circus hudsonius*. Presented by Mr. John Nolan.
Two Red shouldered hawks, *Buteo lineatus*. Presented by Mr. Warren Drummond.
One Barred Owl, *Syrnium nebulosum*. Presented by Dr. E. Sterling.
One Silver Pheasant, *Euphonia nycthemerus*. Presented by Mr. W. H. Sterling.

W. A. CONKLIN.

LAKE TICACA.—The *Scientific American* states that Lake Titicaca, on the crest of the Andes, is the highest large body of fresh water, and that the lake never freezes over. Two big steamers of 100 tons each, the only fuel of the country, for there are no trees within 150 miles. The steamers actually cost their weight in silver, for their transportation (in pieces) from the coast costs as much as the original price. A steamboat company has asked from Bolivia the exclusive right of navigating Titicaca and the Rio Desaguadero to Lago Pampa, with guarantee of six per cent. on the capital, and a share of all new mines discovered. Professor Orton, the latest traveller in the region, calls attention to the fact that Lake Titicaca is not so high as usually given in geographical works by about 300 feet. Its true altitude is 12,493 feet, and in the dry season it is four feet less. This fact has been revealed by the consecutive levelings made in building the Arequipa railway, just finished, which reaches from the Pacific to Lake Titicaca. Lake Titicaca is about the size of Ontario, shallows on the west and north, deep towards the east and south. On an island within it are the imposing ruins of the Temple of the Sun, and around it are monuments which attest the skill and magnificence of the Incas. There are also the remains of burial towers and palaces, which antedate the crusades, and are, therefore, pre-Incarnal.

Woodland, Lawn and Garden.

SHEEP RAISING IN CALIFORNIA.

NEW YORK, AUGUST 20th, 1874.

EDITOR FOREST AND STREAM—

If within the scope of your journal, could you kindly inform me regarding sheep herding and raising in the State of California, say in the vicinity of San Diego? To what disease are the sheep most susceptible, and what are the remedies? What breeds are most desirable for that region, both as to quantity and quality of wool and for propagation? What stock is a fair risk for a beginner of small capital and comparative inexperience? What outfit is necessary for a bachelor? Is destruction by dogs an item of risk, and is it worthfulness the only preventive?

H. W. T.

To furnish our correspondent with all the information he desires upon the subject would involve much space. Briefly, the requisites are, a fair amount of capital, unlimited perseverance, and the capacity for finding happiness and enjoyment in comparative solitude and natural beauty. The first, to be sure of tiding over a year or two in which experience must be bought, and the latter from the fact that, in this country, where fidelity can rarely be purchased, to have a thing well done you must do it yourself. There is a tract of country in the county of San Bernardino, in the neighborhood of the San Geronimo Pass, which, although directly on the line of the Southern Pacific Railroad, is, as yet, comparatively unsettled, and which would probably furnish the best and cheapest ranges to be found in that part of the State. Considerable Government land still remains, and our advice would be to select and pre-empt, if it could be found, a quarter section contiguous to some large tract, which might be undesirable for other than grazing purposes, or joining one of the old and still undivided Spanish grants, which could be rented reasonably. Should he be so fortunate as to find a piece with abundance of water, to which he could procure the proprietary right, other occupations could be added to that of sheep raising. Here, under the shadow of grand old Mount San Bernardino, he could build his little cabin, with a cool mountain stream trickling by his door. The nurseries of Los Angeles and San Bernardino would furnish him with fruit trees of every description, from the tropical orange and lemon to the home-like apple and pear; a little labor night and morning would soon bring him a bearing vineyard; he could luxuriate in green peas with his lamb by Christmas, and have strawberries all the year round. Coming home with his herd in the evening, and stowing them safely in corral for the night, he could smoke his pipe under his own vine and fig tree, and enjoy such sleep and health as no city man ever dreamed of. He could find use for his gun among the quail and rabbits, or the deer on the foot hills, or with his rod and the trout in the mountains.

Sheep are comparatively free from disease in California; sometimes a little mange, but easily cured. The Spanish merino is undoubtedly the best, or that with a cross of Cotswold. A flock of from three to five hundred ewes, such as could be picked up in Los Angeles or further north, with hired pure Spanish rams, would be the best to commence with. If successful, our correspondent could import his own rams from Ohio, and gradually "grade up." On a good range, with proper attention, the increase is wonderful. No danger from dogs to be apprehended, but in their place the coyote is the most destructive. They rarely attack, however, in the day time, and at night a good corral is the best defense.

THE POWER OF THE GRASSHOPPER.—A letter written from Nebraska to the *Germanian Telegraph* on July 27th, describes the sweep of the grasshoppers over the country in a matter-of-fact way that gives our readers some conception of the horrible nature of the scourge and the immensity of the demonstration. It says:—

"The air has been filled with them for the last two weeks, having the appearance of a snow-storm, sometimes thick enough to form flaky-looking clouds. Very few in proportion to the number passing overhead; I should suppose not more than one out of a thousand, and yet enough to destroy all the green crops."
Last Seventh-day, (July 25th) about three o'clock, P. M., I witnessed a scene that was awe-inspiring. The sky was nearly clear; a strong wind, almost a gale, was blowing from the north or a little east of north; we first noticed very black clouds coming up from the north, much like those that precede a hurricane. Not much notice was taken of it until the sun came pretty well overhead, then we perceived it to be grasshoppers! A field-class was brought into requisition which defined them very distinctly. The cloud was so dense that it gave the landscape that peculiar twilight appearance, not unlike an approaching eclipse.

Its course was a little west of south. How far it extended east and west, I know not; it met the horizon either way. They could not have been going at a less rate than thirty or forty miles an hour, and it took them two hours to pass over. Then I felt their utter insignificance of all human efforts to cope with such a wonderful engine of destruction. Had they carried a banner inscribed 'Desolation'! 'Famine'! it could hardly have impressed me more solemnly than it did, or conveyed a more convincing evidence of their mission."

—As the season progresses, we are learning by our successes and our failures, how to arrange our rustic baskets another year. The first thing is to have a sufficiency of mould earth, loam and sand, to be placed in the baskets in the proportion say of two parts of earth, two of loam and one of sand, with such drainage as will prevent the roots from standing water, however thoroughly the basket may be watered. A corner for the centre, with a fine tuft of grass on north, or in the shade, a scarlet geranium, and heliotrope, ivy and lobelia, will make a basket which, with proper care, will afford pleasure by its constant blossoming all the season. Again, a rich geranium in the centre,

petunias, periwinkle, coleus and ivy make a good selection. The two main points are not to crowd the basket, and to provide for a succession of flowers. The ivy bestows a gracefulness which nothing else seems to afford, with its rank growth. An occasional watering with liquid manure is an advantage. It is not any too early for more amateurs to belink themselves of next winter's window gardening. Slips of Maderia vine, young callas, tradescantia, heliotropes, should be potted so that when wanted they will have commenced a vigorous growth. As for propagating by slips, at this time of year, only two things are to be ruled for, and these are indispensable: plenty of water and complete shade. It may not be a rule applicable to all years, but our roses put out this spring, well mulched and not watered at all, have all grown well, and some have bloomed a second time. They will get a good coat of coarse stable manure this fall, and a trifle of shelter.—*Providence Journal.*

—There is a pond on Cape Cod which produces pink pond lilies, and it is the only place in the country where such a flower grows. The color is probably caused by some peculiarity of the water or soil, as, when the roots are transplanted to other ponds, white lilies are always produced.

—Vermin increase fast at this season. No fowls will thrive if kept in close, filthy quarters, where lice abound. A coat of hot lime-wash, with an ounce of carbolic acid dissolved in it, will free the roost from lice. Clear out all the droppings, and spread them evenly in the compost heap. As the fowls get fat, put them in the stables and in the straw yard, they should be sold off or used in the kitchen. A stewed fowl is more wholesome food than fried pork at this season. To fowl the run of the barn is a wasteful practice.—*Germantown Telegraph.*

—The papers of Wayne County, New York, are bragging about a big hog which now weighs 1,100 pounds.

—The first cattle introduced into New Hampshire were brought from Denmark in 1631 by Captain John Mason. They were of large size and of a yellow color. The breed remained pure and unmixed in some sections of Maine as late as 1820.

IVY POISON.

EDITOR FOREST AND STREAM:

Seeing the different remedies for ivy poison, I thought I would send you my experience.

My oldest boy poisons very easily. The most likely time to "poison" is on a cold, muggy, or damp day. Then the ivy exhalates the poison, and it is held in the atmosphere, so that if a person is susceptible to its influences in passing by, he absorbs the poison, especially if he is warm and in perspiration. It makes its appearance first generally on the hands, sometimes on the face, and looks then like a small water blister about the size of a pin's head. Often there will be several of these pustules. At this time I can stop the trouble at once, by making a mark or ring with the blister, with caustic A, and stick about half an inch or an inch, is sufficient to have, but put all but the end in a quill, as otherwise it will get on your hands and blacken them badly. If the poison has not been taken in time it will spread rapidly and increase its ugly appearance, and will become very painful. I always use a wash to bathe the inflamed parts, which is a spoonful of washing soda in a glass of water. This is very soothing, and it is very effective. If the inflammation is very freely, and it is very healing. Always keep the parts covered with linen clothes, and soaked continually with the Pond's Extract. If any part of the body is rubbed by the sore hand a new sore is made, which will run and spread the same as the first. By keeping the parts covered this will be avoided. When the poison simply swells the hand, and has a dry or scaly appearance, then the parts ought to be bathed with oil of zinc and kept covered with linen. But the first thing I do now is to cover the parts with linen soaked or wet in Pond's Extract, which generally is sufficient. *ALAX.*

—Where box is used for edging and borders of beds, now is the time for clipping.

The Kennel.

TO THE SPORTSMEN OF AMERICA.

We publish the following letter from a well known writer on sporting matters, a member of the National Canine Society of England, and one of the judges at the coming Nottingham dog show. We are glad to see that so distinguished a writer offers the same advice to Mr. Raymond concerning his kennel as we gave in our issue of July 23d, which has been copied and credited to us by some of our leading English cotemporary:

EDITOR FOREST AND STREAM:

Although some three thousand miles separate us, allow me to shake hands with you through the medium of FOREST AND STREAM. Though I do not know you personally I hope I may, yet I believe the name of "Old Calabar" is pretty familiar to you; at least the editor of FOREST AND STREAM assumes so. Well, so much the better. Sportsmen, somehow or other, always manage to get acquainted with one another and "pah out." I trust I may with you, and I am sure I shall.

You have now in your country the best breed of setters in the world—the "Raymond-Laveracks." Mr. Laverack is an old friend of mine, for we resided close to each other. Many a time and oft have I gone into the kennel and seen him, and I have seen the best of the breed. Mr. Raymond is lucky in possessing such an animal. Let him guard the blood as he would the apple of his eye, and not be tempted to "let the blood loose" by crossing. He has now the means of breeding without going from his own kennel. Mr. Laverack has of course told him how to proceed, and if he has not I am sure he will. Mr. Raymond must not be tempted to put with young stock, and keep covered with him. But the first thing I do now is to cover the parts with linen soaked or wet in Pond's Extract, which generally is sufficient. *ALAX.*

scribe myself your friend and brother sportsman, "OLD CALABAR." P. S.—For the information of Mr. Shipman, of Iowa, I may say I do not see the slightest possibility of an International Field Trial, at least not with Mr. Price or Macdonald. The latter is a St. Bernard man; he never met two setters of any very great note—Kanger and Musie—both are sold. Mr. Macdonald has disposed of all his dogs and retired from the canine world. Mr. Price, I am sure, will not accept, and the only two men I know likely to do so are Mr. Llewellyn and Mr. Whitehouse.

JUDGING ON THE SHOW BENCH.—NO. 5.

THE DULL TERRIER.

THE head should be long, running flat off the nose; ears erect; eyes inclined to be small, and black or brown in color; jaw long and powerful; cheeks flat; nose black; neck long; the shoulders sloping well back; chest deep, with a proportioned thickness; legs straight and muscular with a round, cat-like foot; back short, well ribbed up; hindquarters full and muscular; stern fine, but not too long, and carried pretty straight; coat smooth and close; colors preferred are white, and white with brindle patch.

POINTS IN JUDGING.

Head.....	25	Loins.....	30
Neck.....	10	Stomach.....	10
Shoulders.....	10	Feet.....	5
Chest.....	15	Stern.....	10-100

THE FOW-HOUND.

Head expressive, muscular, ears pendant; head a little wrinkled in chop; face rather long with strong jaw; neck inclined to be long, set into shoulders strongly; the shoulders of great depth and strength, sloping back well, but not so fine and close at point of shoulder blades as a greyhound, as speed is not required so much as in the greyhound, but rather endurance. A model of a stud fow-hound should measure round behind his shoulders thirty to thirty-two inches; the elbows should be straight, and neither bowed out nor pressed into the chest; fore leg to continue straight to the foot, as if one bone, but of great substance, full of muscle; from the pasterns the foot must not turn out, but appear straight and round like; the back ought to be straight, wide all through; rigid-backed dogs considered not so pleasant to the eye; it should be well joined up, not short of ribs, but short in the flank; body average depth, hind quarters, where set into loin, powerful; thighs full of muscle; stern carried well up, but not as a squirrel's, not feathered; coat thick and smooth. There are different colors, the pie, black and tan, tan and white, and blue grizzles.

POINTS IN JUDGING.

Head.....	15	Shoulders.....	15
Neck.....	5	Stomach.....	10
Legs.....	10	Loins.....	10
Feet.....	15	Hind-quarters.....	15
		Stern.....	5-100

DOGS ON THE SHOW BENCH.—The Queens County Agricultural Society, situated at Mineola, L. I., and adjoining the late purchase of Mr. A. T. Stewart at Garden City, will hold their annual exhibition of horses, cattle, &c., on October 7th, 8th, and 9th. There are also, we understand, several premiums to be awarded for sportsmen's dogs, such as the pointer, setter, cocker, and other breeds. This is the first society to take up with this new and interesting feature, and indicates, as we have repeatedly stated in this journal, that before many years have elapsed, the showing of sportsmen's dogs on the bench or in the kennel, and the running of pointers and setters at field trials, will draw together an assembly of field sportsmen that will astonish the inaugurator.

—The new apparatus for drowning dogs was tried at the Pound last week with success. It consists of an iron cage, large enough to hold thirty dogs, and is lowered into the water by a large crane attached to a derrick.

—A gentleman from Pittsburg, Penn., asks us the following questions:

What are the requisite colors of the pure Gordon setter? Are they ever red? What dogs were they bred from originally?

Answer: The general opinion is the Gordon setter owes its origin to Irish blood, which in a measure is substantiated by the fact that red pups often make their appearance, even when bred from the most reliable strains, and there is no doubt that setters in general were originally manufactured from the spaniel; but whether the color of the Gordon is derived from the black spaniel or the Scotch colley, is a query that cannot now be easily answered. The curl in his coat could not have resulted from his taking the water. A curly coat is a great fault in the setter of any breed, and would be dead against one on the show bench.

ATLANTA, GA., AUGUST 19th, 1871.

EDITOR FOREST AND STREAM:

I have derived so much gratification from a story among your entertaining paper, which came lately in my way, that I feel impelled to express that pleasure, and desire also to say something on a few matters appearing in or suggested by the paper. I see some mention made of springer, or field spaniels, and one correspondent writes of "a very fine springer spaniel pup, a small, liver-colored little chap, with tan feet and eye spots—a thoroughbred undoubtedly." In another place a springer is referred to as "a splendid retriever for duck." Now, what are the marks of a springer, and how does the springer differ from the cocker? I have a little bitch, full grown, weighing 20 or 25 pounds, of a dark, rich, chocolate brown on the head, back and stem; mottled like a thrush on the shoulders and flanks, with bright tan spots over the eyes, and feet of a lighter tan; long, silky ears, and a tail feathered like a setter; fond of water and retrieves well, and altogether untrained. From the description can you say what kind of a dog this is? You refer also to other breeds. Are there any in this country?

TYNOS.

The "cocker" is considerably smaller than the springer, and is a light working, active dog, showing far more liveliness in his actions. He carries his tail low and works it more quickly than the "springer." They are generally of a rich liver color. From a description of your dog we should say she was a Norfolk spaniel springer, but do not understand the tan marks, unless some of her ancestors were Gordons, dwarf fox hounds, or beagles. There are no other bounds in America that we ever heard of.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, *Salmo gairdneri*. Salmon trout, *Salmo conflans*. Black Bass, *Micropterus salmoides*, *micropterus nigricans*. Striped Bass, *Morone chrysops*. Sea trout, *Salmo tshawytscha*. Bluefish, *Pomatomus saltatrix*. Weakfish, *Cynoscion regalis*.

Trotting is permitted in Maine and Canada until October 1st. Sea trout fishing with fly is permitted in New Brunswick until September 15. Land-locked salmon and salmon trout in season till September 15th.

—With the 1st day of September, the angling season for trout practically ends. Common sense admits it; the interests of anglers demand it; and the domestic economy of the fish require it. We shall therefore strike off trout from our bulletin of fish in season. There are some localities, however, in which trout spawn late, and in Maine and Canada fishing is permitted by law until 1st of October. Generally, the sport has been abundant and well enjoyed, although the season was late and rainy in northern New York and the Eastern States, and the streams much swollen. Reports agree that trout are increasing in size and number throughout the country, and not diminishing. Some very large fish have been taken, though we have not heard of any weight sufficiently heavy to be regarded as fictitious by those who question the extreme limit to which the *Salmo fontinalis* attains. We also note with satisfaction less disposition on the part of anglers to gauge their success by numbers instead of size, and attribute the fact partly to the education anglers are acquiring through journals like the FOREST AND STREAM, and to the growing disfavor with which the capture of fingerlings is regarded. In a word, the tendency is everywhere conservative, and the increasing interest which is felt in the maintenance of our angling streams is evidenced by the constant organization of new clubs for their protection.

After the 15th of September, the salmon-beguiler must put aside his rod. Indeed, indulgence is given to this date in the Province of New Brunswick only, fishing being forbidden in the rest of the Dominion after the 1st prox. Consequently, we chalk salmon from our bulletin.

The reports of our salmon fisheries from all localities where full protection is afforded is most gratifying, the run of fish being larger and more abundant. Famous catches have been made in Canada, especially in the rivers Restigouche and Miramichi, and on the Gaspé peninsula, in the York, Grand, Dartmouth, St. John, and Cascapédia rivers. American rods have been quite numerous at their several pools, and the Canadians seem to have no feeling toward American lessees except that of good fellowship and amity. We would consider it a great favor if our friends who have lately returned would furnish us with their scores. Their publication would interest those who are curious to compare notes, as well as the rest of the angling fraternity.

As to our own waters, we are looking to them with renewed hope, and doubtless shall have encouraging reports to offer at the end of next season. Land locked salmon have been abundant in the Maine waters, both at Sebago and the Schoodic. The fishing for these will continue until September 15th.

—Messrs. C. A. Robertson and W. F. Bunting, of St. John, with two friends from the States, had very fair success this season on the southwest branch of the Miramichi River, in New Brunswick. They made their first camp at Burnt Hill Brook on June 30th. Three of the party left on the 12th of July, but Mr. Bunting remained with his two guides until the 27th. Up to the time of his comrades' departure all had very fair success, Mr. Robertson killing five salmon in the afternoon, the largest of which weighed twenty-five pounds. It measured forty inches in length, and the guides asserted that it was the largest salmon that had ever been killed with the fly in that branch of the Miramichi. The first grise was taken July 10th. After the 13th the run of fish improved, and Mr. Bunting had the sport all to himself, his score at the end of his visit footing up sixty-two salmon, weighing 750 pounds, and eighteen grise, weighing fifty four pounds. This is said to be about as good a result as was ever shown by one fisherman within the same space of time on that river. The southwest has been well preserved the last two or three years, and although there is still much poaching it is rapidly becoming a splendid salmon stream, and the record of this year's sport is very fine. It is a noble river, as full of beautiful spots to the artist's eye as of pools for the fisherman's rod.

By the way, the gentleman who sends us these facts, and who was one of the party, thinks the Canadian Government might afford the river even a much more thorough protection than it now does, although admitting the gratifying improvement in that respect over past years. Since the year 1870 the river has been leased to several gentlemen, who take great interest in its preservation, and who have expended their time and means in staying the work of destruction. The presence of these lessees and their friends on the river during the fishing season, since the commencement of the time of the lease, has doubtless had a beneficial and salutary effect. It is impossible, however, for these gentlemen to prevent spearing and netting altogether, and the Government ought not to relinquish their own guardianship, which its own overseers are in duty bound to exercise. A letter in the St. John Globe, upon this very subject, says:—

It is notorious that under the very eyes of the officials unlawful acts are carried on with impunity. Fifty or sixty salmon will be speared in one night by two men in a canoe canoe. The work of destruction goes

EDITOR FOREST AND STREAM:—
 "Since my last letter no large catch of fish. Weak fishing at the 'ch-
 trance,' and at what is known as the Reed Burb. has given the fish-
 men some sport. A school of blackfish came in the inlet the other day
 and those who were fortunate enough to throw out the squid at the right
 time were amply repaid. A party with Capt. John Kelly caught seven-
 teen, averaging two and one half pounds. Sheephead fishing has been
 better the last week than at any time before since the season came on.
 Dr. Bennett, of Farmington, took twenty-one on Tuesday. Blackfish are
 running all the way day after day at the inlet. No herring, sea bass
 with 'Dad' Parker, the famous fisherman, and in one hour had a
 basket brayer full of blackfish, sea bass, a few porpoises, and half a dozen
 weekfish. Yours, &c.,
 A. BRUCE."

COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Framing Trust," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, AUGUST 27, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts. Statements of Clubs and Associations are urged to favor us with brief

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that must not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.
CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, August 28th.—Trotting meeting Earleville, Ill.—Trotting meeting, Hartford, Conn.—Trotting meeting, Gardiner, Me.—Trotting meeting, Manchester, N. H.—Trotting meeting, Warwick, N. Y.—Trotting meeting, Hazleton, Penn.—International regatta, Saratoga, N. Y.—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

—Trotting meeting, Deerfoot Park, Brooklyn, N. Y.

SATURDAY, August 29th.—Fly-away vs. Nameless B. B. C., Prospect Park, Brooklyn—Fly-away vs. competing clubs, Oneida, N. Y.—International regatta, Saratoga, N. Y.—Long Branch races, Monmouth Park, N. J.—St. George cricket club, Hoboken, N. Y.—Practice day boat clubs, Harlem, N. Y.

MONDAY, August 31st.—Fly-away vs. Star B. B. C., Catskill, N. Y.—International regatta, Saratoga, N. Y.

TUESDAY, September 1st.—Trotting, meetings at Syracuse, Bath, N. Y.; River Falls, Wis.; Goshen Park, N. Y.; Providence, R. I.; Boston, Mass.; Knoxville, Sycamore, and Macomb, Ill.

WEDNESDAY, September 2d.—Trotting meetings at Syracuse, Bath, N. Y., River Falls, Wis., Gosheu Park, N. Y., Providence, R. I., Boston, Mass., Knoxville, Sycamore, and Macomb, Ill.—Provincial Rifle Association, Sussex, N. B., D. of C.—Match day, Hoboken cricket grounds, foot of Ninth street.

THURSDAY, September 3d.—Troiting meetings at Syracuse, Bath, N. Y., River Falls, Wis., Goshen Park, N. Y., Providence, R. I., Boston, Mass., Knoxville, Sycamore, Macomb, Ill.—New York Caledonian games, Lion Park, N. Y.—Regatta of amateur oarsmen, Laurette course, Troy, N. Y.

OUR FRONTIER OFFICERS.—Our readers are indebted to our army officers upon the frontier, for almost the entire fund of information which this journal has been enabled to furnish respecting our great Western Territories. Every post, almost, has furnished some contribution of absolute value, as to the flora and fauna, Indian life, and the habits of the wild characters one meets with on the Plains and among the Mountains. Such rugged annals of Frontier Life, if written and compiled, would make a volume of far manlier literature than the namby pamby fictions of love and stilted heroism which constitute the mass of the world's reading. We have now on hand fully a dozen of them awaiting their honorable turn to be published in our columns, but still, our insatiable demand cries out for all it can get; and we trust that our generous friends will not lay down their pens under the impression that present repletion means everlasting satety,* for we must eat to live, and no sooner has one meal been dispatched than we must provide for the next, no matter how well gorged we may feel for the nonce. Comrades, attention!

THE PROTECTION OF GAME.

A PLAN OF CO-OPERATIVE LAWS.

IN view of the approaching Convention at Niagara Falls, to devise some plan to provide by legislative enactment for the better protection of game, we deem it best to republish from the FOREST AND STREAM of February 19th the resolutions, touching this very subject, which were adopted at the meeting of the American Fish Culturists' Association, on the 11th day of the same month. A critical examination thereof by the Niagara Falls delegates may expedite the business of their Convention, and eliminate many of the apparent difficulties which seem to beset this long vexed subject. It is more than probable that the scheme for legislative co-operation which underlies these resolutions has never met the eye of those whom it was intended to reach; for the official report of the Fish Culturists' meeting lies buried in the unpublished proceedings of the convention, while the then limited circulation of this journal failed to give it wide-spread notice. That this scheme covers the ground practically and sagaciously, is evidenced by its endorsement by the eminent gentlemen composing that body, which included naturalists, fishculturists, anglers and sportsmen from both Canada and the United States, with Prof. Baird, chief U. S. Commissioner, W. F. Whiteaker, Commissioner for the New Dominion, Mr. Wilmot, of Canada, Seth Green, and other practical men among the number. It would be unwise, then, for the delegates at Niagara to ignore the action and recommendation of that body; or, having the scheme presented to their examination, to give it cavalier treatment, the more especially that no other well-defined or outlined plan has ever been before the country.

Moreover, the light which this scheme throws upon a subject with regard to which most persons have but a vague idea—we mean the precise kind of a remedy to apply to existing evils and defects in the game laws—comes most opportunely, inasmuch as the Convention was called at a date so early (September 9th) that insufficient time has been allowed for a careful investigation and intelligent understanding of the subject. We are convinced that most, if not all, the gentlemen prominently connected with the issue of the call, now admit that it was premature and unseasonable. Many sportsmen are absent in the field, especially at the West, where grouse-shooting at present engages their attention; but the chief cause of regret is, that the suddenness of the call found the country not wholly prepared for the questions before the Convention.

Under these circumstances, we feel that we are doing good service by reviewing the ground already gone over, and showing what actual progress has been made by the few who have given the subject their thoughtful attention. We reprint, (as we have stated in the beginning of this article,) from our issue of February 19th.

[From our issue of February 19th]

The editor of *FOREST AND STREAM* having been impressed with the idea that a more general plan of protection was necessary not only for fish but for birds and animals, took occasion at the meeting of the American Fish Culturists' Association to explain his views on this subject. It is an evident fact that but one general law, identical as to time of close seasons, can ever thoroughly protect the fish, birds or beasts of our country. It is per-
haps true that the law of the Dominion might be made so great in length it might be illegal to catch fish fifty miles from its source at certain times in one State, when 160 miles below in another State the catching of such fish would in no way infringe on the fish statutes of that State. Again, since we owe a great deal to the Canadian Fish Commissioners, it might frequently happen that rivers rising in the States and flowing into the Dominion might be depopulated of fish and then by the fish protected in the States, the fish that exactly the reverse might happen. A commercial question enters here into the subject which occasions no end of dispute and unfortunate consequences. Fish may be legally caught in one State at one particular season of the year, then snipped and exposed for sale in another State where the time for catching such fish may be against the laws, and it becomes a nice question to decide whether the seller or the purchaser of the fish is acting in violation of the laws. It is a question that is hard to make possible, then, that laws should be enacted by the several legislatures, identical in character in regard to close time, within certain zones more or less extended. If the resolution adopted by the Association, as suggested by Mr. CHARLES HALLOCK, could have been made even more comprehensive as to detail, so as to include birds and animals, it would have even met his views more fully, but as the business of the Association was to do with fish, it was thought wisest to leave to the sportsmen's associations in the country the wider development of this idea, to wit, of the enforcement of a more general and co-operative system of game legislation.

The advantages of the proposed plan in regard to the naming of fish and the identification of species is a manifest one. If among the game birds hardly any two States in the Union can agree exactly as to what is a quail, a pheasant or a partridge, the confusion is worse confounded as to fish. Men who are doubtless innocent, who would, if they knew better, aid the Fish Commissioners in their arduous labors, violate the letter of the law from ignorance of the name of the fish.

Not a day passes but that the FOREST and STREAM is in receipt of letters coming from Maine to California, all bearing on these subjects, communications written not only by sportsmen but by those who look into this subject of pisciculture in an economic sense, and it was principally from their suggestions that the preamble and resolutions adopted by the Association were advanced.

The following is the preamble and resolution offered and accepted by the Convention of the American Fish Cultur

ists' Association, with Mr. Hallock's remarks on presenting them:

"I beg to bring to your notice a subject admitted to be of the greatest importance, though I doubt whether it comes fully within the scope of this association; but having heard one of your most distinguished members yesterday assert that, "protection must go hand in hand with propagation, and that all efforts in breeding fish will be nullified by neglect to protect the young fish and fish in spawn by judicious legislation and wardenship," I am encouraged to speak. We set the highest value upon provisions and penalties to protect the great game fish, *salmo trutta*, *salmo gairdneri*, and other devices for the wholesale and indiscriminate catching of fish, and for the taking of gravid and spent fish and all unseasonable fishing whatsoever, and for the means devised to prevent poaching in private or public waters, and for all those wholesome restrictions intended to govern angling on leased and open rivers, lakes and streams. All these go far towards the consummation of the main object of the association, and it is evident that, without the most perfect obedience to existing laws, and the great loophole of escape for transgressors lies in the fact that game fish taken in one State may be sold in the markets of another State with impunity.

What is urged, therefore, is such a co-operation of States as will procure the enactment of a law which shall make it illegal to expose for sale in the markets of one State fish illegally taken in another State within the periods for which their taking is prohibited in such States. Some such measure is by universal consent acknowledged to be necessary, and we are pleased to observe that a draft of a bill with this object in view has been presented to the Legislature of Massachusetts by the Massachusetts Angling and Fishing Commission, of which Dr. J. P. Ordway is the very earnest and efficient President, and that the same has already been introduced into this society have been endorsed by the Fish Commissioners of Maine; and,

WHEREAS, The Committee of the said Anglers' Association has, in a series of resolutions, invited the co-operation of their sister States, and urged the formation of similar associations for this purpose: therefore be it

Resolved, That it is the special province of the American Fish Culturists' Association, composed, as it is, of the State Fishery Commissioners, and the leading Fish Culturists of the country, to promote and encourage, either within or outside of its own body, the formation of a similar society in every State, and to aid in the formation of such societies in view of the difficulty that has hitherto attended the identification of species by a confusion of local names whereby we are unable to distinguish by the vernacular a trout from a black bass, a pike from a pickerel, and a blue fish from a taylor fish, it is of the utmost importance that an uniform system of nomenclature be adopted, and that the name of each species as may be named within and coming under the provisions of any summary act, so that the same be known and recognized in all those States included within the limits of said act, and that the better to decide upon and establish such uniformity of nomenclature, a Board of Reference and Conference be formed to be composed of delegates, one from each naturalist's and sportsman's association in each State, whose qualifications shall be defined and determined by a convention composed of one delegate from each naturalist's and sportsman's association in the States so co-operating, and the organization of which, Board of Reference or Committee, shall be final.

Following the heels of this resolution, we prepared a Comparative Table of Close Seasons, in all those States where game laws exist, which we published on the 12th of March with the following explanatory comments appended:

[From our issue of March 12th.]

Here is given a comparative table of Close Seasons for all kinds of game and fish in the State of Illinois, where protective laws exist, so that the reader can determine at a glance, without the trouble of hunting through volumes of codified laws, just what particular bird, animal, or fish is excepted, or prohibited from being caught or killed, at any given month in the year. Its usefulness and labor-saving character are apparent. He who examines it will find that it has failed to excite any feeling of game law conflict as respects the game of any given latitude, even in the States that are contiguous and homogeneous in their flora and fauna. The time and seasons often vary several weeks in localities that lie within the same geographical zone and between the same parallels of latitude. It is apparent at once what opportunity is thus given to those who are inquisitive and desirous of knowing the laws of game, while to the well disposed and most earnest advocates of protection the jumble of heterogeneous and interminglable legislation renders it almost impossible to keep in mind, or even determine, when and where any particular kind of game is in season or out of season. More than this, within the general law of Individual States are hundreds of special provisions, covering the same particular stream, and this country, and that township, so that there are prohibited districts, and close seasons within close seasons, that render the confusion worse confounded, and defeat the efforts of those who seek the general welfare. And at each session of every Legislature some well meaning and enthusiastic advocate of protection clamors for additional laws, and enlarges and multiplies the number of too much legislation, and too much protection we are likely to defeat the ends we strive for.

It is obvious that the only remedy lies in co-operative legislation, and in a simplified code. Nature has singularly defined her geographical belts, and designated the animal and organic life that dwells within them. As certainly are the boundaries of the range of the deer and the habitat of the trout defined as are the varieties of food upon which they feed. *Cervus Virginianus* is not found north of a certain latitude, nor the *Salmo fortitatus* south of a certain latitude. The game is the same in the soft and pinnated woods of the north, the turkey, the moose, and the muskrat. What we need is one general enactment that shall apply to each of these geographical zones alike throughout its breadth and extent, or at least to extended sections of these zones. Game laws for Ohio need not be the same as for Maine, but the laws protecting game in Maine, Vermont and New Hampshire should be precisely alike, as the laws for Ohio, Kentucky, and Illinois should be the same for those particular States. The same laws should be made different. Local laws would have to be made for the moose and the big horn buffalo, for their range is limited and fixed. For the nomadic sheep, which ranges through many de-

groes of latitude, and whose periods of coming and going are as regular and well known as the rotation of the planets, special and peculiar legislation is required. Nevertheless, the general principle, as indicated can be easily applied. Under these provisions there would be no need of local or neighborhood laws, for the game being thoroughly protected throughout the whole State, the depleted and barren districts of the State would in time be replenished and restocked. Different laws for contiguous States are irrational, and as at present constituted, they are actually aiding to drive out and exterminate the game instead of preserving it. If September is a close season in one State, and October in the next adjoining, no end of trouble must result; witness the case of the Governor of Missouri, who, when shooting near the border, happened to cross the line into Kansas, and was very properly arrested for an infringement of the law of the latter. There should be no difference between the laws of Kansas and Missouri, for their climate and latitude and game are essentially the same.

We have now stated the facts and the necessities of the case. We propose a practical application of the remedy, premising (and taking the highest English authority as judges of the question) that "it is a known fact that all the best measures for the protection of game, the most judicious not only for the sportsman, but for those who gain their subsistence by shooting and fishing, must always emanate from those who shoot and fish for their pleasure." Ordinarily, those who legislate, those who make the laws, are not practical sportsmen, or so well informed on the subject as to serve advantageously as scientific economists. It is proper, therefore, that the drafts of any bill or bills to be submitted to future legislative bodies should emanate from the sportsmen, naturalists, and fish culturists of the country, who make our game animals, their habits, their protection, their pursuit, and their propagation a constant and intelligent study. The remedy, then, and its application, lies in the co-operation of all the scientific and acclimating societies and sportsmen's clubs in the Union, and we are herewith encouraged by the Game Protective Society of New York, and the American Fish Culturists' Association of the United States (to both of which the scheme has been presented) to lay before all these clubs and associations the importance of calling at an early day a convention of sportsmen, naturalists, and culturists to select a board of arbitration or reference, which shall prepare a suitable draft of a law to be pressed for passage upon the legislatures of the respective States, this reference to be final, the legislature to sit as a court of appeal, and the bill to be either rejected or accepted unconditionally. Legislators who have the interests of the country at heart would not be jealous of their prerogatives in such cases; indeed, they should be gratified to be relieved of the arduous labor and responsibility of so important a measure. We have received a great number of letters urging this movement for a general convention, details of which will soon be published, and we have no doubt that all clubs will readily fall in with it.

On April 19th we supplemented this article by the following brief remarks concerning special legislation for separate localities in the same State:

"They only confuse the conscientious sportsman who is anxious to conform to statutes, and at the same time operate directly to the detriment of general and compulsory statutes, by giving him disposed persons whose losses he is forced to escape their penalties. Any one can very reasonably plead ignorance of the law, when there is a petty enactment for every separate lake, pond, and stream in the State, and when even the freeloader cannot tell what particular law governs his own private preserve. We trust to see some means soon adopted that will sweep this local legislation out of sight, and that a wholesome law for each State, and a plan of co-operative laws for all the States will be framed, adopted, observed, and universally extolled. If special restrictions are required to extend close time or secure total prohibition as to certain waters or districts, the duty should not be imposed upon the legislatures, but be assumed by those persons most immediately interested in the preservation and propagation desired, either through associations or individuals."

On May 7th we printed an extended legal opinion, prepared expressly for the FOREST AND STREAM by one of our most eminent jurists, defining the operations of game laws as governing trespass, and the rights of sportsmen and property-owners. This opinion covered one full page of this journal, and is too long for republication here. It is sufficient for our purpose to state that it gives a legal guaranty of the integrity and correct construction of our co-operative scheme in all its parts.

Having thus fortified ourselves that the scheme was sound, practicable, sufficiently comprehensive to meet the requirements of the case, we sought to obtain its endorsement by the New York City Society for the Protection of Game, a body which has been most efficient and remarkably successful in prosecuting offenders against the game laws—both those who killed and those who sold out of season. The scheme was submitted and endorsed, and resolutions seconding the call of the Fish Culturist's Association were referred to a proper committee, which reported as follows:

"The committee to which had been referred the resolutions offered by Mr. Charles Hallock in reference to a uniformity of the game laws, submitted the following report: that on the examination of this subject they note the varying laws of the several States, and the great variety of seasons in the legal times of killing game, do not depend upon the periods when the animals have ceased breeding, or upon the different climates which advance or retard incubation, as much as they do upon the accidental selection by the legislatures of the law of some other State or Territory as a model. In some instances the breeding season of some fish has been made the open season. In other circumstances open seasons have been fixed for song birds, which should never be allowed to be killed, as for instance the brown thrush, in section 10 of the law of our own State. But particularly we note the objection that adjoining States in the same latitude, and affected by the same climate, and stocked by the same kinds of game, have different seasons in which they may be taken. The injury done by this is manifest, and it not only imperils the existence of the bird in the State where it is adequately protected,

but it renders nugatory, to a large degree, the proper law in the adjacent State, because most of these laws are enforced by prosecuting the vendors of the game, and if game killed according to law in one State is sold in another State where it is illegal, the vendor can plead that the game was killed in an adjoining State where the killing was lawful, and thus not only escape himself, but render convictions under the law so uncertain that few will undertake the risks of prosecuting. It oftentimes occurs that the breeding place of some game bird in one State, while the game in the autumn moves to other grounds, as in the case of woodcock, and a great temptation is thrown in the way of those who live near the breeding place, and know that in a few days the birds will move off where they will be killed, and they not allowed to participate in the chase.

The reasons seem even stronger when applied to fish in rivers which run through several States, as, for instance, the Connecticut, which is liable to be fished by the citizens of four different States, any one of which could prevent by their action the enjoyment of the fisheries by any of the others.

There are certain zones of climate where the birth and maturity of game are so nearly simultaneous that the same law could govern in all. Take, for instance, the quail in Connecticut, New Jersey, New York, Delaware, Maryland, Pennsylvania, Ohio, Illinois, Indiana, Michigan, Wisconsin, and Minnesota. These birds are a staple game bird of great market value and field pleasure.

Their incubating season may vary between Central New York and Maryland about two weeks, and in either place will be advanced or retarded that much of time by the character of the season. In none of these places, however, do we see the largest proportion to open the season at the precise day when the birds are grown. A reasonable margin of time is made, extending from October 1st to February 1st. In our own State the open season is from October 20th to January 1st. These States, on this subject, had their laws been uniform as to times, would be perpetually aiding each other; now they are the cause of stumbling and uncertainty. Another matter which is essential to a complete system of game laws is to have as many kinds of game as possible condensed into the same close season. Each State has not only varying times to commence shooting the same game, but also varying times to commence shooting the different varieties of game. Thus in our own State the shooting season for woodcock begins July 3d; for quail, the 20th of October; for partridge, the 1st of September; for starlings, the 1st of August. Country people do not carry these dates in their minds, and are led into error; and these excuses to enforce cannot tell whether a sportsman in the early months is pursuing legal or illegal game, and there is a total absence of a fixed, definite time in the public mind when field sports begin.

The same irregularity in our laws exists in those of the other States. No greater step in advance in these matters could be made than by having a fixed, permanent day when all shooting might begin.

We cannot pass in silence one general omission existing in the laws of all the States. Just provision exists protecting the migratory birds that come in the spring of the year, English snipe, plover, dowitchers, and the many varieties of birds that enliven our beaches, are wholly unprotected by law, and are killed and sold in the markets in April and May in large quantities. When the spring is late, and the birds are delayed in their passage, they are found full of eggs, and sometimes are forced to nest within the State.

The birds should be protected in every State, no matter where they are dying to, for they are the children of our common country, and are gladdening every part of it in their migrations. No rule is so good as the rule that no gun is to be fired at birds or animals in spring or summer. Every reason of health to the eater, of abundance of supply of the article eaten, of justice to the animal when breeding or preparing to breed, places in the fullest and most comprehensive and uniform laws in these matters, and therefore we submit the following plan and resolutions:—

Whereas, The general sentiment of the country is in favor of the creation and immediate adoption of some system which will secure in the different States and in Canada greater uniformity, and consequently greater efficiency in the laws for the protection and preservation of game, and inasmuch as a plan for securing these objects through co-operative legislation of all the States was submitted to the American Fish Culturist's Association, and unanimously endorsed by it last February, and since then by other similar bodies in various parts of the country.

Resolved, That it is expedient and necessary to call a national convention at the earliest date consistent with a careful and general scrutiny of the scheme; and inasmuch as this body, the New York Society for the Protection of Game, has already discussed it in session and submitted it to legal gentlemen of experience for examination and secured its approval, we do hereby recommend and advise that a circular letter be addressed to each of all the sportsmen's clubs, acclimating societies, natural history societies, and fish culturists' associations throughout the country, wherever available, inviting an endorsement of the same, and requesting that a written notification of such endorsement, signed by their respective Presidents and Secretaries, be sent to the Secretary of this society, to be filed, and that the said letters shall express the choice of location and date of year at which the national convention shall be held, and that it shall be found upon examination at the end of six months that the favorable responses are sufficiently numerous and widespread to be regarded as representing the wish of the country, then a call shall emanate from this New York Society for the Protection of Game, designating such time and place for the meeting of the Convention as shall appear to be the wish of the majority of the societies responding. All other calls are respectfully submitted.

William C. Barrett, Chas. E. Whitehead, Chas. Hallock, Committee.

May 11th, 1874.

The report was adopted, and ordered to be printed. In issuing this call, the New York City Society had no intention or desire to usurp any prerogative, but in the absence of any other movement, or any indication of one, was ready to take the initiative. It will be observed that the selection of time and place to hold the Convention, was to be left to the choice of the clubs responding to the call. In this way the sense of the country could readily be taken, and sufficient time be allowed in the Convention to permit a

careful examination of the general subject of game protection, and of the proposed plan in detail. Just at this juncture, it was very properly and in the most friendly way, suggested by John B. Sage, Esq., one of the officers of the New York State Association, that in view of the approaching State Convention at Oswego, the call might with greater propriety emanate from that body, and thereby doubtless have the greater weight. The concession was made with alacrity; the resolutions, committee's report, and formal circular, were forwarded by mail to the President and Secretary of the State Association, and a delegate was sent to Oswego to submit the Scheme (as adopted by the Fish Culturists and endorsed by the City Society) to the consideration of the State Association, in order that the anticipated call might be projected upon its basis. Through inadvertence, and some informality in his credentials, the delegate was not admitted to the floor; the Scheme was not presented; and a call for a National Convention, emanating from an altogether different source, was instituted by parties cognizant of the earlier movement, and unanimously adopted by a Convention, nineteen-tenths of whose members were wholly ignorant of any such movement. Indeed, the officers themselves expressed their regret that no opportunity had been afforded to examine a Scheme which had been prepared under the auspices of so eminent a scientific body as the Fish Culturists' Association.

We have thought it best to print this historical sketch, in order to bring the Scheme freshly before our readers and the delegates at Niagara Falls, and to inform the public as to what actual progress has been made toward securing a consummation of the great economic necessity of the period. It may be that other better plans will be presented. No doubt the one in question will bear amendment or revision. It is certainly rudimentary, and needs perfecting. It is the duty of the Convention to devise the best means for securing the Protection of Game, and a more effective legislation to govern close times and open seasons; and if this should command their favorable attention, the efforts of those who have worked it out and brought it to its present form will not have been in vain.

THE SHOOTING TOURNAMENT AT NIAGARA.—No doubt the roar of the great cataract at Niagara will drown the popping of the pigeon-shooters' guns next September 9th, so that the noise thereof will not disturb the deliberations of the Convention that meets to secure the protection of game. We hope it may. We trust also that the session of the delegates will in no way annoy the pigeon-shooters or distract their nerves. We look for good scores this day forthright, when the air is cool, and all the conditions of season, climate and locality are favorable thereto. Bad marksmanship brings no satisfactory return. In pigeon practice, the death of each bird ought to bring some compensating benefit to the contestants, either in rewards of merit, the pleasure of honorable emulation, or in improved accuracy. We never could bring ourselves to believe that pigeons were created for the express purpose of being shot from the trap, although they seem in this way to serve men best. They are of very little account in a pot-pie; while, living, they break down forests and defile the face of nature in the vicinity of their roosts. So long as it is more important that our citizens should become expert in the use of arms than that the lives of thousands of pigeons should be saved, so long shall we defend the practice of trap-shooting. It secures quickness of trigger, accuracy of aim, confidence in the field, readiness for emergency, and renders our people the worthy descendants of ancestors whose training and wilderness experiences and hand to hand encounters with wild beasts enabled them to conquer a country and win an independence. It was in such a school as this that our forefathers were tried; in this they learned the art of arms. Pigeon shooting we regard as essential to the defence of our country through the education of our citizens to be marksmen, and until some contrivance shall be invented or discovered which shall serve equally well in the manual of instruction, we must be content to permit and endure trap-shooting, repugnant as it may be to our finer natures.

Through numerous letters from members of the Niagara Shooting Club, we learn that the preparations for entertaining their guests on a grand scale are progressing most satisfactorily, and we doubt not that the tournament will be one of the most "recherché" (is the word proper?) of any similar festival yet held in this country. The Club is one of the oldest we have, and one of the most influential. Possibly all its members are thoroughbred sportsmen and earnest conservators of game, who rejoice at the prospect that some good may accrue from the deliberations of those who meet to improve the game laws, and will in every way aid and abet their action; nevertheless, as we have already said, we should prefer that the Tournament had been called on some other day than that selected by the Convention.

DELEGATES.—Hon. A. L. Brinsmade and H. B. Brown, of Cleveland; C. O. Brigham, of Toledo; and Hon. T. A. Logan and Col. L. A. Harris, of Cincinnati; have been appointed delegates from Ohio to the National Convention at Niagara Falls.

Dr. W. H. Hudson, of Hartford; Hon. O. H. Platt, of West Meriden; R. O. Cheney, of Manchester; Dr. L. S. Luddington, of New Britain; and Judge L. E. Munson, of New Haven; have been appointed from Connecticut.

The New York City Society for the Protection of Game, Royal Phelps, President, has appointed Hon. Robert B. Roosevelt, Hon. Carson L. Brevoort, President of the Long Island Historical Society, and Charles Hallock, Editor of FOREST AND STREAM, with power to name the remainder of the delegation.

Sporting News from Abroad.

GOODWOOD RACES, CRICKET AND DOG SALES.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

THE London season has closed, the shutters are up and the lamps that have burnt so brightly in the temples of pleasure are fast being snuffed out one by one. The long list of theatres of last month is now a short one. The glories of Ascot have passed away and now the Goodwood meeting has brought to a close a season rendered faster than usual by the visit of the Czar of all the Russias. It was a brilliant success, both in point of good racing and in attracting visitors. The Duke and Duchess of Richmond, on account of a recent death in the family, received their friends at Goodwood House, and it was given up to the Prince of Wales, and the Royal standard floated over its walls. There was no fear of that bane of trainers, "hard ground," and though the dreaded Act had suppressed all bags, stools, parti-colored hats, cards, and other "instruments of gaming," nevertheless, I have a notion a good deal of money did change hands on the events of the day. The stakes proved a very mild affair, and the horses engaged were by some degrees worse than a moderate lot. Sir J. Astley's Scamp was the favorite, and won by a neck, but there was a good deal of the hood and blinker sort behind him, and amongst them Indian Ocean, a plater who always runs high up on the betting and never wins. The Cup proved a better race, and was productive of something more like good form and quality. Unfortunately three of the best performers had the fatal pen struck through their names, and the requiem sounded for Boiad, King Lud and Flageolet. Doncaster, an ex-Derby winner, started at 2 to 1, and though he is accounted a bit of a rogue, the gallant son of Stockwell, the best of stallions, stayed the longest and pulled off the race by a head, the notorious Kaiser being "locked to him" as the horses came into the straight. Organist, of Chester Cup repute, lamed himself, but he was outclassed throughout. Altogether the backers of horses had it pretty much their own way, and though people who know nothing about racing tell you the favorite never wins, the takers of odds, I imagine, got home pretty comfortably.

There was another sale of blood stock at Middle Park, Eltham, on Saturday, and some high prices were realized. Mr. W. Blenkiron was a large purchaser from Mr. Walker's stud, giving 3,000 guineas for Vespasian, a well known race horse, 2,500 for Scclusion and her Vespasian filly, 1,300 for the Newminster mare, Pandore, with affily by Hosieryman, bred by Sir J. Hawley, and 750 for Penance and a Trumpet pair. England's Beauty, a grand mare well worth £2,000 two years ago, fetched the fine amount of a "pony," i. e., £25. Such are the vicissitudes of racing. A brown filly, by Blair Athol, sold for £2,000 to Mr. Gretton, and there was no bid for Vestminster, the winner of the Cambridgeshire in 1869. Apology, the winner in the Oaks, is still first favorite for the great St. Leger, and as mares generally do well at that season of the year, I shall expect her to beat the Derby Hero, George Frederick, named after the Prince of Wales's son, and successful, curiously enough on his youthful highness's birthday.

Rugby and Marlborough, two large and important Public Schools, though neither so large nor so good in social position as Eton, Harrow and Winchester, played their annual match before a large assembly at "Lords" on Wednesday and Thursday last. Rugby is chiefly celebrated for football, the "Rugby game" being an ancient and original institution and peculiar to the school. It differs from all other football by the introduction of carrying the ball and "hacking," which means punishing your opponent's shins with a thick pair of boots, but those men who play it swear by it and utterly despise the milder rules of the more merciful association game. Rugby has won the majority of the cricket matches and this year her star was usual on the ascendant, and the superior fielding of the Rugbians greatly aided them to gain the decided victory of five wickets. The highest score made was a Marlboro' innings of forty-one, and nothing very exciting happened throughout the match.

In "Yorkshire vs. Gloucester" Mr. W. G. Grace ran up the fine innings of 167, and though he is accounted the best bat and the worst bowler in England, he, nevertheless, succeeded in taking eleven of his adversaries' wickets, who were, of course, disposed of in a single innings.

Lately there was a real and excellent carrier-pigeon race from Exeter to London, the pigeons being liberated at six o'clock on Tuesday morning, the wind being south-south-east and very moderate. The first bird presented at 100 High Holborn was Mr. Partridge of Paddington's red-checked cock Lord Lyon's at 11:55, and took first prize, Mr. Smeed's dark-checked Comet being second at 1:34; Mr. Smeed also won the pigeon race from Bedford of fifty miles, the time being 1 7.

The American Base Ball players made their first appearance at Liverpool on the ground of the Cricket Club. It happened, unfortunately, that there was a counter attraction in the shape of a cricket match between the 1 Zingari and the gentlemen of Lancashire, but still the attendance was greatly in excess of anything known on the Liverpool ground, and a very favorable impression was produced in favor of the game. Everywhere the visitors seem to have a hearty welcome, Mr. Pullman granting them free use of his sleeping cars and the Midland Railway Company generously placing a special train at their disposal from Man-

chester on stopping at Matlock for two hours en route. Of course the game was not at first understood, though the good hits and catches were at once appreciated. For a short time before the game the spectators were treated to an exhibition of skill in throwing and catching the ball. The height and distance to which the ball was thrown seemed even to the most experienced of our cricketers little short of marvellous, and no less wonderful were some of the catches, where the ball thrown fast, a short ranger seemed to have the velocity of a bullet. The quickness of hand and eye was the subject of general remark.

There was another large sale of pointers and setters at Aldridge's, but the drafts, the Rhinwits kennels, did not go off as well as was expected, though Citadel, a pointer of Mr. Garth's strain, went to Mr. Hemming for £25. The best of Mr. George Moore's pointers didn't go for more than fifteen guineas, and altogether the quality of dogs sold was inferior and the number of purchasers small.

IDSTONE, JR.

August 12th.—The announcement that two of the best American teams would make their debut at Lord's in the national game of baseball, hitherto unknown on this side of the Atlantic, excited a lively interest among the athletic element of the metropolis. Cricket had, however, been so long established that its devotees felt but little uneasy at the idea of the American pastime supplanting it altogether, though they can now have but little doubt that their favorite pursuit during the summer months has met with a serious rival. Everybody is loud in the praise of the pluck and energy of the strangers in travelling so many miles to introduce this novel sport, and all thoroughly understand that it is not a mere speculation of Mr. Barnum's or any other entrepreneur, but a genuine attempt to show us in England that the Americans have a national game, and can play at it well. The Marylebone club, in recognition of the good will shown by the Americans towards them when they were cricketing in the States, placed their ground at their disposal, and gave them every facility and convenience. The day was warm and bright, possibly too bright for difficult catches, and the attendance was large, 5,000 being the reputed number of the spectators during one period of the game. Of course it was some time before the rules were understood and appreciated, but our game of rounders is an unscientific kind of baseball, and though the notions of chaff and corking, which are peculiar to the former, were obliterated, yet the recollection of it served to render the mysteries of pitcher, striker and longstop more intelligible. The proceedings commenced with cricket, but at four o'clock the ground was cleared and the bases marked out with small bags of sand a foot square, lines being whitened from one to the other. The Boston team wore their white flannels, red stockings, bands and caps, whilst the Athletics were resplendent in blue. To an unprofessional eye it was of course difficult to catch the varying points of the game, but from the way in which Barnes and H. Wright played for Boston and got runs, it seemed that the Athletics were off their play, and in fact their fielding was not up to the Boston form, the latter men stopping "hot ones," and returning them with a rapidity that made more than one habitué of Lord's open his eyes. The precision of throwing was marvellous, and better fingers unheard of. The distance between the bases was thirty yards, so that to effect a run, a player had to travel one hundred and twenty yards at tip-top speed. I believe I am right in stating that in America about five acres is required, so that the players must have scarcely had room enough at Lord's. It was all through a most one-sided affair, the chief cause being the fact that the Athletic pitcher, McBride, was "out of sorts," and this led to his side being "whitewashed" three times in succession. Amongst the Bostonians, Spalding and McKey fairly divided the batting honors. Batten disappointed his party, and Anson was perhaps their best man. A brilliant catch at short stop was made by George Wright, and fairly brought down the house with immense applause. The following is the score:

ATHLETICS.					BOSTONS.				
McMullen, c. f.	1	1	0	0	Wright, c. f.	1	1	0	0
McKey, s. s.	1	1	0	0	Barnes, 2d b.	1	1	0	0
Anson, 1st b.	1	1	0	0	Spalding, p.	1	1	0	0
McBride, p.	1	1	0	0	McKey, c. f.	1	1	0	0
Barnum, r. f.	1	1	0	0	Olson, 1st b.	1	1	0	0
Batten, 2d b.	1	1	0	0	O'Rourke, 1st b.	1	1	0	0
Sutton, 3d b.	1	1	0	0	Wright, c. f.	1	1	0	0
Clapp, c.	1	1	0	0	Hall, r. f.	1	1	0	0
Gedney, 1st b.	1	1	0	0	Schafer, 3d b.	1	1	0	0
Total.	7	17	11	1	Total.	7	17	11	1

RUNS MADE IN EACH INNING.

Athletics.	1	2	3	4	5	6	7	8	9	10	11	12
Bostons.	3	0	0	0	1	1	0	1	0	0	0	0
Bases by errors, Bostons, 9; Athletics, 1; Runs earned, Athletics, 6; Bostons, 11. Umpire, Mr. Thomas Beale, of the Boston Club. Duration of game, two hours and ten minutes.												

The spectators at "Prince's" on Thursday were neither so large in number nor so enthusiastic as those at "Lord's." Unhappily for the Athletics, they were deprived of the services of McBride, who felt indisposed, Kent of the Boston team taking his place as substitute. At 4:30 the Athletics commenced batting, and the game proceeded literally even for about an hour. After five innings each, the Athletics were one in advance, but after the fifth their opponents forged ahead, owing to the indifferent pitching of McMullen, the passing of two balls by Clapp, and a mistake made by Gedney at left field. Barnes made amends for his bad fielding by making a good hit, which realized three bases and let home G. Wright. In this innings Anson made the finest catch of the day, and was made catcher in place of Clapp. The Athletics rallied in their eighth innings, and obtained five runs, but failed to score

in the ninth, the game being now virtually over, and the Bostons two to the good. The following is the score:

ATHLETICS.					BOSTONS.				
McMullen, p.	1	1	0	0	Wright, c. f.	1	1	0	0
McKey, s. s.	1	1	0	0	Barnes, 2d b.	1	1	0	0
Anson, 1st b.	1	1	0	0	Spalding, p.	1	1	0	0
Clapp, c.	1	1	0	0	McKey, c. f.	1	1	0	0
Barnum, r. f.	1	1	0	0	Olson, 1st b.	1	1	0	0
Batten, c. f.	1	1	0	0	O'Rourke, 1st b.	1	1	0	0
Sutton, 3d b.	1	1	0	0	Wright, c. f.	1	1	0	0
Clapp, c.	1	1	0	0	Hall, r. f.	1	1	0	0
Gedney, 1st b.	1	1	0	0	Schafer, 3d b.	1	1	0	0
Total.	11	17	25	13	Total.	11	17	25	13

RUNS MADE IN EACH INNING.

Athletics.	1	2	3	4	5	6	7	8	9	10	11	12
Bostons.	1	1	0	3	0	0	0	0	0	0	0	0
Runs earned, Athletics, 5; Bostons, 5; Bases on errors, Bostons, 5; Athletics, 4; Home runs, Kent, 1; Schafer, 1; double play, Schafer and O'Rourke. Umpire, D. F. Houston, of the Athletic Club. Duration of game, one hour and 50 minutes.												

"The Field" is rather severe on the game, and contrasts it very unfavorably with cricket. The editor says:

"In our own individual opinion it has so many inherent defects that it has not the slightest pretensions to be considered superior to, even if it is equal with, our juvenile amusement 'rounders,' on the basis of which it has been modeled.

The other sporting papers are all loud in their encomiums as to the American fielding, catching, &c., but they mostly damn with faint praise the game itself. The Standard, one of the best daily papers, says the play is well worth seeing, if it be only to note how far superior the throwing and fielding of the Americans at their national game is to ours at cricket. Anyhow, I think that base ball has had a fair trial, and whether the seeds sown will ripen into fruit, the next season will tell us.

The Cricket match between the twelve of the Marylebone Club and the eighteen of the Americans was declared drawn. The M. C. C. made 105 in three innings, there being some good batting, but small scores. McBride bowled two of their best men for "duck eggs" with fast underhand, and Messrs. Austen, Hill, Lubbock, Rose and Appleby met the same fate, with dreary blank scores, at the hands of Mr. G. Wright. The Americans were tired by their exertions at base ball, and seemed puzzled by Rose's slows and Pickering's underhands. The rain fell at one time somewhat heavily, and under the circumstances the score of 107 which they realized was a very creditable one. Their batting was described by the press as not very scientific, although the fielding is everywhere admired.

The Canterbury cricket week of course brought many visitors to this ancient city, which boasts one of the finest cathedrals in England, celebrated for its connection with the martyred Thomas A. Beckett. The great match of the day was Kent and Gloucestershire, the All England eleven counting in its cause Jupp, Pooley, Lillywhite, Shaw, Morley, and other famous names amongst the professionals, and their opponents having two out of the three Graces; Lord Harris from the Oxford eleven, Messrs. Thornton, Yardley, and the Hon. F. Bennett. The respective scores were Kent and Gloucestershire, 231 first innings; 247 second innings. All England 201 first innings; 223 second innings. The match was a close one, and an extraordinary catch by Lord Harris alone pulled it out of the fire, as Mr. Mitchell and Greenwood, two of the All-Englanders, in the second and last innings, had got their eye in, and were playing magnificently. Osofort, another of their men, was playing well, but playing forward to a sharp ball of Captain Fellows, he fell and dislocated his thumb, and of course retired hurt. Mr. W. G. Grace, for the counters, made the high scores of 94 and 121. In another match of Kent vs. Marylebone, Mr. Grace made 125, the respective totals being Kent (both innings) 168 and 144, Marylebone, 368. There were twelve men on each side.

The grouse prospects are truly alarming, as in many districts it is to be feared that birds are as scarce as pretty women, and in Yorkshire the accounts are very dismal. Next week will, however, relieve our suspense. The crop of partridges seems to promise well, though it is difficult to tell for certain till the corn is all cut. The young p heasant which I have seen look healthy and strong.

IDSTONE, JR.

WISCONSIN CONVENTION.

CHICAGO OFFICE.

FOREST AND STREAM, Aug. 20th 1874.

The meeting of the Wisconsin State Association for the Protection of Game was held in the Court House at Portage City, on the 18th instant.

The meeting was called to order by A. B. Turner, of Portage City State Register. Mr. R. H. Strong, of Barraboo, occupied the chair. F. W. Woodward, of Eau Claire, Secretary.

It was moved and carried that a committee of three be appointed to draft a constitution and by-laws. W. W. Corning, A. J. Turner and Col. R. M. Strong, committed.

Mr. Turner moved that I. G. True of Forest and Stream, and T. C. Banks of American Sportsman, be invited to participate in the convention. Carried.

Motion was made and carried that the Association adopt the constitution and by-laws of the New York State Association, as those they would act under, with proper changes of names, &c.

Motion was made and carried, that the first annual meeting be called and held on the first Tuesday in February, 1875, at Madison, Wis., during the session of the Legislature. After considerable argument and many suggestions in regard to the best method for the preservation of fish and game, and the future success of the State Association, the election of officers was called for. Col. Strong was nominated. A. J. Strong, of Barraboo, a resident of the State for thirty years, as first President of the Association, it was unanimously carried. The same good feeling, and

the contest is looked for.

CHREDSMOOR.—There were two rifle matches on Saturday. The most important was that for the Amateur Rifle Club long range badge. The distances were 800, 900, and 1,000 yards; any position within the rules; five shots at each range. There were but nine entries, but this number included some of the best marksmen in the club. Mr. L. L. Hepburn won the badge on a score of 54, out of a possible 60. It was previously held by A. V. Canfield, Jr., who won it on a score of 45 points. Gen. Dakin also made a score of 51, which resulted in a "tie" with Mr. Hepburn. The latter was declared the winner, as his score at the 1,000 yards range exceeded that of Gen. Dakin by one point. The following is a list of the scores:

Name.	Yards.	Score.	Total.
L. L. Hepburn.	800...	4 4 4 4 19	
	900...	3 3 4 4 17-54	
	1000...	4 4 4 3 19	
General T. S. Dakin.	800...	4 4 4 4 19	
	900...	2 4 4 4 16-54	
	1000...	1 4 4 3 19	
J. S. Conlin.	800...	3 4 4 4 16	
	900...	3 4 4 4 16-50	
	1000...	3 4 4 4 16	
F. S. Gardner.	800...	3 4 4 3 16	
	900...	3 4 4 3 16	
	1000...	3 4 3 3 17-47	
E. H. Sanford.	800...	3 4 3 3 16	
	900...	3 4 3 3 16	
	1000...	3 4 3 3 17-47	
A. V. Canfield, Jr.	800...	3 3 3 3 15	
	900...	3 3 3 3 15	
	1000...	3 3 2 3 13-47	
L. Geiger.	800...	3 3 3 3 16	
	900...	3 3 3 3 16	
	1000...	3 3 3 3 16-46	
Lieutenant H. Fulton.	800...	4 0 4 4 16	
	900...	3 3 3 3 15	
	1000...	3 2 3 3 11-46	
J. T. B. Collins.	800...	3 3 3 3 17	
	900...	3 3 3 3 17	
	1000...	1 4 2 3 13-44	
G. W. Yale.	800...	4 4 4 4 20	
	900...	4 4 4 4 20	
	1000...	3 2 4 3 16-43	

With regard to this shooting, Col. Wingate writes to **FOREST AND STREAM**:

"The paucity of competitors at long range Saturday was caused by rain, not for the reasons ascribed by the papers. Fulton's bad score was caused by a bull's eye and centre on wrong target, which scored as misses. The Irish score, Elcho Shield, averaged 3.33 a shot, or a score of fifty in fifteen shots. This, you will see, is already equalled by several of the team. The fall of the team, however, is where we are weak. I fear Americans are betting too strong on us, and we wish the public to understand the difficulties we have to contend against."

The other match was the eighth competition for the *Turf, Field and Farm* "challenge" badge. Distance, 200 yards; position, standing; two sighting and five scoring shots, open to all members of the National Rifle Association. There were five entries. The shooting was only fair, the highest score being only seventeen. This was one point better than the score that won the badge at the seventh competition. Mr. Madison was the winner for the second time, and should be so fortunate as to win it at the next competition, he will become absolute possessor of it. Messrs. L. C. Bruce, W. F. Edmonston, Gen. F. F. Miller, F. W. Linton, J. T. B. Collins, F. McMillan, John Beattie, and Sergeant Collins scored 15 each; J. L. Price, A. V. Canfield, Jr., Gen. T. S. Dakin, J. O'Kelly, Col. G. W. Wingate, Leon Backer, J. W. Condy, F. S. Gardner, P. M. Brasher, and A. J. Hennion scored 14 each; Sergt. Turner and H. P. Carrington scored 13, and the others 12 and under.

A number of improvements have recently been made on the range. A high picket fence surrounds the field; refreshment stands have been erected at 200 and 500 yards and in rear of the 1,000 yards firing point and a ticket-office is in process of construction at the entrance to the grounds. A new set of number boards are to be erected behind the targets on which the figures are to be made more distinct, and thus lessen the possibility of accidents by firing at the wrong targets. It is expected that the Fall meeting will be largely attended.

This will take place during the last week in September. The day is not yet fixed, but will be named as soon as the President hears from the Irish team.

The Executive Committee have decided upon the following matches:

First—Judd Match, 200 yards, standing; seven shots; any military rifle; open to all members of the National Rifle Association.

Second—Sportsmen's Match, same distance and number of shots; weapon, any rifle under the rules; open to all comers.

Third—First Division Match, 300 and 500 yards, five shots each distance; weapon, State Issued rifle; to be competed for by teams of twelve from each regiment in the First Division, National Guard State of New York.

Fourth—Second Division Match, same conditions; open to teams from the Second Division.

Fifth—New York State Match, same conditions as the Division matches; open to teams of twelve from all regiments in the National Guard. In case two or more regiments from any of the divisions of the National Guard (outside the limits of the First and Second Divisions) shall participate in this match, the one making the highest score will receive the prize offered by the State to this division.

Sixth—New Jersey Match, 300 and 500 yards, five shots each distance; open to teams of twelve from each regiment of New Jersey N. G.; weapon, such as shall be designated by the Governor of that State.

Seventh—Army and Navy Journal Match, 500 yards, seven shots; open to teams of twelve from any military organization in the United States, including the regular forces.

Eighth—The Gatling Match, 500 yards, seven shots; open to teams of twelve from each regiment of the National Guard of the State.

Ninth—All Comers' Match, 500 and 600 yards, seven shots each distance; open to all comers; any military rifle.

Tenth—Consolation Match, 500 yards, seven shots; open to unsuccessful competitors; any military rifle.

Eleventh—Bennett Long-range Championship, 800, 900 and 1,000 yards fifteen shots each distance; any rifle within the rules; open to all comers.

The particulars of the prize list cannot be announced as yet, further than that for the Bennett Championship the prizes will be: First prize, silver trophy, costing \$350, to become the absolute property of the winner; second prize, cash, \$100; four prizes of \$50 each, \$200; four prizes

of \$30 each, \$120; four prizes of \$20 each, \$80; ten prizes of \$10 each, \$100; ten prizes of \$5 each, \$50, making a total of \$1,000.

For the other matches there will be the Gatling gun, presented by the Gatling Gun Company; the State and division prizes, presented by the State; the *Army and Navy Journal* trophy, presented by W. C. and F. P. Church; eleven silver-mounted rifles, presented by Remington & Co.; a cup presented by Hon. Nathaniel Niles, another by General Woodward, a long range rifle presented by the Sharpe Manufacturing Company. In addition there will be a number of cups, medals, badges, &c., presented by the Association, and quite a number of other prizes by various parties, to the Association. The first day of the match will be devoted to firing at 200 yards and the matches limited to the National Guard disposed of during the first two days.

The team selected to shoot against the Irish Eight has agreed to practice together over Wednesday and Saturday, firing fifteen shots at 800, 900, and 1,000 yards, besides their private practice. The Amateur Rifle Club will provide each one of the team with 500 rounds of ammunition, and will also pay for their transportation. Messrs. Remington & Son have offered to supply, without charge, whatever cartridges may be required by those of the team who shall use their rifle, which will considerably reduce the expenses of the club. It is probable that Col. Gildersleeve will accept the management of the team, in which case another member will be added to the team to shoot in his place. Col. Wingate was expected to take this duty, but business engagements will prevent.

As the following names have been sent over by Mayor Leech for entrance in the all-comers' match of the National Rifle Association, it is safe to presume that their team will be selected from them: J. Bagnell, J. B. Hamilton, P. Walker, E. Johnson, W. Waterhouse, J. K. Milner, H. H. Foster, J. Wilson, J. Rigby, and J. Doyle.

THE MONTREAL RIFLE MATCH.

[From our own Correspondent.]

MONTREAL, August 17th, 1874.

EDITOR FOREST AND STREAM:—As your paper takes much interest in rifle shooting, I will give you a summary of the winning scores at our Provincial rifle matches just concluded:

No. 1, or opening match, commonly called "Brydges' Challenge Cup and Snider Championship Match," which was shot for at 500, 500 and 600 yards, five shots each range, was won by a score of 51 points, second score 50, lowest winning score of 53, prizes \$18.

No. 2 match—Seven shots at 500 yards, three highest scores 27 each, four or five 26's; lowest winning score of 21, prizes, 35 points.

No. 3 match—Seven shots at 900 yards, highest score made by Colonel Gildersleeve, A. R. A. 36; next 35; lowest winning score, 20, prizes, 30 points.

No. 4—Battalion match, squads of five men, seven shots each at 500 and 600 yards; winning score, 215; highest individual score made by "one-eyed Joe" Ferguson, 49 points.

No. 5 match—Seven shots at 400 yards, three highest scores full score, 28 each; numerous 27's; 25 lowest prize score.

No. 6 match—Five shots each at 500 and 600 yards; winning score, 34; Yale second, 33; Gildersleeve sixth, with 32; lowest prize score, 20, prizes, 27. Wind very troublesome and strong.

No. 7 match—Standing, at 500 yards, seven shots; winning score, 34, second 29, lowest prize score, 21, 20 prizes; still very windy.

No. 8 match—7 shots 500 yards, Snider; 7 shots, 800 yards, small bore; winning score, 28 points, Fulton, A. R. C.; second 26 points, Canfield, A. R. C.; lowest prize score, 23 points.

No. 9 match—seven shots each, 500 and 600 yards each, Snider; seven shots each, 800 and 900 yards, small bore. Won by Belle, of Toronto, with 55 out of possible 60 points. 31's lowest prize score, 47; 20 prizes.

No. 10 match—Fifteen shots at 1,000 yards. Won by Snider, 48; 20 prizes, 48; lowest winning score, 39. The men complained that the wind was very light and uneasy, causing many unaccountable misses.

No. 11 match—Consolation, 5 shots each at 200 and 500 yards, Snider rifle. Won by 36 points; 38 unfired; lowest prize score, 27 points.

Have given you a tolerably accurate summary of the shooting. The first seven matches were wholly military weapons, 8, 9 and 10 small bore. We had the pleasure of a visit from several of the Amateur Rifle Club of New York, amongst whom were Colonels Gildersleeve and Wingate, Messrs. Fulton, Yale, Canfield, and one or two others. Colonel Gildersleeve shot brilliantly and thoroughly steadily, being well up to every match he fired in with the military weapon. Mr. Yale also distinguished himself by winning the second prize in No. 4 match, with a score of 33 in ten shots at 500 and 600 yards. Mr. Fulton shot accurately in No. 8 and 9, making 19 bullseyes and 2 centres in 21 shots at 800 and 900 yards, winning first prize in No. 8 and second in No. 9. Mr. Canfield also won a prize in No. 5 match, the second, with 26 points out of a possible 28. Colonel Gildersleeve, I believe, won four prizes, and would have been well up in No. 9 had the writer, who was shooting the same Merford as the Colonel, discovered that the Colonel required four minutes less elevation than him, causing Gildersleeve to pass his shot over the target at 800 yards. As it was, he made the creditable score of 47 with a miss. In the standing match a good joke occurred. Wingate, Fulton and Gildersleeve were chaffing Esdaile, who had no intention of shooting, to enter, and backing the scores for 50 cent pieces against him. He entered to shoot against Gildersleeve, and the score was—G. 4 4 3 3 3 3 21—E. 4 4 3 4 3 3 23, which took the second prize much to everybody's amusement. At the conclusion of the small bore championship match, a rumor was talked about the ground that a man called Field, from Michigan, had called himself one of the A. R. C., but was not acknowledged by them) wanted to back himself to shoot at 200 yards, standing, for \$100, without any one on the ground. Captain Esdaile, who was not shooting, but had come to see the finish of the match, took him up for \$10, and the result was—Esdaile, 3 3 3 4 3 3 21; Snider, 21, 22 3 3 3 3 27; Remington, I believe, Field shot afterwards against two others, whom he beat easily with a very small score. Shooting from the shoulder at 500 yards in a breeze was no easy work, and the Captain had to thank his coolness as good luck for making so fair a score as center from the shoulder at so long a range. The management of the matches was very fair, and no complaints were heard, except from invertebrate grumblers, whom nothing can satisfy. We were all delighted to meet the members of the A. R. C., and our only regret was that there was not more of them.

I hope that your next number will contain the Irish entry, and my word for it they will certainly do so if you have many men like those who favored us with a visit, I am, yours truly,

ROYAL.

The foregoing came one day too late for publication in our last week's issue.—Ed.

—The American Institute Fair will be formally opened to the public on Wednesday, the 9th day of September, and will continue until the 14th of November.

Vachting and Boating.

All communications from Secretaries and Friends should be mailed, not later than Monday in each week.

HIGH WATER, FOR THE WEEK.

—In response to requests from several of our inland subscribers, we have briefly prepared a list of the kinds of yachts mostly used in this country. Yachts may be propelled by steam and sail. Leaving the classification of the steamers to a steam department, we will turn our attention to the sailing vessels, which may be subdivided in the first place into centre-board or keel, and we would state that yachts may be either the one or the other, irrespective of rig, as in our country it seems no yacht is too small to be a keel-boat, or too large to be a centre-board boat. We have already described Whitehall boats and canoes in these columns, so passing by them to the next smallest type, we generally find them of the cat-boar rig; this is simply a boat with one sail, the mast stepped to the very bows; these yachts range in size from fourteen to twenty-five feet in length, and are occasionally longer. Another rig for boats of about the same dimensions is the sloop, in which case the mast is stepped further aft, the yacht receives a bowsprit and a head sail, called a jib. We next come to another class of sloops, ranging thirty-three and thirty-five feet in length, which, as is the case with all the kinds noticed to this time, are open boats, but are dignified with a topmast, a sail set above the mainsail, called a gaff topsail, and another jib, set from the end of the bowsprit to the top masthead, called a jib topsail. From this size up, the sloops generally have cabins, but the rig remains nearly the same. Some sloops having a flying jib-boom, which is a spar extending out beyond the bowsprit; from the end of this spar to the lower masthead is set the flying jib, the jib topsail in this case setting between the end of the flying jib-boom and the topmast head. Sloops of this kind range up to about seventy feet in length, seldom larger.

The schooner yacht is a vessel with two masts; the forward one, which is called the foremast, has a foresail fore-gaff topsail and head-sails corresponding to the rig of the large sloops; the main mast has a main sail and main gaff topsail, and between the two masts a triangular sail, shaped like a jib somewhat, setting between the foremast and main top mast heads; this is called a main top mast stay sail. These are the plain sails; for racing there are various balloon sails and kites. The schooner rig is used in vessels from sixty to one hundred and thirty feet in length. There are some yachts even larger than this. At some future time we may be able to give a more detailed description of the various kinds of yachts.

The **RIVERSIDE YACHT CLUB** of Yonkers has now on its roll twenty names and a fleet of four sloops, as follows: *Belle*, owned by Col. T. F. Morris; *Piquing Cloud*, Wm. P. Smith, Palisade Mountain House; *Pradie*, Henry Weed, New York; and *Ripple*, Frank Post, Yonkers. The officers of the club are: Col. Thos. F. Morris, commodore; Wm. P. Smith, vice commodore; H. S. Warren, secretary; W. R. Ware, treasurer; Frank Post, measurer; Dr. F. S. Grant, lead surgeon. On the 22d instant it started on a cruise, ending with a regatta at Red Bank, New Jersey.

—The **ISLES OF Shoals Regatta**, sailed on the 20th instant, was fully as successful as the large number of entries promised. Out of the sixty-seven yachts which had signified their intention of competing upon this occasion, forty-four actually appeared upon the scene in racing trim and ready for the affray. The prizes, the gift of Mr. John H. Poor, amounting to something over \$400 in value, were allotted to the following yachts. The first prize for the first class was a solid coin silver punch bowl and ladle, of elegant design and workmanship, was designated for the fastest boat in the class, which comprises sloops and schooners measuring thirty-eight feet and upward on the water line. The second prize for this class is a large, powerful marine glass, to be awarded to the successful yacht of a different size.

The second class includes centre-board and keel sloops and schooners measuring twenty-five feet and less than thirty-eight feet. The first prize being a pair of elegant silver napkin rings of special design, and the second an aneroid barometer.

The third class includes centre-board and keel boats measuring twenty feet and less than twenty-five feet. The first prize, a silver pitcher, and the second an aneroid barometer. The first to be awarded in the same manner as the first prize in other races, and the second prize to be awarded to the second boat, irrespective of rig.

Promptly at 12:30 the preparatory signal gun was fired, and ten minutes later the lowering of the signal of the Boston Yacht Club gave notice to the first class to start. All the yachts covered the line within the required time of fifteen minutes, and, after a lapse of five minutes more, the signals starting the second class were given. The first class vessels were out of the way, the third class settled down to their work, and the spectacle of forty-four racing yachts presented to the crowds on the accompanying steamers and on the shore well repaid them for their enterprise in coming.

The breeze was from the S. S. W. and moderate at times, however, inclining to be fluky, and diminishing perceptibly towards the close of the race. In the same manner as the interesting features of this regatta was the presence of the celebrated schooner *America*, and from her performance after hauling on the wind, it is doubtful whether she has lost much of her old form, or in fact whether we have a schooner in the country who is her equal to windward in a seaway. The breeze was entirely too light for her to save her allowance of thirty-five minutes from her fleet little ac-

tagonist, the "Fearless." The "Vindex" won gallantly, and demonstrated the fact that she is the fastest sloop in the country to windward in sea, for her victory over the "Coming" was scored entirely on weatherly qualities, the latter proving herself fully as fast off the wind. Probably the most general interest was manifested in the third class race.

At 3:25 the firing of a gun from the judges' boat announced that the first yacht, the "Olive" had crossed the judges' line on the return, 11.4m. 29s. after the starting of the first yacht in the class, and 3m. 17s. from the starting of the America in the first class. She was followed so closely by the Fannie that there was only 19 seconds difference in their return time. The next two boats in were the Sunbeam and the Hiram B., the difference in the time being only six seconds. Within 28m. 17s. from the time of the return of the first boat, fifteen of the boats of this class had passed the line. The Wanderer of this class arrived some time later, and signified her intention of protesting, on the ground that all the other yachts of her class had gone the wrong course.

The Lillie was the first yacht in the second class which put in an appearance, 3m. 32m. 50s. from the time the first boat started in the class, but made the second class course in 2h. 29m. 13s. In six minutes six seconds it was followed by the Eva, and with the exception of the Ambrotype, which did not put in an appearance at all, all of the boats of this class were over the judges' line within 37m. 50s.

Within an hour after the arrival of this class, the America came bowling in under full sail, leading the large yachts, and was welcomed in the most enthusiastic manner. Up to half-past six o'clock, only six of the yachts in the first class whose time is given in the summary below had appeared:—

FIRST CLASS—COURSE THIRTY MILES.			
	Time of starting.		Time of return.
America	12 42 30	H.	S.
Junonia	12 42 30	5	25 13
Spartan	12 42 30	6	25 07
Coming	12 43 19	5	26 50
Nautique	12 43 59		
Waver	12 44 30		
Fearless	12 45 38	5	54 11
Lillie	12 46 15		
Yoda	12 46 33	6	02 13
Ray	12 47 23		
Carlson	12 47 49	5	41 06
Vindex	12 47 55		
Annie M.	12 47 55		

After making the usual corrections of time in order to correspond with the measurements, the judges awarded the first prize in this class to the Vindex, and the second to the Fearless.

SECOND CLASS—COURSE SEVENTEEN MILES.			
	Time of starting.		Time of return.
Napoleon	1 00 40	3	44 49
Nautique	1 01 05	3	57 40
Eva	1 02 06	3	29 36
Mabel	1 02 22	3	54 28
Ambrotype	1 03 40		
Annie M.	1 03 53	4	28 17
Lillie	1 04 17	3	03 30
Sixton	1 04 31	3	02 11
Whisper	1 05 14	4	11 26
Magie	1 05 14	3	40 43
Parcelus	1 05 45	3	04 48

After making the usual allowances for measurements, the first prize was awarded to the Eva, and the second to the Parcelus, which is Pilot Boat No. 1 of Portsmouth.

THIRD CLASS—COURSE ELEVEN MILES.			
	Time of starting.		Time of return.
Amawau	1 21 30	3	20 34
Sunbeam	1 22 15	3	20 15
Olive	1 22 45	3	20 06
Elmer	1 23 04	3	22 59
Lillie	1 23 19	3	22 53
May	1 23 38		
Freddie	1 24 30	3	13 34
Wanderer	1 24 41	3	47 43
Hiram B.	1 25 04	3	24 04
White Wing	1 25 04	3	24 04
Phantom	1 25 11		
Amawau	1 25 20		
Posey	1 25 48	3	05 04
Alice	1 25 43	3	31 00
Evelyn	1 26 15	3	13 03
Mabel	1 28 22	3	11 11

The first prize was awarded to the Fannie, and the second to the Posey.

LYNN YACHT CLUB.—The second championship regatta of the Lynn Yacht Club in the championship series for the silver cups was held Tuesday, P. M., 18th instant, on the waters of Lynn Harbor, Mass., under two races in the most favorable circumstances. The course of the first-class was six miles long, and of the second and third class, five miles. Of the first class the yachts Lillie, Magic, Haymaker, and Lotta contested—Lillie winner; of the second, the Fleetwing, Lizzie, Mule, Kate, and Mary Ann—Fleetwing winner; of the third, the Mabel, (Captain Roberts), Mabel, (Captain Custumey), and Peris—Mabel winner. As the Fleetwing and Mabel have each won two races in the two respective classes, no more races will take place for second and third class yachts. A race will now have to be sailed between the first-class yachts to decide to whom shall be awarded the silver cup in this class. This race will take place on Tuesday, Sept. 1.

A race for \$300 took place on the Delaware, Aug. 24th, between the yachts Will McIntz, A. L. Dager, A. T. Eggleston, Strimmel, and Hillman. The course was twelve miles long, with two turtas. The contest was won by the McIntz by half an hour, Strimmel second and Dager third.

—On Tuesday the Tom's River Yacht Club sailed a regatta for the challenge cup and other prizes. The result will be given in our next.

—We call the attention of our yachting readers to notice of Mr. Thomas Manning's "Commodore's Signal Book," which appears among our book reviews of this week, and we cordially recommend it to anyone desiring a work of that kind.

—Morris, of Pittsburg, has replied to Geo. Brown, at Halifax, Nova Scotia, that the time named by letter for the race, on Sept. 3, is too short, and offers Brown \$400 for expenses if he will go to Pittsburg and row, about the middle of September.

—The National Association of Amateur Oarsmen will hold their second annual regatta over the Laureate course at Troy, N. Y., on September 3d and 4th. There will be a race for the Laureate shield, a double scull, and four-oared shell. The races will all be started at 10 and a half miles. The pair and double will be decided in

the first dash, but the single and four-oared, on account of the numerous entries, will be rowed in trial heats, the winners to row a final heat. Protests against any of the following entries can be made until August 29, with the Secretary, E. R. Craft, box 706 Post Office, New York:—

ATALANTA BOAT CLUB, NEW YORK.—Edward Blake, Gramercy Boat Club, New York—David Roach, Quaker City Boat Club, Philadelphia—J. B. Leibert, Cedar Bluff Rowing Club, Saratoga, N. Y.—G. C. Myers, New York Athletic Club, New York—E. Yates and W. B. Curtis, Beaverick Rowing Club, Albany, N. Y.—James Wilson and Joseph H. Givins.

DOUBLE SCULL.—New York Athletic Club, New York—F. E. Yates, W. B. Curtis; substitutes, R. W. B. H. McGraw, and J. H. Givins. Beaverick Rowing Club, Albany, N. Y.—George W. Lathrop, Joseph H. Givins. James Wilson, William R. Mills.

FOUR-OARED SHELL.—Gramercy Boat Club, New York—R. K. Williamson, stroke; H. M. Howell, bow; substitute, H. R. Mills. Atlanta Boat Club, New York—H. Withers, stroke; Oliver T. Johnson, bow; substitute, R. B. Bainbridge. Argonauta Rowing Association, Bergen Point, N. J.—F. C. Eldred, stroke; Edward Smith, bow; substitutes, Benjamin Stephenson, Walter Man.

Argonauta Boat Club, Toronto, Canada—R. Lamb, A. Langton.

ATLANTA BOAT CLUB, NEW YORK.—R. Withers, stroke; O. T. Johnson, William H. Spears, R. B. Bainbridge, bow; substitutes, Alex. Haud, Theodore E. Baden, and Edward Blake. Argonauta Rowing Association, Bergen Point, N. J.—F. C. Eldred, stroke; Benj. Stephenson, Walter Man; Edward Smith, bow; substitute, M. A. Phillips and E. W. Gannon. Beaverick Rowing Club, Albany, N. Y.—James Wilson, stroke; T. J. Gorman, R. T. Gorman; William Wilson, bow; substitutes, Daniel Doncaster, Jr., and William R. Mills.

Quaker City Boat Club, Philadelphia—J. B. Leibert, Samuel Moody, George Schaff, John Straub, bow. Gramercy Boat Club, New York—R. K. Williamson, stroke; H. M. Howell, H. R. Mills, W. F. Gannon; bow, substitute, A. Olsen. Wab Wah Sun Boat Club, Saginaw, Michigan—W. B. Paine, stroke; Henry Smith, P. Manning; James Jerome, bow; substitutes, E. Y. Jore and J. W. Alexander.

Buffalo Rowing Club, Buffalo, N. Y.—C. W. Baldy, bow; H. R. Hubbard, J. B. Green; C. Dunbar, stroke. Argonauta Boat Club, Toronto, Canada—H. O'Brien, bow; E. R. Grassett, A. Langton; R. Lamb, stroke.

THE SARATOGA ROWING ASSOCIATION will hold their second annual regatta on Saratoga Lake, to-morrow being the first day, and we continue on the 29th, 31st, and September 1st. The following are the list of entries, but are subject to alterations:—

JUNIOR SINGLE SCULLS.—Saratoga Rowing Association, Saratoga, N. Y.—James Riley, W. A. Costar. Cedar Bluff Rowing Club, Saratoga, N. Y.—G. C. Myers. Chesapeake Boat Club, Norfolk, Va.—Fred Hardy.

Vernon Club, Savannah, Ga.—George Schaff. Carolina Independent Boat Club, Charleston, S. C.—De Saussure Bull. Seawanna Club, Greenpoint, L. I.—Adam Harslacher. Gramercy Club, New York—David Roach.

Amateur Boat Club, Portland, Me.—M. P. Davis. Glean Boat Club, Bath, Me.—W. R. Shaw. Argonauta Rowing Club, Toronto, Canada—A. Langton. Beaverick Rowing Club, Albany, N. Y.—G. W. Lathrop, Joseph H. Givins.

Atlantic Boat Club, Hoboken, N. J.—P. Christie Ackerman.

EXTRA SINGLE SCULLS.—Argonauta Rowing Club, Toronto, Canada—A. Langton. Gramercy Boat Club, New York—James O'Neill.

PENIOR SINGLE SCULLS.—Beaverick Rowing Club, Albany, N. Y.—James Wilson, James H. Givins. Union Springs Boat Club, Union Springs, N. Y.—R. H. Robinson, E. C. Courtney.

Amateur Boat Club, Portland, Me.—M. P. Davis. Glean Boat Club, Bath, Me.—W. F. Stevens. Argonauta Rowing Association, Bergen Point, N. J.—B. Stephenson, Walter Man.

Athletic Club, New York—W. B. Curtis, F. E. Yates. Mutual Boat Club, Albany, N. Y.—P. C. Ewing. Carolina Independent Boat Club, Charleston, S. C.—De Saussure Bull. Saratoga Rowing Association, Saratoga, N. Y.—James Riley. Cedar Bluff Rowing Club, Saratoga, N. Y.—G. C. Myers. Chesapeake Boat Club, Norfolk, Va.—Fred Hardy.

Athletic Club, New York—E. Blake.

SINGLE SCULL—FOR CHAMPIONSHIP OF STATE OF NEW YORK.—Saratoga Rowing Association, Saratoga, N. Y.—James Riley. Cedar Bluff Rowing Club, Saratoga, N. Y.—G. C. Myers. Athletic Club, New York—W. B. Curtis, F. E. Yates. Gramercy Club, New York—David Roach.

Union Springs Boat Club, Union Springs, N. Y.—E. C. Courtney. Beaverick Rowing Club, Albany, N. Y.—James Wilson. Atlanta Boat Club, New York—E. Blake.

FOUR-OARED SHELLS.—Atlanta's Boat Club, New York—R. Withers, O. T. Johnson, W. H. Spears, R. B. Bainbridge, substitutes, E. Blake, Van Raden, Alex. Haud. Atlantic Boat Club, Hoboken, N. J.—Dixon McKinnon, George Pine, James Reek, Robert Selman.

Palmetto Club, Charleston, S. C.—Henry B. Ball (bow), D. C. Saussure Parker (No. 2), W. M. L. Lessee (No. 3), H. M. Parker (No. 4). Potomac Boat Club, Georgetown, D. C.—Frank Jones, A. J. McBrien, H. S. Traux, D. Conghlin. Substitutes, Z. T. Carpenter, W. J. Nicholson.

Vernon Club, Savannah, Ga.—H. Schley (No. 4), G. Kimball (No. 3). George Schley (No. 2), J. Schley (bow). W. B. Paine, Henry Smith, Wab Wah Sun Boat Club, Saginaw, Mich.—E. G. Lovell, J. W. Alexander.

Quaker City Boat Club, Philadelphia—J. B. Leibert, Samuel Moody, George Schaff, Frank Brannan (stroke). Seawanna Club, Greenpoint, L. I.—W. Knob, R. H. Orr, J. H. Johnson, P. Elliott. Substitutes, John Keppel, W. Keisey, W. Wilson. Beaverick Rowing Club, Albany, N. Y.—James Wilson (bow), T. J. Gorman (No. 3), R. T. Gorman (No. 3), W. Wilson (stroke). Substitutes, R. J. Doncaster.

Buffalo Rowing Club, Buffalo, New York—C. W. Baldy (bow), R. Hubbard (No. 2), J. B. Green (No. 3), C. Dunbar (stroke). Argonauta Rowing Association, Bergen Point, N. J.—F. C. Eldred, G. R. Grassett (No. 2), A. Langton (No. 3), R. Lamb (stroke). Gramercy Club, New York—W. K. Williams (bow), H. R. Mills (No. 2), H. M. Howell (No. 3), W. F. Gannon (stroke). H. A. Palmiste, substitute.

Argonauta Rowing Club, Bergen Point, N. J.—Ed. Smith, (bow), Walter Man, B. Stephenson, F. C. Eldred, Substitutes, M. A. Phillips, E. T. Brannan.

DOUBLE SCULLS.—Saratoga Rowing Association, Saratoga, N. Y.—James Riley, W. A. Costar. Athletic Club, New York—W. B. Curtis, F. E. Yates. Substitutes, W. E. McCready, A. W. Rathbone.

J.—F. C. Eldred, Ed. Smith, and B. Stephenson, Walter Man. Argonauta Rowing Club, Toronto, Canada—H. Lamb, No. 1, A. Langton, No. 2.

—On August 15th the railroad clubs of the Chicago, Rock Island and Pacific road, and the Burlington and Quincy played a match at Chicago, on the White Stocking Club grounds, which resulted in favor of the C. R. I. by a score of 80 to 23. Bostwick led the score on the winning side, and was awarded the prize. The C. R. I. and Q. played the score up to the sixth inning, when the Rock Island fellows got in 17 runs, and took a winning lead.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will send a few more promptly, and will be of assistance in this respect. Price of books inserted when desired.

SCHOOL JOURNAL. The New York School Journal has been united with the Illustrated Educational News and the College Review, under the title of the New York School Journal and Educational Review. The new journal, under the editorial management of W. L. Stone and Amos M. Kellogg, promises to be a valuable auxiliary to the educational interests of the day. It is published weekly at \$2.50 a year, office, 17 Warren street.

COMMODORE'S SIGNAL BOOK. We have received a copy of Mr. Thomas Manning's publication, entitled the "Commodore's Signal Book," and we take pleasure in recommending it to our aquatic readers. This work has been published under the auspices of the Commodore Steamship Company and Brooklyn Yacht Club, and contains charts of flags, funnel marks and night signals of all the steamship companies, charts of the signals of all American yachts belonging to recognized clubs, lists of the officers, and tables containing the dimensions and rig of yachts belonging to these various clubs, lists of pilot boats, life-saving stations, tide tables, locality of tide stations, moon's phases, and acts of Congress concerning yachts.

The book has evidently been compiled with great care, and from official sources, and we hope that its reception this year will warrant its becoming annual. No expense has been spared in rendering it most attractive, and the paper, typography, printing of the charts and general excellence and taste of the work throughout render it by far the handsomest volume of the kind we have ever seen. Orders for copies of the work should be addressed to Mr. Thos. Manning, 138 Fulton street, New York.

GOOD MOCCASINS.—Mr. Frank Good, the celebrated shoemaker maker of Manchester, New Hampshire, has repeatedly complained to us that he was unable to fill the orders that reach him through his advertisement in FOREST AND STREAM, and our recommendations of his goods. No doubt some of our readers have been prepared to bestow upon us some modicum of censure because the articles have not been forthcoming, as we promised. All hands will now feel relieved to know that Mr. Good has so increased his facilities for manufacturing that he can fill all orders sent. We advise our readers to order only the Canadian patterns and not the laced brogans. Good's goods are good.

AMENDED GAME LAWS.

NEW HAMPSHIRE.

SECTION 1. No person shall in any way destroy, between the 1st day of April and the 15th day of October in each year, any snipe, otter, beaver, seal or fisher, under penalty of \$25 for each animal so destroyed.

SEC. 2. No person shall in any way destroy, between the 1st day of March and the 1st day of October in each year, any muskrat under penalty of \$5.

SEC. 3. No person shall take, kill, or destroy any of the animals known as hares, between the 1st day of March and the 1st day of October of each year, under penalty of \$5.

SEC. 4. No person shall expose poison for the destruction of animals, or any other purposes, under penalty of \$50.

SEC. 5. If any person shall, at any season of the year, take, kill or destroy any of the birds called shrikes, thrushes, larks, blue birds, parrots, fitches, hantings, martins, orioles, swallows, d-catchers, warblers, tanagers, bonobooks, vireos, nut-batchers, creepers, woodpeckers, humming birds, or any other of the song birds or insectivorous birds, he shall forfeit the sum of \$5.

SEC. 6. If any person shall, between the 1st day of February and the 1st day of May in any year, take, kill or destroy any woodcock, Y. shall, between the 1st day of February and the 1st day of August of each year, take, kill or destroy any of the birds called plover, yellow legs, snappers or rails, or shall, between the 1st day of February and the 1st day of September of each year, take, kill or destroy any ruffed grouse, partridges or quails, or shall, within the respective times aforesaid, sell, buy or have in his possession any of said birds, he shall be liable to be fined, or imprisoned, or both, for each bird so taken, killed, destroyed, bought, sold, or had in possession, the sum of \$10.

SEC. 7. No person shall at any time or place within this State, take any grouse, partridge or quail, with any trap or snare, under penalty of \$10, except upon his own grounds.

SEC. 8. Section five shall not apply to any professional taxidermist, or to any one collecting specimens for the purpose of illustrating natural history in any educational institution, who shall not act apply to any person who may kill or destroy any of said birds or animals doing damage on his premises.

SEC. 9. Section three of chapter CCL of the General Statutes is hereby repealed, together with all other acts inconsistent herewith.

Approved July 2, 1874.

A VALUABLE RECIPE.—The Journal of Chemistry publishes a recipe for the destruction of insects, which if it be one-half as efficacious as it is claimed to be, will prove invaluable:—

Hot alum water is a recent suggestion as an insecticide. It will destroy red and black ants, cockroaches, spiders, chintz bugs, and all the crawling pests which infest our houses. Take two pounds of alum and dissolve it in three or four quarts of boiling water; let it stand on the fire till the alum disappears; then apply it with a brush, while nearly boiling, to every joint and crevice in your closets, bedsteads, pantry shelves and the like. Brush the crevices in the floor of the skirting or mop boards, if you suspect that they harbor vermin. If, in whitewashing a ceiling, plenty of alum is added to the lime, it will also serve to keep insects at a distance. Cockroaches will flee the paint which has been washed in cool alum water. Sugar barrels and boxes can be freed from ants by driving a chalk mark just around the edge of the top of them. The mark must be unbroken, or they will creep over it; but a continuous chalk mark half an inch in width will set their depredations at naught. Powdered alum or borax will keep the chintz bugs at a respectable distance, and travellers should always carry a package in their hand-bags, to scatter over and under their pillows in places where they have reason to suspect the presence of such bed-fellows.

—The "Wild Oats" and "Frank Leslie" newspaper base ball news played a seven innings game at Prospect Park last Saturday, "Wild Oats" winning by a score of 23 to 7.

Guide for the Summer Tourist.

Collingwood and Lake Superior.

Ordinance Lands Sale,

TORONTO.

PUBLIC NOTICE is hereby given that on TUES-

DAY the 8th day of September next, at 10 o'clock

will be sold at Public Sale, by Mr. Orin Wardell, Auc-

tioner, the annual Leases of the Reserves on Lake

Erie, at Pointe Pelee, containing about 4,500 acres, and

Rondon, containing about 240 acres, and Turkey

Point, containing about 500 acres, respectively, to be

employed for the purpose of shooting and fishing, for

the proper preservation of the game and the protection

of the timber thereon.

These Leases to endure for a term of 21 years each,

with power to the Department to resume possession,

at any time, on giving one month's notice.

On condition, that the just rights of squatters

and Indians shall be respected, and reserving—all

rights of fishery, or use and occupation of the shores

in connection therewith, under authority of the De-

partment of Marine and Fisheries.

The rent to be paid to this Department, semi-an-

nually in advance, and good and sufficient security

shall be tendered, at the sale, for payment. If insufficient,

the sale to be renewed at the time and place of sale.

Further conditions, if considered necessary, will be

declared at the time of sale.

Lessees to accept boundaries and quantities as

shown on the Ordnance plans.

By Order,
B. A. MEREDITH,

Deputy of the Minister of the Interior.

Sportsmen!

Your attention is called to
GOOD'S OIL TANNED MOCCASINS,
the best thing ever worn by sportsmen. Not injured by wetting and drying—always soft and pliable. The feet, and VERY DURABLE—being made of the very best of stock in three different styles, and warranted the genuine article, different from anything before offered. Illustrated Circular and Price List free.
FRANK GOOD,
7130 Elm St., Manchester, N. H.

PATENT AUTOMATIC MUZZLE.

[From N. Y. Times, June 22]
"Mr. Bergh has a muzzle that he recommends, as it does not hurt or wound the dog when on his head. By a spring the dog can open his mouth to the fullest extent, and running out his tongue part with as much ease as though he was not muzzled, and drink without any difficulty, but it is impossible for him to bite." The most humane invention of the age Manufactured by W. T. & J. A. BIERCKHAET.
Liberal discount to the trade. 62 Duane St., N. Y.

"DESIDERATUM."
DR. VEGA ARANGO'S
South American Antidote.

INSTANTLY CURES MOSQUITO BITES.
For sale by all Druggists at 25 cents per vial.
CARLE & STRONG, 152 Water St., N. Y.

Terms, Five Dollars a Year. {
Ten Cents a Copy, }

NEW YORK, THURSDAY, SEPT. 3, 1874.

Volume 3, Number 4.
17 Chatham St. (City Hall Squ.)

For Forest and Stream.
THE WHIPPOORWILL.

THE white fog drifts along the meadow,
And the gleam
Of the western sky is fading
From the ripples that were crimson
On the stream.

The thousand tiny voices of the larks
Fill the air,
And the hum-is of the woodthrush,
Ploating softly down the mountain,
Seems a prayer.

Where twilight shadows gather 'neath the cedars
On the hill—
Where the robin latched warbled,
And the sparrow sang his vesper,
All is still.

But the wh'poorwill complaining in the valley
Far below,
With its voice so wild and restless
Wakes memories forgotten
Long ago.

Till the thoughts of former joys and former sorrows
Come again,
And they fall upon the spirit
With the gentle measured cadence
Of the rain.

P. C. B.

For Forest and Stream.
A Day on the Poyang Lake.

OF all hot places in China, or elsewhere, this side of Hades, Kiu Kiang, in summer at least, can probably carry off the palm. The foreign settlement, adjoining the Chinese City, is built directly on the bank of the river, and as it faces the west, is fully exposed through three-fourths of the day to the glare of the sun. Even now, in autumn, the heat is sufficiently intense to make agreeable the use of a *punkah* over the table at tiffin, and to render anything like shooting almost out of the question.

The Yang Tze at this point 600 miles from its mouth, is at least a mile wide, and looking across it, nothing is visible but a dreary expanse of flat and marsh, broken only by an occasional fisherman's hut, or the white walls of a mandarin "squeeze" station or district Custom House. But these same flats, for all their wastes of meadow grass and reeds, afford some shooting as fine as the most enthusiastic sportsman could desire. I doubt if another spot could be named, where in both spring and fall, wild snipe could be found in greater abundance; while in winter the many canals and pools which intersect them, are the haunts of myriads of teal and wild fowl of every description.

For many weeks the Jessie had been riding quietly at her buoy in front of the bund, "like a painted ship upon a painted ocean;" the only signs of life on board being the smoke which twice a day arose from the tallfun, as the *Cow-la* prepared his rations of rice and dried fish. But a change was at hand. The new moon-son, which had now commenced to blow from the N. E., increased in intensity from day to day as it gathered strength to overcome the corching S. W. winds which had prevailed during the summer. With each day the thermometer indicated a lower temperature, until we almost fancied we felt the fresh breezes of old ocean, borne to us on the bosom of his mightiest son, and the emaciated exiles who were doomed to pass this period of their existence in smelling tea, threw off their summer garments of white linen and pith helmets, and appeared once more in tweed suits and wide-awakes.

A party was soon formed to visit the Poyang Lake, which debouches into the Yang Tze some eighteen miles below Kiu Kiang; for the double purpose of seeing some of this unexplored classic ground, and if possible, killing some of the wild-birds which were said to haunt the eastern base of the Lu-shaw Mountains. Messrs. Fortnum & Mason and Crosce & Blackwell, whose *délectation* have penetrated even to the antipodes, were put under contribution and the Jessie duly provisioned for a fortnight's cruise.

The old crew, although employed in boat duty, were soon re-shipped, and Buffalo in his skin coat, which seemed more than ever like his natural epidermis, and Monkey, still as active as one of his namesakes, were soon to the fore, and as ready to carry shot and provision bags as of old. Aho, the cook, routed out the Low-ta and took charge of the culinary department himself, and the only discontented one of the party was the boy Akow, who, having taken unto himself a wife after the manner of the Celestials, was obliged to leave her before the honeymoon was half over. The dogs, Bob and Nellie, although not in as good condition as I should have liked, were shipped in their accustomed comfortable compartment forward. I doubt if a finer breed of dogs for such an expedition as ours, than these kangaroo bounds could be found. Nellie was born in Australia and came to me *en cents*. Bob was the only one of the litter I succeeded in raising, but he grew to be double the size of his mother. The latter showed plainly her mingled stag and greyhound breeding, but Bob, from his immense size and strength, seemed to have some mastiff blood in him.

The Jessie having no windlass, the tackles were laid along the deck and straps made ready for fluting. Enough of the mainsail is hoisted to give her headway against the current, and the chain rattles in over the bow; with the helm down she quickly comes to the wind, the foresail is hoisted and both sails trimmed as flat as Chinese rig will allow. A parting salute is fired from the swivel gun to our friends on the bund and we start on our first tack down the river.

The wind, as usual, was blowing up the stream, but the strong current helped us to fore reach to such an extent, that the second tack carried us clear of the pagoda which stands at the commencement of the wall surrounding Kiu Kiang. This wall being perhaps four or five miles on its river face, would give the impression that Kiu Kiang was a very large city, whereas the contrary is the case, and it is always a mystery to the barbarian, why the Chinese should have gone to the trouble and expense of "fencing in" so much land, where there is no prospect of its ever being built upon. The only solution is, that these were "rings" in those days as well as ours, and that contractors waxed fat upon the spoils of the people. In walking through the ruined and deserted streets of the city I have frequently flushed pheasants among the desolated gardens, which remain as monuments of the invasion of the Taeping Rebels.

Before sunset the Great Orphan, that huge rock standing like a sentinel at the entrance to the lake, was in full view; passing it, we saw in under the shelter of the southern bank, and anchored for the night abreast of a group of picturesque Confucian Temples.

There are undoubtedly yachts with more pretentious cabins and more elegant adornments, but I doubt if for solid and substantial comfort, anything approaching the same size, ever excelled that of the Jessie. At least we thought so, as in slippers and easy coats we stretched ourselves on the well-cushioned transoms, and watched the preparations for dinner. A swinging lamp shed a soft light through the cabin showing the guns hanging in their places overhead, and the two pairs of crossed swords suspended against the bulkhead. Akow, having resigned himself to the inevitable, and recovered his equanimity, was setting the table with his accustomed "neatness and dispatch." Occasionally the fragrant fumes of the muligatney were wafted to us, and the huge York ham on the sideboard was destined to lose its fair proportions at an early stage of the cruise. And after all these good things were disposed of, came the fragrant manillas, not such trash as are sold with you under that name, but genuine *concomitantes*. You cannot smoke Havana cigars in this climate, even if they would stand the voyage, which they will not; they appear to have some effect upon the nerves which any number of manillas will not. And then the quiet rubber of short whist, with modest "quarter" points, and perhaps a dollar on the odd game, at which no one would ever lose enough to disturb their slumbers. And the refreshing night's rest afterwards, through which the

only sounds to be heard, are the softened beats of the tom-tom from a distant temple where some Buddhist priest kept watch and ward over his gilded idols.

Awakening early on the following morning, while breakfast was being prepared, we landed and made the acquaintance of the priests who were domiciled in the monastery on the heights, and found them, as is almost invariably the case, very sociable and jolly. Their establishment, being devoted to the worship of Confucius, was without any of the immense gilded statues of the three-faced Buddha; and in their place the walls were hung with inscriptions taken from the writings of their favorite philosopher and sage. Nevertheless in many little shrines or altars, before which burned candles or incense sticks, were miniature representations of domestic josses, whose presence were supposed to counteract the evil influences of bad spirits, and I doubt not that after our departure additional offerings were made to propitiate these tutelary saints.

In the last of the series of buildings, which were connected by well kept gardens, we found ourselves on the very edge of the overhanging rock and obtained a magnificent view of both river and lake. In front rose the Orphan with its curved temple roofs peering from amongst the dense foliage with which its summit was crowned. Directly beneath us lay the Jessie, quietly at her anchor, her white sides glistening in the first rays of the morning sun. And we could see Akon bending onto the signal balyards the flag that was to announce that breakfast was ready. A brisk walk down the hill, a few strokes of the oar, and the dingy was once more alongside, and giving the Lon-ta orders to get under way, we sat down to the maternal repast of freshly caught fish and curry.

A nice breeze carried us back over a portion of the ground we had travelled in the evening, but before reaching the western shore, we jibed over and hauling on the wind stood up the main channel of the lake. When abreast of the Orphan we found the base of it quite dry, something of very rare occurrence and to be attributed only to the unusually low stage of water in the Yang Tze, which had drained the Poyang of a greater portion of its volume. Such an opportunity of exploring this wonderful freak of nature was not to be lost, so the Jessie was rounded to, leechboards hauled up, and the boat allowed to drift against the steep bank of sand which formed this side of the channel. Jumping ashore, a few minutes walk brought us to the rock, but all our efforts to find a place by which to ascend its precipitous sides were unavailing. That it was inhabited the temples which we had seen from the main land as well as the noise of the tom-tom's heart during the night before, testified; but how the inhabitants of this solitary rock ever escaped from it, was beyond our ken. The rock was five hundred yards or more in length by about half that width, and its height we judged to be about two hundred and fifty feet. Looking up its perpendicular and moss grown sides, we could see branches of trees projecting over the top, and hundreds of cormorants, disturbed by the noise of our guns fired to produce an echo, wheeled and circled high over head. By the water marks on the rock we could see that the spot where we stood must have been twenty-five or thirty feet under water during the spring freshets, when the snows of the far western mountains in Sze-Chuen and Thibet had swollen the grand old Yang Tze to its summer height. Now we found the base of this lonely orphan perforated and honey-combed by the action of the water, and in places worn into little caverns connecting with each other, in which were piles of delicate and minute sea shells, and carpets of the softest white sand. They seemed to be fit abodes for mer-men and maidens and in the oppressing solitude of the place we almost expected to come across some fair one with looking glass and comb.

Returning to the Jessie we were soon under way again, but before passing the rock we gave it a parting salute from the swivel gun, and sent the screaming cormorants once more from their lofty crys. But even all the noise produced no other sign of life. As the distance increased the

waited for something to turn up. It was not long before I heard Bob on the hill above and to the right of me, and presently an immense bear, the largest we had yet seen, came galloping along the side of the hill above where I stood. Catching sight of me, he stopped and looked so much like charging that I meditated a scramble up the nearest tree. Bob appearing on the scene, however, brought him to bay, and as he turned to face the dog, his broadside being toward me, I planted a shell directly behind his foreshoulder, which brought him rolling down the hill almost to my feet. The effect of the shell was wonderful. At the moment he had exploded the moment it struck him, full evidence of its destructive powers was apparent. Some of the pieces had penetrated the skin on the opposite side and the organs in their course were utterly destroyed. Death must have been instantaneous.

It was now nearly night and time we were thinking of returning to the lake, or making preparations for camping where we were. It was decided, however, that we should rush on to the half-way village, and then, if it was not too late, we could get chairs and be carried to the Jessie, while the coolies could remain all night and return with bamboo men enough to bring the game into Tsing-poo. With our united weight we bent down some saplings, and after dressing the pigs tied the sow and boars to them and let them spring back. The little porker the men slung on a pole and volunteered to carry to the boat. It was quitted when we reached the half-way village, but there we procured more richly decked sedan chairs, and stout bearers, who, starting off with their usual dog trot, by nine o'clock had landed us on the shore of the lake. Hailing the Jessie a coolie sculled the dingy ashore and Master Aho had soon prepared us a bountiful supper.

Going on shore the next day at noon, we formed part of the crowd which had assembled to receive the triumphal procession headed by Buffalo and Monkey, which brought in the result of our previous day's sport. Most of the meat was distributed among the villagers, and in an hour the Jessie was again under weigh, and the white walls of Tsing-poo rapidly fading in the distance.

New York, 1874.

For Forest and Stream.

TRIBULATIONS OF A TRAMP IN THE ADIRONDACKS.

HAVING just returned from a two weeks' trip to the John Brown Tract, I herewith submit the following report. Eight of us started from New York on the evening of July 24th, arriving in Albany at five o'clock the next morning. We there took the 6:45 A. M. train, arriving in Utica at eleven o'clock, and Boonville at two o'clock. Ed. Arnold was with us with a team, and take us to the lakes; but no Arnold could be found, so we had to wait.

Shortly after supper Arnold put in an appearance, and said we should go to Moose River that night. It was now nine o'clock, and we were still waiting, having walked from the hotel to the depot just seventeen times. Well, we finally got started at ten o'clock, and arrived at Moose River at half past two the next morning. The trip was not without its tribulations, twelve miles did ever known in the experience of any of the party; stopped at Lawrence's Hotel the remainder of the night; turned out at seven o'clock in the morning, and during the next three hours succeeded in getting our breakfast, and getting our luggage over the river and securely packed on the backs of horses.

One of the party had complained several times about the weight of his luggage, but we had all complained here, reaching the next best load. He had occasion to open his bundle next morning, and in it discovered three bricks, which some one in New York had placed there before he started. He begged us not to let his friends know that he had brought them three hundred miles before finding them, but the joke was too good to keep. At ten o'clock we started on our twelve and a half mile walk through the woods to Arnold's. We had been told that it was the fiercest rough road, and expected to find the hardest traveling we had ever seen; but our idea of it was like Nicholson pavement compared to the reality. It was up mountains, down valleys, over rocks, stumps, and fallen trees, through mud and sloughs a yard deep, with mosquitoes and punkies by millions. At the end of five miles I was nearly played out, and if I could have been placed back at Moose River nothing would have pleased me so much. The rest of the party were nearly all used up, but not in so bad a condition as myself. This, remember, was at the end of only the fifth mile, and we had seven and a half more before us. I made up my mind that this was not only my first, but would be my last trip to the Adirondacks. I thought the only fortunate man in the original party was C., who stayed at home. But what could I do? I was in the wilderness, five miles from the nearest habitation, and had to get on from anywhere else, and the horses with the rest of the party were a long distance ahead. By the way, I would like to mention right here that the miles in this part of the country measure twenty thousand feet each. I was bound to go through or "bust," so I trudged along behind, the others occasionally waiting for me, and finally N. decided to remain with me, and I went on to the lake. It seemed to me that the journey was very tall, but complained no more, and drank so much water that it made him feel a little bad. He said several times that he could actually hear it jolting as he walked, but after listening and puzzling over it for some time, he happened to put his hand into the pocket of his brother's coat, which he was carrying, and pulled out a bottle about half full of some dark liquid, which explained the sound and sensation he was feeling. He seemed to me to have discovered that the water he had been drinking hadn't made him feel bad at all. He also learned from the label that the bottle contained some kind of medicine for pains, cramps, etc., the dose being fourteen drops in a gill of water, and was exactly what I needed, so we pushed on again with the understanding that I should take a dose at the first place where we could find any water; but not a drop of drinking water could we find during the entire remainder of the journey, and it was just as well that we did not, for when we arrived at Arnold's we learned that the bottle contained "oil of tar."

On arriving at the house I spread myself at full length on the floor, completely exhausted. I rested an hour, and then ate a dinner of bear steak, brook trout, etc., and felt better, and at six o'clock went to bed and slept soundly until seven the next morning.

July 27th.—A rainy day before us, but we procured additional provisions, boats, cooking utensils, jack and guide,

and started for the lakes. After a pull of four, and a half miles up the river we arrived at the "Forge," where we had to "carry" our boats and luggage a quarter of a mile, as it was then raining, and the trail was in no better shape, but seeing no prospect of fair weather, and being anxious to get located in camp as soon as possible, we decided to start for Seventh Lake, and run the chances of getting wet, and the chances were good, for we did get thoroughly drenched, and yet we were happy. We went as far as Sam Dunakin's camp on Fourth Lake (or Dan Samagin's, as it is sometimes called), where we arrived at three o'clock. Sam and a splendid hunter, which I named in short order, being hungry as wolves. The storm had been increasing all the time, and we waited until it was too late to proceed further, and then decided to remain all night—and a jolly night we had.

The next morning, July 28th, we found the storm still raging, but were determined to go into camp that day anyhow, so after taking breakfast we packed our traps into the boats once more, and again packed on our journey the rain pouring in torrents, and filling our boats half full of water before we had gone two miles; so we concluded to give it up once more, and went for Jack Shepherd's camp, near the head of Fourth Lake, which we found vacant, and a notice on the door saying, "Gone to Queer Lake." We at once took possession, and the first thing we did was to build a fire, and hang ourselves up to dry. Shortly after our arrival, one of Shepherd's guides came in from Queer Lake and gave us a cordial welcome, telling us to make ourselves comfortable until the storm was over. We did make ourselves comfortable the rest of that day, and all night.

The next morning, July 29th, we found the storm still raging as hard as ever, but having learned of a vacant camp on the other side of the lake we decided to locate there, and give up the Fourth Lake idea. Therefore, after breakfast we packed the boats once more, and proceeded to "Camp Providence," which we found to be a lovely place, and all hands were delighted. An hour's work put it in perfect order, and we commenced camp life on our own hook for the first time. We tried fishing in various directions during the day, but did not meet with much success on account of the storm. In the evening we sat by an immense fire, which kept us warm, and told stories, until ten o'clock, when we spread our blankets on the ground, which had been liberally covered with hemlock boughs, and turned in for our first night's sleep in an open tent.

On the morning of July 30th we had a little pleasant weather for the first time, but it turned out to be a cold, cloudy day, with rain mixed in occasionally. Did a large amount of fishing and hunting today, but did not get much fish or game. Two of the party, with a guide, went off on a deer hunt, to a small lake called "Hell Gate," about fourteen miles from camp, and a deer hunt it was for those two. When they got there the boat which had always been kept on the lake was nowhere to be found, and after hunting two hours they gave up in disgust, and started for camp, where they arrived at one o'clock. The evening, however, was pleasantly spent, having traveled twenty-eight miles without firing a gun or casting a fly.

July 31st.—Another cold, rainy day, and the wind blowing a perfect gale, making the lake so rough that it was impossible for us to use the boats, or do anything else but loaf around camp and complain about this confounded weather. All hands discouraged, and beginning to show homesickness, getting tired of fried pork and beans, and longing for fish or game. Caught four trout today, the largest of which was less than eight inches long, and although it hurts my feelings to do so, I am compelled to acknowledge that we have caught more trout than on any previous day, or on previous days put together. If this weather and luck holds on much longer we shall pack up our traps and go—somewhere; I don't know where, but the party seem willing to go anywhere to get out of this forsaken corner, completely bored by fish and game. Perhaps we will go back to Arnold's, where we can get good square meals and a place to sleep, where the rain will not soak our blankets during the night. If it were not for being laughed at by our friends, we should be willing to start for home to-morrow morning.

August 1st.—Another cold, rainy day, and the wind still blowing like a hurricane. The rain came down in torrents during the latter part of last night, causing a stream of water to flow through our camp large enough to propel a saw mill. Our bark covered tent will shed water pretty well in ordinary showers, but afforded very little shelter last night. We were completely drenched, and although I supposed my gun was in a dry place, I found both barrels half full of water. Another loading day before us, and more fried pork and beans. We used ourselves the greater portion of the day by inventing adjectives suitable to express our opinion of this weather, but did not succeed in getting anything strong enough to satisfy us. Probably a more thoroughly disgusted party never visited the Adirondacks. We rolled ourselves in wet blankets to-night, with the understanding that if it rains to-morrow morning we will pack up our traps and start for Arnold's.

August 2d.—Still raining. The lake, and streams are so high now that there will be no fishing before it is time for us to go home, so it makes but little difference to us. We ate a breakfast of fried pork and corn cakes, packed our traps into the boats, bid farewell to Camp Providence, and started down the lake, and in less than an hour the sun came from behind the clouds and laughed at us, but it did not tempt us to turn back.

August 3d.—The sun shined, and therefore proceeded on our course as fast as rough water and a strong head wind would permit. We went ashore at the head of Third Lake to pick some berries, which were very plenty, and after getting our fill some one proposed that we should visit the top of Bald Mountain, and it was no sooner proposed than we were on the way. It was a big climb, but the scenery from the top was worth going to any distance. There are different lakes as far as the eye can reach. Once more on the lakes, and the sun still shining, but the wind is blowing so hard that our progress is very slow. Arrived at the "Forge" at three o'clock, and after working pretty hard succeeded in getting our boats and luggage over the "carry," and safely packed them in the boats. The evening seemed to us to be a very long one, and we did not forget a single thing, except at this "carry." Two fishing poles, three canes from the top of Bald Mountain, a pair of gloves, a coat, and a rubber blanket. Found the river six feet higher than usual at this sea-

son, and higher than ever known before in the summer. Arrived at Arnold's at five o'clock awful hungry. We had eaten nothing but berries since morning, and after a good supper of venison, etc., we were once more happy. A fresh party came in late in the evening, and learning that we had just left the lakes were very anxious to find out all we knew about the fishing there. We could have written it all with a piece of chalk on a three-cent piece, but not wishing to hurt their feelings so soon after their tiresome walk from Moose River, we made things appear as bright as possible. They were surprised to learn that we did not do too much up to a boat, where you were pulling in a twelve-pound salmon. They seemed to have an idea that the boats were about the size of whale boats. A healthy time they would have with whale boats on a three mile "carry." One of the party was dressed in black broadcloth pants, light shoes, white vest, linen duster, silk hat, and an umbrella.

During the next few days we had lovely weather, and enjoyed ourselves very well indeed. Arnold gave us all we wanted to eat, and that was a great point, as we had ferocious appetites. About an hour after each meal we would commence reckoning the time we would have to wait before the next meal would be ready. Game was plenty, and during the last two or three days of our stay fishing was fair, but not what would be called good. We remained until August 7th, when we started for home. Some of us went through to Moose River by horse, while others preferred to walk, the latter bending the horses' time by half an hour. Although the road (?) was in a frightful condition on account of the late storm, we were in a much better condition than when we went in, and did not mind the journey at all. Went as far as Boonville that day, and took the first train in the morning, stopping six hours in Albany, and arriving in New York on the morning of August 8th.

Notwithstanding our many difficulties, and the extremely unfavorable weather, we all enjoyed the trip, and shall be ready to repeat it next year. Every man gained flesh, and came back with splendid health and a ferocious appetite. I should certainly go to the John Brown Tract for two or three weeks' recreation in preference to any other place. It is hard work to get there, but the hard work is exactly what is needed by persons who live in a city and have but little exercise. It would make the journey much easier next time by going in from Moose River on horseback. The additional expense is not much. My luggage would be very light. In addition to the heavy wooden clothing, underclothing, and stout boots that would be worn, I should carry simply a rubber coat and cap, pair of shoes, three pairs of socks, a yard of mosquito netting, a bottle of "oil of tar," and fishing tackle. Nothing else. Everything else that is needed can be obtained there as cheaply as in New York. I should not "camp out," but should board, either at Sam Dunakin's or Jack Shepherd's camps, on Fourth Lake, or at Ed. Arnold's, on the river below the lakes. At either of these places first class board can be obtained for about \$6 a week, which is about as cheap as "camping out," and when night comes you can sleep on a good bed under a mosquito canopy. The only advantage of camping in the immediate vicinity of these places is first class under decent circumstances, although the foregoing report will hardly verify that statement, but it must be remembered that we did not get a chance to try on account of the unfavorable weather. We learned, however, from several sources, after leaving the lakes, that the parties who remained were catching plenty of speckled and salmon trout. Boats and good guides can be had at any time. The guides all appear to be tip-top fellows, very willing and accommodating, ready to go anywhere, or do anything at any and all times, and seem to have no inclination to "beat" their customers. I can with confidence recommend as guides the Arnolds, Nick, Weston, Sam Dunakin, Jack Shepherd, and George Ballard. There are many others who are no doubt equally as good, but these are the only ones with whom I became personally acquainted. They are whole some, and will go a long distance out of their way to do a man a favor.

R. H. WALKER.

New York, August 10th, 1874.

SPRUCE BEER.—Allow an ounce of hops and a tablespoon of ginger to a gallon of water. When well boiled strain it, and put in a pint of molasses. Add an ounce or less of the essence of ginger, which will add a teaspoon of ferment for a clean, light, cake (a pig will do), and let it ferment for a day or two, then bottle it for use—you will find it quite good after three days. The essence of spruce can be obtained at any drug store.

TO TAKE GREASE OUT OF BOARDS AND STONE.—Make a strong ley of pearl-ash and soft water, and as much unslacked lime as it will take. Stir it up together, and let it settle a few minutes; bottle it, and stop close; have ready some water to lower it as used, and scour the part with it. If the liquid should lie long on the boards it will draw out the color of them. Do it, therefore, with care and expedition.

A new kind of elastic material called Balata gum, grown in English Guiana, is coming into use. It takes a place between gutta percha and India rubber. It exudes from a tree called the *Sapota mullieri*. One curious property it has is that when fresh it may be used as a substitute for milk. About 10,000 pounds of this substance have been sent to England. Mr. Melville first discovered the useful qualities of Balata gum in 1860.

By the English Betting Act, frequently alluded to in our foreign news, which went into operation on July 31st, persons are now liable to penalties of £30, or to imprisonment for a term not exceeding two months, who cause any advertisement to be published, or any letters, circulars, telegrams, &c., to be sent or exhibited giving information or advice with respect to bets or wagers in the United Kingdom or Scotland. The new law also applies to those who induce persons to apply to any house or other place for information, advice, or who may invite people to make or take any share in such bets or wagers.

To clear a room of mosquitoes, take of gum camphor a piece of about one-third the size of an egg and evaporate it by placing it in a tin vessel and holding it over a lamp or candle, taking care that it does not ignite. The smoke will soon fill the room and expel the mosquitoes.

When a bullet misses its mark, it is proper to say it is lead astray?

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FLASHES FROM THE "BLUELIGHT."

SEVENTH WEEK.

I WILL begin my letter by giving you the final results of our experiments in acclimating young shad to salt water, and will briefly connect this week's work with the condition of affairs at noon on the 22d ult., when I last wrote.

All fish taken from hatching boxes at five A. M. on the 15th, one hour old. All fish arrived at Noon at half past eleven A. M. on the 15th. First salt water put in at nine P. M. on the 15th.

No. 1 became entirely salt at six P. M. on the 17th in forty-five hours; fish began dying at nine A. M. on the 18th; all dead at six P. M. on the 18th, having lived fifteen hours in fresh water, forty-five hours in water being gradually salted, and twenty-four hours in entirely salt water; altogether eighty-five hours (three days and thirteen hours) from hatching boxes.

No. 2 became entirely salt at three P. M. on the 19th (ninety hours); began dying at nine P. M. on the 19th; died rapidly during the 20th, 21st, and 22d, and at nine A. M. on the 22d nearly all were dead (a very few lived six hours longer), having lived sixteen hours in fresh water, ninety hours in a mixture more or less salt, and sixty-six hours in entirely salt water; altogether 172 hours (seven days and four hours) from hatching boxes.

No. 3 became one third salt and two thirds fresh at three A. M. on the 17th (thirty hours); fish lived well and lively till the 20th, when they began dying, and continued to die, but at slower rate than in No. 2, until three P. M. on the 22d, when, having been 156 hours in one third salt and two thirds fresh water, about seven eighths had died. The remainder died gradually until six P. M. on the 25th, when but a dozen or so were alive, but not quite dead, and by many hours any young shad ever treated in such manner. Their record is—in fresh water sixteen hours; in water more or less salt thirty hours; one third salt, as a batch, 156 hours (eight days and ten hours), and a few survived fifty-one hours longer, reaching to ten days and ten hours from hatching boxes, all but sixteen hours of which they were in water more or less salt. This was our best experiment.

No. 4 became half salt and half fresh in forty-eight hours (nine P. M. on the 17th). The fish, as a batch, did better than in either of the other jars, very few dying until nine A. M. on the 22d, when they began to settle, and were all dead on the 23d at six A. M., their record being—fresh water, sixteen hours; water more or less salt, forty-eight hours; water half salt and half fresh, 129 hours; altogether, eighty days and one hour from boxes.

No. 5—The above four sets of experiments the water was kept ordinarily at from 66° to 68° and 70°, but on the 20th the temperature of the air ran up to 79°, and the water in the jars to 77°. This excess of heat produced great mortality.

Jar No. 5—Temperature test, fresh water kept at 64°; the fish began dying noticeably on the 22d, and were all dead at three A. M. on the 23d, having lived seven days and twenty-one hours from hatching boxes.

No. 6—Temperature test, kept at 64°; some of the fish held out till nine P. M. on the 23d; eight days and fifteen hours from boxes.

No. 7—Same test as above, with similar results.

No. 8—After having been kept in fresh water at 64° for six days, and appearing lively, were placed in an ice chest, and suddenly reduced to 50°, killing all in seven hours.

No. 9 and 10—Natural temperature; fresh water, changed every six hours; all died at three P. M. on the 23d, having lived eight days and twelve hours from boxes.

A few fish were taken from jar 9 when weak and nearly used up. They were placed in a jar with a small quantity of road-side gravel. They began to work around among it, and revived considerably, outliving those left in jar 9 by several hours. This seems to point to a conclusion that, in addition to the experiment of very slowly adding the salt, some means must also be devised by which, at the same time, food can be supplied to them. Various fresh water plants lived during this course of experiments on smaller numbers, and it was found that water from cisterns, ponds, or that had run through old slimy logs, was bad for them, killing them in a day. The jars being kept shaded, a few fish from each were tried in small two quart glass jars, placed in the window, and exposed to the light; in each case this proved injurious, and the fish died soon. The one singular result of this set of experiments is that young shad have been kept longer in salt water than they ever have before been in fresh, and it is highly probable that starvation killed them eventually.

Messrs. Griswold and Vealhy have cleaned up their jars and cans, and started back. Mr. G. will, through the fall, continue a set of experiments suggested by the present.

In the laboratory a series of interesting experiments have been carried on by Prof. Verrill, Hyatt, and Rice, to ascertain the action of various forms of poison upon the lower forms of animal life. The primary object has been to discover, if possible, some method of killing an animal while in certain stages of expansion, so that specimens of the animals, as they present themselves, and are drawn, may be retained. It has been found a very difficult operation. A bit of living coral shows each little orifice crowned with a small diastyle-like polyp, restlessly waving in the water.

The anemone thrusts forth from its leather, sack-like body petal-like tentacles, which, of various colors, produces a similitude to the flower from which it is named.

Mollusks crawl out—or nearly out—from their shells, and, as in the case of the common periwinkle, develop most curious organs; in the end of the long proboscis are hidden sharp, strong, file-like teeth with which he rasps his way through the strongest shells, and this proboscis is, in a state of quiet, withdrawn into the body; between the two leaders on which are situated its eyes the great foot, with which he drags himself along, is generally withdrawn from sight. Many shells possess curious organs; even the common clam is a subject of study.

But to obtain a lasting view of these appearances pre-

sents a great difficulty. Only when undisturbed will they expand and show their beauties. At a touch or jar they contract and hide their peculiarities. Therefore the attempt is made to kill them suddenly while expanded. The

THE PERIWINKLE.*

most virulent poisons have been tried. Prof. Rice experimented upon the *Gastropoda*, casting them into strong alcohol, prussic acid, woodrue. The first killed them, but they gradually shrank back in their shells as they died. With prussic acid and confine they died quickly, but with few cases of any remains of expansion, they acting in fact but little more effectively than did stale water. Hydrate of chloral and chloroform seemed to kill them most rapidly, but their contraction was as complete as in alcohol. Picric acid acted quickly, but not enough so as to prevent contraction. This acid has been found the most effectual of any substance with which to kill and preserve jelly fish. Treating them with alcohol has been found ineffectual. Osmic acid has been highly commended by some European writers as a material for killing and hardening these delicate creatures before immersing them in alcohol for preservation, but the experiments made with it here are not satisfactory for it badly discolors them. Prof. Verrill has found that even the most delicate ones can be nicely preserved by first immersing them for half an hour in a strong solution of picric acid, then transferring them to alcohol of about sixty per cent. The same method has been found to be successful with hydroids, anemonies, sponges, and various other soft bodied creatures. The little coral polyp, though, draws back and disappears too quickly. For killing many kinds of animals a solution of chloral hydrate has been found successful, even when they have resisted the action of poisons more virulent to higher forms. In this, most soft bodied animals die quickly, and many kinds, such as the soft nemertean worms, annelids, etc., die in a fully expanded position, displaying all of their organs, the specimens being transferred to alcohol when dead. One creature has been the whole corpse so far. It seems to be impervious to poison. This is a large, soft larva of a fly (*Eristalis*), found living in pools of dirty sea water near high water mark, burying their bodies in the decaying vegetable matter and mud at the bottom, and stretching their long, slender, tapering tails up to the surface for air, their breathing apparatus being at the extreme end of the tail, which can be extended from one to four inches at will. Although apparently quite soft and tender, this creature is covered with a coat of mail impervious to all poisons. The strongest alcohol was but a bath to them, in which they swam for hours unharmed. Entire seemed to kill them in about an hour, but on being taken out and placed in sea water they would come to life again. Strong carbolic acid simply annoyed them, and eleven hours soaking in strong hydrate of chloral but made them less lively. Several specimens were placed in a strong solution of picric acid. They enjoyed it for thirty-six hours, then contrived to crawl out of the dish and escape. Prussic acid, cyanide of potassium, and other deadly poisons had no effect on them, and even in a concentrated solution of caustic potash they lived for thirty-five minutes.

The periwinkles and other shell fish have to be caught when partially expanded by a string fastened around the expanded part quickly and hung up by the string, the weight of their shell and body gradually draws them out.

The "Blue-light," during the week, made her usual quota of trips. Our cruising ground, though, has been somewhat limited by the continued northeasterly winds, which have roughened up the Sound too much for our work. Along the southern shore of Connecticut, and of some of the larger islands, we have, however, found smoother waters, and two good pulls in the Race brought up bags full of pebbles and gravel from forty fathoms down, but very poorly filled with animal life.

The Cygnet, our working yacht, has worked diligently in the adjacent bays, seining for small fish, setting trawls, etc., for larger ones. The trawls, as usual, brought skates and flounders, but in one day four blue fish had hung themselves for our inspection—an advance guard, perhaps, for the next day the Race was full of them, and the trollers were well rewarded.

Our anticipations as to finding here the young of many species has been realized, and in the fish house are arranged jars of many sorts; some, such as the young cod, not before found in this locality. And besides, we have young bluefish, hake, alewives, cunners, taunts, skate, flounders, and a curious fish, the lump fish (*cygnetops lum-*

*"PERIWINKLE" (*Scapharca caudata*), half natural size—a. The head. b. The proboscis. c. The breathing pipe. d. The foot. f. The operculum, or door. g. The mantle.

pus), a beautifully marked fish. This one is of a reddish brown, with blue and green tints and silvery streaks, when grown to perhaps two feet in length. They resemble, when floating on the surface, as they usually do, lumps of greenish ice, their translucent bodies permitting a play of light. Prof. Gill and Putnam have about five hundred pickled skates from our work, and about two barrels full from Maine, and are making careful investigations into certain differences to decide questions as to species.

A fine tarpon, four feet nine inches in length, and weighing fifty-five pounds, was sent to Prof. Baird by Mr. Blackford, of Fulton Market, and is in the hands of the taxidermist. It was caught somewhere off Long Island. Our trawling and dredging has not been so productive of new results, its usual hauls the weather has kept us most to ground already thoroughly exposed. In fact the vicinity is nearly exhausted, and our summer's work near to a close. Our party is breaking up by degrees, and in another week we will have finished, and in another, Noank will be left with but the memory of the Commission, and we feel and hope that the remembrance will be mutually pleasant.

S. S. August 30th. P. M.—Worked "Race" faithfully all day; good breeze from S.S.W.; two lines of small bluefish and two bonitos. Crossed to and from Fisher's Island a dozen times. Another boat got seven.

PISCOC.

SALMON BREEDING ON THE PACIFIC COAST.

UNITED STATES FISH COMMISSION,
McCLOUD RIVER, CAL., August 20th, 1874.

EDITOR FOREST AND STREAM.—

The enterprise for producing salmon spawn with which to stock the Eastern rivers is being carried out, under the charge of Livingston Stone, U. S. Deputy Fish Commissioner, upon the McCloud River, in Northern California. Notwithstanding the disadvantage arising from the distance of the camp from settlements, the work is progressing in a very satisfactory manner. The river is a rapid one, and very cold, being formed from melting snow upon Mount Shasta. A trap has been built, however, 120 feet in length, and extending across the river, by means of which the salmon, as they are going up stream, are secured in corrals, from which they are taken as they are used. The arrangements for maturing the eggs are, this year, quite extensive. There are 800 running feet of hatching troughs, one foot wide, and the trays of wire netting for holding the eggs cover a surface of two thousand square feet. The troughs are supplied with constantly running water by a large water wheel, which raises 15,000 gallons of water every hour. Some males have been caught which are already ripe, and probably the work of taking eggs will commence the first week in September. The preparatory work, which has occupied ten white men and several Indians for more than a month, is now nearly completed. The camp house-hold consists of ten white men, a Chinese cook, and one or two regular Indian servants. Indians from neighboring ranches work daily. The weather is remarkably cool and enjoyable this year, at this season, and life at the McCloud River Camp is thought very pleasant by every one here. As the fish of the rivers in this vicinity have been very little studied, specimens are collected for the Smithsonian Institution, especially of the salmon, trout, and wildcat in the different stages of development. The Indians are very abundant, and there is reason to expect great success in this expedition of the Fish Commission.

M. S. P.

FISH AT THE ROCHESTER STATE FAIR.—Mr. Geddes, superintendent of the fair, is making active preparation for an exhibition of Mr. Seth Green's fish, which will illustrate all the most brilliant results of fish culture. From the *Rochester Advertiser* we take the following: "A tent forty feet in diameter, will be placed in the open space opposite the club house, and this will entirely be devoted to the interesting display. Six feet from the outer line of the tent there will be a circular row of aquariums, and these will be filled with salmon from one to four years of age, salmon trout in the same stages of growth, brook trout from one to ten years old, the latter from the ponds of A. S. Collins, together with the graylings, and finally all the common kinds of fish, besides some that are exceedingly rare. The game fish, save the grayling, have all been raised from the egg, and will, therefore, show to even the most initiated observer what has been done by Seth Green, and the fish commissioners of the State. Besides the aquariums there will be globes containing fish, hanging all about the large tent, which will thus furnish as beautiful a spectacle as will be found on the grounds during the fair. Mr. Green in this instance is preparing for an exhibition which, for novelty, beauty and interest will be something never before witnessed."

The fair will commence on the 14th of September, and continue until the 18th. Location on the grounds of the Rochester driving park."

SALMON IN THE AFFLUENTS OF LAKE HURON.—We have the following from Mr. D. H. Fitzhugh, of Bay City, Michigan, to his friend, our correspondent, Mr. Thaddeus Norris:—

I had a veritable *salmo salar* sent to me alive from the Au Sable last Wednesday, one of those placed in the stream a year ago. I took you "American Angler" and traced him out line for line and dot for dot—finger marks all correct, and everything that could identify him to perfection. A nice line of red spots along his lateral line, a forked tail according to plate, with small scales. It was exactly six inches long; a trifle longer than your life-size plate. I carved him in ice and sawdust and sent him by express to Professor Baird, under whose name a few thousand fry were put in the river at Grayling last year. The little fellow was taken with a fly near the bridge at Grayling.

—The *Scientific Manufacturer* of Chicago and Detroit contains a description of an improvement in a fish hatching apparatus, the invention of the Hon. N. W. Clark, of Oakland county, Michigan. The egg traps are so arranged as to be readily moved from place to place, and can be washed in various currents of water. The invention facilitates labor in every way, and insures a very large yield of fish. The cost of hatching some 1,500,000 white fish by this patent only amounted to some \$391, and the same expense would have brought to maturity two or three times as many eggs, with an exceedingly small per centage of loss. It should be remembered that white fish eggs are among the most difficult ova to hatch.

—The death of Dr. J. H. Slack, of Bloomsburg, N. J., one of the Fish Commissioners of that State, is announced. We have no particulars, and trust that the report is unfounded.

Natural History.

TAMING ZEBRAS.

IN the last Bulletin of the Paris Society of Acclimatization, there is to be found a most interesting article, from the pen of M. Saint-Yves Menard, on the successful taming of a number of zebras. The specimens thus broken to harness were Burchell's zebras, known in Africa under the name of Dauws and Pechis. Before the Prussian war, several zebras had been partially handled, but during the siege were probably eaten. In 1872 seven young dauws were bought by the Society. At first, these animals were exceedingly wicked, biting, kicking, and allowing no familiarity. When put together in a large stall, it was dangerous to enter, as they used their heels, and were terrible biters. In order to halt them, the beasts were lassoed. After a great deal of trouble, all the animals were haltered to the same manger, only divided from one another by hanging partitions. It was an ugly business to go near them even then. On the approach of a groom, they would all commence kicking and plunging together. The introduction of horses among them was the first step which brought a good result. After a while the zebras could be uttered and fed. To groom them gave a great deal of trouble, but in time this was satisfactorily accomplished. Kindness and gentleness to the beasts were the only methods employed. In about six months, the first attempt to put the dauws in harness was tried. Just then a celebrated French horse tamer offered his services to break three of the zebras to draw a wagon. Basing his theory of zebra taming on the severe method employed with horses, the man used a certain amount of severity, and signally failed. The dauws were returned to the Society, cowed, but not broken, and in wretched condition. The work had to be recommenced. In time the animals became obedient, and at present are found to be most servicable beasts. Their gait is not rapid, but sustained. At present the dauws are found to be quite useful. They are not only quite steady under a heavy load, but work smartly, and stand considerable fatigue, doing all the ordinary hauling for the garden. One serious drawback, however, still exists, and that is that the zebras have to be caged and tied up whenever shoeing them is necessary. M. Saint-Yves Menard draws from these attempts to bring the zebras into use, the following conclusions:

- 1st. That the dauws can be domesticated.
- 2d. That the only method to be employed is to treat him kindly.
- 3d. That they can be usefully employed as draft animals.
- 4th. That the animals have a certain merit for endurance and vigor; although not fast, they seem to occupy a position between the ass and the horse, as to temper and character.
- 5th. That in placing Burchell's zebra among domestic animals, his usefulness would be about the same as that of the ass.

THE BIRDS OF NEWFOUNDLAND.

THE ornithology of Newfoundland has, as yet, received scant attention from naturalists, so that it is impossible to make out anything approaching to a complete list of its avi-fauna. It is greatly to be wished that some enthusiastic ornithologist would visit this island with the view of making a complete study of the subject. The only one who has done so, to any extent, is Henry Reeks, Esq., F. L. S., of Thurston, in Western England, who spent the greater part of two years in New Newfoundland, engaged in the examination of its ornithology. Unfortunately he met with an accident which kept him in the house for several months, so that he was unable to accomplish as much as he might otherwise have done; still his "notes," which appeared some years ago in the *Zoologist*, are very valuable and furnish the only information on the subject which is reliable. To these "notes," I am largely indebted for the following facts regarding a few of the more important of the birds found in Newfoundland.

Dawks.—Of the hawk species, Mr. Reeks reckons up eleven varieties, which are to be found here. The osprey, or fish hawk, is the finest of these, and is common in the thinly settled districts of the island. It is a summer migrant, coming in May, and retiring in the early part of October. It builds in trees, the extensive woods, either along the seacoast or some inland haunts. The eggs can scarcely be distinguished from European specimens, and both Wilson and Audubon reckon the European and American osprey of the same species. "Often," says Mr. Reeks, "on a calm summer's evening, as I lay on the grass smoking my pipe, have I watched two or three pairs of these birds fishing in the harbor. Suddenly the slow, circling flight is stopped—the quick eye discerns its prey; the body assumes an almost vertical position; the wings for a moment vibrate rapidly, as if to give their owner impetus, and then, with almost unerring aim, like an arrow from a bow, the osprey drops into the water. In a few seconds he re-appears, and rising a few feet from the water, the rapid vibration of wings is again observable, but this time only to drive the claws more firmly into the sides of his prey; and, with which he slowly sails away to some high tree in the woods, where, probably, is a nest—

"Itself a burden for the tallest tree."

The Bald Eagle.—The bald or white-headed eagle is called in the vernacular of Newfoundland "the Grebe." It is also a summer migrant to Newfoundland, and disappears in the fall. Its nest is usually found near the top of a tall pine tree, and generally contains but two eggs. This handsome bird is gradually decreasing as settlement advances, though it is still tolerably common.

The other members of the hawk species, enumerated by Mr. Reeks, are the pigeon hawk, a beautiful bird, closely resembling the merlin, which feeds chiefly on small birds; the Greenland falcon, called by our settlers the "White Hawk;" the American sparrow hawk and goshawk; the black hawk or buzzard; the sharpshinned hawk; the red-tailed hawk and the American horn harrier. The whole of them are summer migrants.

Owls.—Of owls we have a considerable variety. The great horned owl visits this island for the purpose of nidification, and is not very uncommon, especially late in the summer, when the young leave their nests. Our settlers call this the "Cat Owl," and its nest is said to be usually on the ground, on a tussock of grass. The American screech owl is rare in Newfoundland; but the screech owl, a summer migrant, is tolerably common. The long-eared and short-eared owl, the barred and sparrow owl, are common; the snowy owl or "White Owl" of our settlers, remains throughout the year. Its chief prey is the polar hare and the ptarmigan, which retire to the highlands as the snow partially disappears. The snowy owl is a bold, rapacious bird and not easily driven from its sluggish prey. When feeding on an eider duck it has been sometimes knocked over with stones and apparently killed before it would relinquish its hold of the duck. "During my residence in Newfoundland," says Mr. Reeks, "I heard several amusing anecdotes of the snowy owl, one or two of which I shall relate. William Young, of Codroy, having continually had the bait stolen from one of his fox-traps, determined to watch the trap and shoot the robber. For this purpose he selected a fine moonlight night, with snow on the ground, and with a gun in his hand, a white swan-skin frock on, and a white handkerchief tied round his cap, he secreted himself in a small bush, about twenty yards from his trap, fully determined to shoot the first comer; but his determination proved fruitless; for a large, white owl—probably the thief—seeing something white sticking up through the centre of the bush, and mistaking it for a fox, pounced, willow-growse, instantly upon a 'shot,' and at the same time sending its claws almost to the man's brains, suddenly disappeared with the cap and white handkerchief. The man was so startled for the moment that he was unable to shoot at the bird. The snowy owl is a frequent attendant—although generally unnoticed—of the sportsman, and generally succeeds in carrying off a grouse or duck before the retriever gets to it. On one occasion some men were waiting in ice for the purpose of shooting a seal, when one of them, named James Carter, left his 'gaze' to go and have a chat with his neighbor, incautiously leaving his new white swan-skin cuffs and gun behind him. He had scarcely left his 'gaze' when an unseen enemy, in the shape of a fine snowy owl, pounced in and succeeded in getting clear off again with both of the white cuffs. A fine adult bird of this species entered my host's house, via the chimney, and fought so valiantly for the cuffs that the man had to kill it with a 'peevy' piece of pointed iron fastened to a wooden handle about four feet long, and used for throwing codfish from the boats. A good many snowy owls are annually caught in the fox-traps of the settlers; and when very fat, which they frequently are, are considered good eating by many."

Hawk Owl.—The only other species of owl here is the hawk owl, which is common, and is generally found in the neighborhood of houses, preying on chickens, tame pigeons, &c., remaining throughout the year, but not so abundant in the depth of winter as at other seasons. It is in the habit of perching on the bare and dead top of high fir trees, from which it commands a good view of the immediate neighborhood, and suddenly drops upon any unfortunate object in the shape of food that may happen to pass within a convenient distance.

Woodpeckers.—The species of woodpeckers are found in Newfoundland. Of these the finest is the black-backed three-toed woodpecker, which is tolerably common throughout the year; and often when the snow-flakes darken the air, no other sign of animal life is noticeable than the "woodpecker tapping" in search of the larvae of several fine species of sirix, which abound in the dense forests. The banded three-toed woodpecker is also resident throughout the year; but the black woodpecker, or "great black woodpecker" of our settlers, is only a summer migrant. The flicker, called here the "English Woodpecker," is pretty common, and has a peculiar note which bears a fancied resemblance to that of the green woodpecker—hence the name bestowed on it by our settlers.

Swifts.—Mr. Reeks enumerates two species of swifts—the American chimney swallow and the American night hawk—both summer migrants. The latter, the kingfisher, he says, is tolerably common during the summer months, and like the British species of kingfisher, builds in banks, often at a considerable depth, and lays five or six white eggs. Six species of the tyrant fly-catchers visit Newfoundland in summer, and disappear when the first snow falls. The bee martin, the pewee, wood pewee, green-crested fly-catcher and yellow-bellied fly-catcher belong to this class, and are all summer migrants.

Plover and Curlew. These birds are peculiarly fine in Newfoundland, especially the latter, which is pronounced by epicures to be the most delicate table bird anywhere to be found. The history of our curlews is rather curious. They are bred on the bleak coasts of storm-beaten Labrador, where they feed mostly on shipwrecks, and are so shy as to be almost unobtainable. During August, when the wild herds begin to ripen, they arrive at the bleak coasts of Newfoundland, and feed solely on fruit. Their droppings are then a rich purple, while their feathers are often stained with berry-juice; and they become so fat, sweet and tender that they sometimes burst when they fall. When in this condition the curlew are delicious. When the winter approaches these birds fly to South America, where they winter—chiefly, I understand, in Brazil—the longest flight of any migratory birds known. A few of them rest for a short time at the Bermudas, and some visit the West India Islands; and they have been seen, it is said, perching on the huge rafts of tangled sea-weed that are found after a storm in the Saragosa Sea. There can be no doubt that these were the flocks of land birds seen by Columbus during his first memorable voyage in these latitudes. In the spring they do not approach Newfoundland, but make their way up to Labrador, though the curlew, probably following the spring as the snow line gradually retreats northward.

(To be continued.)

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, AUG. 30, 1874.

Animals received at Central Park Menagerie for the week ending August 20th, 1874:
One Ruminant, *Rhinoceros unicornis*. *Hub*. Height, 5 feet 4 inches; length, 11 feet; girth, 11 feet 6 inches; weight, about 5,000 lbs.
Two *Macrura Canis*, *Canis latrans*. *Hub*. Central Asia.
One *Canis*, *Canis latrans*. *Hub*. Pacific Ocean.
One Crow, *Corvus Americanus*.
Two Crows, *Corvus alcedo*.

W. A. COXLEY.

Woodland, Lawn and Garden.

ANSWERS TO CORRESPONDENTS.

AGAPANTHUS, (natural order *Hernandiaceae*).—This is one of the most valuable plants to Africa, combining the most graceful foliage with large, handsome, waxy blossoms. In flower beds or mosses the blue variety is truly magnificent. This variety is the one our correspondent Johnson, of Westfield, makes the subject of inquiry. This rare African bulb, planted in rich, loamy soil, produces the very choicest of blossoms, and we have planted it with very fine and pleasing effect in the centre of a circle of gladioli, of either the *Bombay* or *Grandis* variety. Try this style of planting for next year, and you will find that for the centre compartment of your garden you have a splendid and beautiful finish. In the pot culture of these bulbs use a large pot or large pail for each plant. Use good, strong, rich loam and dung. During the summer months, when in pots, give abundance of water and liquid cow manure twice each week. In the winter protect from severe frost, and give water very sparingly. If you follow the above directions we will guarantee you a splendid bloom. O. Q.

M. THOMAS, Wisconsin.—We are in receipt of your box and inquiry of the 8th ult., as to "what is the enclosed insect?" This curious little insect is called *Phymata crosa*, and is one of the few friends to the gardener that, like certain kinds of birds, should ever find a welcome about the gardens of the fruit grower. The *Phymata* is a great lover of the insect called the *Aphides*, which infests in swarms our best shade trees, and is very destructive. They have a great love for the hudsonian, and I have seen them many times upon my own lindens, and made a careful study of them. The *Phymata crosa* very persistently pursues the *Aphides*, and greedily devours them. I carefully placed a leaf containing a number of both the *Aphides* and *Phymata* under a microscope for examination. The latter insect would grasp the former in its embrace, hold it fast, and then extend a little lance-shaped tube, with which, after gnawing the *Aphides* it sucked, and all the life out of it, leaving only a skin. They feed upon the rose insect, and upon some others. I regard it as the friend and not the enemy of the gardener. As yet I have found no satisfactory solution of your other question; as soon as found will communicate. We have before us three letters making similar inquiries. O. Q.

ELLEN MART, Mr. Clair, N. J.—The leaves you send are from a plant called the "honey flower" (*Meliodendron*), a native of the Cape of Good Hope. It is profusely cultivated in England, but is not considered so valuable here. It may be grown in the open air, but requires protection from frost. It produces abundantly large spikes of brown red color. The soil should be light. O. Q.

LOAFERS IN THE GARDEN—DO NOT SCARE THE BIRDS.

Casting my eyes out upon my garden at this writing, I can see three pairs of industrious, happy-winged workers, busy protecting my garden from the depredations of the birds. I am not at all surprised to see these birds so busy. Are not my feathered servants busy this fine day? Says one at my side, "you will have no cherries if you thus allow the birds to depredate at will upon them; see that old fellow of a robin; he picks out the choicest of fruit and bears it away." Truly, he does that, and I am pleased to let him carry away his wages. Those three pairs of birds, the true, eat quite a quantity of cherries, but what then? I planted more trees than I wished to grow, so that the birds should have their dues. You would be surprised to know how great a work of destruction these six robins alone perform in a single morning. Make these winged co-laborers your friends, do not drive the birds away from your gardens; rather encourage and protect them. Drive away long-legged loafers, who are knocking about your walks, breaking into your enclosures, under the pretext of hunting, but hunting with a vengeance every little unfortunate bird that falls in their way. Turn about and hunt them out of your grounds; there is too much of this garden loafing permitted, for it is a nuisance that breaks in not only upon our week day occupations, but destroys even our Sunday's quiet. If any class of men deserve the special attention of our gentlemanly shooting-club, these fellows who prowl about the gardens just in the time when the birds are making their nests and hatching out their young. We are very happy to know that such fellows fare pretty roughly at the hands of our game-protecting associations, and in the vicinity of Boston, Roxbury and Arlington they are most severely dealt with. We feel it to be our duty to protect the birds from these hunters, and to become in our turn the "hunters" of these garden loafers. OLLIE'S QUILL.

PROCESSION OF THE PEAKS.—From the Divide, between this city and Gold Hill, is to be had a magnificent panoramic view of the mountain scenery, lying far to the southward. At the distance of from forty to sixty miles in that direction rise the grand, massive peaks of the Sierras, standing stately and clearly defined against the blue sky beyond. These peaks are particularly striking at the present time because their summits are free from the foot in white and glittering snow. Viewed from our standpoint on the Divide, they look like an army of giants marching up from the desert wilds of Arizona, in meandering array. Far away the tail of the procession is seen to sweep miles on miles to the eastward, while again, above the heads of the giants forming this curve, is dimly seen through the haze a hint of heads in still more distant rear—swinging back to the westward, falling into the folds of the mountain range to the northward. All above, beyond, and about the giant army looks so settled, calm and silent, that one is, even at this distance, aware into all manner of weird day-dreams in regard to its motionless march. These mighty peaks are impressive at any time, but when they come up before us in procession, robed in their splendours, they set us to thinking ponderous, solemn thoughts which we don't more than half like. —*Virginia*, *Nec*, *Enterprise*.

—Australia is commencing to grow the willow in large quantities, an active demand for osier twigs having arisen in England. Great Britain imports every year as much as 5,000 tons of willow, worth \$200,000. Stafford, in Nottinghamshire, is the centre of the trade, and no less than 300 various kinds of osier are used.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY,
FISH CULTURE, THE PASTIME AND THE PASTORAL PASTORATION OF FORESTS,
AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST
IN OUT DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
125 SOUTH THIRD STREET, PHILADELPHIA.
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person
sending us two subscribers and Ten Dollars will receive a copy of
Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25
cents per line. Advertisements on outside page, 40 cents per line. Reading
notices, 50 cents per line. Advertisements in double column 25 per cent.
extra. Where advertisements are inserted over 1 month, a discount of
10 per cent. will be made; over three months, 20 per cent; over six
months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 3, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary
correspondence, must be addressed to THE FOREST AND STREAM PUBLISH-
ING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with
real name, as a guaranty of good faith. Names will not be published if
objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief
notes of their movements and transactions, as it is the aim of this paper
to become a medium of useful and reliable information between game-
sportsmen from one end of the country to the other; and they will
find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to meet and secure the
patronage and confidence of that portion of the community whose re-
fined intelligence enables them to properly appreciate and enjoy all that
is beautiful in Nature. It will wander to no depraved tastes, nor pervert
the legitimate sports of land and water to those base uses which always
tend to make them unpopular with the virtuous and good. No advertise-
ment or business notice of an immoral character will be received on any
terms; and nothing will be admitted to any department of the paper that
we cannot be read with propriety in the home circle.

We cannot be responsible for the delinquency of the mail service, if
money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 12th.—Regatta of the National Association of Amateur
Oarsmen, Lawrence course, Troy, N. Y.—Trotting meetings at Syra-
cuse, N. Y., Providence, R. I., New-Corn, Mass., Knoxville, Syracuse, and
Macon, Ill., and Middlebury, Vt.

SATURDAY, September 13th.—Yacht race, New Rochelle harbor, N. Y.—
Practical day boat clubs, Harlem, N. Y.—Trotting meeting Prospect
Park, Brooklyn, N. Y., and Macon, Ill.

SUNDAY, September 14th.—Trotting meetings at Aurora, Ill., Davenport,
Iowa, and St. Joseph, Mo.

TUESDAY, September 15th.—Trotting meetings at Eau Claire, Wis.,
Wolcottville, Conn., Kingston and Clyde, N. Y., Reading, Pa., Boston,
Mass., St. Paul, Minn., and Davenport, Iowa.—Racing meeting, Buff-
alo, N. Y.

WEDNESDAY, September 16th.—Senece Lake regatta, Watkins, N. Y.—
Convention of Sportsmen, Niagara Falls, N. Y.—March day, cricket
clubs, Hoboken, N. J.—Trotting meetings at Prospect Park, N. Y., An-
derson, Iowa, St. Joseph, Mo., Wolcottville, Conn., Kingston
and Clyde, N. Y., Reading, Pa., Boston, Mass., and St. Paul, Minn.
—Running meeting Buffalo, N. Y.

THURSDAY, September 17th.—Senece Lake regatta, Watkins, N. Y.—
Convention of Sportsmen, Niagara Falls, N. Y.—Trotting meetings at Syra-
cuse, N. Y., Kingston and Clyde, N. Y., Reading, Pa., Boston,
Mass., St. Paul, Minn., Erie, N. Y.—Racing meetings at Prospect
Park, Brooklyn, and Buffalo, N. Y.

We take great pleasure in announcing that the veteran
field sportsman, Horace Smith, Esq., so well known to
most of our friends who love the dog and the gun, will take
charge of our Philadelphia office and interests.

THE INTERNATIONAL REGATTA AT SARATOGA.—This
important event was concluded on August 31st, and for
full details we refer the reader to our boating columns.
The four-oared scull race was made especially interesting
from the fact that the South was represented by two crews,
one from Charleston, the other from Savannah. The
whole regatta was a most extraordinary success, reflecting
great credit on the Saratoga Rowing Association, and on
Mr. Conkling, the President. Commodore Brady's efforts
and untiring energy are also not to be forgotten. In giving
James O'Neil's time in the extra single sculls as wonder-
fully fast, it must be taken into consideration that rowing
in dead water may give certain advantages. A straight
away race may be the best for making excellent time, but
turning races are far more interesting than those on a
straightaway course, as they allow the spectators to see
the start and the finish.

COD FISHING—FROM FULTON MARKET
TO NANTUCKET SHOALS.

It was not exactly a case of mental use up; but those
peculiar drawers in the brain, in which are stored
away for ready reference certain facts and fancies, which
drawers ought to have sprung out of the intellectual cabinet
when only a finger was put on the handles, refused to
work, and grated on their slides. Even when they were
wrenched open, after no end of strain, absolutely nothing
was found in the receptacles. The mental digging for
FOREST AND STREAM, though not in stony or sandy soil,
had, perhaps, from over delving, dulled the spade edge,
and the hack andched and the arms were tired. In fact,
a holiday—a perfect relaxation from all work—was a neces-
sity. The question was, How or where should we take our
two weeks' faring? Nothing is more enjoyable than abso-
lute contrast. From a purely literary and sedentary life,
a physical and active existence was what we were yearn-
ing for. We wanted to sail in somewhere in our shirt
sleeves, wear old clothes, go unshaven, and, enjoying God's
pure air, suck in untainted breezes, and wash off the ink
stains from our fingers and brain.

"The very best thing you can do," said Mr. Blackford,
of Fulton Market, "is to take a trip in our smack, the
Wallace Blackford, Captain Michael Redmond, and go to Nan-
tucket Shoals and back, and catch cod for market. The
smack lies at Greenport, and will sail to-morrow. You can
take a sound steamer, or the railroad, and catch her."

The proposition was hailed with delight, the offer in-
stantly accepted, and next day we were at Greenport, Long
Island, and on board the smack were duly enrolled as an
amateur cod fisherman.

Now there are smacks and smacks—some antique and
dilapidated, others fresh and pretty. The gayest, sauciest,
trimmest of them all is the Blackford. Of some forty-six
tons measurement, with a neatly fitted cabin, she is as
handsome in model as a yacht, and carries two rakish
masts, with topmasts, and is altogether the pride of the
market. Soon we bowled out along the Sound, caught a
fog off *Pinto Jude* (Point Judith), made New Bedford next
day, where we shipped some fifteen tons of ice, and then
off again, sighting Gay's Head. Next day an eight knot
breeze took us to Nantucket. Here we tarried a day, tak-
ing some forty bushels of sea clams for bait, and adding to
our number a Nantucket fisherman; then off we started
with a rattling breeze for Nantucket Shoals.

Now look at your maps, and off to the eastward of the
island of Nantucket you will see Sankaty light. On your
charts, about 69° 30' by 41° 00' you will find all kinds of
shoals and rips. Look a little further, and you will dis-
cover that the currents are indicated as running in all di-
rections. It is a locality dreaded by the coasters. Some-
times drifted in by a fog, some loggy drogher stumbles in
here, and the skipper, seeing the malicious lines of sharp
surges that race across the seas, as the tides tear over the
shoals, gets bewildered, and scuttles out again, if he can,
into smoother water, to use a sailor's expression, "as fast
as a scalded hog." Just here, some twenty-five to thirty
miles east of Sankaty light, are the cod fishing grounds.
There is Deep Rip and the Cod Bank and the Rose and
Crown, and lots of other shoals.

Cod are fished for and brought to the New York market
all the year round. The harvest never ceases. From De-
cember to May our fishermen find cod off the shores of
Sandy Hook as far as Cape May; then from June to Sep-
tember they are caught off Nantucket; in October and
November they take cod off Bass' Rip and Old Man's
Shoals, nearer to Nantucket. The gadsens seem to love
cold water. In summer they seek deeper water; in winter
shallower beds. Off on Nantucket shoals it is always
deep sea fishing, from twenty fathoms to sometimes almost
forty fathoms. Off Sandy Hook cod are caught by trawl-
ing in shallow water. Trawls are long lines anchored and
buoyed with shorter lines *gassed* to them, sometimes as
many as 500 hooks being on a trawl. Trawling is done in
boats, the smack picking up the men. It does not matter
much whether you catch your fish by trawling or by deep
sea fishing, the work is hard either way.

Our captain, sailing over rips and surges, instinctively
finds a good place for fish. The lines are as much as forty-
five fathoms long, each provided with a sinker of some
two and a half pounds, to which are attached by a snood
or gause two No. 12 hooks. The vessel is so maneuvered
as to be carried broadside by the tide. The wind, if it
blows favorably, holds her back so as to retard her move-
ment. Alongside of each man is a basket of clams. The
first mystery of cod fishing, the rudimentary part, is to be
an expert clam opener. You take a round bladed knife,
gash through the clam, and with a peculiar scrape, at one
motion drop the meat on the deck and slinger the shells over-
board. During the time it takes your sinker to plumb the
depths you ought to be able to open some half dozen clams,
for if the fish are in the humor of biting you will want
every one of them. Over, then, went our line, thrown
bottom, when there came a tug. We jerked and drew on
the line. There was a wriggle some 150 feet below, and
hand over hand we went for that fish. Our excitement
was intense. We pulled something to the surface—a hor-
rid creature, which gaped at us over the rail. The crew
laugh, and cry "a purp, a purp!" The brute feels ice cold
as we disengage him from the hook. Our captain tells us
to beware of two claw-like appendages which protrude
from the dorsal fins of this ugly fish, which might hurt us

if he struck us. We have caught a dog fish. We tear the
hook from his grizzly nose, toss him overboard, rebait our
hooks, and over goes the line a second time. While our
sinker goes down we look around. Some half dozen fish
are already flopping on the deck, and every man, Jack of
the crew, cook and all, have their lines taut, and the cords
in full tension are singing merrily over the thwarts.
Now comes on our line a more lusty, honest pull. We
yank away, (the captain's expression) and haul and tug.
Now this pulling on a stiff cord, not more than the sixth
of an inch in diameter, calls into play peculiar muscles
you have never exactly exercised before. Give you a two
inch rope, and tug on that, and the hand, arm, and usual
muscles are exerted, but gripping so small a thing as a fish-
ing line with the ends of the fingers is quite a different
kind of business. If you had been a violin player, using
your left hand on the strings, perhaps your digits might
have been strengthened. Your three fingers on each hand,
it is true, are protected by India rubber finger stalls, called
cots (Query—whether the expression *cottoning* to anything
is not a fisherman's expression?), but still the line cuts.
You pull away, all nervous and excited, and land on deck,
with a flutter, your first cod. Confound it, he has gorged
the hook! For a twenty pound fish to gorge his hook is a
shameful proceeding. You pull at that hook, but it won't
come. The captain shows you how to extirpate it. You cut
a slit below the fish's jaw, slip your fingers, through the
wound down the gullet, turn the hook backwards, pass the
hook of the line through the cut, and out slips the line.

Just in the middle of the craft a temporary bin has been
erected, and now, as the fish are caught, they are slung
into this receptacle, and fish are fast being heaped up there.
No sooner is our line down than we feel a bite and jerk,
and up she comes. It is a second dog fish, and warms
forthwith dubbed with the honorable title of "Champion
dog fisherman." Captain Redmond explains to us that we
are fishing too near the bottom. We catch after that cod
after cod. Now suppose you took a fish line with forty
pounds attached to it, and let it go of its own weight off a
spire 200 feet high, and then haul it up as fast as you could
some twenty times, and you would commence to think it
was a heavy job. Our fingers were exactly of that opinion.
We buckle, however, down to the work, and stick to it,
when *nolens volens* we have to give it up from sheer exhaus-
tion. The fish are coming up all around. Jack, Tom,
Sile, George, a gentleman from Syracuse, and the captain
are working away on codfish, but our own fingers, cut to
the bone, are too sore for work. The fishing continues
until flood tide sets in, and the drift of the vessel becomes
too rapid. By this time the bin is overflowing with cod
and haddock. The fishermen call the latter Dickey. Now
there is a fine old Catholic legend telling how St. Peter,
when he took the tribute money from the fish, marked the
haddock with two spots back of the shoulders. Devil may
care Jack has a different yarn. "You see, sir," said Jack,
"old Nick went a fishing and caught a haddock. 'Belay
now, Dickey,' said old Fire and Brimstone, 'I've got you
good.' 'Devil a bit of it,' said the fish, as Belzebub clapped
his claws on him, for you see a haddock is slimy, and he
slipped through his crooked fingers. 'I'll mark you,
though, Dickey,' said old Satan, and for sure he did. Just
where he touched Dickey he burnt his back with his red
hot fingers."

We had caught some fine pollacks—the salmon of the
sea—and they really bear quite a resemblance in shape to
the salmonidae. Some strange fish had also been dragged
up. Huge sea toads and skates, and a ling of a pale yellow
color, and an ugly brute of a sea catfish. This fish
was the very personification of anger and spite. Showing
his sharp fangs, fully an inch long, he bit and snarled like
a wolf. A poor, inoffensive cod near him peeped on,
and shook and worried as would have done an animal.

We had caught some 350 cod fish on the tide. The very
smallest would weigh two pounds, the largest forty pounds.
Now all hands drew in their gear and commenced to dress
the fish. For market purposes the very small fish are left
with their heads on, but these were few. The greater pro-
portion of the fish had to have their heads cut off, and all
had to be disemboweled. Three men decapitate and clean
rapidly, while two of the hands wash and scrub the fish.
This task finished, the fish go below to be iced. One of the
ice houses is emptied, the ice is broken up, and layers
of fish and ice are stored snugly away. Next the decks are
tidied, innumerable buckets of water and brooms are
brought into play, until not a bit of blood or slime, or a
scale is seen on deck, and so ends our first day's fish.
We must catch some 2,200 fish before we will be ready to trim
sails for Fulton Market, and 2,200 fish means—for the cap-
tain has said the fish are running very large—fully eight
tons of fish to be hauled up over the smack's side from a
depth of water not less than from 150 to 200 feet.

(To be concluded in our Next.)

MEMBERS of our National Rifle Association are warm in
the acknowledgement of the many courtesies afforded them
by the Quebec Rifle Association. Not only was there a
spirit of fair play about the whole proceedings, but the
officers and men of the Provincial Rifle Clubs, seemed
to vie with one another, in their endeavors to show every
attention to our representatives. We assure our Canadian
friends how fully we appreciate these favors, and we trust
to be able when they visit us at our fall meeting, to extend
to them the same hearty welcome.

—Those who wish to bind the second volume of FOREST
AND STREAM, will find a title page with the present issue.

THE YOUNG SHAD FOR GERMANY.

IN our issue of August 6th, we announced the departure of Fred Mather, Esq., our distinguished fishculturist, per steamer Donau for Bremen, having in charge some 100,000 young shad. At the time we wrote that the chances against carrying the fish alive on their journey were very great. On Saturday we received the following from Mr. Mather:—

ON BOARD STEAMER "DONAU," OFF SOUTHAMPTON, ENGLAND, AUGUST 15, 1874.

EDITOR FOREST AND STREAM:—

I regret to say that our mission has not been successful; our fish died last night of starvation. Mr. Anderson and myself have done all that could be done under the circumstances; were with them night and day; gave them Crown water every hour the first six days, and every half hour the remaining four. Out of 100,000 fish we had lost but 19,000 at the close of the ninth day. FRED. MATHER.

Though this most novel experiment of transporting young fish has not been successful, we are by no means willing to consider it as conclusive. We believe that it will be found perfectly possible to carry young fish on a sea voyage of a moderate duration, and that before a year has elapsed Mr. Mather will accomplish this feat. Let any one read Mr. Livingston Stone's most interesting account of the first transportation of the fish across our continent, and he will appreciate the many difficulties which encompass these experiments in fish culture. We are certain that Mr. Mather, whose powers of practical observation are of the keenest character, has already discovered where the plans were at fault, and that he will try another trip, and with better chances of success. It is necessary for us to state that Mr. Mather was by no means sanguine of his ability to keep the fish alive, and that he told us, to use his own words, that "there were ten thousand chances against him, and but two or three in his favor."

We trust to have from Mr. Mather an account of his experience, and how his novel nursery was managed, which doubtless will be interesting, not only to our readers, but to fish-culturists all over the world. In a novel experiment of his character, difficulties in the way act but as incentives to overcome them, and we again repeat that we believe before very long FOREST AND STREAM will publish an account of how the young shad traveled all alive from New York to Bremen.

OUR INDIAN GALLERY

WE are indebted to an officer at Fort Sill, whose correspondence frequently graces our columns, for a series of very fine photographic pictures of the various Comanche, Apache, and Kiowa braves, whose names are not unknown to our readers. The pictures are exceedingly interesting from the notices of the chiefs written on the back of them. We pick up a picture at random. We see a noble warlike head with an iron mouth, betokening decision, with a deep furrow on the brow, the eyes, however, with something of a latent glare in them. Take it in a Lavator sense and it is the portrait of an aristocrat, so proud and defiant is it. Turn to the back, and we read the following: "Santanta, sentenced to be hung for various massacres in Texas, but eventually released. Is here now at Fort Sill sick, all his prestige gone, and amounts to literally nothing." The picture of "Big Tree," Santanta's comrade, shows more guile. The features are a trifle sleepy, but to us there is much more of the hidden devil in them. "Big Tree" is now a simple brave of the Dangerous Eagle Band of Kiowas. His incarceration seems to have broken his spirit. Mohray's picture is a startling one. It represents the features of a savage of some fifty years old. The mouth is grim, the forehead is broad enough, but low, and there is no end of guile, lure, and wickedness about the face. The legend on the back reads: "This chief means business and war in earnest. Is one of the ablest of the Comanche Indians. All his people are now hostile." White Horse's head also illustrates our gallery. The face is pitted with smallpox, and is crafty to a degree. White Horse led the party of Kiowas who murdered the Lee family in '73, and says our informant, "he is as precious a scoundrel as goes unhung, yet now professes to be friendly." The most superb head of all is that of Big Bow, chief of the Kiowas. With a more lofty brow than Indians generally possess, the whole contour of the head is grand, the eyes are thoughtful, and there is even a certain amount of benignity about the features. But all signs as to physiognomy fail when you look at an Indian picture, for the endorsement reads as follows: "Big Bow, for years a bad character, is now here and will manage to sneak out of present difficulties. He led the party committing the Howard Wells massacre in 1872." Various pictures of Indian girls also adorn our gallery. Mademoiselle Lone Wolf, with aquiline Jewish features is absolutely pretty, and her pose on a buffalo robe, with head bent on a beautifully rounded arm, is as good as that of a Grecian statue. Arrapahoe and Comanche girls have, however, generally to our eyes few redeeming personal traits. Though graceful in their movements, with small hands and feet, their features are ugly and stolid, and as to the married and overworked Indian women, the homeliest creature in the world is a squaw.

—A note from our Editor-in-Chief dated Toronto, Aug. 28th, states that he would leave for Muskoka on the 29th. C. S. Rust, Esq., Fulton, N. Y., and W. E. Williams, of the Fulton Times left for Muskoka on the 27th. Four gentlemen who had just returned report plenty of game. He acknowledges the courteous attentions received at the Rossin House.

POOR CHILDREN'S PICNICS. THEIR CONCLUSION.—On Saturday August 29th, took place the twelfth and last of the Poor Children's Picnics. At a cost of \$8,874, 23,856 children were given a pleasant jaunt on the water, and amply fed, cared for, and provided with amusements. This happily concluded the third season of these picnics, where over 65,000 children have been entertained. From some personal experience in the business, for a business it is, we are very sure that few can imagine how arduous a task it is to care for such a host of little ones. The success achieved by G. F. Williams Esq., the manager of these Poor Children's Picnics, has been akin to the marvellous. Sixty five thousand children! Can the reader even imagine what an army of little ones—what a host of children—these figures represent? To feed them alone is a troublesome task, but to care for their safety, is the all important thing. It is safe to say, that if an equal number of adults had to be moved about and cared for, more or less accidents to life and limb would have occurred. It is then, we repeat, akin to marvellous, how Mr. Williams should have so far carried through this enterprise, and never hurt or lost a child. This wonderful result, is due entirely to the admirable administrative qualities of the manager, and his ceaseless care and watchfulness. A balance of \$693 remains now on hand for next season, and Mr. Williams intends to keep open the subscription in order that next year the funds in hand may be ample for this most excellent charity.

SHIPPING GAME OUT OF SEASON.

NEWCASTLE, ONTARIO, AUGUST 29, 1874.

EDITOR FOREST AND STREAM:—

In view of the Convention to be held at Niagara Falls next month, allow me, through your columns, to suggest to the delegates the necessity of some legislation to prevent the shipment east by express of immense numbers of grouse and quail during the close season. I have, myself, seen barrels of prairie chickens and quails opened at the grouse shops in the city of Toronto as late as the first of April, every one of which had evidently been caught in a trap. The tremendous severity of game on the prairies is not to be wondered at when I tell you I have counted as many as eighty P. C. traps around one field in the State of Iowa. Hoping some action may be taken by the Convention in this very important matter.

I remain, yours truly,

SPORTSMAN.

["Sportsman's"] correspondence has our special attention. We trust the Convention will do all in their power to suppress trapping. It is in regard to selling birds out of season where the Press can be of use. This year we directed particular notice to pinnated grouse exposed for sale in England during our close seasons. We trust our friends in Canada, this coming spring, will give us names and addresses of all vendors of game who are disposing of our birds out of season.—Ed.]

Sporting News from Abroad.

THE TWELFTH OF AUGUST.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

YEARS ago the 1st of September was the red letter day in the sportsman's almanac; but however much the modern generation esteem partridge shooting, it nevertheless holds a very secondary place in comparison with the more fashionable pursuit on the Scottish moors. As regularly as the swallows seek warmer climes, so do the fired barristers of Lincoln's Inn, the jaded merchants, the *blase* men of pleasure, statesmen and jurists, army men and *literateurs*, Peers and Commons, with long accounts at the bank, seek new health and vigor in the fresh air of moor and mountain. Were the night express from Euston on the eve of the 12th to run off the line, and indulge in one of those smashes of rolling stock and passengers' ribs, which are the result of nobody's carelessness, and often traceable to an extra glass of gin and water, I more than expect that the speeches in the House next session would be most of them maiden ones, and whilst the extirpation of betting and the early closing of public houses remained unadvised, many a church would lack its brilliant sermons, and shovel hats and ecclesiastical gaiters be found amongst a debris of breech loaders and pointers.

It is, however, now two years since Lord Walsingham killed on the Bladderhouse moors 423 brace, or 846 head of grouse, to his own gun or guns, for of course there was always a second one ready cocked and loaded for him when he had killed right and left. This unprecedented season saw enormous bags on other moors. The Marquis of Ripon, at Studley Royal, brought home 2,240 head in one day, and ere the sun set at Wemmergill almost as many had fallen, and 700 of them to Mr. Milbank's aim, whilst finally, 2,626 head were shot at Bromhill, in the West Riding by Mr. Rimington Wilson and his friends. This was rather an improvement on Colonel Hawke's time, when a typical day's sport realized some forty birds all told, and the cripples picked up. The extraordinary crop of 1872 furnished many writers with arguments in favor of grouse driving, then just come into vogue, and it was insisted on by more than cockneys in the Strand that Sancho and Don were the origin of the disease, and that by shooting over dogs the old birds were allowed to escape, whilst the young ones fell. This gratifying theory was supported by the fact that old cocks and barren hens are the first to fly over the ambushed sportsmen, when packs of grouse are driven, and as far heavier bags were made, and there was more shooting, the Londoners who cared nothing about a dog's instinct caught at this method of ensuring plenty of sport, and discarded setters and took to driving. The disastrous consequences of this theory are, I think, now becoming apparent, and whilst there are not enough birds left to stock a moor for the next season, we can't eat our cake and

have it too, though owing to the fables of the lessors of t ground—

"Hope springs eternal in the human breast;
Man never is, but always to be blest."

With an ominous and singular unanimity the reports, when candid and unbiased, prophesied scanty packs and a bad breeding season. Grouse disease had been general; the hatching season has been scarcely unfavorable; but somehow or other the habits of the dark fleshed game are few and far between, and ruefully the wealthy lessees are looking at their cheek books and their "bags." As luxury and effeminate habits aid Rome low, so have breech loaders, driving, and other sybaritic devices for making shooting free from fatigue and exercise, ruined sport in the land of brown heath and shaggy wood. The moors have left the hands of the birds of the highlands, who, bold and active mountaineers, were born sportsmen and cared not for a pastime as tame as pigeon shooting, now fallen to the tender mercies of the dandies of Bond street, whose long purses enable them to stand behind a screen in patent leather boots, and whose idea of sport is to see themselves in print, as having killed so many hundred brace of grouse. A shooting box in the north is now a sort of Capuan villa, on a small scale. A friend of mine more gifted with rent-rolls than energy, would go mad with ennui if he hadn't his French chef, a billiard table, a valet, *Mot et Chandon*, Habanas and Parisian novels. You are expected to play unlimited loo, smoke big regalias and "pot the red and cannon" till at least three o'clock in the morning, and then outdo the steady old fellows who have snored peacefully rolled up in their plaid for at least ten hours, whilst you wake up with a headache only dispelled by a bathe, and some loo and soda water. As a writer says in the *Field*, you can—if driving is the order of the day—sit down at your stand until your team tells you to look out, and then you ride from stand to stand on a pony and fire away without soiling Dougall's Athol brogues, or using more exertion than is required in inflicting a gun to the shoulder. Of course some amount of practice is required to hit birds who fly to fast down wind as an average swallow or an ordinary kingfisher, but you need know no more about sport than a London rat catcher. My own idea about driving grouse is this: It is as tame as shooting at glass bottles. I would rather shoot over poodles or Persian kittens than go in for such artificial sport.

The best bags read thus:—

Abeyon—The Marquis of Huntley and two other guns, on the moor of Danett, sixty-five brace grouse, two snipe, one plover, and two rabbits.

Rhichols, Bala, North Wales—Mr. Lloyd Price and friends seventy brace of grouse; seventeen and a half brace killed over Bent and Mallard, the field trial pointers, and ten and a half over Grecian Bend and Light. Mr. Price's old Drake, purchased at Mr. Garth's sale for 150 guineas, knowing the birds were wild, went low in the heather, always working for the wind, and more birds were killed to him than other dog.

On the Yorkshire moors two guns killed eight and a half brace on the Caldberth ground, and on Penhill thirty-nine brace fell to ten guns.

The Honorable Thomas and Charles Fitzwilliam killed forty-five brace, the Rev. H. Russell twenty and a half brace, and at Edward Byer's a bag of twenty-six and a half brace, and several others of twenty brace, were about the best made.

The Earl of Stair, Honorable North Dairnple, and another gun killed seventy-four brace, and the best shooting in Scotland seems to have been in Banffshire, Argyshire, and Wigtownshire. The Duke of Roxburgh has decided to give his moors a rest in consequence of the badness of the season, and his example is followed by many of the leading sportsmen.

The *Field* says the only good bag was that made by Mr. W. Canlie Brooks, M. P., Admiral Farquharson, Mr. Thompson, Rt. Hon. W. P. Adam, and Mr. Davidson, which amounted to 133 brace of grouse and twenty-two various. On the Melgense moors Messrs. Noble and Baytum made a bag of eighty-seven and a half brace of grouse and over 100 hares, which was better in proportion to the guns.

The American base ball players at Richmond had rather stormy weather to contend against, but nevertheless there was a large assembly of people. The Athletics won a quick game. The runs scored were:—

Athletics..... 8 0 0 3 0 0 1 6—1
Boston..... 0 2 0 0 0 0 1 3—3
Runs earned—Athletics, 4; Boston, 2. Home runs—Gedney, 1; Beals, 1. Double play—George Wright and Kent. Base on errors—Athletics, 7 times; Boston, 6 times. Time of game, 1 hour 25 minutes.

At the Crystal Palace the weather was bad, and hence "spectators few," and the ground being slippery the game was not up to its usual form. At the "Oval" cricket ground the Bostonians had it all their own way. It has been asserted in the *Times* that base ball is an old English game but like pall mall has subsided of late years; but there is not much proof of this, and I am inclined to doubt it.

INTOXIC, JR.

—The Irish team will sail on the 5th of September, and will be composed of the following gentlemen:—James Miller, John Rigby, Edmund Johnson, James Wilson, Dr. Hamilton, Capt. Walter, H. Forster, W. Waterhouse, J. Doyle, and J. Kelly.

Any of our subscribers who have a copy of this paper of February 13, 1874, which they do not wish to preserve, will confer a special favor by forwarding it to this office.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked salmon, *Salmo gairdneri*. Salmon trout, *Salmo configis*.
Black Bass, *Micropterus salmoides*. *micropterus nigricans*.
Striped Bass, *Morone chrysops*. Sea trout, *Salmo immaculatus*.
Whitefish, *Coregonus nasus*. Weakfish.

Trotting is permitted in Maine and Canada until October first. Salmon fishing with fly is permitted in New Brunswick until September 15. Land-locked salmon and salmon trout in season till September 15th.

FISH IN THE MARKET.—There is somewhat of a scarcity of sea fish, rather expressed by an advance in price, though the slabs seem overflowing. Spanish mackerel are by no means in large quantity, and worth fifty cents a pound, coming from the east end of Long Island. It looks as if the rush was now over, though they will keep off and on until October; prices may be increased. Blue fish in good supply, worth eight cents a pound, they have been as low as six. They are coming from Hyannis and Martha's Vineyard, Nantucket, and perhaps escorted President Grant and the City of Peking. We may expect the blue fish to keep on coming until about November. The New Jersey throng of fish ought to make in, say about the middle of this month. The average weight is about three pounds. We saw some fine fellows, which when dressed turned the scales at eight pounds. The true mackerel are plentiful from Boston, worth fifteen cents, though small, fat and delicate. Sheephead from Little Egg Harbor are in moderate stock, worth twenty cents. Striped bass quite scarce, and really none fresh on the market—a hungry squad of sharks off Pasque Island said to be the cause. Salmon in small supply, principally from the Miramichi, fetching forty-five cents a pound. It is not pleasant to look at them, as some of the fish seemed ripe with their eggs. King fish in their pretty coats of silver and russet hardly plenty, worth twenty-five cents. Pompanos abundant at thirty-five cents. Salmon trout and d white fish from Lake Erie just shipped from Buffalo are bringing eighteen cents. The South now is sending in some of her fish, notably the hump-back snapper, which comes out of the brilliant waters around Key West, all aglow with his crimson fins. Soft crabs—huge fellows—at fat and tempting, the nicest we have seen, worth for the best \$1 50. The New Jersey lobsters we have so much praised, have gone to grief or to salad; there are now no more of them, at least for the present. Smaller ones, whose habitat is Fisher's Island, near Nantux, are now in market. Epicures declare these lobsters to be the finest as to flavor which come to us. Haddock scarce—worth twenty cents. Cod—the famous old fish—stand by in moderate quantity, worth eight cents, near Nantucket Shoals.

The best fishing ground in Pennsylvania, as we learn cheerfully from the *Germanstown Telegraph*, is at the Schuylkill Falls. That paper says: "The water on this side of the river is as black as ink, and on the other side it has all the colors of the rainbow. We have never passed along without seeing men and boys fishing." The only difficulty seems to be that there are no fish there, and yet, as we have remarked, the fishing could hardly be better.

The Norristown Herald, of Thursday says: "Twenty black bass, weighing thirty-nine pounds, were caught by a gentleman at Pawling's dam, on Saturday last. Among them were some splendid fish, six of the largest weighing seventeen pounds. The same place has since been visited by sportsmen, nearly all of whom failed to catch even a single fish."

Mr. A. B. Harrower, who is in the habit of "casting his lines in pleasant places," says:—

The fish in the Richelieu River, P. Q., Canada, are pike, black bass, rock bass, haddock, pickerel, doree, and an occasional muskallunge. I have seen fine, very fine, bass taken at St. John's with a minnow, and have taken some very large strings of fish, trolling with a spoon above the rapids. The pleasantest spot to fish on the Richelieu, however, is at Chambly, at the foot of the rapids. The "Redfish" (trout) are found here, and are a good deal here, kept by one Lafine, never seen in writing, so can not sure about the orthography. A Frenchman—that is, he gets a good time. I can state from my own experience that bass do take a "trot" at least in certain waters.

An expert angler who fished a Canadian river last month thus describes how he captured a fine fish in the dark, and the difficulties he had to contend with. He writes:—

I killed a splendid salmon at dusk this evening. He weighed twenty pounds. Having fished some ten or fifteen minutes, and darkness coming on, I made a final retreat to reeling up. My fly was seized, by what I supposed to be a grise or large trout, under water. Soon, however, from the fish's movements I felt assured that I had an unusually large salmon, and governed my tactics accordingly. He made for the foot of the run, and walked for some time. Then he dashed down stream, and I saw a crown quite dark. My line was invisible, and it fouled twice around the rocks. I expected every moment to lose the game. After running below Orr's rock and showing himself but once above water, I brought him in and gradually reeled him towards the shore. The guide prepared to gaff him, but in the dim light broke the gaff handle in the fish's mouth. I pulled together, and in attempting to pull the hook I lost the line (the gaff ran separated from the handle and remained in the fish, which again made off. He was, however, pretty well played out, and I again reeled him in without much difficulty. The guide tapped him over the head, and then "scopped" him with his hands, and literally dangled him ashore. It was the hardest fight I ever experienced with a salmon, and considering the darkness and adverse circumstances I regarded his capture as quite a triumph.

Our attentive Barnegat correspondent, writing August 29th, says:—

No blue fish have been caught during the last week. Weak fish have been caught in great numbers at the head of "Sammy's Slough"—so called. King fish, sea bass and black fish have given good sport. Doctor Oakley and Mr. Brewster, of Elizabeth, N. J., caught over a hundred on Wednesday in about two hours. The prevailing easterly wind has made bluefish fishing uncomfortable in boats. But few have been on the ground, and not many have been caught. Yesterday, here, in Tom's

River, I saw a fisherman catch a large string of weak fish and perch near the mouth of the river. Another fisherman caught about thirty pike in the river here. In my next I expect to report some good catches of striped bass.

BLACK BASS.

DAVENPORT, IOWA, August 10th, 1874.

EDITOR FOREST AND STREAM:—

By recent communications in your valuable paper the writer observes that with many it is still a mooted question whether the black bass can be taken with a fly. Permit me to add my testimony in the affirmative, if the question be regarded in any respect an open one.

The writer, with a young friend who has not attained his majority, and who never fished with a fly—Mr. George Finch, of this city—visited a chosen spot not a mile distant on the Mississippi, and enjoyed rare sport among the bass. He took as I have intimated, his first lesson from me, arranged his rod, and sat down with fly and yellow body and drake wings, and dropped it upon the rippling current, when almost instantly he had a fine black bass. I think in course of an hour he landed safely eleven, one of which weighed five pounds, and three or four others from three to four pounds. I caught a number, the largest three and a half pounds. These fish I speak of were weighed—no guess here from size. I have also taken them repeatedly with Mr. Gray, a noted fisherman of this place, and a Scotch gentleman, who can make and cast a fly with any of Sir Isaac's disciples, and we have had glorio as sport together in taking bass and other fish with the fly. Upon one occasion, at Rock River, near Milan, a famous fishing place, the writer, with a sawy red-winged fly and light body, caught a four pound bass, and immediately after a four pound salmon, albino pike perch. Now, touching this latter fish I am much inclined to add at a moment, but if this article be taking, will reserve my disposition to a salmon for another.

In fishing with the fly here for black bass we take other fish—pike perch, as I have intimated—whose misnomer is white salmon, also white or striped bass and croppies. Parson a word or two respecting the latter fish. I am familiar with the striped bass of the East; ours are very like but do not attach the same growth, the largest I have seen or taken weighing four pounds. They are a fine blue fish, esteemed equal to the black bass. The croppies you have not in Eastern waters. I think they would be worth planting. Ask Seth Green, the father of fisheries, I have caught them largest about three pounds. They are plenty; have seen sixteen taken in six minutes. They are a better game fish than the muskies, and I have known a fisherman catch a croppie and muskie equal, if not superior, to any fresh-water fish. I am well, will take leave of you at the time. The interesting feature, however, about the croppie is that it, with the others named, will leap to the fly.

Now, as the writer is an old, white-headed fisherman, he desires to add a few words for the benefit of others in the same location. If you fish for black bass with the minnow or bait, let me tell you the test. It is the only test, and on the river streams, croppies, and on Western streams known as blannies or crawlers. They are under the rocks in the bass streams, I think, at all seasons of the year, the natural food of the bass, and for this reason they love the tumbling waters where the rocks abound. Now, this croppie comes out of the water about April or May, takes to decayed logs on islands or river-shores, under stones and boulders, beneath the roots of trees, and in any place where it can find food for itself. While the croppie is in its first state a black, ugly, crawler as you can see in Fenner's Zoology, it is the best bait for bass. I have heard and believe that a fisherman took fourteen black bass with a single specimen. In Rock River I discovered this insect late in Sept., and caught more black bass with it than I could carry. I am satisfied they continue to be taken in the river, and, on croppies, the physical food of the black bass. I have found them crawling on the rocks, and have no doubt they are about the bottom, millions of them continuing in the stream, while a portion of a certain age, I suppose, leave it annually for the fly condition. If you regard this sentence worth a place in your column, please it and I'll give you another at leisure.

J. H. BARNYARD.

TROUTING NEAR MALONE

DAVENPORT, IOWA, August 10th, 1874.

Among the number of sportsmen there are few more easily accessible, or which afford better sport than the Salmon River, above what is known as the "State dam." Here, within thirteen miles of Malone, is a stream which, notwithstanding its frequent visitors, affords an inexhaustible quantity of trout. The pool itself by the dam varies greatly in size. Generally it is only about a quarter of a mile in length, and about that the river winds for several miles, and has several small among grassy flats, and for a still further distance it flows more devious way, if possible, among a thick margin of alders. With the probable view of making the greatest possible display, it takes more turns and twist to the square mile than almost any known stream, ten minutes' rowing frequently bringing you back within fifty feet of where you started. The water is set and clear, and nature, by way of making compensation for the knots she has tied in the course, has located a trout hole in the curve of each bend, which is well populated by the "speckled beauties" so dear to the heart of all sportsmen. When the water is up, as it was during the first part of August, a boat can go all over the meadows, the trout running farther up, the distance to the fishing grounds being thereby increased, and the trout are more numerous. Several ponds empty into this river, which furnish homes for the trout in the winter, and its upper waters seem to be all spawning beds, which accounts for the abundance of the trout. Nearly all those fishing averaged sixty to seventy trout a day, the largest running from a pound to a pound and a half, and from that down, and when the number of visitors is considered, there seems to be but little exaggeration in the remark made by a sportsman, Malone that "more than three tons of trout had been taken out of Salmon River this year." They seem to be taken better with a fly than with bait, the favorites being a red fly, brown hackle, and a gray fly. Montreal flies and white millers are also used with success.

Many deer come into Round Pond, Wolf Pond, and the other sheets of water in the neighborhood, and many of them were also visited. Many partridges are to be found in the woods. There is a good, although unpretentious, hotel at the dam, kept by R. J. Cunningham (better known as "Hos"), where guides and boats can be obtained. The house is beautifully clean and the fare good. Visitors should take the H. R. R. to Malone via Ogdensburg and Lake Champlain Railroad. From there a team can be hired for the State Dam. G. W. W.

CAUGHT.—A few days since, while one of the operatives at the Wamsutta Mills, New Bedford, Mass., was walking upon the shore near the mills, he discovered a wild duck, apparently wounded, on the shore. On approaching it he found a quohag hanging to one of its feet. The poor creature had accidentally got its feet into it while running upon the shore. It was promptly released.

A correspondent informs us that he has found oil of sassafras a perfect protection against mosquitoes. It is entirely harmless to the skin, has very little odor, and if rubbed on in the evening will last all night. Care should be taken to rub over all the surface, as the pests will discover any spot which the oil has not touched.

A Wisconsin correspondent reports pike, pickerel and black bass biting freely in Lake Koshkonong.

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

Moose, *Alces Melchis*. Snipe and Bay Birds.
Elk or Wapiti, *Cervus Canadensis*. Caribou, *Tarandus Rangifer*.
Hares, brown and grey. Red Deer, *Capreolus virginianus*.
Wild Turkey, *Meleagris gallopavo*. Squirrels, red, black and grey.
Woodcock, *Scolopax rusticicola*. Quail, *Spizella virginica*.
Ruffed Grouse, *Tetrao canadensis*. Pinnated Grouse, *Tetrao capidus*.
Esquimaux Curlew, *Numenius borealis*. Curlew, *Numenius Argus*.
Plover, *Charadrius*. Quail, *Spizella virginica*.
Godwit, *Limosa*. Willets.
Rail, *Rallus virginianus*. Red or Rice birds, *Dolichonyx oryzivorus*.
Wild Duck.

[Under the head of "Game, and Forest in Season," we can only specify in general terms the several varieties, because the lists vary so much that were we to attempt to particularize we could do no less than publish three entire columns that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the lists of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

GAME IN MARKET.—Woodcock still scarce; about 300 brace coming into market a week. Birds in nice order, are worth \$1 75 a pair. Connecticut, Rhode Island, and New Jersey are sending a few birds, but the bulk are from the West. Some ruffed grouse in the market—said to come from Indiana and Iowa—worth \$1 50 a pair. Not in very good order, nor prime birds. Prairie chickens—but few yet—worth \$1 25 a pair—rather scrawny birds. Red birds—the first we have seen—worth \$1 a dozen. As yet they have but a skim of fat on them. In a week or so they will be lumps of lusciousness. Curlew few—Snipe scarce, but grass plover in moderate quantity and plump—worth \$1 00 a pair.

—Though there seems to be as yet somewhat of a depression in general business, the fall trade coming in but slowly, gun makers are doing a fair business. Chicken-shooting in the West consumes an enormous amount of ammunition, and orders for guns are being rapidly sent in. The Messrs. Remington have found it impossible to keep up with the demand for their new breech-loaders. At present their facilities allow them to turn out some ten guns a day. Very shortly with enlarged facilities they trust to be able to make as many as 300 of their breech-loaders every week.

—James K. Polk, of New York, nephew of the late President of the United States: Landon Ketchum and four other gentlemen of Westport, Conn., went rail shooting on August 26th, four miles above the New York and New Haven Railroad bridge, at Stratford, Conn. They returned in the evening, having bagged 600 birds. They report vast quantities of all kinds of game in that region, and say sportsmen may go there assured of meeting with success. The season for rail generally begins in September, but this year the birds have appeared earlier. Rail shooting is also reported good at the Lazaretto, Chester, Marcus and Port Penn, Pa.

—Snipe and other bay birds are reported scarce around Barnegat during the last few days.

—The region around Lake Koshkonong, Wis., is a very attractive one for sportsmen. Our attentive friend A. M. Valentine, Esq., writing from Janesville August 29th, says:—

I have just returned from a prospecting trip to Lake Koshkonong. Mallard, teal and wood ducks are very plentiful there now, and shooting is good and will be when the close season opens, Sept. 1st. We shot about a dozen mallards and teal, and a few wood ducks. We got a cold storm to start the ducks from the north. The snipe shooting is also very good. Parties intending to visit Koshkonong should write to Joseph Mackroft, Port Atkinson, Wis., naming day they will arrive there, and he will meet them at the station, which is on C. & N. W. R. R., 112 miles north of Chicago, and five miles from best shooting ground on the lake. He has a house there, and will be glad to show you all the sportsmen plenty to eat and a good place to sleep and take pains to put them on good shooting ground.

—Our valued correspondent "Gnyon" sends the following account of a wonderful shot in the dark, as a "trump" for the report of the remarkable shot reported in FOREST AND STREAM, and corrected by "Old Smokey." If it is doubted he offers to send "sworn statement," with signature of John Smith, J. P., fully attached:—

At the vicinity of Corinth, one dark and rainy night, was much disturbed by the howling of a small pack of wolves. They finally came within three or four hundred yards of the house and set up most terrific yells. Mr. B. had an old Enfield rifle, picked up on the bloody field of Shiloh, which he loaded, and going to the door ascertained the direction from whence the howling came. The report of a gun, and a yell of triumph echoed through the darkness, and then all was silent. He heard the wolves no more that night, and next morning, happening to pass near the spot where they had last been heard, he found an immense dog-wolf—'with the foam of his gasping lying white on the turf'—shot square through behind the shoulder.

—One who has enjoyed its quiet comforts, endorses very cordially the "Model Farm House" at Georgeville, P. Q., Canada. The owner is N. A. Beach, and his rates of board are moderate.

SPORTS EXTRAORDINARY.—During this week two young men went down one evening to Comancho bank. There they killed forty curlews, of the brown and white wing variety, and amongst them several of the pink curlew. They then proceeded to the mouth of Bar creek, where they lay in ambush, and killed twenty more, including sea-shore snipe and other delicate sea birds. Mr. James Mickler killed a buck, one day this week, near St. Augustine, which weighed over 200 pounds. Hunters report that there never were so many deer near the city. Good for visitors during the coming season. They also report an extraordinary number of quail hatched behind the hills of the North beach, and around and about St. Augustine. —*St. Augustine (Fla.) Press*, Aug. 20.

—The Gloucester Co. Game Protective Association of Swedesboro, N. J., have elected James D. Gibbs, President of the association, as a delegate to the National Sportsmen's Convention to be held in September 9th, 1874.

—All members of the National Rifle Association in future when shooting at Creedmoor, must exhibit their card. This rule is imperative, and will be enforced. Members teams are required to exhibit their cards before practicing on the range.

Prize List!

POST OFFICE BOX 2882,
125 S. THIRD STREET PHILA.
CORR'S BUILDING, DEARBORN ST., CHICAGO

For Sale.

ONE OR A BRACE OF VERY SUPERIOR thorough-bred well-broken SETTERS—gold retrievers. For particulars, address H. S., Box 8160 P. O., Philadelphia. sep8-1f

ILLUSTRATING THE SCENERY OF
the East and West coast and interior of Florida.

BY THE RIVER.

BY the bank of a beautiful river,
Where the rim of the waters was white,
And the grasses so tall were a-shiver
In the gloom of the fast falling night;
Where the shadows of the hills were reflected
In the heart of the hurrying stream,
And the rays of the sun were deflected,
We woke from our passionate dream:

And the clouds like great ships on the ocean,
Spread their sails in the freshening breeze,
And the moon like a beacon in motion,
Sailed away with them over the trees.
And the song which the boatman sung gladly,
Keeping time to the noise of his oar,
Came faintly, pulsating, and sadly,
Like an echo from Lethean shore.

But her lips were as scarlet as ever,
And I yearned for one amorous kiss,
While her eyes were more eloquent never,
And her smile had its quantum of bliss;
But my pride whispered to me of duty,
And I silenced the words on my tongue,
And I turned my gaze away from her beauty—
Was it foolish? Ah, well, I was young.

Had she sorrowed for words that were spoken:
Had she made but the slightest advance;
Had she gave me some sign or a token
That our meeting was more than a chance;
Had she gave me the ribbon that bound her;
Had she gave me one glance from her eyes,
Or a thread of the gold floating around her,
Might we both not have known brighter skies?

But the boatman's song died in the distance,
And the yellow mists closed in the scene,
And I offered no sign of resistance
When she tripped away over the green;
Though I know she would not have resented
Had I held her in one fond embrace,
And I knew she would there have related,
Had I kissed but her beautiful face.

And in this way a romance was ended,
And in this way a life was o'ercast,
And in this way an old love was rendered,
And my heart became part of the past.
But still the old time will come o'er me,
As I sit in the shadow of years,
And the scene will rise up before me
Like a mirage of beauty in tears.

Selected.

figured by the labors of a busy day, I was gradually subsiding into the *dolce far niente*, which good news from a far-away home and those I dearly loved, lately received—a good dinner, comfortably eaten (no mean luxury of the frontier)—the soothing influence of the “peaceful pipe,” glowing with well ignited “Lone Jack” (not an inappropriate name just then)—combined with a bright fire and the presence of faithful brute friends—inspires, when a quick step sounded on the porch, and the door flew open as the Quartermaster entered. Jack bounced up with a joyful bark to greet the intruder, who was a well known friend, while Dan opened his eyes widely, but seeing who it was closed them again and resumed his meditations.

“Don’t you want to go goose shooting, Doctor?” exclaimed the Quartermaster. “The tide will be down in an hour, and this bright night the geese will be flying in clouds. I saw them at sundown across the bay by the thousand. We will have fine sport.”

“Sit down, Captain, and don’t make such an awful rum-pus. What do you want to disturb a man for, this cold night? Take a pipe and toast your heels before this fire. Don’t you know it’s cold to-night? I’ve been hard at work all day, and am tired. Sit down, man, and enjoy the goods the gods have bestowed upon you, and let the poor persecuted geese alone.”

“You be hanged, Doctor; you’re lazy. Tired! I should like to know what you have done to make you tired? You haven’t chopped off anybody’s limb, that I know of, and since you and Dr. — (one of the physicians of the town) nearly killed that poor fellow the other day, I know you can’t get any one to come within a mile of your scalpel. So don’t be nonsensical, but get into your old boots and come along.”

“Why don’t you go for Capt. T., or some one else, and let me alone? Don’t you know that I won’t be out of the garrison five minutes before “somebody’s darling” will have the croup, or the colic, or something, and the poor mother will be frightened into hysterics, and when they find I am away there will be ‘the old Harry’ to pay?”

“Nonsense! Leave word where they can find you. We will not go far. Don’t be so obstinate. You know you only want to be coaxed. The ladies spoil you doctors, and you are getting to be almost as bad as a miss in her teens. So get your traps in shape while I order the horses.”

“Well, if I must, I must, I suppose, so sit down and let me hear what you propose.”

So we discussed the matter over an amicable pipe, and the upshot of it was that we determined to go out on the flats beyond Humboldt Point, about a mile distant, and try and get some shots as the geese flew over on their way to the places of drinking. These places were springs along the shores of the bay, uncovered by the falling tide, or little brooks which emptied into the bay, and which, when the tide was down, ran far out over the flats, tiny streams of pure fresh water. Thither the geese were accustomed to repair by night, and we determined to waylay them en route.

While the Quartermaster was having the horses brought round and getting his “implements,” I induced my shooting toggery and “old boots.” Leaving Jack behind, much to his disgust, in a few moments we were riding rapidly along the beach on our way to the Point, keeping a bright lookout for the quicksands, the location of which we well knew. There were but few of these along the bay shore, but in other places they are both numerous and dangerous, and not a few horses and mules, and in some instances, I believe, men also, have perished miserably in them.

Shortly after my arrival at Humboldt Bay, I was one day riding at a hard gallop along the smooth beach or shore of this bay, never dreaming of there being any danger. I rode a very powerful chestnut sorrel horse, somewhat famous in that part of the country for strength and endurance. Suddenly, my horse, in his stride, leaped clear of the solid beach, and sank half way up his side in a quicksand. As he was a very courageous and strong animal, his efforts were tremendous, and in almost less time

than it takes me to tell it he had struggled through, and stood with wildly glaring eyes and heaving flanks upon the solid ground. Fortunately, this quicksand was not deep, but I shudder to think what might have been my fate had I struck a larger, deeper, and more dangerous one. I should have lost my horse, if not my own life also. When my horse got through, which took scarcely a minute, he was white with foam, and he had not “turned a hair” before. This will give some idea of his struggles.

Our ride was a short but lovely one, for the moon was nearly full, and the air pure and bracing. The moonlight nights in California are, I think, peculiarly beautiful. The air is so pure and clear the moon shines with a brightness unequalled elsewhere. Talk of the moonlight of the Orient, it cannot compare with it. In California the grandeur of the forests, lit up by the moonbeams, struggling through the tops of the gigantic redwoods, can only be appreciated by being seen. “The dim aisles of the forest” are there reality, and the colossal trunks, with their lofty heads, strikingly remind one of the huge columns and carved capitals of a great cathedral. The “subdued ecclesiastical light” there is perfection. Many a night have I ridden through these forests when the entire party has been hushed with the holy awe that pervaded the “temple of the woods.” When we came out upon the hills bounded by the ocean, with the flood of soft moonlight pouring down, and every blade of grass glittering with diamond dew drops, with the ceaseless boom of the mighty Pacific at our feet, the white capped waves dancing and glancing o’er the dark waters, and the perfection of the spot marred only by our presence, everyone halted as if spellbound. I tell you, comrade, neither Egypt’s shrines nor Holy Land ever saw fairer sight or brighter moonlight, or that which filled the soul and impressed the mind with a greater sense of man’s littleness, and the power and munificence of our Maker.

Soon we arrived at our destination, although we had paused on our way to induce L., a brother of the rod and gun, who lived on a small rancho about half a mile from the Post, to accompany us. Fastening our horses securely, each man hunted out from a ruined shanty near (one of the relics of the suburbs of “Humboldt City”) a piece of board some ten feet long to lay on the flat, so that we could sit down, and thus be less exposed to the keen vision of the game, and lead them to consider us some stump or log left by the tide, and also to keep us from sinking in the soft mud in which we floundered, ankle deep, at every step. Walking out as far as the consistence of the flat would allow, we placed our boards about thirty yards apart, and sat down to wait patiently for the geese. Soon they began to fly over us in little flocks of half a dozen or more. As they came up they appeared double their real size, white as snow, and beautiful beyond compare—flying quite low, often within thirty feet, and giving us good easy shots.

“Mark,” called out the Captain, who was on the extreme right.

As he spoke, up came a flock of three or four. Aiming at the middle one, I let drive my left barrel, and down came a fine gander, stone dead, almost at my feet. At the shot the flapping and honking of the survivors was tremendous. Quickly I fired my right barrel, and down came another, in anything but “easy spirals,” wing tipped, and off he ran over the flat toward the water.

“Catch him, Doctor,” sang out L., and at the word I laid my gun on the board and made for him. Talk about the slow and awkward gait of a goose. That one was a born racer, and it was all I could do to reach him before he got to where the mud was too soft to beat me up. He struck at me fiercely with his uninjured wing, and bit most viciously, but I soon had him safely laid by his companion.

Loading carefully, I sat down on my board, with due patience, when soon another and larger flock coming up gave us all a chance, and we rendered a fair account of them, the Captain and myself getting one each, and L., who had the heaviest gun, two.

But what boots it to tell of misses made or points scored.

NO. V.—WILD GOOSE SHOOTING BY MOONLIGHT.

I WAS sitting quietly in my quarters one evening, enjoying the warmth and brilliancy of a crackling wood fire, and reading, by the light of my “student lamp,” some papers lately received from the East. The night was chilly, though the moon was bright and the sky clear; for though it never becomes cold at Humboldt Bay, a very trifling variation is noticeable, the body becoming sensitive to any change, however slight, in consequence of the evenness of the temperature. My setter Jack was lazily snoozing by the fire, while in dreams he no doubt roved fancy free through the fields and woods in pursuit of his natural and favorite calling, as was evinced by an occasional yelp of delight or growl of anger, according to the nature of the game he was mentally pursuing. Whenever the dog would growl my old gray “Thomas puss,” Dan, who claimed as his particular domain the corner of the hearth furthest from the door, would spring up, and with arched back and enlarged tail exhibit his sympathy, for they were fast friends; but seeing no antagonist, and only old Jack stretched out sound asleep, would quietly settle down again, and with half closed eyes resume his musing. Ever and anon my eyes would stray to the corner where rested my faithful double barrel gun and tried old rod, and thoughts of bygone pleasures, in which they had done well their part, would flit across my brain. Somewhat fa-

the mail arrives, say once in two weeks, all work is suspended for the time being. With the arrival of the Indians from their summer hunt there will be more activity and life, and time will pass more pleasantly; however, we do not complain, but enjoy ourselves to the best of our ability.

Prof B. Knapp, M. T., August 7th, 1874.

THE ICTHYO FAUNA OF THE NORTH-WEST COAST.

THE FRESH WATER SPECIES OF ALASKA.

IN previous communications I referred to the principal species of fish frequenting the waters of Oregon, Washington Territory and Northern California; so this one is to present a list of those inhabiting the waters of British Columbia and Alaska; yet it must be understood that several of them belong also to the more southern clime, especially the salmon, cod, halibut, white-fish, eulachon and others. As fish that are useless to man are interesting only to scientists, I shall confine this article to those possessing economic and commercial value. At the head of the salmon, and that, like its southern congeners, is found from Behring Straits to the most southerly point of Vancouver's Island. In the spawning season the straits, bays, sounds and inlets of the coast are thronged with it. Its presence can be readily detected by the commotion in the water, the number of seals encountered in all out-of-the-way spots, and in many instances by the thousands of salmon leaping out of their element, in the straits, as it were. After reaching the spawning grounds myriads die from exhaustion, for in several cases they travel over one thousand miles from the sea to accomplish their blind instinct. From the first of June to the middle of August the Stikine and Yukon Rivers are fairly alive with the countless numbers leaping to the headwaters, among the mountain gorges. If we far from the market, except material for shipping abroad; but the business of the coast is in the hands of the Indians, and as they have but little knowledge of commerce, the natural result is, that an industry which should employ thousands of men and be worth millions of dollars, remains undeveloped. The Alutics, and other littoral tribes live almost entirely on this fish, and they must consume at least from five to ten millions per annum. Excluding the large quantity which they may, or allow to go to waste, and the preceding figures, alone give a general idea of the abundance of the salmon. The Russians catch a few thousand barrels, which they ship to China and the Sandwich Islands, realizing from ten to fifteen dollars per barrel for them. As the cost of transportation, barrels and catching does not exceed, at the utmost, over five or six dollars per barrel, it is evident that the industry can be made a financial success if prosecuted with vigor and discrimination. The first salmon to visit Alaska is the chief or king salmon, the *Oncorhynchus opacirostris* of Pallas, which occupies the same position north that the *salmo gairdneri* does in Oregon; in fact I presume that with the exception of size and a few minor differences, both belong to the same species. The former is said to often reach a weight of one hundred pounds, its average being from twenty to sixty pounds. The Tlingit tribes of the Yukon River, to whom it is known as *K-keek*, say that it commences running about the first of June and continues for six weeks, its average daily journey amidst the strong current being about thirty miles per diem, though it is often less. The more northern the grounds of this species, the better its flavor, and the dearer its market price; in fact you must ask for the best *Yukon* if you desire to test the delicacy of the Alaska's favorite fish.

When under Russian rule the Governor had several hundred barrels caught specially for the table of the Czar and forwarded to him as an annual present. Two other species are also found in these waters, the *O. ligonchus* of O. proteus, of Pallas, and the *not-glog-gho* and *noog-lag-ni*, respectively, of the Yukons or Tlingites. These are allied to the *salmo proteus* and *salmo gairdneri*, or *confluens* of the more southern clime. Like these, they are deemed inferior to the preceding both in flesh and size, and their weight ranges only between ten and forty pounds. Large numbers are caught by the Indians in weirs and seines made of vegetable fibre, and are dried for winter use. The salmon or mountain trout, (*salmo alpinus*—Linn.) is very abundant in the northern portion of Alaska, and is apparently a constant resident, as it is found in the streams at all seasons. It has a beautiful color, the sides being of a purple, olive and scarlet; its flesh is very delicate, and its weight ranges from seven to fifteen pounds. This is the *salmo spectabilis* of Oregon and Washington Territory, and like that it furnishes excellent fly-fishing. The *O. sanguinatus*, or red fish, of the *O. lyodon*, or dog salmon, and the *salmo purpuratus* or black salmon, of Pallas, arrive in the rivers between August and October, and run for a month or more. They are a beautiful color, and are of three varieties, their flesh not being deemed very palatable. Their English names they derive from looks and the color of their flesh; so the reader can find among the southern varieties, previously mentioned, the prototypes of these species.

A sucker found here, which is called *cruskes* by the Russians, (*catostomus lere*), is quite common, and for its rustic habit, quite a large average from four to seven pounds. A species, the white fish, called *radok*, by the Tlingites, frequents the shallow streams and ponds, and is caught in large numbers by the aborigines who scoop them out with their hands, paddles and grass baskets. The flesh is insipid but sweet, and for this flavor a few tribes like it. If one were to give it an English cognomen he would be apt to call it a black bullhead or sculpin. A small dace, also found with it, is very common, and is called *hook*. The pink salmon, (*salmo goriscus*), is very abundant in the rivers of the almost arctic regions of Alaska. It resembles its eastern congener, is of little use as an article of food or sport, and it is, therefore, less severely alone, except the comparatively limited numbers caught in seines for the purpose of feeding the sled dogs. The burbot, eel pout, or loach, (*lotus maculatus*), swarms in the lakes and rivers, and being quite edible, is sometimes caught in large numbers; when broiled, it is quite delicate, the flesh being hard and compact. The liver is considered the best portion, as it is permeated by a sweet, rich oil, which is often extracted for the purposes of the cuisine. The skin, which is translucent when prepared, is used quite frequently for window glass. The male is smaller than the female, often carries a few bladders, while the female has a large one. The latter will compare with any of her order in fecundity;

for she is full of roe in the spawning season, from October to January. This she bears in two sacs near the vent, which are connected by an opening with the cloaca. Though slow in movement and apparently dull, this species destroys large numbers of white-fish, and others of less importance. The grayling, (*thymallus*), is very abundant, to offers excellent advantages to sportsmen who care for the pleasure of catching it than the pleasures of the palate, for in my estimation, its gastronomic qualities are rather limited. It comes in very well when better fish cannot be procured, but for itself it is a sort of cross between an *abasco* and the *chupa* of Puget Sound. It is a beauty, however, in looks, and will compare with any in the western waters, except the sapphire perch, and it excels this in gorgeousness of fins. It has a broad, flat, darkish ground streaked with a purplish crimson; the abdominal region has a dull yellowish, rather bright coppery lustre; sides a dark pinkish yellow. The dorsal fin is its most conspicuous ornament, being very long and of a grayish color, spotted with bright crimson. The abdominal fins are streaked with four lateral lines of light pink, which add much delicacy to the colors above. Of the white-fish, there are several species, the most common being the silver fish, or the southern prototypes, the greater difference being in their numbers. I know of only two species in Oregon, the *Coregonus Williamsoni* of the Des Chutes and other streams, and the *homolopus Tulebridgeti* of the Columbia River. In Alaska we have the *nulotoki*—*nulotoki* of the Russians—a small, bony and comparatively useless fish; the *morsok*, or white-fish of the Russians, a highly edible variety, which weighs between two and four pounds, and has firm, succulent flesh. It is readily recognized by its small head and fins. The hump-backed species, the *corbula* of the Russians and *Ko-kak-ah* of the Yukons, is quite abundant but bony and insipid, the *coregonus nansu*, or round fish—the Russian *Krug*, and *Yukon butch*—with its long, subfusiform body and lean muzzle, is a denizen of several streams, and is often caught for food; the *coregonus mukson*, or broad white-fish, the *ichthyophaga* of the Yukons, with its large scales, broad body, short head and weight of thirty pounds, is readily distinguished from the others, and as it is excellent for the table, large numbers are caught at all seasons by the Indians. The largest of this genus is the great white-fish, (*halibut levelis*), which excels its congeners not only in size but flavor. It is very abundant in the Stikine and Yukon Rivers—and is found in all the streams throughout the year, its weight measures between two and four feet in length, and its weight from twenty to thirty or fifty pounds. It is full of eggs from October to the first of January, so is in the best condition from May to August. It has a fine outline, being slender and long; and its color is bright silvery above, somewhat darker beneath. Despite the abundance of this fish and its excellent edible qualities, it is not used as an article of commerce. It certainly seems plausible to suppose that its size and numerical strength would render its capture and transportation a successful enterprise if the limited fishing grounds of Lake Superior can be worked with profit.

The profusion of salmon and white-fish in Alaska should make that region the supply depot of the world, for they are certainly abundant enough to feed the peoples who use fish as a portion of their diet. All required to prosecute the business is a comparatively small capital, and whoever is first in the field has the best chance of success. A great wealth will be utilized by those whose means will be ample enough to enable them to monopolize the largest share. The species enumerated, and the brook trout, (*S. albus*), are the only fishes frequenting the fresh waters of Alaska that have much interest for mankind in general. In my next letter I shall glance at the marine species, their commercial value and geographical distribution.

MORTIMER KERRY.

FOR FOREST AND STREAM. X HAND TO HAND WITH A PANTHER.

IN the extreme northern end of Albany township, Berks county, on the Blue Mountains, a struggle between a man and a panther took place on Wednesday evening, which was indeed a desperate battle. Therewith present an account which I have secured, and believe to be true in all respects. People travelling over the mountains in the night have reported that a strange animal had been seen, and on occasion deep groans were heard, and a fiery red fire was placed in these statements. Calves, sheep, and litters of pigs mysteriously disappeared from some of the farmers in the vicinity, and none there knew what caused their disappearance; but this fact is now revealed. Reports of this animal being seen on the mountains came to the ears of Mr. Pfeiffer, an old hunter and trapper, who, it is said, had passed forty years of his life in the mountains, and made several attempts to hunt the animal, which proved to be unsuccessful. A small hunting party was thought to be a necessity to procure the animal, and was instantly organized. The party consisted of two Englishmen, also old mountaineers, and Mr. Pfeiffer, who left for the mountains at two o'clock, each one going in a different direction, and having agreed to meet at the "big tree"—a memorable tree on the mountain—about five miles from his starting place. Two of the party arrived at the tree within half an hour of each other, but not so the other, Mr. Thomas Anson, one of the Englishmen. Nothing was seen or heard of Anson, and the sun had gone down behind the hills, and the forest and woods were becoming gloomy with the return of dusk.

It appears from the statement of Anson that he was wending his way slowly and cautiously through a deep and tangled ravine, and when about one hundred yards from the point of meeting he concluded to pass up another ravine, which was overhung with a dense growth of shrubs and undergrowth. When directly under a small crag, and walking along with his head bent towards the ground, peeping amongst other crags under a low vine, with his body doubled, he suddenly heard a snarl overhead, and the next second felt his head of the animal sink into his neck. This was accompanied with fierce growls, and quick work was before him; but in another moment all was action, and by a dexterous movement Anson swung around his hands and seized the animal in his vise-like grip by the neck, and staggered back towards the clearing, when the creature shook off the hunter's grasp and made an attempt to bite him again in the neck. The poor man, however, was not to be so easily vanquished. He grasped it, and with a terrible velocity swung it around and buried it deep into the side of the animal. The brute gave a long howl

from the effects of the pain, and amidst the excitement man and beast rolled over together on the ground, and in doing this Anson received three bites on the shoulders. Now were moments of terrible suspense. The growls of the animal attracted the attention of the remaining two of the party, who came running towards the spot at a terrible speed, through the bushes and undergrowth, where man and beast were lying on the ground fast as dead. Anson once more plunged his knife into the animal's body, and in a few minutes more it rolled over in its own blood and died.

The hunters examined the monster, and think it to be a panther, or catamount, of the mammoth species. The weight was 146 pounds, length 4 feet 54 inches, not counting the length of the tail, which was over two feet, the height 2 feet 8 inches, and the animal powerfully built and knitted. The color was a deep brownish black on the back, and a shade lighter on the belly and portions of its legs. Its teeth were long and sharp, and the age of the brute was thought to be about seven or eight years. The tail at the end was very bushy. In triumph was the prize which had caused so much labor and pain carried home by the party, skinned, and the hide will now be owned by Mr. Anson, who carries it to his home, to look it home with him, and will preserve it, as he well can, as a relic of his battle with an unknown animal on the Blue Mountains. The report of this capture and fight created great excitement and rejoicing in the county, and all congratulated the bold hunter and trapper with his miraculous escape from death. It is still unknown where the animal came from, the stamens of the smaller species abound in these mountains, but this is one of the largest animals killed on them.

Hanover, Berks county, Penn., August 10th, 1874.

FOR COLLINS AND COLORADO.

Our valued correspondent, Wm. O. Collins contributes the following to the Highland (Cal.) News, in reference to a region full of attractions to our sportsmen:—

"In your paper of July 23d, in a notice of Fort Collins, Colorado Territory, you say, 'we believe Fort Collins was named in memory of Lt. Caspar Collins, the lamented son of our townsmen, Col. Wm. O. Collins,' &c.

Permit me to say, that 'Fort Caspar' is the post named after my son. It is situated on the North Platte River, in Wyoming Territory, about 140 miles west of Fort Laramie. It had been previously known as Platte Bridge, but in 1864, after the death of Lt. Collins, who was killed in the vicinity while leading a desperate charge against a large body of Indians, the name was changed to Fort Caspar, which it still bears.

Fort Collins is situated in Colorado Territory, on Cache Poudre River, a tributary of the South Platte, more than 200 miles from Fort Caspar, and my name was given to it by the Commanding General, when first laid out in 1862.

The location proving unsuitable, I was ordered in 1864 to select another site, and did so, some four or five miles distant, laying out a four-company post, with a reservation four miles square, which was approved by the War Department, the previous name being retained.

Knowing its location and surrounding, I am not surprised that the region was long ago noted as a military post, and the location when it was surveyed and brought to market, it should be selected as a fit place for a future city, and make the rapid progress it seems to have done. The reservation and its vicinity possess singular advantages for a permanent town and community. The foot is on a beautiful promontory, projecting towards and overlooking the broad and fertile valley of the river, along which the reservation fronts for four miles.

It is at the foot of the Colorado Rocky Mountains, near the same mineral region geologically as that which lies directly west of the plains at Denver, and extends into New Mexico. This mountain country, occupying the west half of Colorado, and drained by the tributaries of the South Platte and Arkansas rivers on the east, and those of the Colorado and Green rivers on the west, in its extent and great regularity of surface may be called a plateau, and the Rocky Mountains. Its mineral wealth is boundless, and will not be fully explored or possessed for centuries.

Cache Poudre River is a clear, swift, never-falling stream, abounding in trout and other fish; the soil in its valley and the adjacent plains is good and easily irrigated; indeed there is probably no body of land in Eastern Colorado equal to it. These facts, in respect to the Cache Poudre, I do not know any place in Colorado more inviting for a permanent home.

Fort Collins has been selected as the site for the State Agricultural College, and the country about it is rapidly settling. As a business centre, Denver is and will continue to be the metropolis of Colorado. Its early settlement, and the general control of the commercial and mining interests of the territory, but I see no reason why Fort Collins should not stand in the next rank of towns now springing up here. Many of my former comrades and acquaintances have located there, and from a personal knowledge of a vast extent of the central Rocky Mountain country, I think they have chosen wisely, and I can honestly advise any of my friends who have been invited by the New West to take a look at the Cache Poudre valley.

Wm. O. COLLINS.

Hillsboro, July 28, 1874.

—Quite an interesting pamphlet, written by Mr. Freidel, has been read before the French Académie de Médecine in regard to the bites of the viper. One fact mentioned is the method used by the Hindoos, which method of treatment has come somewhat into vogue to prevent hydrophobia in India. When a man is bitten by a snake, his companions take sides and drive the sufferer about for hours, making him move along briskly by means of blows. Mr. Labrousse, who presided the work to the notice of the academy, stated that at the Jardin des Plantes, when the attacks were bitten by snakes, they were dosed with brandy and forced to take the most violent exercise, and with good results. This treatment has a good deal of sound reason about it.

—Jeremiah Comfort is the successful propagator of numberless fine brook trout at Honey Valley, Montgomery county, Pennsylvania. Comfort always attends success.

Fish Culture.

FLASHES FROM THE "BLUELIGHT."

EIGHTH WEEK.

As the summer left us, the "Blue-light" extinguished her lights at the wharf and rested from her summer's work. A little time borrowed from the autumn this last week and a few more days in the one coming, and we will have finished. This will be my last letter from Noank, and it is with sincere regret that I say it. To most of us the little place, with its glorious climate, its kindly people and pretty scenery, has endeared itself. We have not been fat birds for them to pluck, nor strangers to be taken in, metaphorically, for literally they have taken us in and made for us pleasant homes, when we from previous experience but expected what we could get for money, not love. We all regret somewhat, the thoroughness of our work, that has so completely explored the adjacent waters, that there is nothing left to a new world to conquer, nor worm to classify; so next year we must seek a new field, and may we be as lucky.

The last day of summer found us busy with a new trawl that Prof. Baird had just imported from England. Our old one consists of a big bag net hung to a twelve foot beam, which keeps its mouth extended; this beam is fastened to iron runners, and a row of leads in the foot rope to keep the mouth open, and drags the bottom as we give her "three bells, with a close throttle." The net, one, used extensively in England in the sole and turbot fishery, is called the "otter trawl," because the net is suspended from wooden runners, iron shod, called "otters"—why, I don't know. It has a spread of forty-two feet, and being, without the heavy beam, for which a row of corks is substituted, tows much lighter than the old one. The "otters" are slung like a kite, and although close together when the net is lowered overboard, stretch out to the right and left, as it is opposed resistance, and soon spread the mouth to its utmost extent, and it ought to give big results. It will, when we grow skillful in its use, and learn just how fast to drag it, so as to keep it open, and not off the bottom. Our tries so far on the Watch Hill pecten bed have not been very successful; not so much as with the old trawl, as to quantity, but we captured a few fish that ordinarily are too few to be taken—shrimps and sea robins. On this trip we were favored with the company of Mr. Blackford of New York, and family. He is a good friend of FOREST AND STREAM, and of the Fish Commission, and places both in his debt; you for items, and us for rare and curious fish which he frequently sends us. One he brought this time—a beautiful silver-sided fish that I have seen in Barbados, never elsewhere, and I thought it peculiar to the West Indies. I applied at once to my friend Gossard, who is "up" in fish, to tell me something about this stranger, and he kindly gave me this information:—

THE LEATHER JACKET.—The fish taken at Gravesend and brought to Noank by Mr. Blackford, is one of the most interesting of late additions to the fauna of our coast. It is known in the British West Indies as the "Leather Jacket" and the "Skipjack," and the former name being the most applicable, doubtless, and the latter, too, being applied to several other species, it seems proper that we should call it by that name. The species was first described by Linnaeus in the "Systema Naturae" as *Gasterosteus occidentalis*, subsequently by Lacépède as *Lichtia quibria* and by Curvier and Valenciennes as *Chorinemus aillans*. Of course the name of Linnaeus has priority, and Professor Gill having found that the fish he got was *Gasterosteus*, its proper designation is *Gasterosteus occidentalis* (Linnaeus). The "Leather Jacket" attains the length of two feet or more. Nothing is known of its habits, but it is probable that they resemble those of the bluefish, and that the "Leather Jackets" roam the tropical waters in schools, feeding upon smaller fishes, and sporting and leaping at the surface. The species has been seen on the South American coast at Bahia, in the Gulf of Mexico, and then at Santa Domingo and Puerto Cabezas, in the Gulf of Honduras, and in the United States National Museum are some taken at Key West by Dr. Simpson. So Mr. Blackford has the honor of having added another new species to the fauna of the north-east coast of North America.

We tried our new trawl, and began to learn it, for we did better and better each time, but the evening came and we ran back to Stonington and saw our guests safely on board the New York steamer, and then at an hour and a half we had a new experiment. We had never tried night work, and it might be that among the odd fish at the bottom there were some more apt to be caught out late than early; so lighting our green, red and white lights, the "Blue-light" started again to see what we could turn up. An hour's steaming brought us to the grounds where we knew that unless we caught on the wreck of the ill-fated Meiks we could draw in safety. We brought in her head, the tide and lowered her into the darkness. All of our lanterns and all day had borrowed, hung around the ridge rope, and I had no doubt but that from a distance we resembled Fourth of July. But we dreaded approaching vessels, and from our ten-knot reputation feared they might try to cross our stern, and that was the way we were going. Nothing troubled us. We hauled in our trawl in due time, and we got skates, flounders, pectens and spunges—just our day's results, and two more tries produced the same. Then we went home.

The stormy weather of the preceding week had paved the way for calms and smooth seas in this, and we made the most of it. Two thirty-six hour trips to the southward and eastward of Block Island gave us a good knowledge of the reefs and banks in that vicinity. We scraped acquaintance with Cox ledge, Sharp ledge, Crab ledge, and others, while, and while the professors dug up and bottled up their specimens of fish food forward, we aft did no doubt but that from a distance we resembled Fourth of July. But we dreaded approaching vessels, and from our ten-knot reputation feared they might try to cross our stern, and that was the way we were going. Nothing troubled us. We hauled in our trawl in due time, and we got skates, flounders, pectens and spunges—just our day's results, and two more tries produced the same. Then we went home.

Block Island is quite a place. There is a village, New Shoreham, of sixteen hundred inhabitants, and on the bluff at Sandstone, a fashionable hotel, the "Ocean View House," which I should judge must be a pleasant resort in summer. It is well kept and clean. We found there two gentlemen fishermen, who had come blue fishing, but a dead calm in the morning was not conducive to that sport. So we took them out in the Blue-light, and saved their time, besides saving one of them an expensive course of medical treatment to get clear of a large quantity of bile—the Blue-light

did it. One of them, from New York, whose name I will not mention after the above remark, captured the day we arrived, a twelve pound bluefish, and on a squid of his own invention. It was nothing more nor less than a long shanked hook, with a doll's flannel petticoat on it. I send you one he left with me, but want it next year.

We rolled from all the white cotton tree knots. I had one of Andrew Clerk's best, and it was better than anything else to be got around here; but the petticoat beat it; and he had two strikes to my one from bonito; which, by the way, we find one of the best table fish we get. It is better than blue fish, when fresh, and I wonder at its cheap price in New York markets.

The laboratory is a dismal place this week, and I don't care to write of it—all who have been gone are packing up, and instead of a pleasant microscopic view of a dissected worm, or a lively glimpse of a squirming animal in picric acid, we see only bottles in brown paper wrappers, and learned professors bending all of their energies in the direction of getting another package in an already full box.

From the first I have intended in this, my last letter, to make a summary of our summer's work (no pun intended), but I find that all who have been gone are packing up, and instead of a pleasant microscopic view of a dissected worm, or a lively glimpse of a squirming animal in picric acid, we see only bottles in brown paper wrappers, and learned professors bending all of their energies in the direction of getting another package in an already full box. It is skip to your readers, they have the advantage of me—they can skip it. A long obituary is in bad taste, so I will close. PISCO.

OYSTER CULTURE.—A correspondent of the *Montreal Witness* called on Mr. Wilmot to urge the introduction of oyster culture in the Provinces of New Brunswick, Nova Scotia and Prince Edwards Island. The writer says:—"Could the proprietors of oyster beds in New Brunswick, Nova Scotia, etc., be induced to study the question of laying down beds and breeding the live in a proper manner, and take practical steps to grow them in New York and Baltimore, it would, doubtless, in three or four years, prove greatly to their advantage and to the provinces in general."

THE GRAYLING IN MAINE.

NEW YORK, September 1st, 1874.

EDITOR FOREST AND STREAM:—In the west branch of the Penobscot River, below the Ripogonus Carry, the *Thymallus tricolor* (grayling) is found, intermingled with the speckled trout (*salmo fontinalis*). A fish like your engraving, with the apparent distinguishing dorsal fin and characteristics, rose to the fly. A considerable number, perhaps a dozen, were caught, averaging a half pound. The writer is familiar with the fish in its habits, but being ignorant, at the time, of the shape form and markings of the grayling and its habits, regarded the fish as *an* *genus* to those waters. I have by this mail forwarded to Sam Cole, my guide, of Moosehead Lake, a copy of the FOREST AND STREAM, and will write him for further details, and if possible will procure a specimen. T. B. V.

—We see and hear allusions made from time to time to the project of restocking the Connecticut river with salmon and shad, and intend to keep these columns open to all reliable information upon the subject. This matter, as well as the general one of the preservation of fish and game in the State, is one in which we take a lively interest. We should be glad, if possible, to get at the facts regarding to the fishway at Holyoke, and to keep posted in regard to the fish that have been deposited in the waters above. The success of this undertaking depends upon careful observation of facts. The theory that shad remain at sea until full grown, which has been held, must now be given up. The hook and line with which young shad (one, two and three years old), have been caught at Holyoke this season by fishery men, tells the story. When shad were taken in a 4 1/2 to 5 inch seine, of course the young shad would pass through and their presence in the rivers be unnoticed. The experience of fishermen this season has been that more young shad are taken than old. We are told that Fred Mather has placed about 2,000,000 in the river at Bellows Falls, above the dam, mostly taken within the last few weeks. We hope that the Fish Commissioners are doing their work properly, and that the young shad which have been placed where they will live; for, some day, we want to catch a 15 pound salmon in Vermont with a fly rod. But, as we said before, the whole business requires a careful watching, as its success depends upon the patient observation of facts.—*Rutland Herald*.

Natural History.

POSSIBLY A NEW BIRD FROM OREGON.

On August 1st a party of gentlemen ascended Mount Hood, and after a hard struggle, scaled the summit. When arriving, however, at just that point where vegetation almost ceases, and there is nothing to be found in the rocks and sand but some bunch grass and a few stunted bushes, Mr. D. E. Warner, of Portland, Oregon, shot and captured a very remarkable and rare bird. This new ornithological specimen is said to be only found in the mountainous regions of Oregon. Mr. C. Koop, the taxidermist and naturalist of Portland, has very kindly sent us a full description of the bird:—

Length of bill, 14 inches.
Length of head, 14 inches.
Length of neck, 13 inches.
Length of back, 3 inches.
Length of tail, 41 inches.
From tip of bill to tip of tail, 114 inches.
Wings, outstretched, 12 inches.
Around head and across eyes, 3 1/2 inches.
Around neck, 41 inches.
Around tarsus tip, 12 inches.
Three frontal and one lateral toe, large nails, wings shorter than tail, fourth primary longes.
Fourth primary, 1 inch; third primary, 1 1/2 inches; second primary, 1 inch; first primary, 3 1/2 inches.

The bird has an ash-colored head, neck and breast; wings very dark blue; coverts white tipped; tail white, except the two centre, and the one-half of the adjoining feathers, which are a dark indigo-blue; bill and feet black; head large; eyes prominent; iris yellowish; green cross bill; under bill turns to the right. Six years ago Mr. Roop informs us that he obtained three specimens of this bird far up on the extreme heights of the cascade. Mr. Roop is desirous of having the bird if novel, given a name.

A FIELD DAY IN THE INSECT WORLD.

SEVERAL members of the "Sandwich Naturalists' Association," a recently organized society for popularizing the study of the natural sciences, spent half day recreating, and in searching for entomological specimens for a museum of natural history, which it is proposed to organize in connection with the association. The valley of Little Rock Creek, in Kendall County, was selected as the theatre of operations; a bright little stream, fed by numerous cool springs, which some day near at hand will be stocked with speckled trout (*salmo fontinalis*). Armed with paraphernalia, the committee, the outfit of a naturalist, not omitting chloroform—the party was divided into groups and at once set upon the task of collecting. Let me say at this point never capture even a bug and thrust it into a vial alive, but humanely use chloroform and thus put an end to its ephemeral existence. Remember what the poet says:—

"The man who needlessly sees foot upon a worm," etc.

The true naturalist, like the true sportsman, prompted by humanity, will not inflict unnecessary pain even upon the smallest insect—the minutest of the tiny objects of this division of the animal kingdom.

A more general diffusion of the natural sciences—more especially those which relate to organized beings, far down in the scale of animated nature—will tend to enlarge and exalt our views regarding those tiny creatures, the important place they occupy in the scale of being—their relationship to man—vital and psychological—and of all the vast chain of being which from God began—beast, fish, bird and insect, which no eye can see, or glass can fully comprehend—a microcosm of strange groupings—enough for the grandest intellect to study and ponder over in the little brief period called human life.

Pardon this digression, and I will proceed to say that our rambles and communion with nature were in all respects such as tended to unbend, for the time at least, our minds and thoughts from business pursuits, and the carking cares of life.

Our half day's doings were amply remunerative. We were enriched by the capture of a large number of arch-nide, one species of which closely resemble Her Majesty's *Raft Spider* of England, (*Dolomedes fimbriatus*), which, if not identical, is, at least, a near relative. It is an inch long, of chocolate-brown and orange color. It is remarkable for the manner in which it is engaged in the laudable employment of catching grass-hoppers, which avocation it seemed to enjoy, without the outlay of much labor. Its habitat is marshy land or bogs, which were overgrown with *Eupatorium perfoliatum*, or the Hoosier's puke-weed, to which the weeds were attached. We also obtained several of the *Bufo Americannus*, specimens of *Rana*ids, frogs; and *Hyla*ids, tree toads. There were several species of *Lepidoptera Coleoptera* and *Yoma*, both wasps and hornets, captured. Of reptiles, three specimens were captured; one *Eutania Scutaria*, water garter snake, and two of the *Eutania Sirtalis*, striped snakes, and a singular but beautiful spider, which we can find no name for. The spider is three-eighths of an inch in length, in shape is hastate, the abdomen terminating in two long spines, while near the union of the head with the body, there are two more short spines, the dorsal and anterior ones point out upward from the back, and the lateral ones are equidistant from those of the head and the posterior spines first described. The spinaret is below centrally located and extends downward different from those of any other species, and is one-sixteenth of an inch in length. One of the same variety caught has eight spines, and this feature is very likely a mark of distinction of sex. The back is yellow, dotted with red spots, while the under part is variegated in color fulvous mixed with chocolate color—a very curious arachnid, indeed! Who can tell its name? TELA ARENARIA.

Sandwich, Ill., August 24, 1874.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, NEW YORK, Sept. 8, 1874.

Animals received at Central Park Menagerie for the week ending September 7th, 1874:
Two Hooper Swans, *Cygnus ferus*. Hab. Europe.
Two Snow Geese, *Anser hyperboreus*. Hab. N. America.
Two Snow Buntings, *Lagopus lagopus*. Hab. Northern United States.
Two Mandarin Ducks, *Aix galericulata*. Hab. China.
Four Passenger Pigeons, *Pennisclava passerina*. Hab. S. America.
Three Turquoise Parakeets, *Euphonia pulchella*. Hab. New South Wales.
One black Spider Monkey, *Ateles ater*. Hab. Bolivar.

W. A. CONKLIN.

A BIRD NOT TO BE IMPOSED UPON.

KEY WEST, Fla., August 22d, 1874.

EDITOR FOREST AND STREAM:—In your number of August 13th reference is made to the habit of the "cow hunting" of depositing her eggs in the nests of other birds. I can corroborate the statements of "Bob Beverly" and "R. S. W." as to some of my time in the collection of bird's eggs, and frequently noticed this trait. The cow hunting does not confine herself to the nest of any particular variety, but seems quite indifferent as to the foster mother of her young. This deposit of the eggs is not the worst feature of the case, however, as I have seen cases, and indeed think them usual, where the young of the cow hunting, being as usual thing larger than the legitimate young, have thrown the latter from the nest, usurping the whole, and leaving the proper young to perish on the ground. Sometimes, however, and it is of this that I intended to write, a bird is found that is not so to be imposed upon. At one time while pursuing my search for nests, I was struck by the extreme height of a nest belonging to what is known as the New York State "yellow bird," that is, the one that was made as the "summer yellow bird." On examination I discovered that the nest proper had but the usual depth, while the bottom was at least two and a half inches thick. On removing that which proved to be the upper bottom of the nest, I discovered an egg of the cow hunting, nicely enclosed and covered; again removing a second bottom, a second egg was discovered, and still again under this a third egg. The conclusion was obvious. The yellow bird, having built its nest in the usual way, an egg of the cow hunting was deposited. The plucky yellow bird, not to be imposed upon, rather than to build an entirely new nest, built a fresh bottom over this, only to have a second egg deposited by the same or second cow hunting. Again was the operation repeated, and a third egg was deposited by the despotic, while for the fourth, and the fifth, and the sixth, and the seventh, and the eighth, and the ninth, and the tenth, and the eleventh, and the twelfth, and the thirteenth, and the fourteenth, and the fifteenth, and the sixteenth, and the seventeenth, and the eighteenth, and the nineteenth, and the twentieth, and the twenty-first, and the twenty-second, and the twenty-third, and the twenty-fourth, and the twenty-fifth, and the twenty-sixth, and the twenty-seventh, and the twenty-eighth, and the twenty-ninth, and the thirtieth, and the thirty-first, and the thirty-second, and the thirty-third, and the thirty-fourth, and the thirty-fifth, and the thirty-sixth, and the thirty-seventh, and the thirty-eighth, and the thirty-ninth, and the fortieth, and the forty-first, and the forty-second, and the forty-third, and the forty-fourth, and the forty-fifth, and the forty-sixth, and the forty-seventh, and the forty-eighth, and the forty-ninth, and the fiftieth, and the fifty-first, and the fifty-second, and the fifty-third, and the fifty-fourth, and the fifty-fifth, and the fifty-sixth, and the fifty-seventh, and the fifty-eighth, and the fifty-ninth, and the sixtieth, and the sixty-first, and the sixty-second, and the sixty-third, and the sixty-fourth, and the sixty-fifth, and the sixty-sixth, and the sixty-seventh, and the sixty-eighth, and the sixty-ninth, and the seventieth, and the seventy-first, and the seventy-second, and the seventy-third, and the seventy-fourth, and the seventy-fifth, and the seventy-sixth, and the seventy-seventh, and the seventy-eighth, and the seventy-ninth, and the eightieth, and the eighty-first, and the eighty-second, and the eighty-third, and the eighty-fourth, and the eighty-fifth, and the eighty-sixth, and the eighty-seventh, and the eighty-eighth, and the eighty-ninth, and the ninetieth, and the ninety-first, and the ninety-second, and the ninety-third, and the ninety-fourth, and the ninety-fifth, and the ninety-sixth, and the ninety-seventh, and the ninety-eighth, and the ninety-ninth, and the hundredth, and the hundred-first, and the hundred-second, and the hundred-third, and the hundred-fourth, and the hundred-fifth, and the hundred-sixth, and the hundred-seventh, and the hundred-eighth, and the hundred-ninth, and the hundred-tenth, and the hundred-eleventh, and the hundred-twelfth, and the hundred-thirteenth, and the hundred-fourteenth, and the hundred-fifteenth, and the hundred-sixteenth, and the hundred-seventeenth, and the hundred-eighteenth, and the hundred-nineteenth, and the hundred-twentieth, and the hundred-twenty-first, and the hundred-twenty-second, and the hundred-twenty-third, and the hundred-twenty-fourth, and the hundred-twenty-fifth, and the hundred-twenty-sixth, and the hundred-twenty-seventh, and the hundred-twenty-eighth, and the hundred-twenty-ninth, and the hundred-thirtieth, and the hundred-thirty-first, and the hundred-thirty-second, and the hundred-thirty-third, and the hundred-thirty-fourth, and the hundred-thirty-fifth, and the hundred-thirty-sixth, and the hundred-thirty-seventh, and the hundred-thirty-eighth, and the hundred-thirty-ninth, and the hundred-fortieth, and the hundred-forty-first, and the hundred-forty-second, and the hundred-forty-third, and the hundred-forty-fourth, and the hundred-forty-fifth, and the hundred-forty-sixth, and the hundred-forty-seventh, and the hundred-forty-eighth, and the hundred-forty-ninth, and the hundred-fiftieth, and the hundred-fifty-first, and the hundred-fifty-second, and the hundred-fifty-third, and the hundred-fifty-fourth, and the hundred-fifty-fifth, and the hundred-fifty-sixth, and the hundred-fifty-seventh, and the hundred-fifty-eighth, and the hundred-fifty-ninth, and the hundred-sixtieth, and the hundred-sixty-first, and the hundred-sixty-second, and the hundred-sixty-third, and the hundred-sixty-fourth, and the hundred-sixty-fifth, and the hundred-sixty-sixth, and the hundred-sixty-seventh, and the hundred-sixty-eighth, and the hundred-sixty-ninth, and the hundred-seventieth, and the hundred-seventy-first, and the hundred-seventy-second, and the hundred-seventy-third, and the hundred-seventy-fourth, and the hundred-seventy-fifth, and the hundred-seventy-sixth, and the hundred-seventy-seventh, and the hundred-seventy-eighth, and the hundred-seventy-ninth, and the hundred-eightieth, and the hundred-eighty-first, and the hundred-eighty-second, and the hundred-eighty-third, and the hundred-eighty-fourth, and the hundred-eighty-fifth, and the hundred-eighty-sixth, and the hundred-eighty-seventh, and the hundred-eighty-eighth, and the hundred-eighty-ninth, and the hundred-ninetieth, and the hundred-ninety-first, and the hundred-ninety-second, and the hundred-ninety-third, and the hundred-ninety-fourth, and the hundred-ninety-fifth, and the hundred-ninety-sixth, and the hundred-ninety-seventh, and the hundred-ninety-eighth, and the hundred-ninety-ninth, and the hundred-thirtieth, and the hundred-thirtieth-first, and the hundred-thirtieth-second, and the hundred-thirtieth-third, and the hundred-thirtieth-fourth, and the hundred-thirtieth-fifth, and the hundred-thirtieth-sixth, and the hundred-thirtieth-seventh, and the hundred-thirtieth-eighth, and the hundred-thirtieth-ninth, and the hundred-thirtieth-tenth, and the hundred-thirtieth-eleventh, and the hundred-thirtieth-twelfth, and the hundred-thirtieth-thirteenth, and the hundred-thirtieth-fourteenth, and the hundred-thirtieth-fifteenth, and the hundred-thirtieth-sixteenth, and the hundred-thirtieth-seventeenth, and the hundred-thirtieth-eighteenth, and the hundred-thirtieth-nineteenth, and the hundred-thirtieth-twentieth, and the hundred-thirtieth-twenty-first, and the hundred-thirtieth-twenty-second, and the hundred-thirtieth-twenty-third, and the hundred-thirtieth-twenty-fourth, and the hundred-thirtieth-twenty-fifth, and the hundred-thirtieth-twenty-sixth, and the hundred-thirtieth-twenty-seventh, and the hundred-thirtieth-twenty-eighth, and the hundred-thirtieth-twenty-ninth, and the hundred-thirtieth-thirtieth, and the hundred-thirtieth-thirtieth-first, and the hundred-thirtieth-thirtieth-second, and the hundred-thirtieth-thirtieth-third, and the hundred-thirtieth-thirtieth-fourth, and the hundred-thirtieth-thirtieth-fifth, and the hundred-thirtieth-thirtieth-sixth, and the hundred-thirtieth-thirtieth-seventh, and the hundred-thirtieth-thirtieth-eighth, and the hundred-thirtieth-thirtieth-ninth, and the hundred-thirtieth-thirtieth-tenth, and the hundred-thirtieth-thirtieth-eleventh, and the hundred-thirtieth-thirtieth-twelfth, and the hundred-thirtieth-thirtieth-thirteenth, and the hundred-thirtieth-thirtieth-fourteenth, and the hundred-thirtieth-thirtieth-fifteenth, and the hundred-thirtieth-thirtieth-sixteenth, and the hundred-thirtieth-thirtieth-seventeenth, and the hundred-thirtieth-thirtieth-eighteenth, and the hundred-thirtieth-thirtieth-nineteenth, and the hundred-thirtieth-thirtieth-twentieth, and the hundred-thirtieth-thirtieth-twenty-first, and the hundred-thirtieth-thirtieth-twenty-second, and the hundred-thirtieth-thirtieth-twenty-third, and the hundred-thirtieth-thirtieth-twenty-fourth, and the hundred-thirtieth-thirtieth-twenty-fifth, and the hundred-thirtieth-thirtieth-twenty-sixth, and the hundred-thirtieth-thirtieth-twenty-seventh, and the hundred-thirtieth-thirtieth-twenty-eighth, and the hundred-thirtieth-thirtieth-twenty-ninth, and the hundred-thirtieth-thirtieth-thirtieth, and the hundred-thirtieth-thirtieth-thirtieth-first, and the hundred-thirtieth-thirtieth-thirtieth-second, and the hundred-thirtieth-thirtieth-thirtieth-third, and the hundred-thirtieth-thirtieth-thirtieth-fourth, and the hundred-thirtieth-thirtieth-thirtieth-fifth, and the hundred-thirtieth-thirtieth-thirtieth-sixth, and the hundred-thirtieth-thirtieth-thirtieth-seventh, and the hundred-thirtieth-thirtieth-thirtieth-eighth, and the hundred-thirtieth-thirtieth-thirtieth-ninth, and the hundred-thirtieth-thirtieth-thirtieth-tenth, and the hundred-thirtieth-thirtieth-thirtieth-eleventh, and the hundred-thirtieth-thirtieth-thirtieth-twelfth, and the hundred-thirtieth-thirtieth-thirtieth-thirteenth, and the hundred-thirtieth-thirtieth-thirtieth-fourteenth, and the hundred-thirtieth-thirtieth-thirtieth-fifteenth, and the hundred-thirtieth-thirtieth-thirtieth-sixteenth, and the hundred-thirtieth-thirtieth-thirtieth-seventeenth, and the hundred-thirtieth-thirtieth-thirtieth-eighteenth, and the hundred-thirtieth-thirtieth-thirtieth-nineteenth, and the hundred-thirtieth-thirtieth-thirtieth-twentieth, and the hundred-thirtieth-thirtieth-thirtieth-twenty-first, and the hundred-thirtieth-thirtieth-thirtieth-twenty-second, and the hundred-thirtieth-thirtieth-thirtieth-twenty-third, and the hundred-thirtieth-thirtieth-thirtieth-twenty-fourth, and the hundred-thirtieth-thirtieth-thirtieth-twenty-fifth, and the hundred-thirtieth-thirtieth-thirtieth-twenty-sixth, and the hundred-thirtieth-thirtieth-thirtieth-twenty-seventh, and the hundred-thirtieth-thirtieth-thirtieth-twenty-eighth, and the hundred-thirtieth-thirtieth-thirtieth-twenty-ninth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-first, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-second, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-third, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-fourth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-fifth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-sixth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-seventh, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-eighth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-ninth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-tenth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-eleventh, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-twelfth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-thirteenth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-fourteenth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-fifteenth, and the hundred-thirtieth-thirtieth-thirtieth-thirtieth-sixteenth, and Woodland, Lawn and Garden.

CULTIVATION OF THE TULIP.—(Natural order, Tulipaceae).

WE come now to a new peculiarity of cultivation of a very large, highly picturesque, and beautiful flower of the English, German, and American gardens. As a general thing, all seedlings of tulip bulbs, in their first time of blooming, produce but a plain, clear flower of one single color, white, or markings all the upright portions of the flower being a plain color, called selfs, and without any variation of color of any kind. These self colors are sometimes very handsome. I have had from the first blossom of a new bulb a flame color of a beautiful hue, and the second year the blossom from this identical bulb has been gorgeously striped with yellow. They will sometimes run for three years of the first color, and also retain their long stems and single scarlet hue. The spots and vermillions often show their first colors in this manner. These will sometimes flower for years without variation, and then break out into one of the most unexpected stripes or spots. Here is where our named varieties come from. Any one who grows a valuable striped tulip from the single colored bulb has the right to name it if he sells the plant he originated. Fabulous prices have been obtained for these striped bulbs when once the colored stem fixed by several years of cultivation. In this manner, too, are raised very many unnamed, beautiful plants, which sell quite low, for the reason that they have multiplied greatly in the breeding state, and have been carelessly distributed all over the German tulip grounds. By this careless process—if I may be allowed to call it a process—those to whom justly belonged the privilege of naming this plant have forfeited their right. This is the reason that this result, that we find many different synonyms are one and the same thing. One peculiarity I have often noticed in my own beds is that twenty, and perhaps more, of a sort, will come up, and scarcely any two of them are alike. Some who are esteemed good judges may say they can recognize them, but we cannot. These peculiarities are considered as lessening the standard value of the choice bulb, while they may otherwise add much to the charms of tulip cultivation.

I have before me a letter from a lady of Philadelphia, who says:—"Please tell me the best kind of soil for my tulip beds, and the form in which I can grow them with the least care and obtain a fine exhibition of flowers?" We answer:—Procure two barrels of rich loam from an old pasture, say three inches of the top, throw it in a heap, and have it frequently stirred until fairly rotting. Then get three barrels of decayed leaf mould from the woods, one half barrel of a clean grit sand, and mix these ingredients together. Now you will proceed to make your tulip beds. As you wish for an arrangement and form that require little care, and give a fine effect, you will, if possible, make your bed to run north and south. Make your drainage perfect. Tulips do not love water at their roots. We usually have our beds made four feet wide, and we always get the three feet six inches in depth, and the compost spoken of is cast into this bed, filling it until within two inches of the top. Now let your bed, thus prepared, rest three days to settle before you plant your tulips. Sift the soil remaining with a coarse wire sieve or screen into your bed until it rises in the middle two inches higher than the edges of the bed, which should be even with the top ground. This bed, thus lightly constructed, will be in the middle three inches higher. You will now proceed with the planting of your bulbs. About seven rows will give you ample room for your plants to develop their true beauty. The bulbs are to be pressed into the soil a little, and soil to the depth of three inches placed directly over them. Be very careful not to let any stones or obstructions lie over the bulb. Some of our successful tulip growers add to the soil covering the bulb an equal quantity of half rotted sawdust. We like the plan, have tried it, and recommend it as safe. The bulbs should always be planted according to their height and color. Those growing from fifteen to eighteen inches high to occupy the outer rows, the second rows, on each side, are those growing two feet, and others growing two feet six inches should be placed in the three centre rows. You will now leave your bed until the approach of frost, when you will air it as much as you please, protecting them from freezing by means of mats or shelter. Coverings of boards are sometimes used to advantage, placed upon joists laid along the sides, and removed as soon as possible in the spring, so that your bulbs may draw up strong. From the 7th to the 10th of April always remove the coverings of your beds. As the spikes begin to open and develop the leaves they will need especial protection, if at any time. A frame resting upon four stout posts, set at each corner of your bed, upon which a light canvass is tightly drawn, is a very pretty protection; the posts are to be six feet high to protect them from too hot a sun. I sometimes have covered the tops of my beds with one inch of sand. This is a fine improvement, and gives a pretty look to the flowers. This, to the grower for profit, or to sell again, is valuable, as many by this means label their bulbs when they take them from the last of July to fall, when the leaves are brown or yellow. This is the time to lift the bulbs, dry them, wrap in papers, and place in drawers for next season.

For planting, the best time is from the 20th of October to the close of the fall. If you sow seed, remember that, you want just such a bed as the above. Sow the seed in spring or autumn. Of the tulip we have two classes. The first class are the double, and the second class are the single. The double are called roses, lyblyomens, and bizarres. The roses have white grounds and markings, are mostly of crimson, pink, or scarlet, distinct and pretty, and always a desirable garden flower. By the term lyblyomens we mean those having a white ground, with markings of purple, lilac, and black. The bizarres have a yellow ground, and these break out into many different colored markings. Selfs are those which give one color, such as white and yellow, and rarely show any inclination to break into other colors. Then we have the early or ground tulips in many varieties, always pretty, and, being naturally very hardy, induces many to grow them who otherwise would forego tulips altogether. These cost little, and are the most brilliant of this flower. So easily are they cultivated that they may be placed near the four foot garden walls, and in the sunny side. Dig a pit one foot wide, two feet deep, and fill in with good soil; set out three rows of early tulips—reds, whites, and yellows—and await the opening

spring. Now you reap the reward of your fifty cent investment. Are they not beautiful? Truly we knew you would find it out. Single tulips are always a fine sight, and there are to be had in the market thousands of bulbs for one dollar, and some for fifty cents a dozen which contain many fine named varieties of much value, but the labels having been lost they are thrown in with the unnamed varieties, and singles and selfs are sold for a trifle per dozen. The writer purchased for one dollar three dozen of these kinds of bulbs, and upon their blossoming in the following spring he obtained four very fine and valuable tulips, one that had already been in the market for several years for five dollars the single plant. Aside from the small price asked for these bulbs without a name, you will find, if you are only an amateur florist, the lessons unfolded in these bizarres of different stripes and grounds a very valuable botanical catechism of just the kind of knowledge you now need.

The culture of these bulbs (and they grow in many ornamental forms readily) will be found a good study for our young florists. One rule you can adopt as a guide. Whatever situation and culture gives you a good hyacinth will give you a good tulip. In pots, vases, and even in hanging baskets the tulip makes a fine show, and in the hands of our flower-loving ladies may be made to assume numerous pleasing and original aspects.

We close this paper, already somewhat long, with the names of a few old favorites, always true to their nomenclature, viz.:—Admiral de Constantinople, red, finely striped with orange; large yellow, striped with red; Von Baden, crimson, striped with yellow; Perfecta, yellow, scarlet, and green. To these you will add five mixed doubles, at about seventy-five cents per dozen. As the season for the sale and planting of these fine bulbs will soon be at hand, at the earnest request of some half dozen readers of the FOREST AND STREAM we have given them these carefully written observations of our own manner of successfully cultivating most of the varieties of the tulip.

N. B.—Inquiries relating to this department always promptly answered whenever accompanied with a reliable name; never without. OLLIFORD QUILI.

TREE PLANTING IN NEBRASKA.—There is something impressive, even poetical, in the way Nebraska is working out the problem of how to cover her broad hands with trees. Some years ago Hon. J. Sterling Morton, of Otce county, conceived the idea of making tree planting a kind of holiday, uniting work with pleasure. This gentleman founded what is called in Nebraska, Arbor Day. On the second Wednesday of each April every farmer throughout the State was requested to plant a single tree at least, or as many more as he felt inclined to. On the first Arbor Day of 1871 two millions of trees were planted. This year the State Board of Agriculture endorsed the original plan, and have even recommended that the day be made a legal holiday. Each owner of land is recommended to plant his tree, and the State Board has agreed to award a prize to the person planting the largest number. One industrious man took the prize this year, having set out no less than 27,800 trees. Dr. Holmes once told a strange story of how all the world agreed to shout out at the same time, in order that the people in the moon might hear it. As the hearing power of the inhabitants of any other planet might not be as sensitive as their seeing faculties, perhaps in time Nebraska, all covered with forests, may show to other worlds a physical aspect of a novel character. But jesting aside, if only this experiment could be carried through for a limited series of years we might find that certain modifications of climate most beneficial to man and agriculture would take place. There is something very grand, even noble, in a people devoting a portion of their time and energy to producing a growth of timber, which, if it benefits them in their life time but very little, may be of incalculable advantage to generations coming after them. People in Nebraska are striking a balance with the future. It would not be amiss if the dwellers in the older States, imitating younger Nebraska, should institute Arbor Days.

The Kennel.

GORDON SETTERS.

PHILADELPHIA, September 4th, 1874.

EDITOR FOREST AND STREAM:—

The opinion of Mr. Theodore Morford, of Newton, N. J., as well as that of Mr. Horace Smith, of Philadelphia, in regard to the source from whence comes the peculiar black and tan color of the Gordon setter, is in accord with mine, and I quote a portion of Mr. Morford's letter to me in relation to it. He says:

"In regard to the wherfore of the black and tan color of the Gordon I undoubtedly comes from the black and tan hound. My knowledge of the matter I received from the gentleman who presented me with the imported Gordon bitch Fido. He said that the Duke of Gordon was the breeder of the black and tan color, and stated to me that the Duke of Gordon greatly admired the color of the black and tan hound, and knowing that the hound, when it first caught scent paused for an instant and then gave chase, conceived the idea that by crossing it with the setter he could obtain the color he wished and add endurance by so doing."

Mr. Smith has owned, at different times, setters of the Webster stock, and has never doubted the hound cross in them. As I wrote you last week, it is not probable the Duke of Gordon would look for color, nose and endurance by the introduction of Scotch odd blood in his breed, and where we know he used the hound in the make up of the "Webster," it is not feasible, at least, to suppose he practiced this cross before."

With all due deference to Mr. Morford, Horace Smith and our friend "Homo," we beg respectfully to state that that the breed of the Black and Tan Setter existed in England before the present head of the Gordon family was born. It is true that Lord Gordon admired the color, but this admiration was simply a fancy, not as a mark of a better or improved strain, although he has successfully bred some splendid specimens of the setter. The color of the true Gordon is not black and tan, as usually understood; it is black and white, with tan cheeks and eyebrows, and spotted down the legs. The Webster dogs Ruke and Rachel, were an experiment of Lord Gordon's, and made to order, as he was

so devoted to the black and white harmonizing with the rich golden tan. They were full brother and sister, and in color black, white and tan; the great preponderance being black and white, with large, clear tan spots over the eyes; tan on each side of the jaw and balance of the face; tan inside of all four legs; black and tan at the root of the tail, with a long, white, silky flag at the extremity; all the rest of the body black and white in large patches. The one-eighth fox hound, which was bred in the Webster setter, was as we understand from a gentleman who afterwards owned and shot over Rachel, purposely crossed in this manner to suit the Americans. That it is the opinion of several of the best authorities on dog-breeding in England that the original production of the black and tan colors in the setter was formed by the amalgamation of the old black wavy-coated spaniel and the red Irish setter, was thoroughly tested by a gentleman who writes to the *Fancier's Gazette* and states: "Having heard the 'Gordon Setter' was originally a cross between the black spaniel and red setter, I obtained a red dog and black bitch as well bred as I could get; the result was a very handsome and perfectly marked black and tan, well feathered on fore legs and tail—the hind legs lightly feathered and coat wavy. When about eighteen months old I trained him with much difficulty to take the water." If so much can be accomplished in the first cross, the wavy coat might easily be taken out on the principle which Mr. Laverack adopts.—Ed.]

OPERATION ON A CLUMBER SPANIEL.

STRAFFORD, CONN., August 25th, 1874.

EDITOR FOREST AND STREAM:—

I have lately returned from a visit to the interior of this State. While absent I heard of the following instance of the instinct of the dog which you are at liberty to utilize under the proper head in your paper: "The owner of a Clumber spaniel, six years old. A few months since this dog had a tumor on his hind-quarters, so large and protruding as to push aside and disturb the natural position of his tail; which he was much emaciated and weakened by its effects. The tumor had been opened twice before with a pen knife (I believe not wisely, as not being natural), but to the evident relief of the animal. "One day," says my informant, "the dog's master, 'the dog dandy' my attention to his condition by rubbing himself against my legs as I was at work at my shop bench. After awhile I comprehended the meaning of this action. I took him out of doors and directed him by word of command 'drop'—to lay down on a wide plank. He retained the position until I went to the neighboring wood pile, got a stick to place under the board, thereby raising his head, and whilst he extended himself without struggling, and with but a slight vocal utterance of pain when the knife was used, awaiting patiently the termination of the operation and the cleansing of the wound afterwards. The result was successful, and the animal soon recovered his usual wonted health, strength and natural appearance, and when I saw him a cleatix alone marked the place of the operation and served as the act for this story of his suffering and of his escape. I can corroborate the statement of your correspondent 'O. H. I.' in your issue of the 3d inst., with reference to a dog pointing the land turtle or tortoise from my own knowledge. Very many years ago I brought over with me from England a brace of pointers from Sir Thomas Stanley's kennel, near Liverpool, purchased from his keeper, after witnessing their performance in the field. They were of both sexes, and had been used for breeding purposes. The dog quite old—too much so, as afterwards found to bear a change of climate, yet having all the recommendations of game, style, and breeding, I was fain to select. He died too soon to realize my anticipations of his excellence in the field, or to benefit by his use in the stud. This veteran surprised and annoyed me much at first by his repeated drawing on and pointing at the turtle, and not until after constant ratings did he find out the character of the game and discontinue this habit. The bitch, high couraged and staunch, proved herself worthy of her lineage and education. "SENEX."

CORRECTION.

EDITOR FOREST AND STREAM:—

Permit me to correct an error of mine, caused in copying the pedigree of Mr. Theo. Morford's young bitch Queen, which was published in the FOREST AND STREAM of the 3d inst. Rodman's "Bob" was incorrectly designated imported, and as all pedigrees should be guaranteed reliable, I am unwilling to have that of Mr. Morford's stock recorded unless perfectly correct. "HOMO."

JUDGING ON THE SHOW BENCH.—NO. 7.

THE DANDIE DINMONT TERRIER.

HEAD long and powerful; ears pendant, about three inches long and almost V-pointed; jaws strong; eyes brown and piercing; neck strong and muscular; shoulders rather low; chest wide, black, long, and level; fore-legs strong-boned and full of muscle; tail carried gaily, and slightly feathered; coat at bottom pily, outer hard and wiry; general outline "vermin-looking." Several colors are admissible—blue-greys, mustard, reddish-brown, or grey-pepper.

POINTS IN JUDGING.

Head	25	Legs	10
Coat	25	Feet	8
Symmetry	25	Stem	10-100

THE SKYE TERRIER.

Head long, but outline smothered with coat of a long and wiry texture; eyes, with set of good ivory; shoulders wide; jaws powerful, with a set of good ivory; shoulders wide; back long; stern well flagged and carried straight or nearly so on remarkably short legs; in fact, when in full coat, without the dog is moving, you cannot see he has legs at all. Coat long and hard, free from crimpiness, but straight and lying flat, equally divided down the back.

This dog, as now exhibited at the first Scotch shows, has too much the appearance of a Scotch terrier, and is not a SKE. There is another strain, termed prick-earred. The only great difference is in the ears being carried erect, which certainly gives it a more jaunty and brighter appearance.

Color may be black, black grizzly, dark grey, dark brown or fawn; pure white is rare.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Land-locked Salmon, *Salmo gairdneri*. Salmon trout, *Salmo conflatus*. Black Bass, *micropterus salmoides*, *micropterus nigricans*. Striped Bass, *Morone chrysops*. Sea trout, *Salmo maculatus*. Whitefish, *Coregonus solitarius*. Weakfish.

Trouting is permitted in Maine and Canada until October first. Salmon fishing with fly is permitted in New Brunswick until September 15. Land-locked salmon and salmon trout in season till September 15th.

FISH IN MARKET.—After holding off and on, appearing capriciously here for a day, and surfeiting away the day after, blue fish have at last come in to the New Jersey shore for good, the catch having been considerable. We may expect blue fish in larger schools before long, but the biggest and fattest are the October fish. It is at that time that a stock of blue fish will be put in the refrigerators for winter use. They are worth now seven to eight cents. We had one weighed of eleven and a half pounds, dressed; he must have been a fourteen pound fish when alive. Striped bass are still scarce, and less in quantity than they should be for the season. Price twenty-five cents. Spanish mackerel more plentiful, coming in from the Long Island shores, and worth thirty-five cents. The big run is over, however. Salmon are not abundant. The male fish with ugly deformed heads, all battered and scarred, do not look good to eat. These fish of both sexes are now out of condition, and should not be exposed for sale. Price fifty cents, and not in demand. They come from the Mirimichi, Halibut from the Georges abundant, and selling for twenty cents. Cod fish in fair quantity, worth eight cents. Sheephead from Barnegat not plentiful. Worth twenty-five cents. Porbeys scarce, but weak fish abundant, and selling at ten cents. Now the Nook lobster is coming in; rather small but fine flavored, and worth ten cents. Soft crabs, wonderfully good, are now gladdening Long Island shores, and are worth \$1.25 per dozen. We noticed particularly at Middletown & Carman's, very fine prawns. These delicate crustaceans represent the tail of the colored citizens along the Carolina and Georgia shores. The Lord sends down South first blackberries and wild plums, and prawn and shrimp, then watermelons, and crab "all de time," and what poor cuffy could do without them, no man can tell. We felt grateful for all southern contributions to our market. Terrapin season just coming on. This most delicate creature sells for \$12 the dozen counts; that means a terrapin is a count, providing he measures under his shell just six inches; if less than that, he loses his title of nobility, and may be called a cullin—or a snob terrapin. Purple plenty, worth eighteen cents. Scallops just in, and selling at \$2 a gallon.

A letter from Charles Hadlock, Esq., Managing Editor of this paper, dated North Branch Muskoka River, Sept. 5th, and received just as we go to press, says:—"I am just out of camp, and start for Lake Couchiching in an hour. I killed a deer the first day out, and have started nine with dogs, but they won't take the water—or rather, the lakes and streams are so numerous that no single one can be depended upon. When we learn the runways thoroughly, we can be more successful. Deer tracks on banks of Muskoka River are as thick as footprints in a cattle yard, and either bound or "jack" will fetch them; but still hunting, until snow and barren trees, is impossible, on account of the thickness of the coverts where the deer lie, although the forests for the most part are not very thickly undergrown with brush. Muskoka River is wide, full and deep, with thirteen falls in a distance of thirty miles. Have visited six of them. Trout large and abundant, and in splendid condition, and not yet collected at falls and mouths of cold brooks. Spawn is incipient, and about three weeks later than in New York. A few ducks on the river. We have hauled our canoe eighteen miles through the woods on a two-wheeled rig. The lakes of Muskoka, Rosseau and Couchiching are very beautiful and studded with innumerable islands. Hotels very comfortable. Guides obliging, but not quite as well up in their work as they should be. The sportsman must be able to direct to all things—oil up, steam up and pull the levers."

—From our attentive correspondents at Barnegat and Waretown we learn that bluefish are again abundant. Sheephead are more plentiful. General Oakley, of Elizabeth, N. J., caught eight weakfish running from ten to three and a half pounds off the "Stone Piles." One boat took eighty in "Mud Channel." Sea bass small and scarce; striped bass season opening favorably—forty-nine taken on Tuesday at the "Great Ledge," one weighing seven and a quarter pounds. Richard Grant, one of the keepers of the Light House at the inlet took thirty black fish, nine weighing less than two, and averaging three pounds.

—At Twin Lake Mr. W. M. Cole, of Brooklyn, and Mr. Frank Cooper, of Delhi, N. Y., were fishing in the lake on Saturday last, and made a fine catch of black bass and pickerel. The black bass fishing is likely to continue excellent for sometime to come. Very good accommodation can be had at the house of Mr. F. F. Cooper. [See advertisement.]

—G. F. Benson, with two friends, caught seventeen black bass in Lake Pepin, Minn., in half a day, of the following weights: one of 7 pounds one ounce, one of 6½ pounds, one of 5½, one of 4½, three of 4, and ten running from 2 to 4 pounds. Mr. B. and Major VanVleet and H. Center, of Lake City, caught thirty-one black bass, weighing 105½ pounds in one day's fishing in September of last year.

—A correspondent of an inventive turn of mind gives us the following pleasant account of how he discovered a

device for enluring mosquitoes. He was one of a party on Smith's lake, and had fought, bled, and almost died in the wilderness from mosquito bites, when he set to work to obtain relief, and believing his invention of practical value, we here produce an engraving of it.

The way the original "model" was made is quite amusing, and we give it in the inventor's own words:—

We took a square rubber blanket, and cut out a cap in shape similar to the soldier's hat, with oval opening large enough to allow plenty of room for the face, and with cape about eight inches long. Then we took a wickhopple stick, bent it round, and sewed it in the rim of the opening. We should have used wire if we could have obtained it, but did not have time to run down to the store for it, as it was about sixty miles from us. Then with some hoop stick wire, which some unfortunate female had left in our camp, we hoveled out a piece from the forehead to the chin and then transversely, sewing it firmly in its place; then over this a covering of mail, or netting, and your cap is complete. This is the only thing that I have found to keep off insects, and insure a good night's sleep. You can lie in any position. It is not uncomfortable, and serves also as a night cap. The cape should be securely tucked under the coat collar, and held snugly around the throat. By using a very fine veil over the opening of your cap the punkies can be excluded in the same way. I think old silk would be better than rubber cloth. We all tried this last summer, and I used my old one this summer, and money would not buy it if I could not get another one.

SCORES OF SALMON TAKEN ON THE NEPIGON.—We have the following from our friend Thaddeus Norris:—

Editor Forest and Stream:—I read the following scores which anglers I fitted out for that river this summer. The gentleman who sends me the first scores says:—"I never shall forget the sensation of mingled terror and delight as I cast my fly (a silver gray) into 'the keg' and it was seized by a hungry little eight pounder. He looked then enormous (for a four ounce trout was the heaviest I had ever taken with a fly, and from kept saying, 'Keep your rod up,' 'let him run,' 'dip your rod,' etc. My whole frame shuddering, flies biting, perspiration running, all combined to fix in my mind my first salmon. My score, which I herewith enclose, shows that I went on during the day, and afterwards until the morning of the 22d, when I took ten splendid fellows off Cooper's Point, at the Grand Falls, before breakfast, and half of them with a broken reel, broken spring, and no click."

BARNEAT FALLS, NEPIGON RIVER, 1874.

*Only two hours fishing.

Then follows the score of two other gentlemen—Messrs. M. and T.—at the Chain of Rocks and Grand Falls, on the same river:—

August 20th.—M. took two fish, weighing 12½ and 10 pounds, and M. took one, weighing 11½.

August 21st.—M. took four fish, weighing 8½, 12½, 17, 10, and T. took three, weighing 14, 12½, 10.

August 22nd.—M. two, weighing 12, 10, and T. two, weighing 7½, 14.

August 23rd.—M. eleven, weighing 7½, 8½, 9, 11, 12½, 11½, 9, 12, 10, 10, and T. four, weighing 14, 12, 8, 8.

August 24th.—M. two, weighing 8½, 7½, and T. two, weighing 10, 8½.

August 25th.—M. three, weighing 10½, 14, 26, and T. one, weighing 8.

August 26th.—M. two, weighing 11, 10½, and T. one, weighing 8½.

The river is the most wonderful one for numbers of fish I have seen, and from all accounts it holds more fish than any in Canada save the Nahquah, and were it not stopped from June 15th to September 15th by excessive regularity the fishing would be splendid to late comers. In order to catch the steamer leaving Shediac on Tuesday, you are obliged to start from New York on the previous Friday night, and it usually rains a week before you get to the river. On the way up we stopped for a day on the Tahashan. The big pool at the mouth of the big Escudaciel had been netted, and when we had expected to make our big haul for trout we obtained but six. However, we killed eighty-eight, weighing 120 pounds, which was pronounced poor fishing for the Tahashan.

J. R. M.

—From a private letter just received from Henry O. Stanley, Esq., one of the Commissioners of Fisheries for the State of Maine, we extract as follows:—

Editor Forest and Stream:—

I see some mistakes in your paper in regard to the close time for trout and land-locked salmon fishing in Maine waters. For the benefit of the angling fraternity, I would state that the close time on the Rangely waters, above the outlet of Umbagog Lake, commences October 1st and ends March 1st. On Moosehough, October 15th, ends March 1st. Upper St. Croix, Grand Lake, and lakes above, September 15th, ends March 1st. All other waters in the State, I believe, 1st of October to 1st of February. I have just returned from a visit to Grand Lake and the lakes above, being the best waters of the St. Croix River. There are some twelve or fifteen large lakes above Grand Lake stream. All contain land-locked salmon, trout, and tope; also plenty of pickerel and white perch. The best season for salmon fishing is in June. There is no good fishing in the fall until after the 15th of September, which is close time. These lakes are easy of access by of Calais and Princeton to Grand Lake, or by way of the R. and N. A. Railroad from Bangor to Wilm, then stage

twenty miles to Springfield and Duck Lake, where you can take a canoe and go to any of the chain of lakes you wish, and down the St. Croix River to Calais and Eastport if you choose. The whole territory about these lakes is wilderness, and sportsmen are not likely to be troubled by too much company.

"SQUIDDING."

BARNEGAT, N. J., August 31, 1874.

EDITOR FOREST AND STREAM:—

Blue fishing has carried the palm in our waters this season, and we baffle the expressed conviction of many who have entered with zest and enthusiasm upon this exciting sport, when we state that tawling for snapping mackerels is a pastime, to say the least, unequalled by any sport in the whole category of pleasures laid down as the rule of sea sports. The gratification afforded amateurs by the abundance and gamey nature of the fish has been in the past a source of gratification and profit to the yachtsmen, who are ever ready to conduct visitors to the favorite haunts of fish and fowl. Next in order comes the wary sheephead, to capture which requires skill and patience; but if success crowns the efforts of the angler he is amply rewarded, for no fish that swims, in the estimation of connoisseurs, may be deemed superior, and indeed it has few peers, especially when served up by mine host of the Clarence or the Mullen House, where the guest will ever find ready welcome and abundant provision for the wants of the inner man. At the present writing immense numbers of weakfish are being caught, while the catch of sheephead is about the average. This kind of sport will continue till cold weather admonishes the sealy customers that it is time to seek a warmer climate. Next in order will commence the season for wild fowl shooting, beginning in October. Millions of these migratory birds annually alight in the waters of our bay, and our gunners have ever on hand all kinds of decoys to assist sportsmen in the capture of this sort of game.

EDWARD K.

A LINE FROM SEBEC LAKE.

AMHERST, MASS., September 5th, 1874.

EDITOR FOREST AND STREAM:—

In accordance with your kind suggestion, I have been spending the last two weeks in camping out on the shores of Sebec Lake, Maine, and I owe you many thanks for your kindness in telling me of the place. Everything was found even better than you led me to imagine, except the salmon fishing, which was not of the best. The excellent sport afforded by the shooting, however, fully counterbalanced the poor fishing. Ducks, geese, and rabbits were found in sufficient quantity to more than "keep the pot boiling." I must not condemn all the fishing in the lake, however, because the salmon were not accommodating enough to be caught, for never before have I seen such beautiful pickers as those taken by my party. Some of the largest weighed in the vicinity of four pounds, and none were smaller than a pound and a half. We visited several times the ponds owned by Mr. J. W. Woodard, and Mr. J. W. Woodard, where some 250 lbs salmon are awaiting the "stripping" process.

Never before did two weeks pass away so quickly or pleasantly to me as did the last, and it was with regret that we "struck our tents" for Amherst. Your suggestions as regards a pleasant place to camp out in have proved so good that if I am ever permitted to renew this summer's pleasure I shall look to you for help.

P. S. Perhaps I might interest you to know that, at one time when in the quiring at a log hut near the lake for a newspaper, two or three old copies of the FOREST AND STREAM were handed us with the injunction, "Please be careful of 'em." EDWARD HITCHCOCK, JR.

—The Syracuse Daily Journal refers as follows to the "luck" of A. J. Northrup, Esq., (who recently gave us a pleasant account of the "Beaver River country") while fishing in Onondaga Lake:

While fishing for bass near the mouth of Nine Mile Creek, in about fifteen feet of water, he took a lake sheephead (*Coregonus albus*) thirty inches long, twenty-one inches around, and weighing, after being about five hours out of water, fourteen and three-quarter pounds. This interesting specimen took a crab on a large trout hook, on light tackle, and gave his captor about ten minutes of fine sport. The lake sheephead is described in the Natural History of New York as being from twelve to eighteen inches long, and we doubt if Onondaga Lake has ever furnished a larger specimen of this fish.

—The Florida Press, of St. Augustine, tells us of the abundance and cheapness of fish in their markets. Mulllets, big fat ones, twelve on a string, are worth five cents. Green turtle, five cents a pound. Beef, five to ten cents, venison the same price, and chickens twenty-five cents a piece. "What adventurer could fail," says the Press, "who should open a cheap boarding-house on the right plan with the right attention." What a chance, then, for carpet baggers! If only instead of going into politics, and misleading the poor colored folks, these adventurers would open boarding houses. Should, then, any of these adventurers be laid out cold by a double barreled shot gun, discharged by a dissatisfied boarder, we might in that case write a touching obituary, and state how he died in the noble cause of carrying out a St. Augustine boarding house.

VISITORS AT THE NEPIGON THIS YEAR.

Our very good friend, Mr. R. Crawford, sends us from his Hudson Bay Post, at Red Rock, a list of the visitors who have journeyed to Nepigon this season. The FOREST AND STREAM takes great pride in the fact of having brought the attractions of the Nepigon prominently before the sportsmen of America, and believes its columns has been instrumental in making many of its readers personally familiar with that magnificent hunting and fishing region.

List of fishing parties who have been at Nepigon River during the summer of 1874:—

His Excellency the Earl of Dufferin. A. B. Tullman, Wheeling, W. Va.
The Countess of Dufferin. W. Wallace, N. Y.
Hon. Charles D. Clarke. H. L. Lister, N. Y.
Lt. Col. Fletcher and lady. H. A. Stimson, Minneapolis.
Captain F. Word. W. L. Woodward, California.
C. W. Birney, Ontario. W. F. Madson, Minneapolis.
P. Dixon, Esq. W. L. Tiffany, Minneapolis.
Dr. J. H. King, U. S. A. W. Simpson, New York.
Captain F. Wilson. G. F. Atterbury, New York.
W. Campbell and suite. Ver. Mitchell, M. D., Philadelphia.
H. C. Culbertson, Cincinnati. J. W. Churchill, Philadelphia.
W. M. Cameron, Cincinnati. J. H. Hutchins, M. D., Phila.
C. W. Birney, Ontario Territory. O. J. and F. V. LaFarge, N. Y.
J. M. Keating, M. D., Philadelphia.
Dr. and Mrs. Botterill, Montreal. Hon. John Simpson, Hornumville.
H. B. Stevens, New Bedford, U. S. W. Thompson, N. Y.
—Soper, N. Y.
S. J. Wallace, N. Y.
—Isaacs, N. Y.
J. W. Thompson, Blyville.
J. W. Churchill, Philadelphia.
W. W. Brown, Jacksonville.
W. H. Wright, Jacksonville.
—Dr. J. M. Keating, N. Y.
Rev. Dr. Goodwin & lady, Chicago.
J. M. Avery, Chicago.
Hon. J. H. Hutchins, M. D., Phila.
Rev. W. F. Friedman, Jan. 1874, N. Y.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK.
 (Post Office Box 2832.)
 125 SOUTH THIRD STREET, PHILADELPHIA.
 COBB'S BUILDING, NEAR DOWNTOWN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 13 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 30 cents per line. Advertisements in double column 25 per cent extra. Where advertisements are inserted over 1 month, a discount of 10 per cent will be made; over three months, 30 per cent; over six months, 50 per cent.

NEW YORK, THURSDAY, SEPTEMBER 10, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be received.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all the beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 11th.—National Sportsmen's Convention, Niagara Falls, N. Y.—Seneca Lake regatta, Watkins, N. Y.—Trotting meetings at Reading, Pa., Boston, Mass., St. Paul, Minn., and Etan, N. Y.

SATURDAY, September 12th.—National Sportsmen's Convention, Niagara Falls, N. Y.—Practice day, boat clubs, Harlem, N. Y.—Practice day, cricket and base ball clubs, Ninth street, Hoboken, N. J.

MONDAY, September 14th.—Trotting meetings at Kansas City, Mo., and Waverly Station, N. J.—Chicago vs. Boston B. B. C. at Boston—Athletic vs. Hartford at Hartford.

TUESDAY, September 15th.—Cricket station, regatta, Mystic Park, Medford, Mass.—Trotting meetings at Mankato, Wis., Jamestown, N. Y., Pittsburg, Pa., Troy, N. Y., Des Moines, Iowa, Cleveland, Ohio, White Plains, N. Y., South Norwalk, Conn., Keene, N. H., Burlington, Vt., Lancaster, Pa., Chatham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., and Norristown, Pa.

WEDNESDAY, September 16th.—Bowling regatta, Lake Sebago, Portland, Me.—Trotting meetings at Mankato, Wis., Jamestown, N. Y., Pittsburg, Pa., Troy, N. Y., Des Moines, Iowa, Cleveland, Ohio, White Plains, N. Y., South Norwalk, Conn., Keene, N. H., Burlington, Vt., Lancaster, Pa., Chatham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., and Norristown, Pa.

THURSDAY, September 17th.—Trotting meetings at Florence, Ky., Mankato, Wis., Jamestown, N. Y., Pittsburg, Penn., Troy, N. Y., Des Moines, Iowa, Cleveland, Ohio, White Plains, N. Y., South Norwalk, Conn., Keene, N. H., Burlington, Vt., Lancaster, Pa., Chatham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., and Norristown, Pa.

THE NATIONAL SPORTSMEN'S CONVENTION AT NIAGARA FALLS.

As we are going to press the National Sportsmen's Convention is holding its meeting. Let us sincerely trust that the convention will be the first to give proper and due attention to the great question of the preservation of game.

It is fitting that such a reunion should be one where acquaintance is made between all the various sportsmen in our wide section of country. But men have different tastes. The question of prowess or skill with a particular weapon is of course an important one. But giving this all weight, we are forced to consider pigeon shooting but in an unimportant light, and every way subordinate to the great object of the convention. It may be the fire works, the band of music, the excitement, the sensation, which tends to draw a portion of the audience. But certain men

in this good country of ours, as they follow the grouse in the prairies of the West, or track the deer over the mountains of the East, or who whip the floods of the North for trout or salmon, think less of their skill with gun and rod than of the future of the game. They ponder over thoughts of this kind: The beneficent Creator has peopled this world of ours with creatures which we are killing for our sport, pleasure, or profit. Shall we lavishly squander all this multitude of life He has given us? Are we to be selfish enough to slay and destroy ruthlessly, without let or hindrance, all that comes before us? Shall we not care for those who may come after us, in ten or twenty years? When age has stiffened our limbs, and our eyes are dimmed, so that then we must place in our children's hands the guns and rods which now delight us, and in our chimney corner must listen to the stories of field and flood told us by younger, fresher men, will there be that abundance of game we now see around us?

As far as the eastern and northern hunting grounds go, and even for a certain distance beyond the Mississippi, our game is becoming limited. We have arrived at that particular crisis, when we may expect to see, with each succeeding year, a diminishing quantity of game. Even the era of the perfect extinction of certain birds, beasts and fishes, can almost be foretold.

It behooves us, then, to make special and careful laws for the preservation of our game. So far such ordinances as have been passed were necessarily, from the spasmodic character of the Legislation, made without system or judgment.

We have advanced certain suggestions for a system of general game laws, founded on a perfectly rational and geographical plan, and endorsed by naturalists and the leading sportsmen of the country. We believe that if these laws are framed and carried out, by their means the game of the whole country will be preserved, and that litigation and trespass will cease. We have stated our points, clearly and fairly. Our object is to care for game, not only for to-day but for to-morrow and for all time. These laws have nothing capricious about them. While Nature is the same, while the identical birds, animals or fish dwell in certain geographical zones, we want the laws to be the same. The whole plan is simplicity itself, and is as easy of comprehension as it is must be to carry out.

TYNDALL AND MATERIALISM.

IT is from the German *Vorstellungen Kraft*, or the ability to understand oneself, or from molecules, nodules, or conservative energy, that we are to seize the grand, the ever impenetrable secret of our being, past, present and yet to come? Professor Tyndall's inaugural address before the British Association for the advancement of science, powerfully as it is written, leaves us just in the same doubt as when Lucretius, Democritus, Epicurus, Socrates, Plato or Aristotle first grappled with human thought. Few men will understand the force of this paper, the strongest, strangest and most powerful production of the century. Many appreciating but half of the spirit of the address, will sneer at it and loose their tempers. A majority of people of timid temperament, to reverse somewhat Tyndall's own expression, "accept if the choice be forced upon them, stagnation before commotion; the stillness of the swamp, to the leap in the torrent," and refuse the mental effort necessary to work over the debatable ground, even deeming it irreverent to think over such subjects. If Mr. Tyndall pays a merited compliment to Professor Huxley's wonderful clear *aperçu* of Darwin's speculations, immense credit is due to himself for his lucid analysis of the theory of "selection," for it has never been before so sharply defined.

But after all, what does it amount to? Can the human mind ever discriminate between the self working molecules, independent of themselves, knowing no master, and the creative power which runs parallel with them? Can an apostle of this materialism in ages yet to come, count on more than a handful of followers? He who credits Tyndall with irreverence, takes up a weapon which recoils on himself. How grandly the greatest thinker of the age speaks of that innate reverence, which some (not all) men, possess. "There is," he says, "that deep set feeling, which since the earliest dawn of history, and probably for ages prior to all history, incorporated itself into the religions of the world. You who have escaped from these religions in the high-audry dry light of the understanding may deride them, but in so doing you deride accidents of form merely, and fail to touch the immovable basis of the religious sentiment in the emotional nature of man."

For ourselves, our mind refuses to accept the idea of molecular action independent of itself, and materialistic. We see in it the action and guidance of an immortal Creator, whom we reverence. No ostentatious song of triumph marks Tyndall's discourse. Its conclusion has a saddening strain in it, when he says: "And if, still unsatisfied, the human mind, with the yearning of a pilgrim for his distant home, will turn to the mystery from which it has emerged, seeking so to fashion it as to give unity to thought and faith, so long as this is done, not only without intolerance or bigotry of any kind, but with the enlightened recognition that ultimate fixity of conception is here unattainable, and that each succeeding age must be held free to fashion the mystery in accordance with its own needs—then, in opposition to all the restrictions of Materialism, I would affirm this to be a field for the noblest exercise of what, in contrast with knowing faculties, may be called the creative faculties of man. Here, however, I must quit a theme too

great for me to handle, but which will be handled by the loftiest minds ages after you and I, like streaks of morning cloud, shall have melted into the infinite azure of the past."

OUGHT SETTERS TO RETRIEVE?

From the programme of the Tennessee State Sportsmen's Association which lies before us, we quote:—

We return our thanks to the editor of the FOREST AND STREAM, whose valuable paper has given us great assistance in getting up our rules and scale of points. In one thing we have differed from him, *i. e.*, in not giving points for retrieving; and we will endeavor to show, briefly, one or two of our principal reasons for so doing. Having gone thoroughly into the matter, and discussed all the points, for and against, we decided as we have.

First: As two or three of our (thought to be) best dogs would have been withdrawn from the Field Trial, being non-retrievers, if we had allowed points for retrieving; and as the principal use of Field Trials is to find out our best dogs, and to breed to them for the purpose of improving the breeds of pointers and setters, we considered that the withdrawal of all non-retrievers would be a great blow to the chief object to be gained by Field Trials.

Second: It was considered that nine out of ten dogs would gain their points for retrieving too easily, and the tenth, though, perhaps, a better dog at all points than the winner, might lose the prize through failing to retrieve what, perhaps, no other dog in the field would have been able to do had it been his time to retrieve.

Third: And (this we think of great importance) we considered that it would, if taken as a precedent, create great dissatisfaction among the majority certainly, we think of sporting men, by ruling out from Field Trials those who do not believe in retrieving pointers and setters, and that there are many who believe so, we cannot dispute; *vide Turf, Field and Farm*, and also FOREST AND STREAM. Furthermore, we see no reason for allowing [altering?] the points as heretofore used, for everybody is satisfied with them as they are, and if changed many would be dissatisfied, and, therefore, we consider it would be doing harm to the sporting interests generally should we allow points for retrieving as suggested by the editor of the FOREST AND STREAM.

Before giving the points in FOREST AND STREAM for field trials to suit American-bred setters, and allowing for retrieving as a special mark of merit, we wrote to some fifty practical field sportsmen, occupying the best positions in the several clubs in the United States, as regards the mode and style in which a setter should be hunted, and personally called on the most influential field sportsmen in New York and Brooklyn, requesting them to answer the following questions: Is it necessary for the setters to retrieve? Ans. Certainly, we want a dog that will save us the trouble of picking up and walking long distances after our dead birds. Would you buy a setter that did not retrieve? Ans. No; unless it was a young dog that could be taught to fetch.

The International field trial would never have ended as it did, if the English sportsmen would have conceded points to our American-bred setters for retrieving. What is the object of destroying one of the greatest characteristics in the setter? The ancestors of this animal were retrieving spaniels, and it was their first propensity to fetch and carry. In England most of the gentlemen who patronize field trials state that the birds should not come in too close contact with the dog's nose, as it injures the scent. Suppose it does, which we are inclined to disbelieve. To talk plainly, the majority of our sportsmen do not wish to be bothered, nor have they the time, inclination or estate to keep a large kennel of dogs. As we have stated before in these columns, that what is required in our country for the field sportsman is a good all round dog, an animal that will be staunch on ruffed grouse, woodcock, quail and snipe; not that he would be particularly grand on either game, but his action, ranging and nose should be fair, and give help, amusement, and a medium bag to the shooter. When gentlemen talk of pedigree, blood, performance, grand high-headed action in the field, it is a very different kind of animal to the ordinary sportsman's dog (we should all wish to own this style of setter, but how few there are.) This dog on account of his rarity and great value, is only to be found in the hands of the careful breeder, and is usually kept wholly and solely as a stud dog or brood bitch. We should advise the breeder not to handle his breeders to retrieve, but when the progeny have been sold, it is the business of the field sportsman to train, break, and develop his retrieving qualities. The yearling of the above description should be thoroughly broken in on one long season's shooting. How many setters could be sold to-day, however well trained and broken, if they were deficient in retrieving?

The pointer we should never teach to retrieve as a rule, nor have we in these columns altered the English points for pointers at field trials.

Pointers as a general rule are or ought to be used for open field shooting only, as their delicate organization, thin skin, slight coat, and having no hair between their toes, prevents them retrieving successfully through scrub oaks, thick cover, swamps and water. Nine times out of ten a shooter will tell his pointer to charge after he has just fetched a snipe or cock out of a heavy water swamp, to the contrary notwithstanding; the dog having comparatively little clothing will take cold. It is true that a high-blooded pointer will go anywhere, but not without ill effects to his person, such as drawing blood and otherwise materially injuring his physique. We think it is quite sufficient for the pointer to stand his dead bird. Pointers do not make as good retrievers as setters for the reasons stated above, and moreover if most of the celebrated retrieving pointers be traced back one or two generations, it will very likely be found that the grand dam or grand sire was a setter, which will account for this inherent retrieving propensity.

—In our next issue will be given a full and accurate account of the National Sportsmen's Convention, held at Niagara Falls on the 9th of September and following days.

CODFISH. FROM FULTON MARKET TO NANTUCKET SHOALS AND BACK.

[CONCLUSION.]

IF the daily consumption of fish in New York is estimated to be 200,000 pounds, it is some satisfaction for us to know that our catch of cod on the Blackford represents a small percentage of the quantity required, especially as Captain Redmond assures us that the fish are running large, though he tells us that when packed in ice there will be shrinkage of fully a third in the weight of the cod; so we have still plenty of work before us.

All our fish having been put away, and the decks of the vessel having been made as clean and neat as a housewife's dresser, we take supper and prepare to turn in. Our fare is excellent. The sea gives a huge appetite. There is a hearty welcome. If the conversation is not exactly Chesterfieldian, it has at least an honest Rabelaisian smack about it. Supper over, gears are mended, new hooks are ganged, and then Jack—great, big, lusty Jack—tells yarns on yarns with an exuberance of spirits, and a lavish amount of exaggeration. Then he sings, and we hear old nautical songs of seventy-five years ago: how the "Night-Ingale" went to sea in the British channel, and never was heard of again, and how the Press gang carried off poor Jack, and left a disconsolate maiden to deplore his loss. Then we all turn in and sleep the sleep of the tired and the blest. We are at anchor, and though we roll about much and pitch no little, the writer and amateur cod-fisherman knowing not what sea-sickness is, sleeps without waking until four o'clock next morning, when the voice of the skipper rouses all hands. We heave up the anchor and fishing recommences. Having struck deep soundings, we try our luck and catch very large fish. We now have an opportunity of examining the catch more critically. We readily appreciate two varieties of cod. The smaller are the muscle cod, distinguishable by their dusky brown color, while the shoal cod are larger fish, and are of a russet color, with distinct yellow spots, something the shade of human freckles. We catch now some of the largest cods on the trip; some will weigh fully fifty pounds. When a large one is pulled up now and then, the hold on the fish being slight, a gaff is used to bring the fish on deck. Now I see Jack has something tant which he can barely pull in. Captain Redmond sees it and goes to his aid, and tells us from the nature of the pull it is a halibut. The fish is hauled, and the line is kept taut on him all the time. Gradually the fish is brought to the surface—he is gaffed, and a handsome seventy-five pound halibut flops on the deck. We look at it critically, and are struck by the parasites, the sea lice, that run round in circles on the white side of the fish. We are delighted at the catch, ichthyologically, because it is the first live halibut we have seen, and are pleased commercially, because a halibut is worth certainly eighteen cents a pound, while all a cod will bring is five cents, for we are fishing for business. It is a queer feeling, but not an unsatisfactory one to know that we are hauling up twenty-five cents or one dollar at every haul from thirty fathoms below. Halibut are caught in deeper water, however, than we are now fishing in, and earlier in the season. We ask Captain Redmond about the size of the very largest codfish he has ever heard of. He says he has no reason to doubt the fact of the Goliath of cods having been caught off Cape Cod, which, when dressed, weighed 119 pounds. We notice the food disgorged by the cod, consisting of crabs, star fish and a small narrow fish the men call "stripers." Some of the cod throw up squids. One of the crew takes a squid cast up by a defunct cod and catches a half dozen fresh fish with it. We observe that many of the middle-sized fish, those of from eight to twelve pounds, show scars and traces of recent contests. Some of the wounds are fresh, others are so old as to be almost obliterated. A fish must have wonderful plastic or recuperative powers, and has perhaps the power of growing fresh scales, just as human beings remake the epidermis. The question arises, "With what other fish had the cod been quarrelling?" In some fish we notice that the bladders expanding suddenly—the pressure of the deep water having been removed—choke the fish. It strikes us, too, that whenever we move our fishing grounds haddock are caught more plentifully for a while. Then the cod come in, and we catch no more haddocks. We do our best to strike a balance between the cod and haddock, and think the latter are in about the proportion of ten per cent. We watch the movements of each particular fisherman and make up our mind that after Captain Redmond, Clark, the Nantucket man, is the most expert of all the crew. We recall old Oppian's lines descriptive of the model fisherman:—

"First be the fisher's limbs compact and sound,
With solid flesh and well-braced sinews bound;
Let due proportion every part command."

"Nor loathsome shrink to much, nor fat distend."

We do not mean to say that our Nantucket fisherman follows exactly Oppian's *signalement*, but his movements are worth noticing. His action is automatic. Overboard goes his gear, and while the lead sinks he opens his half dozen clams. Then he clutches the line with his left hand, secures a little, feels the nibble, gives the jerk, fastens the fish, brings in the line swiftly hand over hand, unhooks the fish, slings him in the bin, rebaits, and so over and over again, with a kind of military one, two, three motion, and never moves an inch out of his tracks. Frequently two fish come on deck. Notwithstanding sore fingers, we go for cod once more, catch a dozen or so fine fish, interspersed with an occasional dog fish, then we give it up, with an elegant blister on the index finger of the right

hand, and a cushion-like puffy swelling of the ligatures on the back of the left hand. We are not singular in this respect. Our companion from Syracuse, though game, gives up cod-fishing for that day, after a noble struggle. Captain Redmond, imperturbable, keeps on pulling in the cod, remarking, however, that "his hands will be sure to be sore and stiff before he is through with the fish."

While we fish, the mist thickens, and we are in a bank of fog. Foggy weather is a constant element on the banks. All the winds coming from the south bring fogs, though the northerly breezes disperse them. We hear yelling in the distance, and presently the noise coming from a spirited performance on a tin pan. Evidently there are other fishermen in the neighborhood; one loves to have company on the high seas. And by the fog drifts, and we see some four fishing crafts around us, all hard at work. Just as Captain Redmond is about telling us who they are, and where from, the fog curtain drops once more, and we cannot see a boat's length before us. Twice on the second day we fill the fish bin three quarters full, and then cease fishing for the day. We plunge our hand into the belly of a fish, just eviscerated, while almost alive, and are amazed to find how cold it is, and we regret not having a thermometer with us. As the entrails and livers are thrown overboard flocks of gulls swoop into the water after them, and chatter, squawk and quarrel over the food, and drive off the stormy petrels. Strange sea-weeds float past the craft; one kind particularly attracts our attention. It is shaped like an elongated oak leaf, and is russet in color, but what is curious about it is, that it is ornamented with bosses placed at regular intervals. Now and then we pull up from the depths below those strange organisms called sea potatoes, or man-heads, so well described by the wise men at Noank, and our correspondent "Piscoco." Sometimes we find this curious growth of the seas inside the cod.

We fish with very good luck for three days, until we catch some 2,200 fish. When the fishing is very lively we call up the cook, who gives his valuable aid. Now a cook on a fishing craft, to nautical and fisherman qualities, must combine the highest culinary attributes. While we eat dinner he must steer. At some stage of their lives all fishermen are cooks on shoals.

At last all our four ice-houses are full, and we heave up anchor once more, and with a cracking breeze make for old Sankaty Light and Nantucket, where we come to outside of the bell which booms on the bar, and land our Nantucket haul.

It is worth while to mention here the thorough discipline and attention to all details which are found on a smack like the Blackford. The captains of all of the fishing crafts have to be thorough seamen, and to be acquainted with every nook and corner of the coast, and the hands have to be fully up to the mark. Sails are frequently trimmed, and every square foot of canvas made to do its work when occasion requires it. The craft we sail on is the fastest of the New York fleet, of which Messrs. H. C. Rogers & Co. own the little flotilla of at least a dozen, and these gentlemen pride themselves on the sailing qualities of the Blackford. We easily overhauled anything that sails, save the high flying yachts. Sometimes a knot or so made in a day's sail makes two cents or more difference to the advantage of the skipper in the price of his load.

Wages on the smacks are \$30 a month for the ordinary hands, \$45 for the mate and \$40 for the cook. What with interest on the cost of the vessel and wages and incidental expenses, such as of ice, bait, &c., it must cost to run the Blackford fully \$450 a month. The duration of a trip to Nantucket shoals and back being somewhat over two weeks, the margin of profit, even with cod at five cents a pound, when commissions for selling are considered, is not large. When off Sandy Hook in the winter, cruises are longer, occupying three weeks. The fish then caught are put in the wells and brought alive to market. For this purpose the Blackford has a well running across her at midships from side to side. The sides of the vessel being bored with holes allows the water free entrance and exit.

From Nantucket bar we take an eight knot breeze at sundown; by day break next day make the Little Gull Island, and by ten o'clock are through Plum Gut. Then comes a dead calm on the sound, and we float along in a lazy lotus-eating style for fifty hours, until in the evening, just off Glen Cove, comes a pleasant breeze. We hoist all sail, tackle everything, pass sloops, schooners and brigs, nor does a rain storm stop us at Hell Gate, which Captain Redmond gets through as neatly as if it was a straight and easy channel. By eleven o'clock we drop anchor off the slip of Fulton market, and in a half hour more are snugly moored stern and stern in our berth ready for market. We bid our gallant Captain good-bye just as old Trinity strikes midnight, and leave the Wallace Blackford with regret, for we have had two weeks of the purest enjoyment, and have made some kind friends. When returning now to the city for our day's work we always cast a longing look into the Fulton ferry slip to see if our dashing little schooner is back again. When we found her gone one morning, once more for the shoals, it seemed to us that something was wanting, so much had a fortnight's of cod-fishing with Captain Michael Redmond endeared the Blackford to us. Codfish may be very prosaic things, but in pleasant company there is nothing more enjoyable. We trust some of our readers next season will try the pleasures of a trip from Fulton Market to Nantucket shoals and back after cod.

—The New York State Agricultural Society will hold the thirty-fourth annual Cattle Show and Fair at Rochester on September 15th, 16th, 17th, and 18th. We thank James Geddes, Esq., for courtesies.

DEATH OF DR. J. H. SLACK.

IN the last number of our paper we reproduced what had come to us as a painful rumor—the report of the death of Dr. Slack. It is with regret that we announce his demise. Dr. Slack died at Bloomsbury, N. J., on Thursday, August 27th.

Conspicuous by attainments enriched by travel, Dr. Slack was among the first to seize on the general natural facts which underlie the science of pisciculture, and, when it was almost unknown in the United States, labored long and diligently to introduce it into this country. Gifted with literary talents, and a scientific knowledge of the highest order, numerous contributions from his pen have enriched contemporaneous journals. At the time of his death Dr. Slack filled the important position of Fish Commissioner of the State of New Jersey. One who admired and appreciated Dr. Slack writes to us thus feelingly about him:—

Dr. John Hamilton Slack, aged about thirty-eight or thirty-nine years, died at his residence, Troutdale, near Bloomsbury, N. J., on the 27th ult., of consumption. Even in boyhood he was passionately fond of the sciences, constructing a small steamboat when quite a lad, and the boiler being a coal scuttle, and ran it on a mill pond near his mother's country residence in the vicinity of Bordentown. He graduated with honor at the Pennsylvania University, and commenced the study of medicine in which he excelled as a student in anatomy and chemistry. In the latter science he afterwards, when not over thirty, became professor in one of the Philadelphia medical colleges. His knowledge of a naturalist which he turned his attention came to him as if by intuition. When not over twenty he was a composer of music, and his variations on "Tune, Sweet Home," and some of his waltzes, are still extant and popular. He was a good amateur printer, a good mechanic, especially on late work, a fair photographer, and a good prestigator, giving exhibitions during the war for the benefit of the soldier hospitals. His knowledge of a naturalist was extensive and varied. His specialty as a mammalogist was the *Quadrumanus*, and his collection of monkey's skulls was one of the largest private ones of the kind in the country. He was a man of restless activity, never appearing to need repose, and his labors at the Philadelphia Academy of Natural Sciences, when scarcely out of his minority, were wonderful. He was a member of various important zoological organizations, and he made a comprehensive catalogue of the monkeys, which no other member would undertake, delighting in organizing and arranging in any way. He was the first librarian of the Philadelphia College of Physicians. He was a good linguist, both in ancient and modern languages, was a commissioner and collector of old books, and before twenty-five had been an observing traveler in Europe and Africa, spending more than a year in Turkey, Egypt and the Holy Land. His life abroad was to study monkeys at Paris, which occupied nearly a year. Since 1867 he has lived at Troutdale, being engaged in pisciculture, and service as assistant United States Fish Commissioner, hatching over half a million of California salmon eggs at his establishment, and distributing the fry amongst the waters of the Middle and adjoining Southern States. The Doctor was given to controversy, verbal and in newspapers, but his amiability, originality, and his eccentricities precluded the possibility of any man becoming his enemy. His death comes as a great shock to all who knew him, and all regret that so brilliant a mind should have gone out when the task of life seemed but half performed. His death was formally announced at a meeting of the Philadelphia Academy of Natural Sciences on the evening of the 1st of the present month, and resolutions of regret and condolence with his family were passed. N.

—We call particular attention to the Pigeon Shooting Tournament, to commence at Toronto on Tuesday September the 22d, under the auspices of the Toronto Gun Club and the Junior Gun Club. Over \$1,000 will be given in prizes. The attractions will be numerous, the Canadian Grand Provincial Fair being held at Toronto on the same day.

Sporting News from Abroad.

THE EVE OF ST. PARTRIDGE.

(FROM OUR SPECIAL ENGLISH CORRESPONDENT.)

THE sportsmen in the North have had to put up with cold and stormy weather, small bags and wild grouse. The ravages of disease and the bad effects of driving birds are almost universally apparent. I notice, however, on the Castle Carr moors near Halifax, that there was a pleasing exception to this distressing rule, and had it not been for the wet and boisterous weather, no doubt 400 brace would have been killed on the first and consequently best day. As it was, a party of fourteen guns, including Lord Lilford, Lieut-Col. Sir H. Edwards, Col. Egerton Leigh and Sir Henry Wilmot, bagged 287 brace, and in the first five days the total amount killed was 905 brace, notwithstanding wind, rain and fog. Black cock shooting began on the 20th, but I have not heard that any extraordinary number have been killed. They are of course much scarcer than grouse, and the hens or heath pullets lie closer, though an old black cock is a very crafty customer to deal with, and taxes both dogs and sportsmen to the utmost. In the South of England, on the heath country, I have seen a considerable number of these moor game killed, and undoubtedly we should have the grouse there too if we only had enough of the Scotch heather, on which they feed. The Dorsetshire heath is far prettier and of a richer purple color, but though I go into raptures about it when I am sketching in water-colors, yet I would willingly exchange it for its more sober tinted rival, when I am behind the pointers. But after all the whiskey and driving, kills and lartans, gillies and scenery of the moors, give me a day amongst English turnips and partridges, and I shall be better pleased than if I had shot my gun red hot in the North.

We have had out the team twice a week for the last months, besides giving them their drilling in the spring, and though we don't enter them at field trials and pull them in the papers, I know that they can find bris, stand to them and go at a rattling pace, and more I don't require. To please me a dog must be fast and range tolerably wide. I don't like a "pothunter's companion," who is afraid to gallop for fear of putting up his game. I would rather see

a dog dash right into the covey and put it up any day, if he at once recognises his mistake and drops, then creep up to it and then be uncertain. But my setters seldom put up their birds, for they are not deficient in nose, and unless the scent is very bad I can kill as much to them as to a slow team. The first thing to do in breaking a dog, be it setter or pointer, is to make him drop to hand, and turn to whistle, and if he will do this he is more than half broken, and I will make him "back," "point" and drop to shot and wing in two days if he has a drop of blue blood in his veins. But whilst the dog is the "right sort," the breaker must also have patience and perseverance, and with these two qualities, provided his brains are superior to batter plding, he can, as Lord Melbourne's keeper did, train a pig to find birds. To break a retriever is not so difficult as to break a setter, though it depends a good deal on the individual dog's temperament. I saw an ingenious plan the other day for teaching a dog how to dive, which ought to have been patented, and I'm not sure that it wouldn't have paid better than an atmospheric churn or a cucumber slicer. The old plan of weighting a cork till it floats in mild water, has its good points, but very often a dog that has been taught to fetch sticks and corks will most annoyingly bring sticks and stones when sent for a bird. This invention was a very simple one, and consisted of a swan's wing, (any large wing would do,) stretched out straight and stiffened, the feathers at the end only being left, and a small weight in the shape of a piece of old iron being attached where the wing was cut off from the body. A cord was fastened to this piece of iron, and one end of the cord held in the keeper's hand. Taking the wing by the tip, he swung it round his head and threw it from him the whole length of the string out into the lake, upon the edge of which were standing. The weight caused the wing to float perpendicularly, its white tip just appearing above the water. We sent in a dog who was mad for the water, but had no notion of diving. He at once made for the swan's wing, which was some thirty yards out, evidently thinking he had nothing to do but to fetch it. When he got within snapping distance, Galton, the keeper, pulled the string, which of course caused the wing to go beneath the water. "Sailor" plunged his nose in after it up to the eyes, sneezed plaintively and wondered where it had gone to. Suddenly it appeared again just in front of him, as we relaxed the string. He wildly plunged at it and missed it as before, and next moment it was sailing along a yard in front of him. The dog's blood was up, and jumping at it, and missing it again, he evidently saw it below him and dashing right under he followed it up too quick even for us, and brought it to shore with great triumph. He had previously shown no inclination to dive, though always taking well to water.

There is an article in this week's *Field*, written by "Istone," descriptive of the proper setter for America. [We will reproduce it.—Ed.] Though, as he says, it is not the particular breed of setter, but the individual dog which will suit. With regard to retrieving setters he says:—"It is a common opinion—indeed it is my opinion—that you imperil the staunchness of a dog upon his point, if you let him round a running bird, overtake and retrieve it, though a good deal depends upon the man himself, and unless the sportsman is thoroughly at heart a lover of the dog, he is very much tempted to 'He on' his dog, directly he has shot at or crippled a bird, and to do so is ruin to the dog." "Istone" also says the American setter should, for cover shooting, have a good deal of white about him, so as to be easily distinguishable, but he does not speak very favorably about using setters in cover, though acknowledging that the American sportsmen who do shoot over them in cover are second to none. My own idea is that nothing is allowable in cover but good spaniels or even some broken-haired terriers, if spaniels are not to be got. A setter passes an immense amount of game in cover, his coat and skin are ill adapted to stand the thorn, and he is too long on the leg to creep under briars and rout out setting game. Besides all this, if he gets a point you lose him, and his high ranging and turn of speed do not serve him. He must go slow and can't "go for the wind."

As far as partridges are concerned I think we shall have plenty of them, as I have seen coveys of 12, 16 and 20, and the young birds are strong and healthy. The use of the machine for cutting corn is undoubtedly very injurious to ground game, as the barley and wheat being cut from the outside and a ring being thus formed, the unfortunate hares and rabbits have no chance to escape, and are mobbed with sticks by the farmers and laborers. It frequently happens, too, that the partridges have their nests in the grass which is laid up for hay, and being "mown out" where the grass is, many eggs are broken and destroyed.

George Frederick, the Derby winner, still holds his own as first favorite for the St. Leger, but I fancy the mare Apology will pull off the great event, as mares run better in the autumn than in the spring. It is rumored that the Duke of Richmond is to be prosecuted "for allowing betting on the Goodwood course," under the new act for its suppression. This is indeed a farce, as the Duke and Captain Valentine did all they knew to prevent ready money transactions taking place.

Horses are now so extremely dear in England that I think it well worth the attention of horse-owners in other countries, with a view to shipping horses for England. We have a confused notion here that in some parts of the American continent, magnificent mustangs with all the breeding of a thoroughbred can be caught on the prairies or purchased at the all round price of a dollar a head, ready broken. (It is this he go, and is not the creation of novelists, I seriously think

that it would pay well to export a few, at all events it is worth trying by some of your wealthy speculators. I can tell them where to dispose of them, and indeed, it is impossible to get a hack of any sort under seventy or eighty pounds, and the same sum is given for cart horses, whilst a park action ladies' horse is worth 150 guineas, and a pair of carriage horses at least £300. You can't buy a pony under £25, whilst a year or two ago eight sovereigns would produce a good one.

—BOSTON, Ju.

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

Moose, *Alces Alces*. Elk or Wapiti, *Cervus Canadensis*. Hares, brown and grey. Wild Turkey, *Turkey gallinule*. Woodcock, *Sceloporus rusticus*. Ruffed Grouse, *Tetrao umbellus*. Esquimaux Curlew, *Numenius borealis*. Plover, *Charadrius*. Godwit, *Limosina*. Rail, *Rallus Virginianus*. Snipe and Bay Birds. Caribou, *Tarandus Rangifer*. Red Grouse, *Capreolus Virginianus*. Squirrels, red black and grey. Quail, *Quail Virginia*. Pinnated Grouse, *Tetrao Capito*. Esquimaux Curlew, *Numenius borealis*. Sandpipers, *Tyrannus*. Willet. Reed or Rice birds, *Delichamps nitens*. Wild Duck.

"Under the head of 'Game, and Fish in Season' we can only specify in general terms the several varieties, because the laws of States vary so much that we are unable to particularize we could do no less than publish these different sections that relate to the birds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion."

GAME IN MARKET.—No change in woodcock; coming in scattering from various localities. Birds seen in fair order. About an even quantity of young and old birds. In demand at \$1 75 a brace. Ruffed grouse (market partridge) said to come from Iowa, but we did not look at the express receipts. Not very prime birds, selling at \$1 75 the pair. Pinnated grouse (prairie chicken), very fair birds now on sale, and plentiful; worth \$1 00 the brace. Reed birds poor in condition, and the rails look starved. Bay birds poor. Game generally not in very lively demand as yet.

—Mr. J. Deleisur, Secretary of the Excelsior Sporting Club of Brooklyn, was one of a party of three members of that club, who recently made a trip to Sullivan and Wyoming counties, Pa. He reports deer plenty in the mountains; bears and wild cats were occasionally seen, and squirrels were abundant. Trout fishing was rather poor. He recommends Jerry Hunzinger as a reliable guide. Board can also be obtained at \$4 per week.

—Several flocks of bay snipe and curlew were on Barnegat meadows last week, and on Tuesday several sportsmen report good bags. Captain Joseph Predmore killed thirty king rails or "mud hens" on the marshes of the inlet. Black duck are swarming to the bay by hundreds.

—Our friend and co-worker, "Ollipod Quill," who is as ready with the gun as with the pen, reports bagging a number of marsh larks, and two dozen upland plover last week in the marsh shores of Seaside.

REPORTS OF PINNATED GROUSE.

—From correspondence received during the week we collate the following:

CHICAGO, September 5th.—Pinnated grouse in this vicinity are very scarce; a shooter for every bird almost. More plentiful in other portions of the State.

LEFROY, ILL.—"Grouse shooting has not been good here so far this season, on account of the dry weather—there is no shelter in the stubble for grouse, and they are only in the stubble early in the morning, and quite late in the evening. We have no good shooters among us, and can give you no good scores to cast your optic upon; however, we are soon to organize a shooting club, and you shall hear from us. Quails are plenty. There is thought to be five to one of last season."

IOWA.—Large quantities of pinnated grouse are being killed; the birds are fine and in good condition. The law prohibiting the shipment of more than one dozen grouse per man, per day, proves a great benefit. S. H. Terrill, of Chicago, who has just returned from central Iowa, reports extraordinary success in quantity and quality.

WISCONSIN.—Game is reported rather scarce. Ruffed grouse and quail can be shot on and after the 15th of September until January 1st. We hear of no large bags at present, except from two sportsmen from your city, who killed 122 birds to two guns, over two brace of pointers.

MINNESOTA.—Prairie chickens (pinnated grouse), are very abundant, and in fine condition; no disease of any kind has been noticed among the birds. Sportsmen from all parts of the United States, and not a few from England, are having grand sport. Some large bags were made in the neighborhood of Albert, Lea and Brainerd counties.

—The Kennicott Club of Chicago are represented at the national convention, Niagara Falls, which is now in session, by the following gentlemen: Abner Price, J. J. Kleinman, H. W. Baldwin, J. H. Whitman, T. J. Higgins, J. F. Whiting, George C. Sherman.

—Our kind friend and correspondent, F. D., of Cedar Rapids, complains that the dry weather has somewhat interfered with chicken shooting, making the hunting party too thirsty. However, one party of six, at Maynard, shot in four days, 400; another party, at Green's, killed 290 birds, but the weather, being too warm, the dogs gave out for want of water. To show how dearth of water affects dogs, F. D. says: "O be afternoon I was at Washington, in this State, with a blue dog and white setter bitch, two years old, with a splendid nose, when I found a sough of three acres, with three or four inches of water. I knew there

were chickens there, for a covey of nineteen was flushed by the dog of a gentleman who was shooting with me. The fact was that the dog did not know that they were there, because he could not scent them, and yet he was as true a dog as a man ever owned. It was no use to scold. I knew there was water there, so down to it we went; it was only one hundred yards from where we stood. The chickens when flushed would go clean out of sight, down to the slough. We went there, but could not get a shot at one. Kicking around in the grass, I caught two birds with my own hands. We rested there forty minutes, dipped our handkerchiefs in water, and sopped it on our dogs, and cooled them off. After that the fun commenced. We only left after we had shot fifty-three chickens. So you can see how the heat affects dogs. Pointers do better here, but our shooting is principally duck shooting, or net shooting.

—An ardent sportsman at Peoria, Ill., just on the eve of preparing for chicken shooting, having read the communication of "One Who Shoots with His Eyes Open," in regard to paper or metallic shells, writes us as follows:

"A paper shell does all the work for me that a metallic shell has done. I was prejudiced against paper and lead metallic only, but found them about as inconsequential to carry, when loaded, as they were burden, some when not. I found, too, when tramping, unless you were very careful, and had a Black's vest, that the wad that was on the shot was in there, and if you didn't find the wad near the mouth of the shell you would find it out entirely and the shot with it. I found also quite frequently that when I discharged one of my barrels the other metallic shell would look after, and I was afterwards convinced that it waited attention by hearing the shot rattling along the barrel as I walked along, all of which things are very unpleasant when you have your pouch at home or in camp. The paper shell does away with all this annoyance, besides dispenses a great deal of unnecessary sweating and dog ponding. The improvement, and the only one I think the gunner needs, is a thing called down (without loss of strength) in some way, so that a No. 10 will take a No. 8 wad, at least so my gun says—and I am not an exception, I guess, among your numerous weekly perusers."

[We shall be glad to hear from P. C. W. again, and learn how the chickens are in Fulton.—Ed.]

PINNATED GROUSE VS. RUFFED GROUSE.—A correspondent in Philadelphia asks us the reason "why less shot should be used for pinnated grouse shooting, than for ruffed grouse?" We answer: Pinnated grouse (prairie chicken) at the beginning of the season, say August 20th, are mostly in packs, and in many instances are not full grown, and unable as it were to take care of themselves. In a week or so when the pack or brood disperse, each seeking its own livelihood, they are stronger on the wing, but never even in their most natural climate and soil, have they the power to propel themselves through the air at anything like the speed of the ruffed grouse; besides pinnated grouse shooting is almost invariably in the open.

Ruffed grouse is the most powerful and difficult game bird to shoot and kill known to our field sportsmen, as they are nearly always shot in close, thick covers, and they must be killed in order to be bagged.

The theory of using large shot for field shooting, like the illusion of using fine powder, is exploded and a thing of the past. The great secret in shooting and killing game is to throw a fair size shot according to the strength, size, and rapidity of flight of the bird, with terrific velocity. The chances of killing one, if you use No. 8 shot, taking the average of shot manufactured in the United States, as the St. Louis shot have nearly 100 more pellets to the ounce in No. 7 and 8 than the New York shot, would be as 423 is to 295. Some years ago we loaded with 3 B's for geese shooting, with but poor success; now we charge the gun with single B's, and think No. 1 is large enough. Formerly duck shooters used 3's, now 7's and 6's are common. For ruffed grouse, at the beginning of the season No. 8 is used, in November, No. 7, with half a drachm more powder, making four drachms. Pinnated grouse when in packs, No. 8, when wild, the wind blowing and later in the season, No. 7. Quail, No. 8; July woodcock, No. 10; fall woodcock, No. 9; spring English snipe, No. 10; fall English snipe, No. 9.

—We had the pleasure of a visit from Mr. P. G. Sandford, who showed us a magnificent breech loader, a *chef d'œuvre* from the hands of W. C. Scott & Sons. Bore 10, length of barrels, fine laminated, 20 inches. Mouldings of locks in superb style. The heel plate of the gun was of horn, chequered, as all guns should be made. We have rarely seen a finer gun, nor one more beautifully balanced. An amateur gentleman shot of New Jersey, killed thirty-six pigeons in succession, on Wednesday last, with this gun.

Sportsmen in Nova Scotia must bear in mind, says the *Anbent Gazette* of N. S., that an act was passed at the last session of the local legislature "for the preservation of useful birds and animals," also that the Game and Inland Fishery Protection Company has arranged to prevent infringements. The act requires that during three years commencing Sept. 1, 1873, no person shall kill moose or hare, or expose for sale, a moose or any part thereof; and that between the first of January and first of October no person shall take, kill, sell, buy or have any woodcock, snipe, blue-winged duck or teal; and that no woodcock shall be killed before sunrise or after sunset.

CREEDMOOR.—The usual amount of practice took place at Creedmoor during the last week. The American team had two good days' work, in which very fair shooting was done. The coaching on Saturday last was excellent. We have not thought it necessary in all cases to append the scores. Our motives are not to be imputed to any desire of "holding back our hand." In some cases, some of our leading shots, desirous of testing certain experiments, may have made poor scores, which to outsiders may have seemed as if some of our best marksmen were deteriorating.

the Carrie and the three Noank boats—Wilson, Allen and Quickston, were entered; also six others from Pro-

vidence, Newport, Bristol and Gloucester, whose names I did not learn. The day was good and the Watson, sailed by her young skipper, Rob. Palmer, came in eight minutes ahead and took first prize, the Carrie, beaten several minutes by the Watson, got No. 2, and the Quickstep No. 3. The Watson came home a short time since with the Groton pennant, which she won from the crack Groton boats Annie and Bessie, and holds the Noank pennant from week to week, as a sure thing. So I was not mistaken when I first came, in admiring the Noank boats.

The seventh annual regatta of the Boston Yacht club will take place Saturday, Sept. 12, starting from the club house at City Point.

The Genesee Yacht Club held their second annual regatta at Rochester, N. Y., on September, 6th. There was a fine breeze during the greater part of the race except on coming home, when nearly all were becalmed for a few minutes. The Seth Green took the first prize, the actual running time being 1h. 54m. 2s. The Alhine took the second prize—Time, 1h. 55m. 24s. The Rebecca third, in 2h. 3m. 50s. Rambler fourth in 2h. 17m. 28s.; Fleeting fifth, in 2h. 37m. 17s.

At Geneva Lake, Wis., on the 21st inst., the yacht Nellie, J. S. Ramsey, won the Sheridan silver cup valued at \$150. There were six competitors. Gen. Sheridan was present. This cup is to be competed for annually. The race was over a double triangular course of sixteen miles. Time, 3:24:45.

MADISON, WIS., August 31st, 1874.

EDITOR FOREST AND STREAM:

The regatta on Lake Mendota, on Thursday, August 27th, was decidedly a success. The feature of interest was the yacht Minnie, brought to participate in the race from Lake St. Croix by Commodore Baldwin of the St. Croix Yacht Club, and "she came, saw, and conquered." The wind was fresh from the S.W., the sea was low, for top sails, though the Jessie carried her flying jib and had the start, and the Minnie was given promptly at two o'clock, and ten minutes afterwards came the flying start. The latter passed the buoy first, followed by the Lady of the Lake, Magic, Gracie, Eclipse, Rockless, Minnie, and Jessie. On running the second stake the Lady got foul of the Eclipse and was disabed.

The course was twice round a triangle of six miles. On passing the first stake, after the first round, there was but six minutes difference between the first and last boats, but the Gracie here gave up the race, her captain, I suppose, concluding he was in the company of too "heavy wells." The personal contests at different parts of the race afforded some very fine sailing. The Rockless (schooner) did not hold her own before the wind, but when she got it ahead did some "splendid" sailing, and in the last prospects of winning, but before reaching the third buoy on the second round, broke her rudder and had to get home as well as she could. The Minnie won the first prize, \$50, in 2:41:54; the Magic taking the second, \$25, in 2:44:15; then came the Lady in 2:41:35; Eclipse, 2:45:21; Jessie, 2:47:11; and Rockless (disabled) 2:57:29. This is the first visit we have had from a neighboring club for some years, but I hope hereafter we shall have at least an annual regatta, at which we shall have a representation from all the clubs in the State. We have unrivalled facilities, and our citizens are ready to offer prize worth competing for.

In giving you an account of the catching of the monster sturgeon I said it was struck through the base of its dorsal fin. I should have said one of its anal fins.

On the 1st inst. the regatta arranged by the Royal Canadian Yacht Club in honor of His Excellency the Governor General, was sailed. The course was thirty-two miles in length, and embraced plenty of distance to windward. The prizes competed for upon this occasion were the Prince of Wales cup and the Governor General's prize. The Governor General. The following yachts started: Oriole, Brunette, Cora, Lady Standly, Ripple, Rivet, and Gorilla. The weather was all that could be desired, a steady breeze blowing throughout, and the race a most exciting one, the Oriole schooner of 95 tons, eventually winning. The Lady Standly was unfortunate, being compelled to retire from the race shortly after the start, by the parting of her fore-stay.

The Friendship Boat Club of New York held their third annual regatta at Pleasant Valley on the Hudson River on September 2d. The course was the same as that of the Hudson River Amateur Rowing Association, and known as the Pleasant River course. The weather and the water was all that could be desired. There were four events to be decided, three single scull races, and one four oared shell. For the first race which was three miles, the prize was the championship belt, presented by Mr. Thos. Connolly. There were five entries, James McCartney (red), James McCabill (blue), Philip S. Biglin (green), Augustus Schneider (blue), Thomas J. Allen (red). McCabill's seat in his boat gave away, thus losing him the race. McCartney came in the winner in 24m. 27s., Schneider, two seconds later, with Biglin third and Allen last. The second race was for junior sculls, for which there were five entries, Charles Harth (blue), P. McSorley (blue and white), Augustus Adams (white and blue), John Hart (green and white), James Smith, (green and red). Mr. Dennis Leary, the President of the club, started the men. After the first mile Harth drew out and the race was won by Adams easily in 26m. 45s., Smith second, Harth third. The third race was for third class sculls, the course being short of a mile and the entries, William Dittm, William Murray, Albert Sauer and Peter P. Moore. The send off was a good one and the race well contested. Dittm won in 8m. 15s., Murray second, Sauer third. The great race of the day, was four-oared shells, the entries were Augustus Schneider, Philip S. Biglin, William Hurley, William H. Hughes; James Smith, substitute; colored red. Thomas J. Allen, M. J. Murray, James McCartney, Philip Christie; Augustus Adams, substitute; color, white. At five o'clock they started, and for the first mile the reds kept the lead. One of the river boats passing at the time rolled over a heavy bar, and the water was so high that the reds, blue, and white, the oarsmen being picked up by a small boat which put out from the shore. The whites then turned the stakeboat and rowed easily home, passing the finishing line in 25m. 5s. Mr. James Cosgrove of the Friendship Club, and Mr. Henry Brown, of the Gracery, acted as judges, with Mr. Thomas Connolly as referee.

The National Amateur Rowing Association held the first day of the regatta on September 3d, near Troy, N. Y. There was a large concourse of spectators, but the wind and water materially militated against the success of the events. The four-oared shell was the first race, and was rowed in two trial tests each, the double scull and pair oared in the first trial over the Laureate course, starting at Lansingburg and finishing at the Laureate boat house. The first contest was a race between four-oared shells, the Wah-Wah-Sums, of Saginaw; Argonauts, of Bergen Point, N.

J.; and Gramercys, of New York, for the first heat. At 2:30 P. M. the boats were got in readiness, when the wind came up rather strong, which ruffled the water. At 2:35 P. M. the word was given, the crews getting away well together. The Argonauts at once took the lead, followed by the Gramercys and the Wah-Wah-Sums, and retained this advantage to the finish, winning the heat by three lengths—Time, 9:36. The two other crews the referee decided a dead heat. In the second heat the contestants were the Beaverwycks, of Albany (the champion four), and the Atlanta four, of New York. The heat was finely contested, as the water was vastly better for rowing. The Beaverwycks won the heat with ease, by six lengths, in 8:56. The first heat of the single sculls Roach of the Gramercy Club, and Myers of the Cedar Bluff Club, of Saratoga, were the contestants, Roach winning the heat easily in 10:19, Myers rowing the distance in 10:32. The second heat, and to the hostpost on account of the storm until the next day, September 4th.

On September 4th the morning was lovely and cool, the water was fairly smooth, and the gathering of spectators along the shores was immense. The first event, the races along the shore for single sculls. Frank E. Yates and W. A. Eustis of the New York Athletic Club contested. Yates got away first, and was never caught by Curtis, winning the heat in 10m. 38s. The next event was the first and final heat for the pair-oared race. The entries were Wilders and Bainbridge of the Atlanta Club, and Smith and Eldred of the Argonauts. The Atlantics were as usual first to get away, but did not retain the lead long, as the Argonauts dashed ahead, pulling a powerful stroke, and coming in the victors by a length in 9m. 41s. The final heat for the single sculls was rowed at four o'clock, giving the other crews time to rest. Roach of the Gramercys and Yates of the New York Athletic Club got off evenly. The more powerful weight of the Beaverwycks and the light decided advantage on this course, although Roach rowed evenly and mechanically, and only lost the race by one boat's length. Yates' time 10:16.

For the double scull race there were three entries, Mosely and Hughes, Mutual Club of Albany, Girvin and Lathrop, Beaverwycks, Yates and Curtis, New York Athletic Club. The referee started the crews beautifully, the Mutuals pulling a quick stroke, which they failed in keeping up, as they were soon overtaken by the Beaverwycks and the Athletics. Yates and Curtis put on a little extra steam and eventually won the race easily by three lengths from the Beaverwycks; the Mutuals several lengths astern.—Time of the winners, 9m. 37s. The final heat of the four-oared race was the great excitement of the regatta, as both clubs, the Beaverwycks of Albany, and the Argonauts of Bergen Point, had shown extraordinary form. Both crews took the water together, the Argonauts slightly to the advantage, which they maintained for the first mile, and here their steering was very bad, as they kept too much to the eastward shore. In the meantime the Beaverwycks had kept a clear straight course, and the struggle between three rival crews was terrific—nothing of the kind has ever been witnessed on any water. The spurring of the crews was an extraordinary sight, and will long be remembered by the immense assembly of people who lined the shores. Finally the Beaverwycks, owing to their advantage in height and weight, being always employed in heavy manual labor, verged slowly ahead, winning the great race by only six feet in 8m. 45s. The timekeepers were W. H. Orlop, L. Lysses Boat Club; G. W. Tucker, of Philadelphia; L. L. Spring, of New York, and the referee whose arduous duties were no sinecure, were ably administered by Frank Bacon of the Nassau Club of New York.

The Argonauts of Bergen Point have challenged the victorious Beaverwycks of Albany to row a four-oared three mile race on the Kill von Kull.

A shell race on the Raritan River came off at New Brunswick, N. J., on September 5th, one mile and return, with two entries, M. B. Neilson and R. B. Culbert. The start was made at six P. M., with Culbert leading, but at the half-mile Neilson was passed by Neilson, who retained the lead until the finish. Neilson's time was 15m. 57s., and Culbert's 16m. 39s.

Our attentive Philadelphia correspondent "Sculls" sends us the following:—There were two races for singles and one for pair-oars, Saturday, 5th. The first was for the champion belt of the Schuylkill Navy, between John Larens, Jr., the holder and Mat. Schmidt, who has held it once or twice before. The race was 3 miles, with one turn, from Rockland up to the Falls and back. Larens made a good start and lead all the way up around the stake-boats and half way back, when he weakened and Max, with a splendid start, came under the water in 2:19, six lengths ahead of Larens. At the call from the judges' boat, the following scullers came into line:—James Mings, Vesper, Frank Henderson, Pennsylvania, F. M. Hartley, Pennsylvania, C. E. H. Brelsford, Malta, Brelsford and Hartley withdrew, Mings came home in 2:32, with Henderson close after. The last race was between two pair-oared shells of the Undine. This race was one and one-half miles straight away over to National cone, and was won by Madeira, stroke, and Gullingham, bow. Their opponents, Ewing and Bright, were unequally matched, and in spite of a good lead at the start, Ewing pulled the bow off his course, and at the white fences were falling behind, when Bright broke his outrigger and withdrew, the other pulling home alone. No time kept.

There is an air of activity on the river that is very encouraging. The College club of the University of Pennsylvania is to have a new house, and will go into it in a month. At the Naval Board meeting Messrs. Parker, Fairman and Krumbhaar were appointed a committee to conduct the fall regatta of the Schuylkill navy, which will take place on the 26th. The races will be for the champion flags of each class, and special flags for each winning crew.

The Emerald Boat Club of Portland, Me., will hold a grand international regatta on Lake Sebago, Wednesday, September 16th, and is open to the United States and British provinces. There will be races for four-oared shells, (professional), prizes \$450; double scull, prizes \$100; single scull (first class), prizes \$200; single scull, prizes \$30; (amateur). The distance will be 10 miles for the four-oared, 5 miles to a stake boat and return. In the double and single races, the distance will be 1 mile to a stake boat and return. Entries must be made on or before September 12th to Peter O'Connor, 14 Public street, Portland, Me. Crews will notify R. H. Parker, 80 Middle street.

The Halifax Rowing Club held a meeting on August 31st, and decided that George Brown accept the challenge of Morris, of Pittsburgh, the race to come off on the Kennebecas River, St. John, September 28. St. John people are willing to give Morris \$500 if he rows there, as he offered to go for that sum, and the race, doubtless, will take place. No correspondence has yet been received from Sadler.

The Horse and Course.

The Prospect Park Association held the first day of the running meeting on their grounds near Brooklyn, N. Y. The track was in fair order, the attendance limited and the weather cool and pleasant. The first race was a sweepstakes for two-year-olds, entrance \$50; distance five furlongs, only two horses coming to the post, Nannie McD. and I Know. The latter colt was beaten by four lengths after a close struggle—Time, 1:19. The second race was for a purse of \$500 for all ages, mile heat. There were four entries, Fadladeen, Audubon, Carriboon, and Mate. Mate won the race, making excellent time, the first heat being run in 1:45 and the second in 1:43. The third race was a dash of two miles for a purse of \$500 for three-year-olds. There were four starters, Lava, Botany Bay, Erastus Corning, Luitia H. Lava. Lava was behind Botany Bay for the first and three quarters and then came away and won easily in 3:48.

The Mystic Park Races, Boston, Mass., on September 2d were attended by an immense number of spectators. The special prize of \$2,500 offered for Goldsmith Maid to beat her previous record of 2:44 was undoubtedly a great inducement to a vast number of persons to see her perform.

The first race was for horses of 2:38 class. There were seven starters, Ben Mace's James Howell, Jr., being the favorite. Bella won the first heat, but the next three were taken by James Howell, Jr.—Time 2:44, 2:47, 2:29. The second race was for horses that had never beaten 2:28, for which there were nine starters. Lucille Goldust was the favorite. Lucille Goldust won the race, after losing the third heat, which was won by Smuggler in 2:22.

The great excitement, however, was when Goldsmith Maid appeared on the tract, she to have three trials. The Maid won the first heat in 2:19, going easily all the way round, accompanied by running horse attached to a buggy, and driven by James Golden. The second trial was made under the most favorable auspices. The track had been scraped close in to the pole. There was absolutely no wind from any direction. Budd Doble noddled for the world the first time he came down. The Maid trotted the first quarter in 33 seconds and the half mile in 1:06, lifting her head once just before she reached there. The last half mile was trotted without the least show of breath, and she made her best recorded time, 2:14, amid the cheers of the assembled thousands.

On September 3d the races were continued in presence of a large crowd of spectators. The first race was for three minute horses, and had seven starters, viz., Essex, Lady Van Cleef, Falmouth Boy, Unknown, Cataract, Wellesley Boy, and Empress. The first half was won by Falmouth Boy, but the next three were won in the easiest manner possible by the favorite, Wellesley Boy. The second race was for 2:26 horses, and the starters were Mambrino Gift, H. W. Gennet, Commonweath, Fred Hooper, Lady Banker, and Joker. Mambrino Gift went off and outtrotted Hooper and the others from the start, winning in three straight heats. The double-team race was the last on the card, and after five teams entered but two started, viz., Tom Carpenter's bay gelding Joe Clark and chestnut mare Mollie Morris, and D. B. Goff's brown mare Lady Woods and bay mare Carrie N. It was almost a walk over for Carpenter's team.

The Mystic Park Fall Meeting closed at Boston, Mass., on September 4th. The weather was very pleasant, barring an east wind, which was rather cool at times. The first race was for 2:31 horses, had six starters, Dan Mace drawing Vanity fair after scoring twice. Fleetly Goldust was the favorite and Kansas Chief the second choice. The first heat was won by the favorite, after a very close contest on the home stretch with Fleetly Goldust—time, 2:26. The second race was considered the great event of the meeting. It was for a purse of \$5,000, for horses that have never beaten 2:20. Of the eight entries four appeared, viz., Camors, Red Cloud, Gloster and Nettie. The first two heats were won by Red Cloud, beating Camors, who was second in the first heat and third in the second. The third heat was won by Gloster by half a length in 2:22, and finally won the race in 2:21, 2:24, 2:22.

At Mystic Park, Boston, Mass., on September 7th, the well known trotters, Goldsmith Maid, Judge Fullerton and American Girl, contested for a purse of \$3,500. The first two heats were won by the Maid with the utmost ease, the battle being between Fullerton and the Girl for second place. They kept well together, but on the home stretch Fullerton beat her out. In the third heat Goldsmith Maid acted badly in coming after getting the word. Fullerton at once taking a good lead, but as soon as the Maid leveled herself she passed the Judge, who was also crowded somewhat by American Girl, but managed to keep second place.

We have read about two hundred and fifty methods, or rather references to the way "scratches" in horses should be treated. But there is no danger of the scratches if horses are treated properly. Dirty stalls, and long standing in mud, and especially in clay stalls, and a neglect to wash daily the feet of the animal, are what produce this disease, sometimes leading to "quarter crack" and greatly diminishing his usefulness. But, as the scratches, from any cause, the scratches do come, among the many cures is a thick paste of gunpowder, well pulverized, two parts, and common salt one part, diluted in strong vinegar, and rub two or three times daily, first thoroughly washing with castile soap and water.—Germanston Telegraph.

The horse Red Cloud has been sold for \$42,000. So they say.

There is an all-rail route between New York and Halifax, Nova Scotia, over which it was promised the transit would be made in forty-six hours, but we seldom receive our exchanges within four days' time, and generally it takes a week.

Miscellaneous.

SPORTING BOOKS.

HURAM WOODRUFF'S—THE TROTTER HORSE OF AMERICA. New edition (the 18th), with nearly 100 pages of entirely new matter by CHAS. J. FORTY, bringing the work down to May, 1874; with a new record of performances, giving the best times made in the last fifty years, and with seven new full-page engravings of celebrated horses, black, white and gold, \$2.50. This is the standard book on the subject, and the additions just made add greatly to its value and interest. Every horse lover should own a copy.

STONEHENGE'S—THE HORSE IN THE STABLE AND THE FIELD. His management in health and disease. By J. H. Walsh, F. R. S. C. ("Stonehenge"). Thoroughly revised and Americanized by ROY McCLEURE, M. D. V. S., and with an essay on the Trotting Horse, his breeding and training, and with full tables of pedigrees. Illustrated with nearly 100 engravings. \$2.50. This is universally admitted to be the best horse book ever published.

DR. McCLEURE'S—THE AMERICAN GENTLEMAN'S STABLE GUIDE. Giving full directions for the management and care of stables, horses, and carriage and harness. By ROY McCLEURE, M. D. V. S. A practical manual for every stable owner.

THADDEUS NORRIS—THE AMERICAN ANGLER'S BOOK. The Natural History of sport, fishing and the art of taking, with instructions in fly fishing, fly making, and rod making, etc. &c. With 40 engravings. 8vo. Cloth, \$2.50. A classic on fishing by the best fishermen in America. Should be in the hands of every sportsman.

THADDEUS NORRIS—THE AMERICAN FISH CULTURIST. Embracing all the details of Pisciculture. 12mo. Cloth. Illustrated. \$1.75.

STONEHENGE'S ENCYCLOPEDIA OF RURAL SPORTS. Comprising Shooting, Hunting, Coursing, Fishing, Hawking, Athletics, Yachting, Boating, Racing, Pedestrianism, and the various rural games and amusements. By J. H. Walsh, F. R. S. C. ("Stonehenge"). Illustrated by 200 engravings. Revised and Americanized. A sine qua non to sportsmen. Crown 8vo. Cloth, black and gold, \$5.

PORTER & COATES, Publishers, Philadelphia.

*When not to be had at the bookstores, sent by mail post paid on receipt of price.

GRAND PIGEON Shooting Tournament!!
Under the auspices of the
Toronto Gun Club,
AND THE
Junior Gun Club,
OF TORONTO, ONTARIO, CANADA.

The subscribers beg most respectfully to announce to all the sporting men of America that they will hold a

Pigeon Shooting Tournament!

At the Toronto Riding and Driving Park, Toronto, Ontario, Canada, commencing

On Tuesday, September 22nd,

\$1,000 will be given in Prizes.

\$500 Open to Amateurs Only.

\$500 Handicap, Open to All.

Bar Messrs J. Ward, Paine, Bogardus and Close. Each of the two prizes will be divided as follows:

1.....	\$150.00	\$110.00
2.....	85.00	70.00
3.....	60.00	50.00
4.....	40.00	30.00
5.....	25.00	20.00
6.....	20.00	15.00
7.....	15.00	10.00
8.....	10.00	5.00
9.....	5.00	0.00
10.....	0.00	0.00

Entrance fee, \$5 to each party.

The game will be made with the Secretary on or before Monday evening, Sept. 21st, 1874.

The Tournaments to be governed by the Toronto Gun Club rules, excepting as mentioned in the regulations.

Two and a half "ground traps" any size gun—12 oz. shot—50 lbs. to fill.

Shooting may take one or more chances in each party, but not to win but one prize in each party.

Any one not a shooter may take a chance in each party, and nominate a friend to shoot his chance for him. Such shooter only allowed to shoot for one friend in each party.

The Amateur match to commence the Tournament. Twenty pigeons to be sent in for each chance, and to shoot at 10.

The Canadian Grand Provincial Fair will be held on the same day, and within 300 yards of the Tournament.

The Toronto street cars carry you within 100 yards of the entrance to the driving Park.

A dinner will be provided on the grounds every day during the Tournament.

Pools will be sold and squares drawn at Mr. Joseph Taylor's Dog and Duck Saloon, Colborne street.

The highest price paid for pigeons by the Secretary, N. B.—All communications and pigeons must be sent to the Secretary, who will furnish rules and all further information.

JAMES CHAPMAN, Sec. and Treas.

227 and 227 Yonge Street.

Toronto, Aug. 1, 1874.

The Kennel.

Old Calabar's Dogs.

SUPERIOR DRAGS.

1. INDEX II, chestnut color, whelped May 15, 1873, bred by John Walker, Esq., Halifax, by Shorthorn's Young Ben, out of Walker's Delectable, (pure Laverack) Young Ben, Old Ben, Robin, Ivy, &c.; a grand young dog, fine ringer, not yet handled, but in the future; full pedigree given.

2. S. real young SETTERS of good blood (Irish). 3. MUSTARD, Dandie Dimont, 2 years old; blue and tan, bred by the Rev. Tenison Mansie, no head, some, came at anything, quite a slow dog.

4. GYP, blue sky, 3 years old; very handsome, show form, famous at water and rabbit; no better.

5. BRACE OF DANDIE DEYMONT pipe, dog and bitch, by Mustard out of a first rate Dandie bitch; blue and tan; it to leave in a fortnight.

The above are all in splendid coat and condition. Apply to Old Calabar, Abbey House, Homsey, Innis, England.

ROME, N. Y.,

MANUFACTURERS OF

Split Bamboo, Lance Wood, and Ash Fly Rods, Sal-

mon, Bass, Trout, Trunk and Perch Rods, with

or without McHarg's Patent Reel Plate. Sole

Agents for the Empire State, New York, and

Brass and Pearl Spinning Bait of every

description, and manufacturers of

Fishing Tackle in all its Varieties,

including all styles of Bass, Salmon and Trout Flies,

Naples; most magnificent views; the Ocean

seen in the distance; the Lighthouse; the Islands

dotted the bay, with their beautiful green car-

pets; ships grandly passing till far out of view;

steamers likewise receding from the sight bound

foreward; yachts dancing the gaily decorated

barges of the boat clubs, conspicuous among which

are the scarlet of the Tritons, the magenta of the vic-

torious Argonauts, the blue of the Bayonne, and

the no less lively hues of the Claremonts, the One-

ida, and lesser crews. Do you want fishing? Here it

is in its exuberance. Only looking at them can tell you

that around their rocky sides sport all the variety of

fish to suit divers tastes, and in prolific supply.

Yachts are in two hours loaded with the blue fish

that are now so lively trod in these waters. Home

reigns supreme. The circles lately taken

shows New York ranked first in the United States.

The rate of increase of this county (Hudson) is 15 per

cent. For 1860, the population was 100,000. For 1870,

only 1 per cent. But twenty-three minutes from Lib-

erty street, and commutation eight cents. Houses

and lots for sale for cash, by installment, or terms.

See. Inquire for JOSEPH HALLOCK, Forest and

Stream office, 17 Chatham street.

Fur, Fin, and Feather,

CONTAINS THE

LAW FOR 1874

Of all the States and Canada, besides a vast fund of

useful information on Hunting and Fishing. Price

50 cents. For sale by Gunsmiths, Fishing Tackle

dealers, and News Agents everywhere. Mailed on re-

ceipt of price by CLARENCE SUDMAN, Publisher,

51 Warren street, N. Y. Usual discount to the trade,

HOME! HOME! HOME!

At Fishing, six miles from New York; 103

trains daily from A. M. to 12 at night; a yearly com-

mutation ticket free.

(Fare 8c. by package tickets.)

For sale, a French slate roof House, filled in with

brick; gas water, marble mantle; good closets; sewer

connections, with double plot of ground, gutted and

fitted. Price \$4,000.

Canaries.

MR. LOUIS RUIH, importer of birds and rare ani-

mal, 98 Chatham street, New York, begs to in-

form his customers and the trade in general, that his

first season's importation of first-class German

Hartz Mountain Canaries, arrived August 30th.

This importation will be followed by regular weekly

shipments during the entire season, from now to May

1875. To buyers, for cash, I offer this year a discount

of 10 per cent. on my wholesale price; customers pay-

ing prompt within thirty days. 25 per cent. No dis-

count will be allowed to any buyer neglecting to settle

his bill within thirty days. For base references

will be required of new customers asking credit.

The good reputation my firm enjoys requires no

comment. Respectfully, LOUIS RUIH.

AMERICAN WILD FOWL SHOOTING.—BY J. A. W. LONG. A practical treatise on the habits, habits and methods of shooting, also specific explanations for building boats, blinds and decoys, the training of water retrievers, and other valuable miscellaneous information, by a professional duck shooter. 1mo. 250 pages, cloth illustrated. \$2.50.
(Note.—Orders received at Forest and Stream office, and book furnished when published, about Sept. 25th.)

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. H. Terry was President. It was carefully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it no more nearly fulfilling the conditions above specified than any other tried by them, or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field. (See Ordinance Report.)
We are now receiving orders for these guns, and notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large guns, 400 yds. range, 3 to 10 cartridges, 70 to 85 grs. of powder, 250 to 400 grs. of lead, 3 to 10 lbs. weight, from \$80 and upwards, according to finish. Special Magazine Rifle for Creedmoor shooting, 50 grs. of powder, 480 grs. of lead, carrying 3 to 8 cartridges, weighing 10 lbs., from \$100 and upwards. Magazine gun for general use, carrying 3 to 9 cartridges, 60 grs. powder, 350 grs. lead, from \$40 and upwards. Single Breech-Loader, Creedmoor shooting, for long range, 50 grs. powder, 350 grs. lead, from \$60 and upwards. "Single Breech-Loader" for general use, 6 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upwards. The calibre of all our rifles, unless otherwise ordered, will be 45-100 in.

All communications should be addressed to
W. G. BURTON,
Care Ward & Co., 54 Wall St., N. Y.

It is manufactured from the best Virginia and North Carolina Leaf. It is particularly adapted to Meer-schaum and Cigarette smoking—does not bite or make the tongue sore—is therefore unlike any other tobacco in these respects.

For Forest and Stream.
THE SEA BOY'S FAREWELL.

WAIT, wait, ye winds till I repeat
A parting signal to the fleet
Whose station is at home,
Then waft the sea boy's simple prayer,
And let it oft be whispered there,
While in far climes I roam.

Farewell to father, revered bulk!
In spite of metal, spite of bulk,
His cable soon may slip.
But while the parting tear is moist,
The flag of gratitude I'll hoist,
In duty to the ship.

Farewell to mother, first-class she,
Who launched me on life's stormy sea,
And rigged me fore and aft.
May providence her timbers spare,
And keep the hull in good repair
To tow the smaller craft.

Farewell to sister, lovely yacht!
But whether she'll be manned or not
I can not now foresee;
May some good ship a tender prove,
Well found in stores, in truth and love,
And land her under lee.

Farewell to Tom, the jolly boat,
And all the little craft afloat,
In home's delightful bay.
Till they arrive at sailing age,
May wisdom give the weather gauge,
And guide them on their way.

Farewell to all on life's wide main,
Perhaps we ne'er shall meet again.
Thro' stress and stormy weather,
Till summoned by the board above,
We'll harbor in the port of love,
And all be moored together.

For Forest and Stream.

**The Ichtye Fauna of the North-
West Coast.**

THE MARINE SPECIES OF ALASKA.

THE saltwater fishes, useful to man, found in Alaska from the fifty-fourth to the sixty-seventh parallels, will equal in number and edible qualities those found in any portion of the world, and as a general rule, exceed them in size; and for these reasons the Northwest Coast must become in time the great fish commissariat of the Western Pacific nations and several of the Orient. As the region has many attractions for the successful prosecution of the fisheries I shall glance at them according as they present themselves, and they will prove sufficiently logical in results to form a corollary. Of the various species of fish frequenting the Alaska waters only a few have received their technical cognomene, and several remain unrecognized, so that in classifying them one meets with some difficulty in trying to be specifically distinct in nomenclature, or in reconciling them with others mentioned by early scientists under a different name. To commence with the less useful, we find in profusion two species of the pleuronectids, the *platessa stellatus*, or spiny flounder, and the *p. quadriloberculatus*, or common flounder; and with these I may mention a fish similar in many ways, the *vaga Cooperi*, or skate. The globe fish, (*unimaculatus orbis*), sun fish, (*orthogoriscus anatis*), several species of sculpin, and the capelin, (*mallosus ellinosus*), are also abundant, but are not used except by the littoral Indians, and they capture them only when pressed by hunger in the winter. Seemann in his explorations of the Northwest Coast states that the mullet thrives the more northern waters near Behring's Straits and Kotzebue Sound, replacing the salmon beyond the sixty-seventh parallel. It is not known around Sitka, so we must conclude that it prefers the more arctic regions. The smelt—*osmerus*, or *argentina priscana*—is a denizen of the coast from Cape Lopatka to the most southerly point; but notwithstanding its numerical strength, it is not em-

ployed in commerce. The anchovy, (*engraulis mordax*), is found along the lower coast in great profusion.

The culachon, (*thaletichthys pacificus*), is nearly a constant resident of the waters, and is caught in large numbers by the Indians, they prizing it highly, as it furnishes them with food, light and oil. Its specific characteristics having been given in a previous article I deem it unnecessary to refer to it at length in the present; sufficient to say that it has a strong affinity to the smelt. During their spawning season the ocean seems in a state of ebullition, so dense are they when preparing to enter the streams. They are then caught in thousands by the aborigines, who smoke them for winter use. This fishing possesses a keen interest for the romantic paleface, as the first fish caught is the centre of much ceremony from its captors. It is the originator of a dance in which all the dusky Masaniellos unite, and after that exercise come speeches, songs, more dances, and a glorious feast of the entire finny race found in the vicinity of the festal grounds. Ere being devoured, the adipose *thaletichthys* is addressed as king, and ample excuses are made to his piscatorial highness for the necessity which enforces upon them the destruction of himself and his kindred; and this rather jolly, though grave, ceremony being finished, the fishing commences in earnest and is prosecuted with vigor for about a month, when it closes, owing to the disappearance of all but a few stragglers. When going on a canoe journey, the Hydhas, Makahs, Bella Coolas and other tribes, take large quantities of this species with them, and when they want a light they place its tail in the fire for a few moments, then withdraw it as the whole body will afterwards burn with a slow but bright flame. With these extemporized candles they light their wigwams, or engage in night fishing.

The clupea family is well represented, there being some four or five species, which are allied to their Atlantic congeners, though different in color and minor anatomical outlines. The interior saltwater basins contain myriads of them in June and July; and they extend in apparently the same density from the Ochotsk and Behring Seas to the southern coast of Oregon. The natives fish for them by placing their canoes amongst a school and hurling them in with paddles containing rows of nails. While the season lasts it is a busy one, for great are its results. This fish could be used to excellent advantage as bait in fishing for cod; or if cured, it would meet a ready sale in the markets of California. Myriads can be trapped in weirs or hauled with seines; more indeed than could receive the attention deserved to render them equal to the best smoked or salted varieties of Scotch herring.

The tom-cod—the *gadus gracilis* of Tilesius—is very abundant and far superior to its Atlantic prototype, (*g. polymorphus*), in size and flavor. As it bites at a hook readily the aborigines capture large numbers late in the autumn with a hook made of walrus ivory; this being kept in motion constantly attracts the *gadus*, which bites at it though no bait is used; and the consequence is that the lines are pulled in about as rapidly as a man can attend to them, for this species goes at the business with most commendable vigor and promptitude.

The halibut, (*hippoglossus vulgaris*), ranges from Oregon to the Aleutian Isles, and up to the ice line of Behring Sea, and westward to the Ochotsk. The specimens caught weigh from one to four hundred pounds, and some are said to exceed even the latter weight. The Russians paid a slight attention to this fish formerly, but they do nothing with it at present, if we exclude the few caught for the table. The Alaska variety is deemed superior to its eastern kindred in firmness and delicacy of flesh, and as will be seen excels it also in ponderosity.

Of all the fish in these waters, the best for commerce, exclusive of the salmon, is the true cod—*gadus macrocephalus* of Tilesius; *marula priscana* of Girard—which is found in countless numbers from the coast of Washington Territory to the southern limits of the ice fields of the Behring Sea, or about the sixtieth parallel, and from Norton Sound to the Coast of Asia. The best species are found in the

deepest water, say from twenty to fifty fathoms, hence those caught along the banks of Alaska are superior to those of the Ochotsk Sea. The best grounds known at present are those off the peninsula of Kamschatka in about latitude 53° north. The fish arrive here about the last of June, thence spread over all the deep, muddy banks of the Kurile Straits, Gulf of Alaska, Shumagin Islands, and other localities, preferring, as a general rule, those banks where the water ranges between fifteen and forty fathoms in depth. Of all places the latter islands seem to be the most favored, as the marine plateaus near them are covered with a soft, oozy mud so well fitted for the home of the cod. Several vessels have been fitted out in San Francisco within the last few years for the purpose of engaging in this fishing, and all have done remarkably well. The hands working on shares have cleared an average of \$100 per month; whilst the vessels not only paid for their construction but also yielded handsome returns on the capital invested.

These grounds are much superior to those of Newfoundland, for the reason that storms are very rare in summer, and that vessels can easily run into a shelter in case of necessity. The shore is also well adapted to dressing the fish; or if a better one is desired a run of a few days will take them to Puget Sound, where they can find the best dressing grounds on the continent. Vessels leaving San Francisco in March can commence fishing late in June or early in July and continue until September. They should make only one trip, but if a second is rendered imperative, owing to receiving a cargo earlier than expected, they can enter Washington Territory and there refit, so that they will only lose a few days at the utmost. The Aleuts, who are excellent pilots and good fishermen, and have a "sea eye" equal to the best old sailor, can be employed at a trifling sum per week, so that any person possessed of a small capital can enter this business with assurances of success. The natives capture large numbers with a hook made of spruce, having barbs of bone, their line being composed of the gigantic kelp, (*uneroeystes*), which often averages two hundred feet in length, and the catch they often sell to white men. The salted fish sells in the California markets at from six to twelve cents per pound, so that the industry must yield handsome returns. In 1870 some thirty vessels left San Francisco for these grounds, remained absent four months and returned with about ten million pounds of salted fish, valued at over \$150,000. This sum alone is sufficient to show the profits accruing, and what a fortune could be realised by developing the industry to its fullest capacity. MORTIMER KERRY.

For Forest and Stream.

THE COMANCHE INDIANS.

NUMBER TWO.

IN my last I stated that a few more details in regard to dress and arms must be given before coming to customs, habits and traditions, which are more interesting. The shield used by warriors is twenty inches in diameter, made of skin taken from the neck of a bull buffalo, or account of its thickness and toughness. This is made hard by heating, and cannot be penetrated by arrows, or even pistol balls at a distance. The shield is carried on the left arm, and fastened with loops; it is decorated with colored eagle feathers, and such scalps as the possessor may have taken; it is also painted in different colors with odd devices.

The lance is of willow or cottonwood, light, and about eight feet in length, including the spear, which is usually made of an old sword blade, knife, or piece of iron filed down and sharpened.

The bow, the main stay and reliance of a Comanche, before possessing firearms, is made of "Bois d'arc"—the osage orange—is light, very tough and springy (to coin a word). The arrows are made of swamp dog wood, the sprouts of which are cut green; they need not be straight. A buck will take a crooked stick and soon straighten it by biting it from end to end. The head is made of iron, usu-

Fish Culture.

UNITED STATES FISH HATCHING IN CALIFORNIA.

SOME weeks ago we acknowledged the receipt from Livingston Stone, Esq., Deputy U. S. Fish Commissioner, of some photographs of the Government Hatching Establishment on the McLeod River, in Skasta county. This establishment comprises two comfortable houses fifty feet long, with kitchen, offices, bunks, &c., which occupy a rocky shelf hanging over the very bank of the river, in the middle of a double curve of the stream, where it forms a letter S. All these have been erected since the 3d of July, during the summer just past, together with corals or pounds, troughs, tanks, filters, and other necessary appliances for carrying on the operations of the establishment, which, without them, were greatly limited during the first two years at this station. The force at present employed in this service comprises: Livingston Stone, Chief; John G. Woodbury, Foreman; Marshall L. Perrin, Secretary; Waldo Hubbard, Richard Hubbard, E. C. Forbes, Oliver Anderson, John P. Williams, Assistants to the Chief; E. Conklin, Photographer; Myron Green, Chief Fisherman—ten persons in all, together with a Chinese cook, and numerous Pitt River Indians, who assist in hauling seines, corralling fish, pulling boats, and other incidental labor.

The McLeod River rises in Mount Shasta, and flows through deep and rocky canyons for seventy-five miles or more, emptying into the Pitt River, a tributary of the Sacramento, 185 miles above Sacramento, and some twenty miles from the Sacramento River on the east. It is never wider than 160 yards, and often narrows, as it rushes and foams through rocky passes, to thirty yards, and even less. Its waters are cold as ice, formed from melting snows, and fed by the coolest springs of the deepest and longest gorges of the mountain ranges which it penetrates; they are clear as crystal, and a person standing on the banks can distinguish every pebble upon the bottom in the mid channel for an eighth of a mile above, and see every fish that sports in their depths. Its waters so temper the atmosphere that the heat of a scorching summer noonday is scarcely felt as you rest upon the verdure covered banks. Wherever known, its wild and romantic scenery and its surpassing loveliness have won for it the verdict of purest and most beautiful of California's rivers. This river is still in possession of the Indians, and almost free from white men, although two settlers have obtained a foothold far up the river, since the advent of the Fish Commission. Up to that time, two years and a half ago, the Indians persistently fought off or murdered all intending settlers or miners, regarding the river as exclusively their own. They had been the last of the California tribes to yield to the white man's sway, and the hardest to subjugate. "At one time," says Mr. Stone, "a party of miners came down across the Sacramento hills to their river to look for gold, but they were waited on in the morning by three Chiefs and three hundred warriors, and summarily escorted out of the country. This sort of thing was repeated several times. Still later a party of two Americans and eleven Chinamen came up from the Sacramento River to dig for gold, and camped a short distance above the present location of our camp, but before morning the McCloud Indians murdered every one of them, not leaving one to tell the story.

"A year ago a Mr. Crooks came to the river and settled a mile or two above us, but the Indians murdered him as late as last September, while I was there.

"When we came to the river to erect our house and hatching works, a large number of Indians assembled on the opposite bank and spent the whole afternoon endeavoring by threats and furious gesticulations to drive us away, and afterwards several of them waited on me and told me in their dialect of which I had learned a little, that this was their river and their land, and these were their salmon, and that I was stealing the land and salmon; that they had never stolen anything from the white man nor taken his land, and that I ought to go away. Some of them went so far as to give out threats about my being killed. When I thought of the fate of all my predecessors on the McCloud, I did sometimes feel slight misgivings, but I adopted a firm and conciliatory policy with them which worked so satisfactorily that I am now perfectly satisfied that none of us are in any danger there. I ought also to add that they stand in too much fear of the white man to do any open injury."

Mr. Stone has now mastered their language, knows every man by name, never passes one without pleasant greeting, trusts them with many valuables and has not yet been deceived. Once having a large sum of money about him and having reason to anticipate an attack from white men, he called an Indian and gave him the treasure, while he laid down and slept. The next day the dusky custodian returned every cent. One of the party sold an Indian a vest; the redskin followed him six miles on foot to restore a gold chain carelessly left in the pocket.

As has been intimated, an immense amount of work has been done the past summer. From a very comprehensive sketch printed in the Sacramento Record we have been enabled to cull the following facts of interest:—

With incredible labor they built two stone piers in the

stream, and from there to either shore; and from pier to pier, where the river is about two hundred feet wide, they sunk a fence to the bottom, and extending a foot or more above the water. This fence resembles a rack, and is made of willow poles lashed to cross pieces. The poles are so close together as to prevent the salmon passing through them, and hence below it they gather in thousands, leaping against the barrier in vain attempts to pass. The fence is made in sections, and on the 1st of November, when the camp breaks up, up comes the fence too, to be packed away and saved for next year. At the northern end of the fence is an acre of river bottom, graveled and level. Here a huge undershot wheel has been set in the bank, moving regularly and slowly with the current. On the shore side the periphery of the wheel is mounted with buckets, which dip into the clear waters, come up full, and empty 6,000 gallons per hour into a flume. This flume lends to the hatching trough. On the opposite shore, at the end of the fence, two corrals, so-called, have been built, made by fencing off some of the river edge where the current is lighter. The only entrance to these corrals is through a long funnel made of poles, and narrowing, so the salmon may barely get through at the inner end, and there the poles are sharp and pointed. The fish finding the fence impassable, work along its front until reaching this funnel. Once in this pool they are driven through a gate to the second corral, and here securely kept.

But all fish are not taken in corrals. Mr. Stone cannot trust for his supply of eggs to these alone. The greater portion are captured below the fence in seines at night, and then the services of the Indians are most useful in pulling at the ropes. A full ton are taken at a haul, and the Professor and his men and Indians are in the midst of the struggling salmon, knee deep in the icy stream. The red skins shout and laugh and dance. The cry "Mahalla!" "Mahalla!" is incessant, and now and then, as a false fellow is disentangled from the net, the cry is "buck!" "buck!" The fish with the gracefully shaped jaws and broad bodies are the females, "mahallas," and are carried rapidly to a floating crib near by and cast in, where they flounder in shallow water in vain endeavor to escape. The crooked jawed, narrow bodied and heavy fish are the "bucks," or males, and about one in five of these are taken to the crib also, while the remaining four fall to the Indians.

The hardest work, however, is done by day. Following down the flume from the water wheel and you enter a tent nearly 100 feet long and 50 wide. The water pours into a large wooden reservoir, and now we come to the hatching process. On one side are the men busy making trays, and hard work it is. These trays are light frames one by two feet, stretched across each of which is a sheet of wire cloth or screen cloth, treated with asphalt, to prevent fungus or slime gathering upon the wood, which would destroy the eggs. Of these trays, over 500 have already been made, and 500 more are yet to be constructed. Leading from the reservoir mentioned and running the whole length of the tent by gentle declination, made by dropping sections slightly, are eight long troughs of heavy boards just wide enough to admit the trays lengthwise. These troughs made by the party are also black with asphalt. Each trough is divided by partitions into lengths to suit the length of the trays. In each compartment so made, four trays will rest, one on top the other. Thus we have troughs enough to hold 1,120 trays at a time. Each tray will hold 6,000 salmon eggs. This gives a total, when all are filled, of 6,720,000. About five per cent are lost, leaving 6,384,000 reliable eggs, every one of which will produce a fish. These eggs are obtained by stripping the female salmon, and impregnating them with the milt of the males. The eggs procured number about 500 to every pound weight of the yielding salmon. They are always rinsed in the trough compartment with carefully filtered water from the reservoir. After lying two days upon the trays, over and through which the water passes continually, the egg becomes opaque, and a film extends over the yolk. This opaque spot is the germ of fish life. Now it is the trays must be watched. Daily, nightly they must be lifted out and examined. Whenever an egg turns white it is dying or dead, and is picked out. If left in the tray it would throw out a vegetable growth of little arms and destroy every egg within reach. For seventeen days the eggs remain in the troughs, and then two bright, black little spots are seen; these are the infant eyes of the future salmon. Now comes the packing. The boxes in which they are packed are all two feet square and a foot deep. The eggs are packed with first a layer of moss at the bottom of the box, and then a layer of eggs, and then another layer of eggs, and so on to the top. Midway, in the interior of each box, there is a thin wooden partition to break the force of the superincumbent mass of moss and eggs. We pack about 75,000 in a box. When the box is filled the cover is screwed down and packed with another one of the same size in a crate three inches and a half larger on all sides than the combined bulk of the two boxes inclosed, this intervening space being filled with hay to protect the eggs from sudden changes of temperature. On the top of the crates is a rack for ice. The only suitable moss that can be obtained is found at the headwaters of the Sacramento, seventy miles away! When the embryo are packed they have to make a journey of 8,000 miles to the eastern waters for which they are intended. The first shipment is now ready, and the rest will follow rapidly until the spawning season ends. Really, that is September 21st, but as California is peculiar in many things, so in this, salmon run up

the stream every month in the year here, and spawning goes on all the time. About the first of November Mr. Stone will break camp, pack up his works and secure them. He will then go down the coast, perhaps as far as San Diego, and, under orders from Washington, inquire into the entire salmon and trout family of the coast, and present the result of his labors in a full report.

No eggs are fully hatched, either at the California establishment, or at the one at the Penobscot River under charge of O. G. Atkins, these being the distributing stations from which they are sent to the various minor stations in the States, at which they are fully hatched. The hatching time depends on the temperature of the water, and may be from one month to six months. In California about one month suffices to produce the perfect fish, which at the age of two months is able to look out for itself in our rivers and bays. The station on the Penobscot is maintained to supply salmon for the cold waters of the northern streams, and that upon the McLeod River to supply fish for the warmer waters of the south of the Union. There is also a noted difference between the salmon at the two stations. That of California is known as the *salmo gairdneri*; that of the Penobscot as the *salmo salar*. The former is marked only by dark and gray spots with silver, while the Maine salmon presents a variety of beautiful colors. The California salmon has a hooked or eagle beak upper jaw, with no knob or projection upon the lower jaw. The salmon at the east presents the contrary features. As to their flesh there is but little difference, though the eastern salmon is now in most favor.

The McLeod River was selected because it is the chief salmon-breeding stream in California; its waters are perfectly pure, and the means of speedy transportation ample; it is free from white men, and has no mining, mills, etc., to drive the salmon away. Within a few years the American and Feather rivers have been entirely depleted of these fish, and now California's supply of salmon depends wholly on this stream. The barriers, corrals, &c. of the Commission will not break up the run of salmon, because myriads of fish go up the river both before and after he takes spawn, and the six million eggs he takes will not be missed. Salmon enter the mouth of the McLeod in March in large schools, and in May are still more plentiful, but not very large. In August the run up stream begins, and then comes the spawning, the fish seeking the far upper waters to deposit the ova. The Sacramento salmon is an active and powerful fighter. It may be caught by hook and line in salt or brackish waters and also in fresh waters of the upper tributaries. "Salmon Roe" is the best bait for angling for the fish, but they will often take the artificial fly. A short time after spawning in the McLeod River, the parent salmon become black, smooth, the scales are absorbed into the body, and they become diseased and die. Their bodies float to the shores in thousands, and then it is the bears come down from the mountains to eat the dead fish, and all the Indians go hunting bear. Preparations are already on foot on the McLeod for the bear hunts of September.

Besides salmon hatching, Mr. Stone and his party have other work still to do. They every day prepare specimens for the Smithsonian Institute Museum at Washington, putting up in alcohol varieties of salmon and all possible attainable varieties of brook, lake, river and mountain trout. Some are skinned, others preserved entire. Over four hundred specimens have already been obtained, and some one hundred gallons of alcohol used in their preservation. When finished it will be the only complete museum collection of California fish.

EASTERN TROUT IN CALIFORNIA.—Some two years ago the California Fish Commissioners procured from the Eastern varieties of river and brook trout, and placed them in the north fork of the American River, where, before, there were no fish. We now learn from Mr. B. B. Redding—one of the Commissioners who recently visited the river where they were deposited, in order to ascertain how the fish had prospered, and whether they had remained in those waters or had gone below the falls—that he found the trout very plenty, biting freely at the hook and much grown. He took several and identified them as the eastern fish. He returned all he caught to the river. The spawning season for this fish is at hand, and he believes the head waters of the river will be thoroughly stocked with these trout.

SCOUNDRELS.—Mr. Hess, of the firm of Perkins & Hess, of Grand Rapids, Michigan, has called at our Chicago office to express their misgivings that Fish Culture will not pay as an industry, inasmuch as an appropriation of some 200 salmon were nearly destroyed in his hatching house last week by some scoundrels who poisoned them.

—The semi-annual meeting of the Illinois State Fish Culturists' Association will be held at Peoria during the State Fair, to-day. Different native breeds of food fish will be exhibited, and also trout from the fish farms at Elgin. Several very fine aquaria will be shown.

—The State Fish House at Anamosa, Iowa, will be completed by the end of this month. The spring which will supply the hatching troughs is almost inexhaustible. Mr. B. F. Shaw, who is in charge, has been notified by Professor Baird to be in readiness to receive 250,000 California salmon early next month. Mr. Shaw will certainly raise white fish at Anamosa. We wish the Iowa Fish Commissioners full success, and believe that their labors will in due time produce the best of results.

Natural History.

THE OREGON BIRD.—In our last number we described a peculiar bird, whose characteristic traits were sent to us by Mr. Roop, of Portland. Professor Baird and Mr. Ridgway have kindly given us the following information in regard to it: "The description of the bird coming from Mount Hood, Oregon, answers very well to that of Clark's crow (*Picicorvus Columbianus*), a species common in the Rocky Mountain region and westward. This bird, however, has an elongated, slightly curved bill, with nothing of the scissors shape about it. If the bills cross, as we infer from the term, it is probably an accidental malformation, such as is not unfrequently occurs in long-billed birds, and such as is permanently present in the so-called cross-bills." [We have requested Mr. Roop to send us a stuffed bird.—Ed.]

—An occasional correspondent who signs himself "Vet-cr-n," mentions having recently killed a black snake which contained in its stomach five little woodcock, apparently only a few days old and just swallowed, and assumes that these snakes are among the most destructive of pot-hunters. We have little doubt in our minds that scarcity in certain localities is often due almost wholly to the cause here named.

—There is something delicious about the way the bees behave in Los Angeles. All you have to do at breakfast time, in an old house, is to procure a gimlet, bore into the ceiling, and hold your cup or your slice of bread under the hole, and the honey drops out in an endless stream. Of course the garrets are not of much account as enjoyable locations. When they tear down a house at Los Angeles, the bulk of wax alone, pays for the demolition, and goes a good way to build the new house.

PRESERVING THE VITALITY OF EGGS.

WHITEFIELD HOUSE, MEALA GATE,
CARLYLE, England, Aug. 25th, 1874.

EDITOR FOREST AND STREAM:—The failure in hatching eggs is a hardy game, lately sent in great numbers from America to England, plainly suggests the inquiry "Have they been packed and treated in the best manner?" I have given this matter great attention lately, and beg to offer a few remarks thereon. Our London Journal of *Horticulture* is also our best authority on poultry subjects. I take it, and see several letters in last month's number giving suggestions how eggs may be preserved, quite fresh for a very long time. One writer states that he has kept eggs perfectly fresh from August till the following March, by using thin boards or shingles perforated by circular holes, in which the eggs are placed with the small end down. This causes the yolk to swim always in its proper position, and not to adhere to the side. Strange to say, but it is an undeniable fact, that twenty or thirty years ago all our servants had ten times more skill in domestic economy than at the present day. They could brew first-rate ale, pickle, preserve, and manufacture capons, and bring up poultry with marvellous success. We have now to do all these things ourselves, if done at all, and wait on our servants. I saw lately in an old lumber room the remains of a board as above described, which my mother said was in constant use fifty years ago in all well managed households.

Laying down a great number of eggs in salt, or hard, every summer, which keeps them quite good for eating for many months; but whether the vital property is preserved thereby I do not pretend to say. I believe that turning the eggs every day is the grand secret.

"On Candemness day"

"Good eggs begin to lay" is a trifle old couplet with some folk, before inclined to sit. These eggs are marked with a cross of ink or soot, so as to distinguish the different sides, and if not turned every day not one will hatch. I observe that our domestic poultry and pheasants turn their eggs themselves when sitting hard, and seldom miss one. Some guests of mine, who would not believe it at first, constructed models of the fact by marking a lot of partridge eggs in a nest, which was in the shrubbery close under a window, and we could see her go and on. Mr. H. Barr, of Berkshire, a most excellent authority in such matters, writes me to-night, and among other things says: "I omitted to answer a question of yours in a former letter, relative to the carriage of American eggs. I think the eggs should be packed in moss, sufficient to keep them in light and not too hard crammed. Then each box or basket should be turned on one side or in every tray every day. This is all important. If it is not attended to it is of no good attempting to transport them."

I quite agree with my much esteemed friend, and I think nothing could be better than packing them in his suggested-in shallow boxes. What could be better than coarse rice, &c. I suppose, which are light and airy, keeping them apart with moss? After that they might be held fast with netting, coarse open sacking, or some such contrivance, so as to keep them from shifting, and then you could invert the thing at once. A lot of these could stand on the top of each other like shelves. This would save the immense labor of turning each individual egg between finger and thumb, and there would not be the liability of missing some or letting them rattle. That they can be brought over successfully, if well managed, I have no doubt whatever. JACKSON GILLIBANKS.

MORE ABOUT SHARKS.

PHILADELPHIA, Pa., August 25th, 1874.

EDITOR FOREST AND STREAM:—In the issue of your paper I observed the article "As to Sharks," and as I have no reason to doubt the veracity of Professor Baird's statement, I am obliged to confess that I have, through want of luck, missed treat, or I must console myself with the belief that there must be a great difference between the flesh of the blue shark and that of the brown and ground species. Eight years of my life I spent at sea, and during that time I made the acquaintance of quite a number of sharks of almost all ages, sizes and species, but only on two occasions have I thought of tasting the flesh, and in neither of the cases did I get the length of actual taste. Many a time I have heard old sailors state their conviction as to shark being "a mighty hard morsel to swallow," and some would say that "skunk could not smell much worse." I felt a great curiosity on the subject, and determined that when I could get a chance at a young one I would try how it tasted. The chance came at last, and an extract from my journal will show my experience on the subject:

Saturday, June 9th, 1868.—Just when I was going in to dinner the boatwain came to ask for a piece of raw pork, saying he wanted to catch a young shark and make mince of the bones. I went forward and found that there were two young sharks, and they would have nothing to do with the bait. I got the sharks and went out on the martingale, and when I got a chance at one I let drive at him, and made a lovely miss. A sailor named Sutton next took the grates, and struck one and got him on board, and then I got a slap at the other one, and some how or other I actually struck him and got him on board too. Half an hour

later a fellow about ten feet long was seen cruising about the same place. The harpoon was got out in his honor, and Sutton sent it through him, but when he hauled him up he kicked and struggled in such an outrageous fashion that the harpoon tore away the flesh, and he fell back into the water a gone shark, and as it was a dead one we could see him as he slowly sunk out of sight. The two young ruffians in the meantime were cut up and prepared for the frying pan and left to soak till to-morrow. I have tasted a good many kinds of fishes, but never yet brown shark, or any other kind of shark for that matter, but I think if all goes right I will have a piece to-morrow to see how it tastes.

Sabbath, June 10th.—I may mention as regards the piece of shark I was to eat to-day, that it never was cooked. The water in which the flesh was soaking was changed three times since yesterday afternoon, and yet by this morning it smelled so awfully that it was quite perceptible from any part of the deck, and the cook emphatically declared that he would not cook any such stuff, and he would not let any of his pans be used for such a purpose, for he never would be able to get the smell away, and nobody should have any objection to what I last threw the whole affair overboard. I felt no desire to-day to taste it—the perfume was enough for me, in fact more than enough. I really do not think that my experience in the eating of shark flesh will ever be very great except I should be driven to it by sheer necessity.

My second attempt at shark eating was at Annesley Bay, in Abyssinia, at the time of the British expedition under King Theodore. Our captain and three officers of the Forty-fifth Regiment made up a shooting party and I was invited to accompany them. We sailed about twelve miles up the bay and camped out for three days, and during that time I made my second attempt at shark eating.

Friday, 26th February, 1868.—When the tide had gone out to-day I saw a fish of some kind floundering about in one of the shallow pools. I took off my boots and socks and made my way out and found it was a young ground shark about eighteen inches long. When I first waded into the pool the young wretch made direct for me, but afterwards turned round and tried to make off. However, I grabbed him by the tail, and in spite of some desperate attempts he made to bite my hand, I brought him up to the tent. I remember the time when I once before tried to eat shark and dirt, and counted to try this one, as it was a different kind and possibly might not smell. The one young shark, I remember, were kept in soak for a night, so I decided to cook this one while fresh. On account of the solemnity of the occasion, and also because I had doubts as to whether our Indian would cook such an outlandish kind of meat, I officiated as *chef de cuisine*, and proceeded to make shark stew, but oh, grates! whenever the meat began to get warm in the stew pan it likewise began to emit a perfume that was far from agreeable, and which in a short time got so intolerable that I seized the pan, carried it a short distance and dumped the contents. I observed that Muckram had a severe scrubbing at that useful utensil during the course of the afternoon, and no doubt he blessed the Sabbath for taking liberties with his dishes.

Such has been my experience with shark flesh. It is true that on neither of the occasions did I get the length of tasting the flesh, and it is possible that the cooking might not have been of the best quality, and that there may be some way of disguising the peculiar smell of the fish, but I must say that, taking into consideration the horrible smell in both cases, he must have been a very hungry man, or else a bold experimentalist, who would have gone the length of eating shark. A.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Sept. 13, 1874.

Animals received at Central Park Menagerie for the week ending September 12th, 1874:

Six Prairie Dogs, *Cynomys ludovicianus*. Presented by Philadelphia Zoological Society.

One Jackass Rabbit, *Lepus capensis*.

One White Peafowl, *Pavo cristatus*.

One Small Alligator. Presented by Master Conde R. Thorne.

W. A. CONKLIN.

Woodland, Lawn and Garden.

THE AUTUMN LEAVES.—The long continued drought in many sections of the country has so dried the sap in the shade and forest trees, that their leaves are withering, turning brown, and falling prematurely. Many trees have already shed half their foliage, and it seems as though all would be stripped and bare long before their usual period; so that we are likely this year to miss the radiant glowing tints that make the American autumn gorgeous. We experienced a rapid transition from winter to summer. Spring was omitted, and now, if we are to pass directly from summer to winter, how shall we endure the elimination of both the vernal and autumnal seasons? In lieu of the crowning glory that makes the October forests resplendent, we shall have only the sere and yellow leaf to remind us, indeed, that "the melancholy days have come."

—Our Waretown correspondent, "A Brick," says he has found pink pond lilies in Ocean County, New Jersey. They were usually of larger size than those of a white color, which he attributes to the peculiar richness of the soil.

ANSWERS TO CORRESPONDENTS.

ANNIE C. AVERY, Mt. St. Vincent.—For information in general as to the cultivation of outdoor or "garden ferns," we refer you to an article on ferns to be found in No. 20, Vol. II, of *FOREST AND STREAM*. Please read carefully the portion commencing "The fern so readily adapts itself," etc., to the end, and if you would add anything to this you will be able to do so easily, as everything relating to this beautiful and hardy decorative plant for the parlor is suggestive from the very beginning. We like the plan of making steps, rising one above the other, or galleries, little arches, etc., all of which can be easily made with small bits of granite quartz and jasper, feldspar, or such other geological specimens as you may have or can procure. Ferns of small size should always be chosen. There are many beautiful sorts to be had at a small cost, and which any greenhouse will furnish. Ask for hardy and half hardy ferns. O. Q.

MARY MANSFIELD.—The leaf you send "of a curious plant found growing wild in the woods," is the *Passiflora*, or passion flower. How it came to be found in the woods I can only conjecture; most probably the seeds were sown by the birds, who plant many seeds, both of flowers and fruits. The *Passiflora* are truly beautiful plants for cultivation—both curious and interesting. The flowers are sometimes produced in great profusion, and during a succession of several weeks. Under glass they will bloom many weeks, and in summer or autumn out of doors.

They are a beautiful plant for training about doors and windows. I have one now in bloom at this writing, running over a portion of my front door, that is the admiration of all who behold it. The one best adapted for indoors is the *Clara gigilucci*, and for out of doors the *P. caerulea*. O. Q.

EMERSON, Charlestown.—The insect you sent for recognition is an old and well known enemy of the garden. He is king among "saw flies," the female *Clandius difformis*. He has an apparatus at the extremity of the body, which, revealed under the microscope, presents the appearance of a genuine saw, hence the local name in many places of "saw fly." This insect is one sixth of an inch in length, with a black and shining body, and dirty, yellowish white legs. Having once seen him you will never forget him. These flies are fond of rose leaves. They work about seventeen days, and then remain in a pupa state three weeks, when they again make their appearance in the shape of perfect insects, ready to vex the soul of the most patient gardener. O. Q.

BREWSTER, Pennsylvania.—The "animal insect, you call him," is one of the August pests, and he is called the *Tettigonia*, or familiarly known in Massachusetts as the "leaf hopper of the vine." This insect is found in wet and damp locations, as well as in dry gardens, and is a bad customer to deal with. The *Tettigonia* are often found upon the leaf of the grape vine, and their bite is blight. They go there to bite kill, and destroy, and they will kill the fruit on the vine if you do not kill them. There is one species of this insect found in grass lands which leave a deposit called "frogs' spittle." You have only to examine this to trace them out. The *Tettigonia* is one tenth of an inch long, and if you catch one and place him under your microscope you will see him in all his glowing straw colors, nicely striped with red. You can find no better means of expelling him than the application, with a pair of bellows (prepared for the occasion), of equal parts of flour and sulphur and dry air slacked lime. O. Q.

WILD PLUMS OF KANSAS.

We copy the following article from "The Garden," a weekly London journal:

[Some time ago it was stated that a traveller in Central America, while passing over the sandy plains of Kansas, met with strange thickets of small plum trees, not larger than our gooseberries, but bearing fruit of immense size, and fine flavor. Several inquiries for further information respecting these plums, not having met with any response, our occasional contributor, Mr. Jackson Gillbanks, of Cumberland, who takes so active a part in all branches of natural history, wrote to America, through the *FOREST AND STREAM* journal, to ascertain whether or not such plums existed, as small bushes bearing large and delicious fruit would be a grand acquisition to both our garden and orchard houses. This has produced the following interesting letter on the subject from Mr. Ed. Thompson, of Kansas.]

"**LAWRENCE, KANSAS, U. S. A., July 8, 1874.**
"Dear Sir—Your letter, relative to the wild plums of the plains of Kansas, has again directed my attention to them. The head waters of the Kansas river and many streams emptying into the Platte, abound in wild plums of many varieties and colors, where the soil is fertile and water not scarce, the trees grow to the height of from 6 to 10 feet, and the fruit of many kinds is large and pleasant to the taste. There is one variety of white plum quite as large and of as good flavor as Bolman's Washington, a kind generally cultivated and much valued in the Eastern States. Another kind resembles the St. Catherine in size and color. Among the sand hills of the Arkansas, the trees do not reach the size that they do further north, being not more bushes 3 and 4 feet high, growing in dense clumps or thickets. The fruit, however, appears to be equally large and luscious, and during the early fall my men have frequently brought baskets into camp, which were exceedingly palatable, either raw or cooked. In the fall of 1872, after we had experienced severe frosts upon the head waters of the Republican, on our way into settlements upon the north fork of the Solomon, we found a deep arroyo, with spring, whose sides were all covered with plum trees, all bearing, their sheltered position having apparently delayed the fruitage and protected them from frost. I shall be this year south of the Arkansas river, in the extreme southwestern part of this State, and if the Indian's untutored mind does not suggest his raising my hair (scalping), I will make further observations upon this subject, the result of which I shall be happy to communicate. (Signed) EDWARD D. THOMPSON."

To Jackson Gillbanks:

A local paper adds: "The labors of Mr. Gillbanks in natural history and nearly every branch of science, seems well known and appreciated in America, and we learn that several parties there have offered to send him some plants of these desirable fruits, which he intends to present to the Royal Gardens at Kew, so as to have the best treatment."

[Mr. Gillbanks begs us to thank Mr. Thompson for the information conveyed.—Ed.]

RANDOLPH, N. Y., Sept. 14, 1874.

EDITOR FOREST AND STREAM:—Enclosed find a common grasshopper, (*Gryllus viridissimus*) that has upon its body small insects, that when put under the microscope look to be three inches long, and one half inches wide, with three pairs of legs, of a bright red color, and half all over its body. My object in sending it is to enquire: 1st. What are they? 2d. Is it common for grasshoppers to have them? I noticed hundreds of grasshoppers with a little clump of from ten to twenty of these little insects under the wings, where they attach themselves to the body, giving the grasshopper a beautiful appearance as they jump and fly. I noticed many with the wings partly and entirely gone. I suppose the little parasites or insects feed upon the wings, and perhaps eat and kill the grasshoppers. Am I correct? Yours very truly,

Secretary Trout Grove Fishery.

P. S.—Since writing the above an old farmer says: "They are lice that have destroyed the grasshoppers for two years before this." T.

[The presence of these parasites has been noticed in other localities; wherever they are found they make mortal havoc with the grasshoppers. If western people would acclimate a few billions of them, the grasshopper plague would afflict them no more.—Ed.]

—A man without resolution is like a man exempt from evil—he has no (will) of his own.

THE NEW CEREAL.

EDISON FOREST AND STREAM.

The article in your issue of the 9th, ultimo, under the title of "A New Cereal," and asking me to answer the query of the editor of *Land and Water*, has been called to my attention. As I was the person who wrote the copied description, I suppose I should be the most familiar with the grain; but I am sorry to state that I paid no further attention to it after making its peculiarities known. The origin of the grain is true, if I can believe the statement of prominent gentlemen. It was first brought to my notice by the gentleman who grew the specimen described, Mr. R. H. Thompson, of the Oregon Steam Navigation Company. He wished me to decide its character, as he could find no two consecutive farmers who would agree as to what it was, some classifying it as wheat, others as barley, oats and rye. He had two acres of it at the time, the product of a small handful received from the party who had extracted the parent seed from the stomach of the wild goose.

Its height, length, and glutinous character were the cause of first attracting the attention of Mr. Thompson to it, as he owns a "Model Farm," one of the finest in the country, and he was anxious to propagate the new cereal, if he could learn what it was. In order to decide he sent it to me, but I only made a superficial examination—though attracted to it very much—as I had no means to test its chemical composition, nor any work on botany to which I could refer for comparison. Mr. Thompson planted all of this seed he could procure last spring, and he promised to let me know the result, and to send me further specimens and name any changes from the original kernels. If he complies with his promise, I shall make a thorough analysis and send you the result. These are all the facts relative to the matter in my possession at present.

Respectfully, &c.,

MORTIMER KERRY.

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

Monroe, *Alces Maculosa*. Snipe and Day Birds.
Hares, *Lepus*, *Capreolus*. *Parus*, *Perisoreus*, *Geothlypis*.
Hares, brown and white. Red deer, *Caribaea Virginiana*.
Wild Turkey, *Meleagris gallopavo*. Quail, *Colinus virginianus*.
Woodcock, *Scolopax rusticicola*. Pinnated grouse, *Tetrao canadensis*.
Ruffed Grouse, *Caprimulgus vociferans*. Curlew, *Numenius argenteus*.
Esquimaux Grouse, *Numenius borealis*. Curlew, *Numenius argenteus*.
Plover, *Charadrius*. Willets.
Godwit, *Limosa*. Red or Rice birds, *Dolichonyx oryzivorus*.
Ralls, *Rallus Virginianus*. Wild Duck.

Under the head of "Game and Fish in Season" we can only specify in general terms the season for the various kinds of game, and we do not wish that we were able to attempt to particularize we could do no less than publish these entire sections that relate to the kinds of game in question. This we realize is a great amount of space. In subdividing game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—Woodcock just a shade more abundant, coming from the usual quarters; worth \$1.75 a brace. Ruffed grouse (partridge) scarce. Those we saw in good order, selling for \$2 the brace. Pinnated grouse, (prairie chickens), in fair quantity, worth \$1 a pair; seemed to be in fair condition, though having to forward all birds in sea spoils their looks. Red birds, in prime order, coming from Delaware, worth \$1.25 a dozen. We noticed, too, the rice bird from Savannah at Messrs. Robbins's, in Fulton market. If anything, the Southern bird was the larger. Our Southern friends would do well to care more for the preparation of their rice birds, as they might fetch a better price. Rail not good, and in poor order. Dowitchers, brant, broad bills, and small bay birds coming in; also some few wood ducks and teal.

NEW HAMPSHIRE.—Boston, Sept. 11.—Have just returned from camp on Lake Winnepesaukee, N. H. (10 days). Found ruffed grouse abundant. The chick cover there affords excellent protection from their natural enemies, and the birds have become full grown and in excellent condition. Generally the coveys were found fresh and undisturbed, which is good evidence that the game laws of New Hampshire are no dead letter. Upland plover are plentiful on some of the islands, and very fat. We wounded and captured a fine specimen of the bald eagle (*Haliaeetus ossifragus*), which alive, proves quite an attraction for Boston. Yours, &c., E. M. MESSENGER.

ADIRONDACKS.—September 8th.—A large black bear was killed in a private garden opposite the Ausable House, in the town of Keeseville, a place of 4,000 people, on September 6th.

Mrs. V. C. Bartlett, wife of the proprietor of Bartlett's Hotel, Saranac, was seriously injured last week by being thrown from a carriage near Black Brook.

A few days ago, a squad of men in employ of C. F. Norton & Co., felled trees and filled up the Sangueno Carry, and also the Clear Pond outlet, thereby preventing communication in the usual way, between Paul Smith's and the Saranac waters. The motive for this act is not yet apparent, but supposed to be out of pure cursedness. The whole army of Adirondack guides, backed by their sportsmen and the hotel keepers, have united and removed the obstructions, and re-opened the carries, and are waiting to have the operation repeated. Blood is in the eye, and the excitement is intense.

NEW JERSEY.—Waretown, Sept. 12th.—Mr. Blakeley, of Bordentown, killed upwards of a hundred bay snipe and a half dozen wild pigeons on the beach, near the Inlet. Brown backs and a very few yellow legs are reported as having been killed on the meadows, but from appearances I should say the shooting is anything but satisfactory.

A BRICK.

PENNSYLVANIA.—Philadelphia, Sept. 4th.—Thus far, although rail and reed-birds are quite plentiful on the Delaware River, comparatively few birds, (especially rail), have been killed, owing to the low state of the water at high tide since the season opened; and the great strength and thickness of the standing reed. Not until we have had a storm to beat them down somewhat, and winds from the eastward to bring big tides in, can we expect to hear of large scores being made. The drought from which we

have been suffering has dried all the water from the meadows and ditches bordering the Delaware and Schuylkill rivers, and consequently the reeds that usually grow in patches have either perished or been cut by the owners of the land. A great many reed birds are killed every season on the meadows, but this year they seek the islands and flats where they can only be followed by "mud waling" at low water, a work for the market shooter only. The wise old heads are patiently biding their time until the September rains shall change the state of affairs and give good shooting among "the yellow flowers." Hono.

—We learn from the Germantown Telegraph that one of the members of the Philadelphia Sportsmen's Club, whose name is known, has been guilty of shooting large numbers of rail birds, (near the city), before the legal expiration of the close season; and very plainly intimates that the offender should be expelled from the club. Some clubs have a provision in their by-laws that applies directly to cases of this kind, and we recommend that all clubs embody the same in their rules. What is the use of gentlemen banding together to protect game when some of their own number are among the first to violate the laws they create. We call the attention of our Philadelphia agent to this case, and trust it may be investigated.

Owing to the efforts of the very club, of which the person above alluded to is an unworthy member, to protect the reed birds by patrolling the river between the 21st August and 1st September, the flight of these birds this season is said to be unusually large and the growth of reed extraordinarily fine. In the vicinity of Philadelphia, however, on the Delaware River, the birds are reported scarce this far.

DELAWARE.—Delaware City, Sept. 10th.—Dear Sir.—Summer woodcock shooting, owing to surrounding circumstances, is a large consumer of muscular force, especially when the birds are as scarce as they have been this summer in our vicinity. On the morning of September 2d, plodding along over the dragon marshes, feeling pretty much like a dog on a tread mill, my push shot on the open marsh like an arrow, and greatly to my surprise flushed a Wilson snipe, which I bagged. I had waived the dog back from a previous point, not imagining that "game was afoot." Within an hour afterwards we bagged five birds out of seven—all we could find. These were the first snipe shot from this place, and I believe they had not been on the marsh twenty-four hours. This is one of the localities where quail, snipe and woodcock can be found almost within gun shot of each other. As the steamer Major Keybold left Chester on her way to Philadelphia yesterday at 10 A. M., I counted five railing boats making for the opposite shore; and two about to leave the wharf. Yours, &c., NON.

ONTO.—New Lisbon, September 8th.—The indications are favorable for finer shooting this season than ever before. Grouse and quail are very plenty. H. W. B.

WISCONSIN.—September 11th.—The season for duck shooting opened finely on September 1st. Quite a number of sportsmen were in the field, and the majority reported wood-ducks plenty, with considerable numbers of mallards, (*Anas boschas*), and blue-wing teal, (*Querquedula discolor*). These are now more plentiful than at the beginning of the season, and the first frost will probably bring them southward by thousands. At Puckaway Lake (the finest point for the sport in this part of the State), a grand season will be had. The Puckaway Club, whose headquarters grace the western margin of the lake, are preparing to begin the season about Sept 20th, and will probably remain in the vicinity about six weeks. Another club which owns a floating club house, by the name of the Black Eagle, will likely put in an appearance soon. Many sportsmen have expressed their opinion that the shooting at Puckaway Lake will be better than has been known for years, and the opening of the season seems to justify the opinion. Pinnated grouse are abundant, though many coveys are getting badly broken by the numerous invasions on their strong-holds. FRED.

MISSOURI.—Lump, Sept. 12.—Chickens not as plentiful as in former years. Quail in large numbers, and better than ever.—D. P. C.

ILLINOIS.—Chicago, Sept. 12.—Illinois not improved in regard to chickens. Quail more plentiful.

IOWA.—Dr. Dyer, of Mason City, and S. M. Demmond, of Chicago, were very successful in vicinity of Mason City, bagging seventy-six in about three hours, over one dog. Sundry parties returning from Iowa, report good success, but no large bags. A number of Chicago sportsmen left for Iowa the first of this week.

CANADA.—Newcastle, Ontario, Sept. 9th.—Duck shooting is in full blast here at present, and grouse shooting will soon be in its prime.

The following letter is from Newcastle, Ontario:

EDISON FOREST AND STREAM.—As duck shooting has commenced, and the season approaches when grouse shooting must be at longer ranges, an experiment was made by a friend and myself a few days since may be interesting to sportsmen. I loaded eight shells with 4 drachms powder and 12 oz. No. 4 shot, using three wads, in four of which I put one of Ely's concentrators. I placed the mark forty yards distant; the size was six by nine inches. The four charges, without concentrator, put in shot as follows: viz. 4, 6, 7, 5, penetration 42 leaves, heavy paper; with concentrator, shot put in were 19, 17, 13, 15, penetration 61 leaves. I used one of Tolley's No. 70 gauge breech loaders. Yours truly, J. J. R.

NOVA SCOTIA.—Amherst, Sept. 7th.—Plover are very plenty here just now. Several officers are up from Halifax, N.S., after snipe and plover. One man last week shot seventy in one day, another fifty-five. A few ducks have made their appearance, but none worth speaking of yet. P.

MAINE STATE TOURNAMENT.

PORTLAND, September 11th, 1874.

EDISON FOREST AND STREAM.

I send you with this score made at the first annual match of the different shooting clubs in the State, which took place at Lewiston, September 8th and 9th, by invitation of the Androscoggin Club of that city. Three clubs entered teams, viz: Androscoggin, Maine, and Forest City, there being no other regularly organized clubs at this time, though there is a good prospect of several more another year. The badge of emulation is a finely engraved shield with a diamond set in its face; a handsome piece of workmanship from the hands of Mr. R. G. Hall, of the Forest City Club, to which club the winner, Mr. Noyes, and one of his chief contestants, Mr. Smith, belong; the other, Mr. Denton, being a member of the Androscoggin Club. Mr. Nason, who won the second prize, is from the Androscoggin, and his opponent, Mr. Merrill, is from the Forest City. For the third prize the contestants were Mr. Small, of the Androscoggin (winner), Mr. Pollister, of the Maine, and Messrs. Day, Billings, Pillsbury, and Wilder of the Forest City Club.

The whole affair was a great success, and can hardly fail to increase the interest in the shooting clubs already formed, while we hope to see new clubs formed during the fall to the number of at least three. Sweepstakes were shot off after the regular match, \$5 entrance, two-thirds of the money to the best score and the rest to the second best. Mr. Noyes, who took the champion prize, also won the first money in this match, with Mr. Shaw, of Lewiston, second. Yours, &c., "860."

DEERFOOT SHOOTING CLUB.—Editor Forest and Stream.—The members of the Deerfoot Shooting Club, of Brooklyn, L. I., held their third shooting tournament of the season on Monday the 7th inst., at Bath, L. I., for their silver medal, which is to be won three times in succession before any member can claim it as his own. They shot at ten birds each at twenty-one yards rise and eighty yards boundary, with one and a quarter ounce of shot. A strong north-wester was blowing at the time, which of course made it more difficult to hit their birds than at former matches; the birds were for the most part good ones, and were brought down in fine style. Mr. E. F. Witte acted as referee and W. West as judge. The medal was won by W. J. Bickerton, one of George Stockford's pupils. The following is the score:—

Name.	Score.	Name.	Score.
George S. Brown.	1 0 0 0 0 1 1 1 1 0	A. J.	
Thomas Penney.	0 1 1 1 0 1 0 0 0 5		
W. J. Bickerton.	1 1 1 1 0 1 0 1 1—8	2	
W. E. Fisher.	0 1 1 1 1 1 1 1 1—8	2	

There being a tie between J. E. Fisher and W. J. Bickerton they both shot at three birds each. Bickerton won, killing two birds and missing one. Fisher's birds fell dead out of bounds. Yours, &c., J. E. F.

WOODSIDE, Long Island.—Editor Forest and Stream.—The Woodside Shooting Association met September 9th, to shoot the annual match for the Cameron challenge cup. There were but two entries with the following score:—John Riker 12; H. N. Terrett 4. The prize is an elegant solid silver cup, valued at \$100, and was presented to the Club, by W. T. Cameron, its Secretary.

A sweepstakes followed, \$5 entrance, miss and go out. Result. Cameron, 7; Bissbee, 6; Riker, 4; White, 1; Tarrett, 0; Betts, 4; Hance, 6; Slocum, 2. Yours, &c., W. T. CAMERON.

—An international pigeon match for \$1,000 and the championship of America was arranged in this city Sept. 11th between James Ward, the one-armed champion of Canada, and Captain A. H. Bogardus of Chicago. The men posted \$500 a side to shoot at 100 birds, twenty-one yards rise, eighty yards boundary, one ounce and a half of shot, for \$1,000 a side and the championship of America. The match is to be shot in Buffalo on the 18th inst.

—The Hunter's Club of Lexington, Ky., will hold their second grand shooting tournament at Lexington, Ky., on September 22d, 23d and 24th. The prizes to be shot for are open to all amateurs in America, the club's rules to govern and the traps used will be H. and T. On the first day a purse of \$500 for ten double birds and \$200 for seventy single birds. The second day a purse of \$200 for ten double birds and a private match by two each shots of

Kentucky at twenty-five double and fifty single birds for a prize of \$200. The third day the prizes will be \$300 and \$200 for ten double birds and twelve single. Parties desirous of further information will address Gus Jarbert, Lock Box No. 8, Lexington, Ky.

SPORTING ITEMS FROM MINNESOTA.

LAKE CITY, Minn., August 31st, 1874.

EDITOR FOREST AND STREAM:

We have now had fifteen days of chicken shooting, and are able to make a partial report. The season was opened here in good earnest; every dog and gun out. The day was hot, but every man made a big bag. The enthusiasm lasted only for a few days, until it was found necessary to go some fifteen miles from town to find plenty of birds. The largest bag reported was made by a friend, viz: thirty-seven birds, after three o'clock in the afternoon.

Our sportsmen speak very highly of the dogs, and wonder why the Eastern sportsmen are importing dogs from England. Certain it is, that right here we have splendid dogs of our own breeding. We may be selfish, but nevertheless we believe that they are not surpassed in the wide, wide world. We have a strain of English pointers, which are the largest and best noted dogs I ever shot over, and my experience with dogs runs back eighteen years. I send you the photograph of one of these dogs, owned by Mr. Dilly of this place. I have one of this dog's pups, only five months old, which is now about the size of pointers a year old. He is already perfectly wary broken, even to retrieving. I shall try him first on quail in October. There have been many sportsmen here and at Frontenac from abroad, and a good number still remain. St. Louis is best represented. Among Eastern sportsmen I may mention E. P. Hoffman, Esq., of Philadelphia, an old Adirondack sportsman. Though strangers we made him welcome, and put him on the track of both trout and birds. He is one of our educated sportsmen, and a gentleman of the first water. He paid a flying visit to Rush River, and was the first and prettiest stream he ever saw, but did not stay to fish to any extent. He has moved on west to find chickens more plenty. Mr. Joe Jefferson, the renowned "Rip Van Winkle," is at Frontenac, and has favored us with several calls. He is having glorious sport. If there ever was a true, genial, and refined sportsman, Mr. Jefferson is certainly one. May his calls be oftener and his stays longer.

The troubling season closes to-morrow, and although I cannot report the exact number or weight for our streams, yet I may say the number taken from the streams emptying into Lake Pepin has been very great. The largest trout taken was by your correspondent, and weighed two pounds ten ounces. We shall make an effort to obtain a law to rest Rush River two or three years. This will bring it back to its wonted glory. After the chicken shooting is over I hope to shoulder a Remington, take up my bed and baggage and start for one week's deer hunt, the result of which you shall know.

D. C. ESTES, M. D.

CREEDMOOR.—On Tuesday September 8th three competition matches took place. The Irish Rifle Club recently organized, held its first match. Perhaps some day this native club will contest for the palm of victory with the regular Irish team. Then when Greek meet Greek will come the tug of war. The first match of the club led off by Mr. Burton shows very good practice. We give the scores. Distance 200 yards, ten shots:—

Name.	Score.	Total.
Colonel B. Burton	4 2 3 3 3 3 3 3 3 3	31
Sergeant J. Wood, 12th Regiment	4 2 3 3 3 3 3 3 3 3	31
W. G. Burton	3 4 3 2 4 2 3 3 3 3	29
Sergeant J. H. Wood, 12th Regt.	4 2 3 3 3 3 3 3 3 3	29
Adjutant Murphy, 12th Regiment	4 2 3 3 3 3 3 3 3 3	27
General F. M. Miller	3 2 2 3 3 3 3 3 3 3	25
Captain Collins	3 2 3 3 3 3 3 3 3 3	24
Adj. J. O'Reilly	3 2 3 3 3 3 3 3 3 3	24
J. S. Conlin	0 3 3 3 3 3 3 3 3 3	21
Major P. M. Harvey	1 2 0 3 0 0 0 0 0 0	3

Mr. B. Burton carried off the club badge, with the very excellent score of 32 in a possible 40. The Seventy-ninth Rifle Club then shot for the Bruce medal, when Mr. Edmundstone made the best score of 48 in a possible 56. We give the seven best scores:—

Name.	Yards.	Score.	Total.
Private Edmundstone, Co. A.	200	3 4 3 3 3 3 3 3 3 3	29-48
Private Keller, Co. B.	300	4 4 4 4 4 3 4 3 4 3	29-48
Private Pyle, Co. F.	300	0 3 3 3 3 3 3 3 3 3	13-43
Captain Clark, Co. E.	300	3 3 3 3 3 3 3 3 3 3	25-41
Private Stevenson, Co. E.	300	3 3 3 3 3 3 3 3 3 3	22-41
Captain Lindsay, Co. B.	300	2 2 3 2 4 3 3 3 3 3	15-40
Private Duke, Co. E.	300	2 1 2 3 4 3 0 3 0 3	12-40
	300	2 1 2 3 4 3 0 3 0 3	12-40

On the same day the rank and file of the Twelfth, held their contest for the Gildersleeve Badge. Shooting nothing to brag of, most of the contestants slipping up on the 200 yard range. We give some of the scores:—

Name.	300 Yards.	Total.	500 Yards.	Total.	Grand Total.
Sergeant A. Wood, Co. D.	2 4 3 0 8	12	3 4 4 3 3	17	29-43
Private Yager, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Sergeant J. H. Wood, Co. D.	2 3 3 3 3	12	3 3 3 3 3	15	27-42
Sergeant Reddy, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Private Dolan, Co. D.	2 3 3 3 3	12	3 3 3 3 3	15	27-42
Private Beattie, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Private Waterbury, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Private Moran, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45

The team practice of the Twelfth Regiment then followed. We append the scores:—

Names.	300 yds.	Total.	500 Yards.	Total.	Grand Total.
Sergeant A. Wood, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Private Dolan, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Capt. Van Rensselaer, Co. E.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Sergeant Reddy, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Private Yager, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Captain Smith, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45

Private Waterbury, Co. E.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Sergeant J. H. Wood, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Private Beattie, Co. D.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Lieut. Helms, Co. B.	3 3 3 3 3	15	3 3 3 3 3	15	30-45
Captain Burns, Co. B.	3 3 3 3 3	15	3 3 3 3 3	15	30-45

Various members of the Brooklyn National Guards tried their hands. We give the best scores:—

Name.	300 Yards.	Total.	500 Yards.	Total.	Grand Total.
Sergeant Stevens	4 4 4 3 4	19	3 3 3 3 4	16	35-50
Private Dibble	3 3 3 3 4	16	3 3 3 3 4	16	32-48
Sergeant Holton	3 3 3 3 4	16	3 3 3 3 4	16	32-48
Sergeant Allen	3 3 3 3 4	16	3 3 3 3 4	16	32-48

On Wednesday the 9th, the members of the Amateur

Rifle Club had their practice, preparatory to the final selection of the American team to compete with the Irishmen on the 26th inst. Wind was good at start, but later in the day was gusty and uncertain. Total of points made by the eight best, 1,120, in a possible 1,440. We append the scores of the eight best:—

Name.	Yards.	Score.	Total.
A. Anderson	800	3 3 3 4 2 3 3 3 4 0 3 4 3 4	47
Colonel Gildersleeve	1000	3 3 3 3 3 3 3 3 3 3 4 3 4 4 4	50-143
Lieutenant Pulron	1000	3 3 3 3 3 3 3 3 3 3 4 3 3 3 3	47-142
J. T. B. Collins	800	4 4 4 2 4 4 3 3 3 4 4 4 4 4	56
General T. S. Dakin	800	3 3 3 3 3 3 3 3 3 3 4 3 3 4 0	46-142

General T. S. Dakin	1000	3 3 3 3 3 3 3 3 3 3 4 3 3 4 4	41-141
G. W. Yale	1000	3 3 3 3 3 3 3 3 3 3 4 3 3 4 4	52
Captain Bodine	1000	3 3 3 3 3 3 3 3 3 3 4 3 3 4 4	37-139
Corporal Hughes, Co. A.	800	4 4 4 3 3 3 3 3 3 3 4 3 3 4 0	52
B. E. Valentine	1000	2 4 3 3 3 3 3 3 3 3 4 3 3 4 0	38-137
Corporal Hughes, Co. A.	800	3 3 3 3 3 3 3 3 3 3 4 3 3 4 0	48
B. E. Valentine	1000	2 4 3 3 3 3 3 3 3 3 4 3 3 4 0	42-136

On Thursday the 10th, the Twenty-third Regiment of Brooklyn, Col. Ward in command, had their day's practice. The very best order was kept. A handsome gold badge was the prize awarded to the marksmen, and in addition the "Kellogg badge" was to be shot for. Corp. Stearns won the first prize, Priv. Dibble the second prize. We give the ten best scores:—

Name.	300 Yards.	Total.	500 Yards.	Total.	Grand Total.
Corporal Stearns, Co. E.	3 3 3 3 3	15	3 3 3 4 3 3	16	31

Private Hughes, Co. A.	3 3 3 3 3	15	3 3 3 3 3	15	30
Private Earle, Co. A.	3 3 3 3 3	15	3 3 3 3 3	15	30

The Kellogg badge, a very handsome one, was presented to the Regiment by Mr. S. I. Kellogg, San Francisco, a former member of the command.

The following table will show the average and best individual scores of the various regiments of infantry and cavalry. Highest possible score 480. Team composed of twelve men:—

Regiment.	Team Score.	Average.	Best Individual Score.
Seventy-second	351	29.25	33
Twenty-second	345	28.75	32
Seventh	342	28.5	31
Ninth	333	27.75	32
Twelfth	333	27.75	31
Sixty-ninth	304	25.33	31
Thirty-second	283	23.58	30
Twenty-third	277	23.08	29
Ninety-sixth	272	22.66	30
Forty-second	263	21.91	26
Twenty-eighth Battalion	252	21.83	29
Fifth	249	20.75	29
Seventy-first	254	21.16	28
First Battalion	251	20.92	26
Eleventh	246	20.50	24
Eighty-fourth	242	20.16	25
Thirteenth	241	20.08	24
Eighty	229	19.08	26
Fifty-seventh	235	19.58	24
Fifteenth Battalion	232	19.33	23
Fifty-fifth	204	17.00	21
Sixth	171	14.25	21

CAVALRY, 100 and 300 YARDS			
Captain Klein's Company.....	330	27.50	32
Third Regiment.....	283	23.58	31
Washington Grays.....	270	22.50	30
Captain Sandburen's Company.....	267	22.25	27
Captain Kreuscher's Company.....	199	16.68	23

On Saturday, "the team" had their practice. The following are the scores:—

Name.	Yards.	Total.
Mr. A. Gildersleeve	800	47
J. P. Fenton	800	47
L. Geizer	800	43
L. M. Ballard	800	43
A. V. Canfield	800	43
A. Anderson	800	43
G. W. Yale	800	43
H. S. Sanford	800	43
J. T. B. Collins	800	43
B. E. Valentine	800	43
General T. S. Dakin	800	43
J. S. Conlin	800	43
F. S. Gardner	800	43

It may be interesting just here to compare the scores made by the Irish team, when they won the Elcho shield, with the performances of the best eight at Creedmoor on Saturday:—

Names.	800 Yards.	Total.
Young	55	49
Miller	55	49
Roby, W.	55	49
Wilson	55	49
Joyce	55	49
Lloyd	55	49
Johnson	55	49
Totals	486	379

Irish total 1,155. American total (best eight) 1,172, leaving a difference of twenty-three points in favor of the Irish riflemen.

THE PRESS RIFLE MATCH.—We are pleased to notice that the N. R. A. will have a Press match at the fall meeting at Creedmoor, open to representatives from any regular newspaper or periodical, each contestant to be a bona fide employe thereof. The weapon to be used may be any military rifle, distance 500 yards, each contestant to be allowed seven shots. No entrance fee will be charged, and the following prizes will be awarded in the order named: First, a gold badge, \$50; second a fishing tackle outfit, to be selected by the winner, (presented by Peck & Snyder,) \$25; third, one gold and silver mounted pearl-handled revolver, in case, (presented by T. B. Fish & Co.) \$20; fourth, a silver badge, \$12; fifth, a gold pen, holder and

case, \$10; sixth, a silver badge, \$8; seventh, a silver badge, \$6; eighth, a silver badge, \$6; ninth, gold pen and holder, \$5; tenth, gold pen, \$5.

We think that General Hawley, of Connecticut, will distinguish himself in this match.

Answers To Correspondents.

HTN INS, Hamden, Conn.—Will answer in our next.

L. S. R.—In your next paper please give me the address of some good party to send game to for sale in your city? Ans. A. & F. Robbins, Fulton Market, New York City, are one of our principal firms that deal in game.

AMATEUR.—What is the best covering for camp-bags, when tightly fastened with thread and wax, to make them water tight? Ans. Rosin, cutta percha, and linseed oil; dissolve and mix. See answers vol. 2, page 107.

N. T. Woodside.—Where can I find good read bird shooting with in fifty or seventy-five miles of New York City, the size shot, also the proper charge, and the best time to go? Ans. Chester, Pa., or Hackensack marshes; No. 10 shot, 2 drachms of powder. Fall are in season now.

SUBSCRIBER.—I have a setter pup five months old 1st of October: wish to know if it will be best to take him into the brush this fall, or not until shooting season opens next fall, when he will be nearly a year and a half old? Ans. By all means take him out, and that in the company of an old dog, if possible.

BENTLEY, Bath.—Can Ely's paper cartridge, No. 12, be reused; if so, where can I procure the instrument to use it? Ans. It hardly pays to use a paper cartridge a second time; providing it does not burst, you can put in another primer. The machine costs about \$15.00, and can be procured of any gunsmith.

TWIN LAKES.—How far from Salisbury, Conn., is it necessary to go to find good bass fishing, and the name of some house (where decent fare and clean beds can be had) to put up at? Ans. Go to Chapinville or Ashley Falls Station, on the Harlem Railroad. Recommend the houses of C. C. Cooper, which are the best in the Bassingville, Railroad fare, \$2.50. See advertisement in FOREST AND STREAM.

QUAKER CITY.—In the Des Moines River, Iowa, there is found a little rarely, if ever, exceeding three inches in length; back gray; sides alternately striped with black and silver; belly, blood red; later sometimes white and changes again to red in a few minutes, the color extending to the lower jaw, and turning the lower part of the tail. What are they? Ans. They are some of the Des Moines minnows, but not so important; we cannot. Paper has been sent as requested.

R. B.—We have two ponds and a fine stream entering under our control, which we wish to stock with land-locked salmon. Can you tell us where and for what price we can get them? Ans. Send to the State Hatching House at Sebec Lake, Maine. We put fifty black bass into one of our ponds last autumn, will they be of any harm to the salmon? Ans. The black bass will destroy the salmon.

G. E. R. Maplewood.—A friend of mine has a spaniel dog which he thinks a great deal of, and uses him for hunting fowls. In running down him one day in the woods the dog ran against a stump and struck his head so hard as to knock him over, and in about two or three weeks after the dog became stone blind. Is it possible to restore his sight to you think? His eyes look perfectly natural, except that in certain light they seem to look glassy, but there is no film over them that can be seen? Ans. We should advise you to try electricity as the only hope.

MUSKOGEE.—Do you know if the Muskogee River, in Ontario, really abounds in large size speckled trout, as reported, and if so where would be the best place to get guide, boat, provisions, etc.? Ans. Take Northern Railroad from Toronto to its terminus at Washago, thence stage and steamboat to Bracebridge, where you can get guides, wagons, boats and provisions. For trout take south branch of Muskogee; no trout in north branch. If desired, you can boat from Bracebridge thirty miles or more. Trailing Lake and Gravelly Rapids are the best objective points. At some points trout will average a pound; at others not more than three ounces. We give our information from personal observation.

READER OF FOREST AND STREAM.—Are breech loading guns of German manufacture reliable? Ans. Very few come to this market. The Germans are noted as makers of gun barrels, and export them in large quantities. The breech loaders are few in price, but the breech loaders in quality, with one or two exceptions. Their action in unlocking the barrels is the best? Ans. The gun that will show the least displacement between the breech and breech block after a shooter's shooting. There are so many styles of action that it is a matter of fancy. Are rebounding locks preferable to others? Are they ordinarily as sure? Ans. In the last four or five years rebounding locks are much less used by sportsmen. They save some trouble, and being a novelty, are fashionable.

MARK RIGHT.—1. What do you consider the nearest point to New York City at which the following requirements are obtainable:—a good farm, healthy location, good upland—what of Orange County?—shooting, respectable neighbors, church and school opportunities? Ans. The back of Peekskill, N. Y. 2. Are you willing to state your choice of the two or three best places? So far, their average of shooting (see to day's paper) is not up to that of the Irish team. For 200 yards, snap shots, American riflemen are quite as good as any marksmen in the world, and perhaps better. The assertion that there were out West "hundreds of men who could strike a bullseye (three inches in diameter) at 1,000 yards, is ridiculous. A man, at a thousand yards, looks hardly bigger than a cup of letter L. How then, would it be possible to see a three-inch bullseye, either at 500 or 1,000 yards? Nothing is looser than the general idea of distances. A noted rifleman of Creedmoor told us yesterday, that to find, outside of Creedmoor, a range of 1,000 yards, save on the sea beach, was almost impossible, and that to shoot over a clear ground of 500 yards was even hard to find. Practical gunsmen and rifle manufacturers, when brought to Creedmoor, are somewhat astonished at what a thousand yards really is.

G. W. H. Philadelphia.—The person who discussed with you the subject of rifle shooting at 1,000 yards is in error. Perhaps those marksmen now practicing at Creedmoor in order to become eligible as members of the American team, are the best riflemen we have for long ranges in the United States. We do not think there are any now in the United States who can beat them. So far, their average of shooting (see to day's paper) is not up to that of the Irish team. For 200 yards, snap shots, American riflemen are quite as good as any marksmen in the world, and perhaps better. The assertion that there were out West "hundreds of men who could strike a bullseye (three inches in diameter) at 1,000 yards, is ridiculous. A man, at a thousand yards, looks hardly bigger than a cup of letter L. How then, would it be possible to see a three-inch bullseye, either at 500 or 1,000 yards? Nothing is looser than the general idea of distances. A noted rifleman of Creedmoor told us yesterday, that to find, outside of Creedmoor, a range of 1,000 yards, save on the sea beach, was almost impossible, and that to shoot over a clear ground of 500 yards was even hard to find. Practical gunsmen and rifle manufacturers, when brought to Creedmoor, are somewhat astonished at what a thousand yards really is.

DORCHESTER YACHT CLUB.—The fifth regatta of this club, and the fourth for champion prizes, will take place to-morrow, September 18th, off Commercial Point, Boston. The contestants are the yachts Bristol, Maud, and Water Witch, and the prize a solid silver cup.

The sixth and final regatta of the season occurs on Saturday, the 19th, for first, second, and third-class centre boards, ketch schooners and sloops, over course No. 2, and for fourth-class centre-boards over course No. 3. First prize will be \$15. Judges W. A. Gilbert, Coolidge, Barnard, and N. Wales.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
125 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tournaments," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 30 per cent.; over six months, 50 per cent.

NEW YORK, THURSDAY, SEPTEMBER 17, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and continuance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 15th.—Trotting meetings at Chatham Village, N. Y., Peoria, Ill., Providence, R. I., Lawrence, Mass., Waverly Station, N. J., Norristown, Pa., Florence, Ky.—Dorchester Yacht Club.

SATURDAY, September 16th.—Practice day boat clubs, Harlem, N. Y.—Trotting meetings Waverly Station, N. J., Norristown, Pa., Florence, Ky.—Dorchester Yacht Club regatta—Philadelphia vs. Boston B. B. C. at Boston, Mass.

MONDAY, September 21st.—Trotting meetings at Fleetwood, N. Y., and Sacramento, Cal.—Philadelphia vs. Boston B. B. C. at Boston—Athletic vs. Chicago.

TUESDAY, September 22nd.—Trotting meetings at Hartford, Conn., America, N. Y., Haverhill, Mass.—23rd to 24th—Portsmouth, Ohio, Potomac, N. Y., Prospect Park, 25th, Brooklyn, White Marsh, Pa., Albany, N. Y., Eau Claire, Wis., Ambler Park, Pa., Folsom, Cal., 36th, Meriden, Conn., 25th Monongahela City, Pa., Cuba, N. Y., Tippecanoe City, Ohio, Middleton, Del., Sharon, Pa., Lockport, N. Y., 29th—Philadelphia vs. Mutual B. B. C.

WEDNESDAY, September 23rd.—Match day, cricket clubs, Hoboken.—Trotting meetings same as on Tuesday.

THURSDAY, September 24th.—Brooklyn Yacht Club regatta.—Trotting meetings same as on Tuesday and Wednesday.

AMERICAN AND ENGLISH RIFLES.

THE late discussions in England in regard to the Martini-Henry rifle, relate not as much to the accuracy of the arm, as the violence of the recoil and the variability of the trigger. Of course the latter point, being a simple mechanical difficulty, could be readily controlled; as to the recoil, that is another matter. The *Volunteer Service Gazette* states, "as regards the recoil, the more we search the Blue Book the more strongly we adhere to our opinion, that some evidence very much more weighty than a few riflemen, however experienced at the last Wimbledon meeting, is needing to rebut the extraordinary strong testimony on the other side, on which the small arms committee relied in recommending the rifle."

We think by comparison, then, we have every reason to be satisfied with our own breech loading arms. The new model Springfield, as an army gun, has proved its accuracy, and even as may have been seen at Creedmoor, as a purely military arm, has asserted its claims as a target weapon. Our Remingtons, Sharps and Ward-Burtons, now used all over the country, subjected to constant and various usage, fit perfectly the places demanded of

them as arms of great accuracy and simple mechanism. Without undue arrogance on our part, we are inclined to think that our breech loading rifles, are, in every way, quite the equals of the English weapons, and in some respects, even surpass them. We do not mean to decry our muzzle loaders. As we have before expressed ourselves, it is a matter to be regretted that our manufacturers of muzzle loading rifles have shown such apathy in regard to their interests. There are no methods, therefore, by which comparisons can be made between the best English rifles, (muzzle loaders,) such as the Rigby and Melford, and those of American make. It has been said to us, and perhaps with reason, that it will require a certain amount of time before such arms will be produced in the United States. Perhaps next season we will see muzzle loaders in use in Creedmoor. As it is, however, comparing American scores with the English ones, Creedmoor against Wimbledon, the shooting of our breech loaders leaves nothing more to be desired.

GAME PROTECTION IN SWITZERLAND.

WE had the pleasure of an interview last week with M. Edward Guyer, fish commissioner from the Canton of Zurich, in Switzerland, who is now on a visit to this country with a view to ascertain what has been done here relative to the protection of game, and to investigate our methods of fish culture. His journey will extend through the West as far as California. From him we learn that Switzerland has taken up the whole subject in earnest, and has acted with a promptness, energy and thoroughness altogether worthy of imitation. Some three months ago the constitution was revised, with the popular consent, so as to place the protection of her forests and streams, with their game and fish, entirely under the control of the Federal Government, the several Cantons or States relinquishing all their rights in their respective domains. By this action she can now treat with other countries upon all questions involved in these special interests; whereas unity of action was before embarrassed by each separate State having jurisdiction over its own affairs. The great advantage thus gained must be conceded. The Federal Government now designates close times and open seasons for game and fish, controls water rights, grants licenses and leases, regulates the fish passes and the sizes and forms of nets, supervises fish culture, prescribes the weight and size of fish to be sold in market, and moreover prevents any one from engaging in the business of fishing unless he thoroughly understands it—a wise provision, certainly. It has also set apart and reserved certain waters for propagation, in which no fishing can be done for a specified number of years. In these respects, it has followed the example of Canada, which seems to be in advance of most other countries in these matters. Each separate Canton, however, is to have its own fish commissioner, and appointments have already been made in nine out of the twenty-two.

This plan of protection includes the forests and their belongings, the propagation of trees for timber and shade, and all other kindred economic interests.

Without at present pressing upon the United States the adoption of a similar system in its entirety (which would certainly seem most advantageous), we will simply state that Austria, Holland and Germany are preparing to reconstruct their game laws upon some improved basis; and are only awaiting the success of the movement in Switzerland to make them conform to hers in all essential features. We shall do wisely if we also scrutinize carefully the work she is doing. A growing interest is certainly manifested throughout this country in this most important subject, not only in the formation of clubs and associations to protect game, and the holding of conventions to discuss vital points, but in the increased amount of information that is daily and weekly disseminated through the press, and the eagerness with which it is everywhere read. The establishment and liberal support of papers devoted exclusively to these interests, two of them within fourteen months, is a most positive indication of the popular drift. Our people seem to have awakened to the exigencies of the hour, and to have heartily embarked in the work demanded of them. What is important is to secure the best method for preservation and protection that can be devised, and then to place it in the hands of the best executive to enforce its observance.

In this connection we may mention one fact most interesting to Americans that has been communicated to us relative to the Austrian fish commission; namely, that its president bears the name of Baron WASINGER, who is none other than the great grand nephew of our own George Washington, and the only one of the name now living. He comes from a branch of the family who did not follow the fortunes of George from England to America. His age is about 55, and his wife is a sister of the reigning Grand Duke of Oldenburg, and a niece of the Emperor. He resides at Schloss Poels, Steiermark, Austria.

—Last August was the hottest month that has been experienced in Florida for many years. The average mid-day temperature was over 90°; highest point reached, 107°; lowest, 77°. Rainfall for the month, one inch. We have a full record from our regular observer at New Smyrna.

—There was a sharp white frost in the Muskoka district, in Ontario, Canada, on the night of September 3d, which blighted the potato vines.

NITRO-GLYCERINE FISHERMEN.

SOME weeks ago we were requested by a person in Massachusetts to give the method by which torpedoes and explosive materials could be manufactured to be used for the destruction of fish. We naturally hesitated before giving such information, and finally thought it better to give no reply to the party making such inquiry. We could, of course, imagine an isolated case where the use of torpedoes to destroy fish might find legitimate employment, as when a pond contained pike, and where it might be necessary to kill all the pike in order to introduce trout or other fish. Of course we gave our enquirer the benefit of this doubt, straining a point, thinking perhaps that torpedoes might be wanted for the above purpose, but determined that it was better to keep to ourselves what we knew of the many rascally methods employed to kill fish. Our most worthy contemporary, the *Turf, Field and Farm*, did not, however, mince matters, for having been requested, very probably by the same person who addressed us, to give the much desired information, "How to kill fish by torpedoes," very properly gave the inquirer a sound rating.

And just here we may mention (not as a coincidence so much as a consequence, perhaps,) that a man has just been discovered killing fish at Quincy Point, Mass., by the explosion of nitro-glycerine, and that much excitement has naturally resulted therefrom. The facts, as we gather them from the New York *Times*, are these:—The fish killed were principally sea bass. A small oval of the explosive was at first used, but with indifferent success, as only a few fish rose to the surface; but with an extra charge in a can all the fish within a circle of forty yards were shocked by the concussion. About one hundred were killed instantly, and captured and sold. It is estimated that a hundred more were so seriously affected as to perish. A careful inspection of the fish killed showed, in every instance, that the second or air bladder was rent and filled with blood. The fisherman has been warned against a repetition of this experiment, which is punishable by fines.

We are moreover informed, by the most reliable authority, that quite lately on the Jersey flats nitro-glycerine has been used, and that numberless fish have been destroyed. Though we have looked up the subject carefully, we have not been able to find out whether there is any positive law for the prevention of the use of nitro-glycerine on the seacoast. All we have to say is, that without exactly advising the enforcement of a maritime Lynch law, we would endorse the principle carried out successfully some years ago by those catching smelt in Massachusetts with a hook and line. Those men who used nets to capture the fish (although the law was not explicit as to their prohibition) were caught by the hook and line men and ducked. As to the nitro-glycerine fishermen, we should think a good galvanic kicking, prior to ducking, would be beneficial. To go as far, however, as "to hoist them with their own petards," would be carrying the punishment perhaps a grade beyond what such a crime deserves. We very respectfully bring this subject of nitro-glycerine before the United States Fish Commissioners, and the Massachusetts and Boston societies for the protection of fish and game.

In this connection we may state, and with regret, that questions are very frequently put to us in regard to methods of killing birds, beasts, and fishes by means which are unsportsmanlike, and that it has been our invariable rule to pay no attention to such questions. Our advertising space has also been asked for by parties desirous of selling instruments or substances which we knew were to be used for the destruction of game in an illegitimate manner, and such space in our advertising columns has been, as it always will be, denied to them.

RATIONAL RULES FOR CROQUET.

OUR recent remarks on croquet have called out some correspondence indicating a general interest in the subject, and a demand for some recognized authority. In view of the fact that there never has been, and probably never will be, any published laws, resting on national authority, governing this popular game, the next best thing that players can do will be to adopt by common consent some popular manual, and thus in time make it practically the desired national authority.

From 1864 to 1868 there was much controversy among players as to the methods of the game, and several valuable works were published. When croquet was first introduced to this country, the English rules of Mayne Reid, Routledge, and Jacques were the recognized authorities. In 1865, "Croquet, as played by the Newport Club," was published, and was the subject of much comment among expert players. In 1868 a new edition of a book by R. Fellow was published, in the preface of which the author mentions as one reason for revising a former edition, and a cause greatly influencing and modifying his whole method, the publication of "Croquet: its implements and laws," drawn up by a committee of players appointed by the editor of the *Field*, London; also an article on this book in *London Society*; and states that he had endeavored to agree, as far as possible, with the English committee. But these and many other books seemed to mystify and muddle the average player, and to disgust him with the "scientific game," producing a false impression and laxity of discipline in the game that many years will not eradicate. And yet, with all the wrangle and discussion, there seemed to be very little advantage to the game, as the only really practical point at issue was the restriction or non-restriction of the

"roquet croquet" to the rover. While these authors were discussing this question, the American players very practically decided it for themselves in a manner that leaves no occasion for controversy, not believing that it added to the interests of the game to restrict the best and most scientific stroke to a few of the best players, or to a shot time at the close of a game.

During these years efforts were made to assemble a Croquet Congress, but to no purpose. Then a committee of expert players, numbering among its members men of literary and judicial ability, was formed, to compile and arrange a code of laws for the game. Their aim was to adopt a few leading principles of the game, and thereon to build a consistent and systematic method of play—a method which should be at once simple and scientific.

Having adopted the rules and put them on paper, they were tested and amended for a whole season, and afterwards published with the title—"Croquet: its principles and rules; by Prof. A. Rover." A great number of unnecessary terms and phrases, imported from England, were omitted, and the game, as set forth, was thoroughly American. Although having very decided and unanimous impressions on some points, this committee did not dare to presume on the public indulgence too much in the way of radical changes, and hence in the first edition they adopted the booby, and inflicted a penalty for the finch; but they strenuously claimed the roquet-croquet for all the players, and offered a solution of the question of double points and the right to waive a step that was entirely original.

The first edition was received with so much favor that in succeeding editions they became bold enough to express opinions regarding the booby and finch. Neither of these changes had, we believe, ever been suggested when first published in "Croquet: its principles and rules," for R. Fellow does not hint at the possibility of such a thing in his new edition of 1893, which he says is based on the latest English decisions, and in the fifth edition of "Croquet: its principles and rules," of the same year, both are fully advocated. These two changes seem very materially to simplify the whole game, both in theory and practice, and yet do not detract in the least from its interest, but rather add strength to it. Therefore we have been led to adopt this manual as our authority, and recommend it to American players. Having at some length explained the reasons for our choice of authority, we wish in a few words to correct some common errors in playing that seem to have come from home made and hearsay rules, as they are not authorized by any recognized code of laws.

One of the most common errors is in relation to the following rule:—"A ball having roqueted another ball, is at liberty to croquet or roquet-croquet or proceed on its round; providing that the playing ball has not already in that tour roqueted that same ball since making a step on the round."

It is very generally understood as it would read if the words "in that tour" were stricken out, and although these three words are printed in bold face type, to give them special prominence, people are so accustomed to their own ways of playing that they will not believe the rule when they see it, but persist in writing to authors and editors for decisions in the case.

On probably one half the grounds in this country the premium of an extra stroke is allowed for making two steps. This is another purely home made rule, as we know of no authority for such playing. If a player makes two steps at one stroke he is entitled to take position up to one mallet's length in any direction, etc., and this is the only premium or privilege ever allowed, and even that was formerly denied by some English authorities; but it is universally allowed in this country, although on some grounds it is not generally practiced.

Another common question in dispute is regarding a dead ball. Although the rule reads thus—"A ball, after it has run all the bridges, may hit the starting post either by a blow from its owner's mallet, by roquet, roquet-croquet, croquet or concussion, and is then a dead ball, and must be immediately removed from the field"—yet players repeatedly write to know "if in case you roquet a rover against the starting stake, can you roquet him and continue play? If, when the rover's ball strikes the starting stake, it is dead, and must be immediately removed from the ground, how can the croquet be executed? That seems plain enough; but the great trouble often is that this one prominent principle is not understood.

"The continuance of play is gained by virtue of the roquet, and not of the croquet. The croquet is merely a privilege consequent upon the roquet. Therefore, to waive a croquet does not terminate the play. This principle once fixed in the mind will avoid much confusion in understanding and interpreting the rules."

The much vexed question of double points is intimately connected with this same principle. The distinction between a point and a step should be understood and remembered. The definition of a point is—"A player makes a point by running a bridge or tolling a post, or by roqueting a ball that he has not previously roqueted during the tour since making a step—or in other words, by roqueting a ball under such circumstances as would entitle him to the privilege of the croquet"—while a step is "running a bridge, or tolling the turning post."

A player may waive any privilege gained—as, for instance, the right to roquet—but a step once made cannot be ignored or cancelled. Hence, when a player makes a bridge, or hits a stroke in course, it must count, and also any other points made at the same blow. These are only a few of the many points which need not be disputed if

only a common authority could be adopted; then the players would read that authority with the same degree of intelligence as they employ in the ordinary business of life.

THE "NATIONAL SPORTSMEN'S ASSOCIATION."

A CONVENTION of sportsmen and others interested in the protection of game and the unification of conflicting game laws, assembled at Niagara Falls on the 9th instant, pursuant to a call emanating from the New York State Association for the Protection of Game, at its late meeting at Oswego. The call is worded as follows:—

A CALL FOR A NATIONAL SPORTSMEN'S ASSOCIATION.—The "New York State Association for the Protection of Fish and Game," believing that the time had arrived when public sentiment was in favor of forming a Grand National Organization for the Protection of Fish and Game, did, in Convention assembled at Oswego, N. Y., on June 23, 1874, adopt the following:—

"RESOLVED, That this Association, in Convention assembled, do invoke the call for a National Association, issued in the *American Sportsman*, February 21, 1874, having for its object the procurement of 'intelligent and efficient legislation for the protection of Game Birds and Fish,' and did name the 9th day of September, 1874, and Niagara Falls, N. Y., as the proper time and place for holding the convention, and did appoint us as delegates to said Convention, now

Therefore, We do issue this call to all State Sportsmen's Associations and Local Organizations where no State Associations exist, and gentlemen of men-sportsmen where no local clubs exist, to take the matter in hand and send Delegates to said Convention, and make the meeting one worthy of American gentlemen sportsmen."

A. C. MATTOON, Oswego, N. Y.
S. T. MURRAY, Niagara Falls, N. Y.
N. BOWEN, West Troy, N. Y.
GEO. W. FLOWER, Watertown, N. Y.
J. W. BABCOCK, Rochester, N. Y.

Eighty-six delegates were present representing the following sixteen States and the District of Columbia:—

New York—W. J. Babcock, A. B. Lamberton, J. A. Hockburn, Henry Walzer, Rochester; W. C. Silsby, Seneca Falls; H. C. Knapp, Palmyra; C. Mattoon, H. L. Davis, S. M. Allen, Oswego; Green Smith, Peterboro; Frank Harrison, Long Island; Robert Nevell, Buffalo; E. B. Klock, Syracuse; S. T. Murray, West Troy; W. L. P. Parker, Manchesters; Cyrus E. Davis, Wm. Sawmays, Niagara Falls; H. G. Jackson, Binghamton; E. Garrison, Syracuse; L. J. Peck, Lockport; H. G. Tanner, Oswego; F. S. Haddock, Port Jervis; C. E. G. Schiner of *Turf, Field and Farm*; E. D. Saxe, E. S. Phelps, S. Weighel, E. H. C. Grilling, J. H. Brinsmade, Chester; G. S. Fitzsimons, New York; Alfred Millett, J. A. Child, Ithaca.

Ohio—A. T. Brinsmade, H. B. Brown, Frank Rockefeller, C. F. Wheel, Dr. E. Starling, C. D. Bishop, Cleveland; T. A. Jones, Cincinnati; John B. Wilkinson, Williamsport; Moore, Toledo; William Chertley, Colerain Corner; M. J. Farrar, Cleveland; Wado Luckett, M. Langdon, Cincinnati.

Michigan—C. C. Cadman, Dr. Wm. Brodie, W. C. Colburn, Geo. E. Long, George Doty, Detroit; J. Eugene Fuller, Greenville; E. T. Holmes, Grand Rapids.

New Jersey—George H. Pache, Morristown; Miles Johnson, Trenton. Indiana—N. H. Church, Poole; B. Wade, South Bend.

District of Columbia—Col. C. M. Alexander, James N. Sarvis, Washington.

Alabama—H. C. Davidson, Montgomery.

Delaware—Isaac N. Mills.

Missouri—J. D. Johnson, St. Louis.

Louisiana—Judge Braugh, New Orleans.

New Hampshire—A. G. Dole, Manchester.

Massachusetts—W. M. Hudson, Hartford; C. O. Cheney, Manchester; W. E. Munson, New Haven; C. S. Newell, T. E. Plunkett, Manchester; W. F. Parker, Meriden.

Wisconsin—N. B. Davis, Oconto; E. J. Krider, Philadelphia.

Wyoming—H. M. Sherman, Beloit.

Massachusetts—Jno. Boydon, Worcester.

Florida—Peter Jones, Jacksonville.

Illinois—Wm. B. Hawthorn, Quincy; Abner Price, T. J. Higgins, Hoer N. Baldwin, S. T. Whittman, J. J. Kleinman, M. M. Turrell, T. J. Abney, Thos. Stage, W. T. Johnson, D. T. Ellison, R. K. Clark, J. Fenimore, Chicago.

The principal support of the Convention, it will be seen, came from the States of New York, Ohio, Illinois, and Michigan.

The meeting was organized at 8 o'clock in the evening, by calling Ex-Gov. Allen T. Brinsmade, of Ohio to the chair, who, in assuming his office, spoke with much earnestness and at considerable length upon the condition of the country in the rapid extinction of game, the incongruity of the laws, the difference in seasons appointed in contiguous districts, and the impossibility of working against the force of public indifference, all which facts the FOREST AND STREAM has earnestly pressed upon the attention of its readers, while it has also endeavored to point out a practicable remedy.

H. L. Davis, of Oswego, and Wm. Humphreys, of Connecticut were then appointed Secretaries.

On motion, gentlemen present who were not delegates from any club, were invited to hand in their names and assist in the proceedings. While the committee on credentials were conferring in the next room, a general discussion was held upon the best means that should be taken to protect game, and prevent the gradual decrease of fish that has been observed in our streams.

The following committee on constitution, by-laws and permanent organization was then appointed:—Hon. A. C. Mattoon, of Oswego; H. L. Davis, of New York City; A. G. Dole, of Manchester, N. H.; Dr. W. M. Hudson, of Hartford, Ct.; W. J. Farrar, of Cleveland, Ohio; Abner Price, of Chicago, Ill. They retired and shortly after reported a constitution and code of by-laws, which were adopted section by section, the name and style of the organization being the "National Sportsman's Association," as above. Exception was made that this did not correctly designate the objects for which the association was formed, namely, the protection of game; but the title as adopted seemed to meet almost unanimous favor.

A motion was then made and debated to adjourn until the following evening at 8 o'clock, in order to accommodate sundry members of the Convention who wished to shoot off the ties that they had drawn in the pigeon matches, of the morning and afternoon previous; but the motion was lost and the Convention adjourned until 10 o'clock on the morning of the next day, September 10th. The consequence was that when the Convention met pursuant to adjournment, the ranks of the delegates was greatly decimated, so much so, that when the ballot was taken for President, only thirty-two votes were cast. Mr. Brinsmade was in the chair.

The Committee on permanent organization reported a list of nominations for permanent officers. Hon. A. C.

Mattoon, of Oswego, and A. T. Brinsmade, of Cleveland, received an equal number of votes from the committee, and were both nominated; the other nominations were unanimous. The formal ballot was then taken for President. Result.

A. T. Brinsmade..... 35
A. C. Mattoon..... 7

On motion of Mr. Mattoon, the vote was made unanimous. A formal ballot for Vice President was taken, and gave C. Shaler Smith, of St. Louis, twenty-three votes; A. B. Lamberton, of Rochester, seven. Smith's election was made unanimous. Mr. C. Fitch Bissel then moved that the Secretary cast the unanimous ballot of the Convention for the balance of the candidates as nominated. Carried.

The complete list of officers of the Association is as follows:—

President—A. T. Brinsmade, Cleveland, Ohio.
1st Vice President—C. Shaler Smith, St. Louis.
2nd Vice President—Thomas A. Lezan, Cincinnati, Ohio.
Treasurer—Henry L. Davis, Oswego, N. Y.
Rec. Secretary—C. C. Cadman, Detroit, Mich.
Cor. Secretary—W. F. Parker, West Newton, Ct.

Colonel Bissel then offered the following, which was adopted:—

Resolved, That the thanks of this Convention be tendered to Hon. A. C. Mattoon, late President of the New York Association for the Protection of Fish and Game, for his indefatigable and successful efforts in the promotion of the National Sportsmen's Association.

Mr. Mattoon moved that the next meeting of the Association be in Cleveland on the second Tuesday in June, 1875. Carried, after some discussion.

A committee, consisting of Messrs. Johnson, Bissell, Lamberton, Clark, and Dole, was appointed to prepare resolutions which would constitute the "platform" of the Association, and report at the evening session. The meeting then adjourned until evening.

EVENING SESSION.

The Association convened in the parlors of the International at 9 o'clock, the attendance still being good. The President appointed as Committee on Finance, H. L. Davis, of New York, S. H. Turrell, of Illinois, W. M. Corning, of Wisconsin, Charles S. Westcott, of Pennsylvania, and Newton Dexter, of Rhode Island. On By-Laws, Hon. A. C. Mattoon, of New York, Thos. H. Manning, of Kentucky, and A. G. Dole, of New Hampshire. On Laws, J. S. Johnson, of Missouri, Wm. Humphreys, of Connecticut, Robert P. Toms, of Michigan, Col. S. A. Harris, of Ohio, and W. J. Babcock, of New York.

The following resolutions were then read and adopted:—

Whereas, The permanent organization of the National Sportsmen's Association has been effected, and its future success and usefulness will depend upon the assistance rendered to it by the naturalists, fishermen, and amateur sportsmen throughout the country, and

Resolved, That its primary and secure the moral and material aid, we deem it necessary to make a definite declaration of the object of the association. Therefore be it

Resolved, That its primary object, first, the protection of game and fish in all the States and Territories, by procuring the passage in each State, and in the Congress of the United States, of uniform co-operation and consistent legislation, and strictly prohibiting their destruction during the breeding, nesting, and spawning seasons and reasonable time preceding and following the same. Prohibiting the capture and destruction of certain species of game and fish in any and all seasons; prohibiting the catching and destruction of fish in the now navigable lakes and streams, with nets or means of chemicals; prohibiting the obstructing of the free passage of fish by nets from such streams, and by the creation of fish-dams and traps; and to procure the passage of such other and further legislation as may be necessary and proper for the full accomplishment of our purpose; second, through such legislative organizations to secure a rigid enforcement of all the game and fish protection laws, now or hereafter to be enacted; third, to secure by and through proper legislation the right of property in useful hunting dogs, making them, when stolen, the subject of larceny, or when wantonly killed or maimed the subject of a misdemeanor; fourth, to secure through and by proper legislation the passage of laws prohibiting at any time and season the killing or destruction of all song and non-game birds; to organize and consolidate, under our State jurisdiction, game and fish protective clubs or associations in each State and Territory, to act under the jurisdiction of the National Association, in securing and enforcing proper protective legislation.

Resolved, That all naturalists, fish culturists, and sportsmen generally in those States having no associations be, and are hereby earnestly requested without delay to organize local clubs thereon, to form State associations, to justify the jurisdiction of the National Association, and that all State organizations now existing and operating be, and are solicited to become members of this association, so that by unity of action throughout the land we may accomplish and perpetuate the great reform designed and desired.

After the adoption of the resolutions a general discussion of subjects pertaining to the protection and propagation of game was indulged in by members from the different States represented. The information imparted in a miscellaneous change of views exhibited the very best evidence of the good which will ultimately result from the organization.

On motion it was resolved that woodcock should not be shot before the fifteenth day of September in the following States:—New England, New York, New Jersey, Pennsylvania, Ohio, Indiana, Iowa, Wisconsin and Minnesota.

A resolution was also adopted authorizing the Executive Committee to change the time of the next meeting to any day in June should they deem it advisable.

Adjourned sine die.

WHEN QUAIL MAY BE SHOT.—Quail can be shot in Maine, New Hampshire, and Vermont from September 1st to January 1st; in Massachusetts and Connecticut from October 1st to January 1st; in Rhode Island from October 15th to February 1st; in New York from October 20th to January 1st; in New Jersey and Pennsylvania from November 1st to January 1st; in Maryland from October 20th to January 15th; in Missouri from October 1st to February 1st; in Kentucky from September 1st to March 1st; in Illinois, Iowa, and Michigan from October 1st to January 1st; in Minnesota from September 1st to December 1st; in Wisconsin from September 15th to January 1st; in Ohio (amended law) from October 15th to January 1st; in Kansas from October 1st to March 1st; in California from September 15th to March 15th.

Probably no better evidence of the confusion that exists in our game laws, and the necessity for their revision, can be presented than the foregoing comparative table affords.

For some of these differences of close times, it may be urged in palliation that the quail has an exceedingly wide range—wider than any other game birds. But why should it be close season for quail in New York from January 1st to October 20th, while as to Pennsylvania there is a difference of ten days? In Massachusetts and Connecticut the law is the same in regard to quail, but differs in Rhode Island, as it does in Maine, New Hampshire, and Vermont. Grouping together States having the same climate and general geographical conditions, why should not the legislation be uniform?

We are pleased to notice that the efforts we have been making for the last year have at last had some effect, and that the convention lately assembled at Niagara Falls has paid some attention to the securing of simpler and more judicious game laws for the country.

MORRIS COUNTY SPORTSMAN'S CLUB.—This club was organized last June for the specific purpose of preserving the game and enforcing the game laws of New Jersey; and, from what we personally know of its character and composition, it cannot but prove a powerful auxiliary to that older association known as the West Jersey Game Protective Society, as well as a useful coadjutor in the universal war which all sportsmen's clubs and associations of good standing have imposed upon themselves. We have received a copy of its by-laws and a list of its members, which comprises some fifty gentlemen, chiefly of Morris county, whose social position, influence, and means will enable them to be fearless in the prosecution of offenders, and vigilant in their watch and ward. There is great need for more clubs of this character everywhere, and we would most earnestly urge their rapid organization in all States, with a view to their eventual combination in the possible formation of an International Game Protective Association, to include both the United States and Canada. It is not necessary that members of such clubs should be practical sportsmen, or expert at trap shooting, so long as they have seriously at heart and in view the great desideratum of multiplied game and decimated pot hunters. We have expectations of great usefulness from the Morris County Sportsman's Club, and wish it every success. Its officers are:—A. W. Cutter, President; James Bryce, Jr., Vice President; Chas. H. Raymond, Secretary; D. D. Craig, Treasurer; Frank Child, Legal Counsel; who, together with three members at large, Messrs. Whitney, Quimby, and Stout, constitute an executive committee.

THE AMERICAN TEAM.—Last Monday the Amateur Rifle Club selected a team to compete with the Irish riflemen on the 26th instant. It was agreed that two riflemen should be selected by ballot, the two selected to choose a third, and so on till the team and reserve were chosen. The ballot resulted in the choice of H. Fulton and H. A. Gildersleeve, and T. S. Dakin, L. L. Hepburn, G. W. Yale, J. T. B. Collins, J. Bodine, and A. Anderson were in turn selected to constitute the team. E. H. Sanford, J. S. Conlin, L. M. Ballard, F. S. Gardner, and A. Y. Canfield, Jr., were in like manner chosen for the reserve. Colonel Wingate was elected captain of the team. The members of the American team will be provided with ammunition, and their expenses paid, on two days each week, until the day of the match.

We congratulate our riflemen on having such worthy representatives, and believe that the appointment of Col. Wingate as captain of the American team is a most excellent one. No one has worked harder than Col. Wingate to advance the interests of the National Rifle Association, nor is there to be found any one who combines more thoroughly the scientific and practical details of rifle shooting.

PREPARATIONS FOR THE RECEPTION OF THE IRISH TEAM.—The Executive Committee of the Amateur Rifle Club held a special meeting at Creedmoor, Long Island, on Thursday last, for the purpose of completing arrangements for the reception of the Irish team and their friends, who are en route for this country, and were expected to arrive yesterday. It was resolved to receive the party at the pier, and escort them in carriages to the hotel they may select. Two large hospital tents are to be erected on the range; one to be tendered to the Irish team for their use, the other to be used by the American team. The Treasurer's report showed the amount on hand to be \$884. Of this amount \$100, equivalent to about \$530, will be required for the stakes, leaving a balance in the treasury of \$354. A resolution was adopted directing the President, Col. Wingate, and Col. Gildersleeve, Secretary, to take the necessary steps to raise \$1,000, additional, for the proper reception of their guests. The members have already raised \$600 by subscription for that purpose. The following committees were appointed:—On Reception, Col. Wingate, Col. Gildersleeve, and Lieut. Fulton; Badges, Messrs. Schermerhorn and Fulton; Carriages, J. T. B. Collins; Police, Lieut. Fulton; Tickets and General Arrangements for the Match, Col. Wingate.

THE GREAT PIGEON MATCH came off on September 14th, and Capt. Bogardus claims forfeit on account of James Ward not furnishing the blackbirds. A new match was made as follows: To shoot from ground traps 23 blackbirds and 77 pigeons, 21 yards rise and 80 yards boundary. The match was then on a tie on the blackbirds, each man holding 21 each. Bogardus killed 95 birds out of 100, Ward killing 88. In the latter end of the match Bogardus killed 65 straight birds, a most extraordinary performance; perhaps the best ever shot.

NIAGARA FALLS.—The Niagara Falls Pigeon tournament resulted as follows: Smith killed 19 birds; Welch 15; Newell 16; Kleinman 18; Bogardus 20; Long 19; Price 20; Brown 19; Turrill 18; Wheel 19; Hudson 16; Sherman 19; Tanner 17; Johnston 18; Fish 19; Witmer 17; Moore 18; Jones 18; Landon 17. In the ties of twenty Bogardus had one bird drop out of bounds, and Price won the first prize, \$400. Sherman won the second prize, \$300, by killing every bird at twenty-six and thirty-one yards. On the shoot-off Turrill made a clean score at twenty-six yards, and won the third prize, \$150. Witmer won the fourth, \$100, and Newell the fifth, \$50.

EXPERIMENTS WITH OLD ENGINES OF WAR.—In Paris, last month, under the directions of General de la Faye, a series of very curious experiments were made with engines of war, modelled precisely on the plans of the battering implements and siege trains employed by the Romans. From a Ballista, cannon balls and stones were thrown a distance of over 220 yards. In a period of time not exceeding six seconds, heavy arrows were thrown from a Catapult, a distance of 300 yards. Stones were launched with an initial velocity of forty-two yards a second. The elevations having been carefully studied, no great difficulty was found in placing the projectiles at a distance of 160 yards within quite a limited area. All these warlike implements were constructed after the designs found on his reliefs on Trajan's column. There is every reason to suppose, that with the warlike instincts of the Romans, their battering trains were powerful implements of destruction. It should be born in mind that sixty years ago army muskets were scarcely of any avail at ranges over eighty yards.

MR. BERGH AND VIVISECTION.—Fully as we may endorse any—not all—of Mr. Bergh's doctrines, we are entirely at variance with him in regard to vivisection, and think that he ventures into waters far beyond his depth. It is a part of all moral reformers to go sometimes, to too great extremes, and thereby retard true progress. Mr. Bergh can never become the censor of what may or may not be the methods to be employed for the highest mental culture. We are all individually obliged to Mr. Bergh for his untiring energy in defence of the animal, but our debt to Prof. Bernard, to Doctors Brown Sequard, Hammond and Flint, is even greater. If the hidden secrets of physiology can only be discovered by sacrificing animals, man follows but the highest instincts of his nature, the desire to acquire knowledge, by subjecting the lower creatures to his researches. The animal suffers, it is true, but the man gains a new life.

The Kennel.

FIELD TRIALS.

We have been urging for some time the necessity for the improvement of the breeds of pointers and setters, and have published from time to time several challenges to test the merits of dogs in the field. None of these matches have amounted to anything at present, with the single exception of the coming trial between "Gopher" and "Mowhawk." We congratulate ourselves that owing to our continual agitation for the advancement of the field sportsman's dog, we are enabled to state that there is scarcely a single sportsman's club in the United States but what can now show some evidences of good blood and superior merit in the field, either in the pointer, setter or retriever, since, through our untiring energies, a new, and as we think, a better strain of blood has been infused into the various kennels of America. We hope there are a sufficient number of gentlemen owners of first-class animals to authorize the inauguration of field trials. We must make a beginning somewhere, and therefore trust that there will be a large number of entries to the following stakes to make the first field trial a success:—

THE QUAIL FIELD TRIALS FOR POINTERS AND SETTERS.
The Quail Stakes for all aged pointers and setters; entrance fee, \$10. To be run near Keyport, New Jersey, between November 9th and 14th. The precise date, place and time to be agreed on by the majority of entries. Entries to close at this office on November 2d. These trials will be run under the rules as given by the FOREST AND STREAM in its issue of February 5th, 1874, allowing points for retrieving in setters, but none for pointers.

THE SNIPE FIELD TRIALS FOR POINTER AND SETTER PUPPIES.

The Snipe Stakes for puppies born since January 1st, 1874; entrance fee, \$10, with a handsomely designed solid silver collar, given by the FOREST AND STREAM. This trial will take place on the Troy Meadows, Pine Brook, N. J., on or about March 6th, 1875. Entries to close at this office on March 1st.

—We knew that whisky was good for human beings when bitten by rattlesnakes, but had never heard before that dogs were benefitted by stimulants. We take the following from the *St. Louis Dispatch*, of Minnesota:—

A few days since, while James Beatty, Jr., was out chicken-hunting, he ran across a rattlesnake, which he shot, cutting it entirely asunder. Shortly after his bird dog ran against the "severed head" and was bitten. Mr. Beatty came into town with him, gave him a good supply of whisky, and bound his leg with earth, which effectually killed the bite of the snake.

GUN TRIAL.—An interesting report of a recent gun trial, sent us by our correspondent at Jackson, Miss., is deferred until next week.

—"Unmanned by the loss of her husband" is the new style of indicating a widow's grief.

TENNESSEE SPORTSMEN'S ASSOCIATION.—The State Sportsmen's Association of Tennessee will hold a grand pigeon shoot, a bench show of dogs, and for the first time in America will inaugurate a series of Field Trials for pointers and setters. This gathering of sportsmen will take place at the Agricultural Fair Grounds, Memphis, on October 7th, 8th, 9th, and 10th. The Field Trials will take place on the 8th. We take great pleasure in congratulating the sportsmen of Tennessee, as they are the first organization to move in earnest in a public field trial for pointers and setters in America. We understand that a large number of entries have already been made. The whole arrangements of the field trials and dog show have been managed by practical men, and when this is the case, a brilliant success for the exhibition is inevitable. If nothing of greater importance, (and we do not think there is anything that would please us better), should intervene, we may be there to see.

The following is the programme:—

WEDNESDAY, OCTOBER 7TH.

Bench Show of Pointers and Setters.

For best setter dog over twelve months, prize Silver Goblet.
For best setter bitch over twelve months, prize Silver Goblet.
For best setter puppy under twelve months, prize Silver Goblet.
For best pointer dog over twelve months, prize Silver Goblet.
For best pointer bitch over twelve months, prize Silver Goblet.
For best pointer puppy under twelve months, prize Silver Goblet.
All entries must be accompanied with pedigree and age.
Sweepstakes for All Ages.

For best pointer or setter, prize Silver Goblet.
Entrance to bench show free.

SCALE OF POINTS GOVERNING BENCH SHOW.

Head	Neck	Face	Ears	Legs	Feet	Stifle	Thighs	Shoulders	Back	Chest	Color	Stem	Quality	Total.
10	10	5	5	5	5	5	15	15	15	5	5	5	5	100
20	10	10	10	10	10	10	10	10	10	10	10	10	10	

SHOOTING MATINES.

Wednesday afternoon, October 7th.

Prizes.—\$400. Class match, ten single birds. Open to all amateurs.
First prize, cash, \$150; second, \$100; third, \$75; fourth, \$50; fifth, \$25. Entrance fee, five per cent. of purse. Twenty or more entries to fill.

FIELD TRIALS.

Thursday, October 8th, 1874.

Prize, Silver Service for best setter and pointer in a field trial. Entrance fee, \$5.

Two hours will be allowed to each trial. Trials will be continued from day to day, at the discretion of the judges.

SCALE OF POINTS GOVERNING FIELD TRIAL.

Name and age of Entry.	No. of Entries.	Face and Style.	Breaking.	Pointing, Style and Staunchness.	Backsight.	Reading.	Total.
	30	30	20	15	10	5	100

RULE 1. The field trials will commence promptly at nine A. M., and all dogs entered for the trial must be at the Fair Grounds by eight A. M. of each day.

RULE 2. Dogs will be matched by lot, and order of running will be decided by the same. No more than a brace will be hunted at once.

RULE 3. Each dog will be judged according to the scale, as heretofore given; total number of points to decide. Should a dog not have an opportunity of exhibiting any particular point or points, the judges shall decide the number given to him for that point or points, by the average number of points gained.

RULE 4. All entries to be made by ten P. M. of October 7th. No bystander or spectator permitted nearer the judges than one hundred yards, except the shooter and handlers of the dogs.

RULE 5. No game allowed on the ground other than those belonging to the appointed shooter. The shooters will be appointed at 8:30 A. M. by the Executive Committee.

RULE 6. The judges will give full instructions to the shooters.

RULE 7. The owner's name, and name of sire and dam of every dog entered must accompany the entry.

FRIDAY, OCTOBER 9TH.

Grand Pigeon Tournament—State Association Championship.

Prize, Gold Medal. Match, five double birds. Entrance fee, \$5.

Class Shooting, Eight Single Birds.

Prizes, \$175. Thirty birds rise, eighty yards boundary. Both barrels allowed. Entrance fee, \$10. Open to all amateurs.

Class Shooting, Twelve Single Birds.

Prizes, \$500. Open to all amateurs. Entrance fee, five per cent. of purse. Twenty or more entries to fill. Application for entries prior to October 7th, and afterwards, must be made to P. H. Bryson, Sec.

The prize of \$500 was originally offered to professionals. At the request of many amateurs it has been changed as above.

The Exhibition and Tournament will be under the management of the following gentlemen: H. C. Pritchett, superintendent; J. F. Franco, assistant superintendent; P. H. Bryson, secretary.

The State Association was organized on May 1st, when the following officers were elected: R. W. Lightburne, president, Memphis; W. E. Watkins, first vice president, Nashville; Joseph H. Day, second vice president, P. H. Bryson, secretary, Memphis; S. L. Barnds, treasurer, Memphis.

—The Queen's County Agricultural Society of Mineola, Long Island, as stated before in this journal, will hold their annual meeting, also the novel exhibition of sporting dogs on the 7th, 8th and 9th October. We published the following points by which the marks of purity of blood and general style of the dogs are to be judged:—

POINTS IN JUDGING.

Head	25 Points	10
Chest	20 Points	10
Neck	10 Points	10
Shoulders	10 Points	10
Back and Legs	10 Points	5-100

—Mr. Samuel Thorne, of this city, paid us a visit last week in order to show us a brace of English setters recently purchased for him by a friend in Scotland. They are a beautiful brace of dogs, and have evidently been under the eye of a thorough game-keeper. The colors are nearly all white and orange and white with black muzzle and ears. He has written to his friend to ascertain the pedigree, &c.

DOG-EROTYPE.—We have received a beautiful photograph of a pointer belonging to S. E. Dillay, Esq., of Lake City, Minnesota. The color is liver and white ticked, fine, deep, powerful chest, with grand hind quarters, and an exquisitely tapered tail—one of the handsomest specimens of a pointer we have seen.

The Horse and Course.

EQUINE SPECULATION.—Where are we going to? Lady Suffolk's 2:26 was thought a miracle; then Flora Temple made her mile in 2:19; then Dexter did it in 2:18 one-fifth; then in 2:17, and three years ago Goldsmith Maid got through in 2:16, and now her last performance is 2:14! We shall never be satisfied until we get the mile to somewhere between 3 minutes and 2:5. When Goldsmith Maid was very young, say only eleven, she was thought to be a fair juvenile trotter. Just then she became the property of Messrs. Jackman and Doble. American Girl at that time could show the Maid her heels, but Doble, her trainer, saw there was something in the Maid, which only time would develop. As Goldsmith Maid waxed in age, her powers seemed to increase, until at Mystic Park, three years ago, she made her mile in 2:16. The Maid must be now fully sixteen and a half or seventeen years old. Taking her case in a sum of equine arithmetical progression as to speed, should she live to be twenty, we may probably get the Maid down close to two minutes, and should her life be spared until she is thirty, we may see a contest between the trotting and the running horse. Who knows? Questions of the maturity of speed in a trotting horse revolutionise all preconceived ideas, and reverse the human theory of "Go it while you're young, for when you're old you can't."

THE GREAT CENTRAL NEW YORK FAIR.—The annual fair of the Central New York Society, will open on October 6th, at Utica. There will be displays of horses, blooded cattle, sheep, poultry and farm implements, with contests between noted horses. As the programme is of the most interesting character, it will certainly draw a large concourse of people to Utica, and the display of animals and implements will undoubtedly fully represent the great State of New York. It will be open from the 8th of October for a week or more.

—The Beacon Park races on September 10th were well attended. The first race was for horses in the three minute class. There were but five starters, the well-known speed of Wellesley Boy keeping several of the entries in the stable. He was the favorite, and won the race in three straight heats, the time of each being 2:27. The double team race was devoid of interest, and was confined to Tom Carpenter's g. Joe Clark and ch. m. Mollie Morris, and D. B. Graft's b. m. Lady Woods and b. m. Carrie N. It was won by Tom's pair in straight heats. The third race was for horses in the 2:26 class, for a purse of \$3,000. There were six starters, viz.: Dan Mace's b. g. Fred Hooper; Carrom's br. s. Jubilee; L. J. Dongre's b. g. Joker; Camec's b. g. Camec; Ferguson's b. m. Lady Bowker; and Farnum's br. s. Commonwealth. Hooper won the first heat in 2:27. Commonwealth captured the second in 2:24. The third was won by Joker in 2:37. On September 11th the unfinished race of the 10th, for 2:26 horses, was decided. Hooper took the fourth and sixth heats and race. The second event was for horses in the 2:31 class, which had seven starters. Kansas Chief was the favorite and won very easily in three straight heats. Time, 2:29, 2:29, 2:34. The most interesting race of the week was for the 2:40 class. Five horses started, Red Cloud, Sensation, Gloster, Nettie, and Camors. Red Cloud won the first heat, Gloster the second, and Nettie the third last, in 2:18, 2:19, 2:23.

—The Buffalo Park Association closed their running meeting on September 10th. The first race was a hurdle handicap. Six horses were nominated and four started, viz.: Gaffney, Granger, Macon, and Bennett; they cleared the first hurdle together, also the three next without a mishap. In the second mile Helen Bennett fell over the fifth hurdle, throwing the jockey, Anderson, and falling over him. He is probably fatally injured. On the three-quarter stretch Macon and Gaffney came down together under whip, and Granger two lengths behind. Macon and Gaffney came in neck and neck, with Granger half a length or so behind, Macon winning in 4:01. The second race was a sweepstakes for two-year-olds. There were three nominations, but only two horses started, which resulted in a match between Wanderer and Volcano. The horse got a good start, Volcano taking the lead before reaching the first turn. On the quarter pole Wanderer was only half a length behind. Volcano, however, widened the gap, and ran splendidly throughout, beating his antagonist by ten lengths in 1:47. The third race was for the Buffalo Cup, value \$1,000, added to sweepstakes of \$100 each; distance two miles and a half. Three horses started, and got on evenly. Wanderer on the inside, with Katie Pease second, and Lizzie Lucas on the outside. The latter took the lead, but Wanderer, who did splendidly, soon got ahead and maintained the lead with the end of first mile, when he lost ground rapidly and the contest became hot between Katie Pease and Lizzie Lucas. Katie Pease, however, now showed herself to be good stuff, and astonished her backers by winning the race in the remarkable time of 3:14, the fastest time on record by six seconds. The fourth and last race of the meeting was for a purse of \$500 for all ages, mile heats. Culpepper, Spendrift, Josie B., and Larry Hart started. Josie B. led by two lengths, but on coming up the home stretch Culpepper made a rush and won the heat by half a head. In the second heat "another jockey up" on Spendrift. There was a good start, Culpepper led by a length, with Larry Hart second and Spendrift third, which placed them in the mile pole as they were reversed. Spendrift leading and came past under the wire four lengths ahead. Time, 1:44. In the third heat Larry Hart and Josie B. were withdrawn, leaving only Culpepper and Spendrift to decide the heat and race. The horses got off well together, and at the quarter Spendrift was a length ahead. On the back stretch he increased the distance to five lengths, and came in three and a half lengths ahead of Culpepper. Time, 1:47.

—Horses that are kept in the stable during the summer should be given daily the luxury of a roll on the earth. Rolling is the means given by nature for the animal to rid itself of vermin and skin diseases, and it tends to make the

animal healthy. Some owners object to allowing a horse to roll on the bare earth, because it gets dirt in the hair and makes extra work to keep the animal clean, but the extra work pays if rightly understood. We allow our horse to roll in the dirt when he is not moist with perspiration, and then stand an hour or two with his coat full of dust before being cleaned up.

CHINCOTEAGUE ISLAND PONIES.—The annual penning of the ponies for the purpose of sale and branding took place on the 18th ult. at Chincoteague, Accomac county, Va. The King of Chincoteague, Kendall Jester, came in first with about "fifty head of critters," as the native islanders call the ponies, and by three o'clock at least 350 were in the pen. The sale was a most one more than the usual, all sold, being disposed of, and at prices averaging some \$60. The owners are evidently a little excited on the subject of the market value of these animals, and are holding them too high for the purposes of speculators. The original stock from which these ponies sprang held possession of this island before it was trod by human feet. It is believed that a vessel was wrecked along the coast having on board Shetland ponies, and that some of them swam ashore. They have been intermixed with imported blood, however, and now only bear resemblance to the real Shetland pony in that they are small. Some of them are very handsome, and are full of spirit and fire. I drove one to a sulky on the beach at a gait inside of 3:45, and without the slightest training. They run wild on the island. Very few are ever broken to harness, and in no instance do they ever taste a mouthful of grain. King Jester had a mare in his drove from which he has sold \$1,100 worth of colts, none over and most of them at rates much less than \$100 apiece. After the colts had been branded they were again turned loose to roam and feed at will over the entire island. Altogether there are some 500 of them. —*Cur. N. Y. Herald.*

THE RACING SEASON.

THE Summer racing season of 1874 has proved so far to be the most memorable and remarkable one in the annals of the American turf. The records for both running and trotting, and for a match race, have been broken in the able of fast time. From a half to four miles the first remarkable performance of the year opened at Lexington, Ky., on May 12, with the remarkable performance of Tom Bowling, in Lexington, 104 pounds, running one and a half miles in 2:44, three seconds faster than the same distance had ever been run. In this race, by a resolution of the Lexington Association, he is credited with one mile in 1:44. The horse was permitted to extend his run to two miles, which he performed in 2:27, four and a quarter seconds faster than True Blue's, with four pounds less weight, timed by the official timers of the day, three gentlemen whose integrity and honesty are beyond question.

On the same day Leona, a two-year-old filly, daughter of War Dance, Lexington, ran half a mile in 49½ seconds, with eighty-nine pounds, being six pounds over the weight required by Lexington rules for two-year-olds.

As the summer advanced the horses centered at Saratoga. The track during the two meetings was generally in fine condition, especially so during the second one. On the first day of October, a two-year-old filly, imported from out of Olinda, by Lexington, ran half a mile in .47. A few days after Madge, by imported Australian, three years old, eighty-seven pounds, dam Alabama, by Brown Dick, ran three-quarters of a mile in 1:57, thus beating Alarm's time one-quarter of a second.

On the 13th of August, Grey Planet, five years old, 110 pounds, by Planet, dam Engleby, by Glencoe, ran a mile against time in 1:42, beating Alarm's and Springbok's time one-quarter of a second; Springbok as four years old, 108 pounds, and has a second heat in 1:42, after the first in 1:45.

On the 15th of August, Picolo, three years old, by Concord, a son of Lexington, with eighty-three pounds, ran one and an eighth mile in 1:56.

On the 19th of August, Fadldeen, seven years old, by War Dance, a son of Lexington, with 111 pounds, ran the same distance, one and an eighth miles, in the same time, 1:56, or at the rate of 1:43 1/2 to the mile.

The day after, Reform, three years old, by imported Leamington, eighty-three pounds, ran one and three-quarter miles in 3:05, thus beating Frogfoot's time, 3:07, one and a quarter seconds, he being four years old and carrying 104 pounds.

The greatest and grandest achievement of them all was the great race of Fellowship, by Australian, dam Aerolite, by Lexington, running four miles in 7:19—the first three miles in 5:29. The pace did not seem to fatigue the horse more than an ordinary run of two miles. In two hours he was entirely over it and ready for his food. The race was his grandiose on the dam's side, 7:19, stood for nineteen years. It will not be so long before this one will be beaten.

Thus the fastest half-mile, .47; the fastest mile 1:42 (unless we give Tom Bowling credit for the 1:41 made in a mile-and-a-half dash, and by resolution of the club, a record); the fastest one and an eighth mile, 1:56; the fastest two miles, 3:32; the fastest two and three-quarter miles, 4:58; and the fastest four miles, 7:19, all have been run on the Saratoga track. Whether the fast time is to be attributed to the nature of the soil, the superiority of the track, the pure and clear atmosphere, or to the improvement in horses, is a question yet to be solved. Before the close of the fall campaign we predict some additional changes in our time tables. —*Turf Field and Farm.*

RICHMOND SHOOTING CLUB.—A number of young gentlemen of Richmond, amateur disciples of Nimrod and Isaac Walton, having formed themselves in a club, and created the necessary buildings at an eligible point for their sporting operations, propose to inaugurate the season on Friday next in a convivial and social way by a little entertainment at their hunting lodge, "Claiborne Hall," in King William county, to which we kindly acknowledge the receipt of a polite invitation. Among the guests will be some of our most distinguished citizens, and a very pleasant time is anticipated. —*Richmond Dispatch.*

We are only too happy to hear that such an organization exists in good old Virginia, and we trust the members of the Richmond Shooting Club will let us hear from them from time to time.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

—Below is a summary of the regular game of base ball—not including "scrub matches"—played in England by the Boston and Athletic clubs. It will be seen that the Bostonians are way ahead on the total number of runs, and that McVey is far ahead in the list of batsmen, while George and Leonard lead the score at cricket.

Commenting on the departure of the American ball players for home, and reviewing their work on the English cricket fields, *Land and Water* says:

While on the subject of the American invasion, it would be unjust to omit mention of the feats achieved by the base ball players at cricket. Below will be found the results of the matches in which they figured in England, and whatever the composition of the teams to which they were opposed, it will be seen that they were never once defeated:

	At Lord's, August 3, 4.	At PRINCE'S, August 6, 7.	At RICHMOND, August 8.	At OVAL, August 13, 14.	At SHEFFIELD, August 15, 17.	At MANCHESTER, August 20, 21.	At DUBLIN, August 24, 25.

Matches played, 7; won, 4; drawn, 3; lost, none. The cricket shown by the Americans was, as may be expected, rough and incorrect, according to strict English notions; but splendid fielding, some good batting, and plenty of free and easy play, were the only merits. The former medium paced round-arm, the latter fast bowler, with considerable judgment, the Wrights, too, showed themselves to be very fair batsmen, and Leonard, Beale, Barnes, Anson, and Spaulding, with practice, would all bat well.

The Nassau club of Brooklyn were very successful on their recent tour through New York State, as the appended record of their games shows. They returned home victorious in all their games but one, the Fly Aways being the only club to defeat them. At the tournament they won two games out of three played, and were thus placed on an equal footing with any of the contesting clubs. The first and second prizes (\$300 and \$200 respectively) were divided between the Fly Aways of New York and the Nassaus of Brooklyn, each club receiving \$250, \$50 being given to the Nassau Club Association. The boys were greeted on their return by a large party of friends, who escorted them from the Fulton Ferry in triumph. One and all unite in saying that they have had a splendid time, and have been received everywhere with the politest attention. The record of the tour is as follows:

Played at Onondaga, August 31, Nassau vs. Fly Aways.....	3	to 2
Played at Onondaga, September 1, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 2, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 3, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 4, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 5, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 6, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 7, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 8, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 9, Nassau vs. Onondaga.....	3	to 5
Played at Onondaga, September 10, Nassau vs. Onondaga.....	3	to 5

Yachting and Boating.

BROOKLYN YACHT CLUB.—The annual fall regatta and clam-bake of the Brooklyn Yacht Club will take place on the 24th of the present month. The prizes to be sailed for will be a champion pennant for each class; one for schooners, one for sloops, and one for boats; subject to challenge within thirty days. The race will be sailed on time allowance, the start to be a flying one. The course to be sailed is to and around South Spit buoy, 8-1-3 (keeping same on port hand turning); from thence around buoy 5, off Sandy Hook (keeping same on port-hand turning) to home stakeboat in Gravesend Bay, keeping same on port hand in passing. Messrs. M. T. Davidson, H. Baragwanath, and John A. Braman are the gentlemen of the committee in charge, and they promise a genuine Rhode Island clam-bake in the afternoon.

SEAWANAKA YACHT CLUB.—The Regatta for the "Ladies Prize" was sailed at Oyster Bay on Saturday last, in half a gale of wind, and great credit must be given the club for the weatherliness of the contending yachts, and the skill and daring of their crews. It was to be regretted that so few of the large yachts were able to enter, and that those contending were so unevenly matched in point of size. The race, as far as these two classes were concerned, was a foregone conclusion, and lacked interest. The course for the schooners and first class sloops was for an imaginary line between Middle Ground buoy and shore to and around Hog Island buoy, thence to and around buoy off Eaton's Neck, thence to and around buoy off Shippan Point, returning to starting point. For the smaller boats, from the anchorage at Oyster Bay to Middle Ground buoy, then twice around the triangle, the points of which were the Middle Ground, Hog Island, and Lloyd's Neck buoys, returning to home stakeboat at Oyster Bay. The following is a list of the entries:

Name.	Mean Length.	Owner.
Idler	62	S. J. Colgate.
Arlet	63	Commodore W. L. Swann.

Name.	Mean Length.	Owner.
Addie	60	Cornelius Roosevelt.
Alert	30	Henry Yail.

The time arrangement for the start of the second and third class sloops was 10:30. The start was very even, no perceptible advantage being gained by any boat. The wind was very strong from the northeast at this time, and other yachts could just lay their course clear of Old Man's Point. The second class, in the strong wind, then blowing, soon separated themselves from the small boats in the third class. The tide was on the last quarter of the flood. After clearing the point, the boats became dead beat to the Middle Ground. The time of rounding the buoy was as follows:

H. M. S.			H. M. S.				
Wm. T. Lee.....	11	11	12	Alcyone.....	11	19	35
Mirth.....	11	12	30	Mary Emma.....	11	20	32
Fei-Seen.....	11	14	30	Jeta.....	11	23	10
Udine.....	11	17	00	May.....	11	27	00

From here it was a run to Hog Island buoy, during which the relative position of the yachts was not materially changed. When after rounding they hauled on a wave and began their beat to Lloyd's Neck buoy, the real work commenced; the tide had just turned ebb, and with an increasing wind the already high sea gradually grew higher until it fairly stood the little vessels on their ends. The Lee proved herself the best boat in the seaway, and in the time to windward continually increased her lead. The Fei Seen stuck close to the Mirth, and the Udine wind-drew, having carried away her bobstay. As no shifting ballast was permitted, and the number of the crew limited, it was very lively work to keep the yachts right side up. The Lee astonished every one who remembered her as a sand-bag boat, and saw how remarkably well she sailed on her own bottom. Of the other class the Jeta was very much admired for the manner she carried her enormous spread of canvas. The Middle Ground buoy was turned after completing the triangle for the first time as under:

	H. M. S.		H. M. S.
Wm. T. Lee.....	12 35 00	Alcyone.....	1 03 13
Mirth.....	12 40 30	Mary Emma.....	1 06 28
Fei Seen.....	12 43 00	Jeta.....	1 08 28

The second time round was very much like the first, only

The second time round was very much like the first, only "more so"—more wind, more sea, and more loose water where it did not belong. The Mary Emma hauled down her second reef, and the Alcyone was obliged to retire from the contest by weight of weather. Right pluckily was she sailed, too. Below are the times of arrival at home stakeboat, together with the start and elapsed times.

Name.	Start.	Finish.	Elapsed Time.
William T. Lee	10 41 00	2 32 13	3 51 13
Mirth	10 41 00	2 34 48	3 53 48
Fei Seen	10 41 00	2 34 48	3 53 48
Udine	10 41 00	2 34 48	3 53 48

Name.	Start.	Finish.	Elapsed Time.
Mary Emma	10 41 00	2 34 48	3 53 48
Jeta	10 41 00	2 34 48	3 53 48
Alcyone	10 41 00	2 34 48	3 53 48
May	10 41 00	2 34 48	3 53 48

The Lee wins without time allowance in her class, and the Jeta wins by 11 seconds in her class, but is disqualified, from the fact that a club member did not steer her the whole time.

The large yachts started and finished, as is shown in the summary of the race, but as before mentioned the result was a foregone conclusion. The Idler, after rounding Hog Island buoy, made one stretch across the Sound, followed by the Ariel, the two sloops preferring to work down the Long Island shore. The Addie carried away her topmast at the cap, and the Alert after trying the strength of the sea, ran under Lloyd's Neck Point, and hauled down a reef. After reaching Eaton's Neck buoy, and rounding, the yachts came home right merrily off the wind. The Idler wins the schooner prize, and the Addie the one for sloops. Below is a summary of this portion of the regatta:

Name.	Start.	Finish.	Elapsed Time.
Idler	11 38 56	2 51 31	3 12 35
Ariel	11 38 56	3 51 21	3 56 21

Name.	Start.	Finish.	Elapsed Time.
Addie	11 38 17	3 08 18	3 30 01
Alert	11 41 16	3 40 52	3 59 36

EASTERN YACHT CLUB.

Boston, September 6th, 1874

EDITOR FOREST AND STREAM:—The autumn regatta of the Eastern Yacht Club took place yesterday at Beverly.

The list of starters was as follows: First class—schooners—Foam, T. D. Boardman, 75.35 feet water line; Rebecca, J. H. Reed, 66.75; Halcyon, Vice Commodore Jaffrey, 72.5. First class sloops—Coming, Rear Commodore Taylor. Second class sloops—Latona, J. G. Cushing, 55.5; Belle, J. P. Gardner, 48.5; Romance, C. W. Conroy, 55.8; Fearless, E. B. Phillips, 54.5. Second class sloops—Imogen, A. C. Wheelwright, 54.1; Gauntlet, E. M. Cary, 53. Allowance 30 seconds per foot in first class, and 48 in second. Course from a stakeboat near the Haste to starting point, 1.13 miles.

The prizes offered were, \$125 in each class of schooners, \$75 in each class of sloops, to be sailed for with time allowance, but no prize to be given unless two boats started, \$75 for the best time over the course, provided that the boat making it took no other prize.

The iron sloop Vindex was expected, and a lively race between her and the Coming was anticipated, but she did not arrive in time from an early cruise. The whole interest of the race, therefore, centered on the Foam and Halcyon. The Halcyon was the champion last year, winning handsomely in every race she entered, while the Foam made her first appearance in Eastern waters at the spring regatta, where, after an unsatisfactory drift to windward, and a good free run home, she beat the Halcyon by 45 seconds, with time allowance, the latter making the best time over the course. She sailed very well also in the race of the S. Y. C. Club from Newport to the Bluffs, following close behind the Dantless, consequently a fair race between the two was eagerly looked for, Foam being the favorite.

The starting signal was given at 11.55, when the yachts crossed the line as follows, with a light S. E. breeze: Belle, 11.55.22; Rebecca, 11.55.22; Coming, 11.55.34; Foam, 11.55.35; Fearless, 11.57.31; Imogen, 11.57.31; Latona, 11.58.33; Imogen, 11.59.22; Halcyon, 11.59.38; Romance, 11.59.47. The America crossed the line at 11.59.50, and sailed over the course, though not belonging to the club.

In the beat out to Marblehead Point the Coming took a decided lead, the Foam being second, with the Fearless very close on her weather quarter, and the Udine fourth, then in the short tacks and light air, Foam seemed to gain a little. At this point the racers were met by the Marquitta, Flirt, Brenda, Princess, Gracie, Julia, Alice, Dream, and other yachts belonging to the club, which accompanied them part way over the course, or remained to see the finish. The stretch across to the Hardies was made without a tack by the four leaders, though the others had to beat for it. As the yachts reached the south shore the breeze increased, and Halcyon ran through Fearless' lee, and steadily gained on Foam, who was now leading boat. Foam gained round the buoy at 1.26.00, followed by Halcyon at 1.29.00, the latter gaining 1 minute and 25 seconds in the run. Coming rounded in 1.30.00, followed by Fearless, America, Latona, Belle and Gauntlet. Imogen, though beating Gauntlet at first ran too far to the eastward, and gave up the race. Romance and Rebecca doing the same. After rounding the buoy, the wind being on the quarter, balloon sails were set all round, Coming carrying away her balloon jibstay and topmast, back-stay in the freshening breeze. A coaster compelled Foam to luff a little just before reaching Egg Rock, which she rounded two minutes ahead of Halcyon, the latter gaining one minute in the run from Hardies. From Egg Rock to the Piggs boat-house a strong breeze, close hauled, Halcyon passing Foam beyond Egg Rock, rounding Pig's stakes at 2.42.45, one minute ahead of Foam; from the Stakes in, balloon sails were again in order. Off Lowell Island Halcyon jib stay broke loose. Foam gaining a little while it was being recovered.

The home line was crossed as follows:—

Yacht.	Actual Time.	Actual Time.	Correct Time.
Halcyon	3 19 30	4 05 17	4 17 30
Foam	3 20 30	4 05 17	4 17 30
America	3 33 52	4 13 02	4 17 30
Fearless	3 37 05	4 23 11	4 17 30
Coming	3 38 38	4 23 11	4 17 30
Latona	3 38 38	4 40 14	4 39 50
Belle	3 38 38	4 40 14	4 39 50
Gauntlet	3 38 38	5 17 47	5 16 35

Prizes were awarded as follows:—First class schooners—Halcyon, \$125. Second class schooners—Fearless, \$125. Second class sloops—Gauntlet, \$75.

The \$75 for best time was not awarded, as Halcyon took the prize in her class. The prize for first class sloops will probably be sailed for next Saturday by the Vindex and Coming. Yours, &c.,

BLUE WITH A GOLD CASTLE.

SHUYLKILL NAVY REGATTA.

PHILADELPHIA, September 14, 1874.

EDITOR FOREST AND STREAM:—The entries for the fall regatta of the Schuylkill Navy will close on Saturday, Sept. 19th. The races for the four-oared shells will be over the National course, one and a half miles straight away, and the others one mile, from Rockland up and return.

There will probably be entries for six-oared barges, four-oared gigs and shells, pairs, doubles and singles, and possibly, an eight-oared shell race between the Crescent and Udine. On Thursday, Sept. 18th, there was a race between these two clubs, both boats being imported from England, and it proved one of the most exciting events of our river. From start to finish, about two miles, neither boat had one half a length lead, and at the finish the Crescents won by only a one-quarter length.

The West Philadelphia oars was the only other boat of the kind, we believe, in this country. It is now on the stocks at Metcalfe's for repairs, and it is to be hoped will be finished and entered.

As the Vespers are not in the Navy, they cannot enter Mings, the winner of the Junior Sells in the 7th, which is to be recreated. This leaves the coast clear for Max Schmitt, the present champion, unless McBeath, of the Quaker's, enters, when we shall see who we shall see. The Quaker City Club practicing on the river four: McBeath, stroke; Gormley, bow, with "Flip" Fenniston and "Dick" Adams in the waist—probably the best team to be raised on the river.

The College Club's house is fast approaching completion, being ready for the roofers to-day. It is 60x25 outside, two stories high and built of unadorned brown stone. The Park Commission take care that the houses shall meet their requisition of "ornamentality," and we will begin to see

the bay windows and balconies this week. These fine houses are very nice to show to strangers, but fall heavily on a young club's treasury. This one will cost \$5,000, to which they will have to add another before it is finished.

This Club has one six-oared Gammel barge, one four-oared gig, one double gig, and a single shell. Their membership numbers thirty-five, officered as follows:—

Calhoun, George, President; John R. Fell, 1st Vice President; W. H. Patterson, 2d Vice President; E. B. Morris, Treasurer; Samuel T. Kerr, Secretary; W. R. Philler, 1st Club Coxswain; James W. O'Neill, 2d Club Coxswain.

On Saturday the Navy lost one of its oldest and most active members, Mr. Jacob S. Miller, for many years the secretary and treasurer of the Udine Club. In one year he pulled upwards of 2,000 miles on the Schuylkill, and for several years averaged more than 2,000, pulling and winning a number of races, and that when over fifty years of age. His loss will be deeply felt.

The Christiana Yacht Club, of Wilmington, Delaware, held their Fall Regatta on Saturday, October 3d. Their races will be single sculls, open to all amateurs. Four-oared gigs for their own Navy and six-oared Gammel barges open to all amateurs. Entries, which close September 19, must be addressed to F. L. Holmes, Secretary, Wilmington, Delaware. I hope to have a fine zig-zag race to report, for they turned out the best material in their Spring Regatta I ever saw.

From the Press this morning I clip the following:—

LONDON, Sept. 12.—A meeting of amateur oarsmen is called for Monday next in this city, when an effort will be made to induce one or more crews to go to Philadelphia to take part in the international regatta of 1875.

Commodore Ferguson is at work, which means success.

Truly yours, SCULLS.

CEDAR POINT REGATTA.—A regatta for cash prizes of \$10 in each class of yachts entering, took place near Westport, Ct., on the 10th of September. There were four entries in the first class, two in the second, and six in the third, with representations from Norwalk, South Norwalk, Westport, Bridgeport, and New Haven. None of the yachts were more than thirty feet in length. A stiff breeze blew from the southwest. The Ada, of Southport, was the winner in the first-class; the Pearl of Bridgeport, in the second; and the Quickest (Brooks) of New Haven the third.

BEVERLY YACHT CLUB.—The fifth Union regatta of the Beverly, Mass. Yacht Club was held on August 29th. Wind light, S. E. Courses triangular for first and second classes, and for the first time, eight miles. Judges, T. D. Boardman, G. D. Howe, C. H. Williams. Judge's yacht, the Foam, of the Eastern Yacht Club. The following yachts entered:—

1st Class.—Eva, Posey, Firefly, Fanchon, Surf and Ariel.

2d Class.—Mabel, Water Lily, Ibis, Peri, Curlew, Madge, Mona, Hebe and Constat.

3d Class.—Pink, and Lizzie.

Eva, Mabel, and Tulip taking first prizes, Posey, Water Lily and Pink second. Eva, Water Lily and Tulip champion pennants. Tulip winning hers for the third time and holding it for good. The annual cruise took place September 4th.

THE LYNN YACHT CLUB.—The members of the Lynn Yacht Club and invited guests, comprising a party of seventy-five, sailed at 9 o'clock Monday morning in the yachts Lillie, Lizzie, Addie Elmer, Nellie J. and Fleeting to Moon Island, Boston harbor, to join the South Boston Yacht Club in a grand clam bake.

—The Watkins and Seneca Lake Association held their first annual regatta on Seneca Lake. On the first day, September 9th, the attendance was large, and the water fairly smooth. The races were the junior single sculls, distance two miles; six-oared shells, distance three miles. The races commenced at 2 P. M., they were spirited and well contested for. The first was for four-oared shells, distance three miles. The Buffalo club won easily, time, 19m. 20s. Union Springs second, time, 19m. 38s.; the Stars of Rochester, third, time, 20m. 38s., and the Seneca Falls fourth, time not taken. The Alacans, of Owego, did not start. The following were the prizes awarded to the first and second crews:—Four gold watch chains to the Buffalos and four gold glasses to the Stars of Rochester. Junior single sculls, two-mile race: a grand silver tea set to first, a silver pyramid fruit stand to second. Robinson of the Union Springs, came in first, time, 15m. 35s.; W. E. McCready, of the Athletics, New York, second, time, 15m. 55s.; Lindsay Watson, of the Nassau, New York, third, time, 16m. 15s., and John Dorr, of the Buffalos, time, 17m. 5s. Six-oared shells, three-mile race: six silver tin pitchers to first, one silver glass to second. Cornell College Club of 1877, came in first, time, 23m. 27s.; Greenways, of Syracuse, second, time, 24m. 7s.

On September 10th the attendance was much more numerous than on the first day. There were some twelve thousand people present. The first race was for six-oared shells, distance three miles. The Nassau crew, of Harlem, N. Y., won in 21m. 3s. Class of 76 of Cornell second, 21m. 45s., coming in only three feet behind. The Greenway Club, of Syracuse, was distanced. The crew, first, six oars glassed, second, six silk umbrellas; third, six gold pen-holders and pens.

The second race was two miles by the Seniors, single scull. First prize, a solid silver table set; second, a silver wine set. It was won by the champion, Charles Courtney, of Union Springs, in 14m. 10s.; R. H. Robinson, of Union Springs, second, 15m. 29s.; and W. E. McCready third. The winning time was only seventeen seconds short of the fastest time on record. The third race, three miles, was contested for by double and four-oared shells. First prize, two diamond studs; second, two sets of cameo studs. It was won by the Riverides, of Rochester. The fourth race, by four-oared shells, was won by the Seneca Falls, of Seneca Falls.

On September 11th, the regatta closed with a yacht race, a four-oared and single scull race. The management of this the first regatta on Seneca Lake has given great satisfaction to all parties, so much so that the future regatta, three miles, was contested for by double and four-oared shells. The yacht race was won by the Lark, of Cayuga Lake, the others came in in the following order:—Lone Isle and Madeline, of Cayuga Lake; Water Witch, of Geneva; Sparrow Hawk, of Cayuga; Vesta, of Geneva; Nymph, Tempet, Norah P. and Julia, of Watkins, and Geneva, of Geneva. The four-oared two mile race was won in 14m. 45s. by the Stars, of Rochester, second, the Riverides, of Rochester, in 14m. 19s., over Compton Myers, of Saratoga. The prize for this last was a \$100 gold watch.

Boston.

SEPTEMBER.

BY MILLIE E. BARR.

O RICH, sweet month, by summer sunshine browned,
With bronzing leaves and golden wheat-ears crowned,
With calm, glad eyes o'er finished labor bent
In deep repose and measureless content,
Thine is the joy of harvest—thine the spoil
Of fields and vineyards and of summer toil.

For thee the sun withdraws his dearest rays,
And veils his face behind a silvery haze;
For thee the moon prolongs her wondrous light,
And with a double beamy comforte night;
For thee earth doth the royal robes unfold,
And clothe herself in crimson and in gold.

The merry songs from vine-clad hills are thine,
The shouts of husbandmen that wheat sheaves twine,
The negro chants among the Indian corn,
The children's laughter and the hunter's horn,
The hymn of gratitude from every clime,
The year's most joyful melodies are thine.

O lovely month! If, in thy perfect days,
When all the world was singing songs of praise,
'The Christ again in love and peace should come!
Then earth, indeed, would shout her "Harvest Home!"
And sweet September's name stand first among
The glorious syllables of heaven's "new song."

—Animal Kingdom.

For Forest and Stream.

The Ichthyic Fauna of the North-West Coast.

SALT WATER AND RIVER FISH.

THE Pacific Ocean will probably equal the Atlantic in its variety of edible fish, and I think, excel it in numbers; but the species frequenting both are quite opposite, and in many cases the contrast is so very great between the two varieties that it is hard to identify them. A large number is known by names different from those they bear elsewhere, hence one is apt to be confused unless he examines closely, and has a work of reference. The latter is an article that cannot be found in the Northwest so far as I know—at least anything general—and even if it were, the difference between the eastern and western species is so great that one might be led into error unless he exercised strict caution. Take, for instance, that type of the percide family, the *Ambloplites interruptus*, which is found from the rivers of Oregon to Mexico, I believe, and you hear it called by half a dozen names, not one of which gives a clue to the other. By these appellations one is very apt to be led astray, hence is liable to place the same species in one or two localities, under different names, unless he has made a personal examination. The following list is, however, as near correct as I could secure, and if it does not embrace all varieties, it does at least the principal species. Of the salt water fish the best for commerce are the halibut (*Hippoglossus*) and cod (*Morhua*), and both are quite abundant, yet they are not used as an article of commerce; in fact, the abundance of salmon causes all ocean fish to be entirely overlooked.

Of the families the *hetelepididae* is represented by a couple of species, the *cottidae*, or sculpins, by about seven, the *scorpenidae*, or rock fish, by four, the *gasterosteidae*, or sticklebacks, by three, the *blennidae*, or blenny, by three, the *gobiidae*, or gobies, by one, the *ophidiidae*, or lance, by one, the *gadidae*, or cod, one—though there is a second variety of the *morhua*, yet it is not a true cod—the *pleuronectidae*, or flounder, by three, the *embioloideae*, or perch, by three, the *cypripidae*, or dace, by several, the greater number being suckers, and the *percidae* by one.

Of the latter the *Ambloplites interruptus* is found in southern Oregon and at the head waters of the Pitt and Sacramento rivers, in California. It is sold in San Francisco under the name of perch. Of the *hetelepididae*, the best is *Chiropsis pictus*, which is known as sea trout and rockfish in California. The Indians of Fuca Straits capture an-

Selected.

other, the *Oplopoma pantherina*, but for this there is no vernacular. The dorsal and lateral region is spotted black; beneath it is a reddish brown, and above a blackish brown. The sculpins are very numerous, and bite freely at a hook, but they are not used at the table, owing to the insipid character of their flesh. The *Chiropsis nebulosus* is black on the upper region; olivaceous beneath, and the caudal is sub-concave posteriorly. It seems to prefer the brackish mouths of rivers subject to tide water. The prickly skinned sculpin (*Cottopsis asper*), the slender sculpin (*Leptocottus armatus*), toad fish, or buffalo sculpin (*Aspicottus bison*), Ayre's sculpin (*Aretidius notosphyllus*), the rough sculpin (*Zaniclepis latipinnis*), and the bar-eyed sculpin (*Nauthichthys oculo-fasciatus*), are as abundant as desired, and about as useful as that family is anywhere.

The *Gasterosteus serratus*, or stickle back, frequents the fresh water in June, July, and August during the spawning season. Its grass-made nest may be seen in the rivers emptying into Puget Sound, and also the parents hovering around it until the young are hatched. It has a plated body; peduncle of tail keeled, dorsal spines three inches high, and slender, and conspicuously serrated upon the edges. The upper region is of a dark grayish olive; beneath of a purplish white.

The *Gasterosteus pygnetti* differs from the preceding in not having the peduncle of the tail keeled, and not having its dorsal spines serrated, and the body only partly plated. It varies in length from one to two and a half inches, and is very dense in the fresh water streams. Another species, the *G. inopinusatus*, is found in California.

Of the blennidae, the most curious is the *Gunnelus ornatus*, or banded mud fish, a sort of amphibious creature that loves the higher beds of molluscs to the liquid element. It measures only a few inches, say from three to six, and is useless as an article of food. It is found in all the bays formed by the Pacific Ocean. Its dorsal and anal fins are contiguous to the caudal; it has two anal spines, two very small ventrals, and its color is a sombre grayish. The common monkey fish (*Cebidiethys violaceus*), and the eel-shaped lampen (*Lumpenus anguillaris*), are also found in all the interior bodies of salt water.

The porous catfish (*Poriethys notatus*) is also abundant in the interior basins. This handsome creature was, in my opinion, placed in the Sound to make people sweat, for it will rush for a bait with an energy equalled only by its impudence. Of the *gadidae*, there is but one true cod (*morhua proxima*), and that is found very abundantly from California to Alaska. It has always been a leading article of food with the Indians, as they can spear it in all the shallow waters during the summer. It is excellent eating, so meets a ready sale. It weighs, perhaps, five or six pounds. A variety known here as rock cod (*Sebastes rosenouensis*) is quite common, and as it bites readily at a baited hook furnishes excellent sport. It varies from sixteen to twenty-two inches in length. The upper regions and sides are of a light purplish brown, the latter being mottled a shade darker. The superior surface of the head is spineless. Three other varieties, or species, are found south of Astoria, Oregon, namely, the *paucispinis*, *articulatus*, and *fasciatus*, which differ only in minor details.

The *Platichthys rugosus*, or rough flat fish, is the representative type of the *pleuronectidae*, and is quite abundant at the mouth of the Columbia, but especially in Puget Sound. The eyes are on the left side, the inter-ocular space being of moderate width; the right is a dark yellow, and the left a reddish brown hue; the fins are olivaceous, dorsal and anal having alternate bands of black, merging into longitudinal on tail, the ventrals and pectorals being unicolor. The scales are rugose. The length varies from seven to twelve inches. It is captured in nets, but can also be speared or taken with the hand after the recession of the tide, as it lies high and dry on some of the flats. The Indians slaughter large numbers along Shoalwater Bay and Gray's Harbor, where they crowd in immense throngs. When started, this fish will dive right into a mud bank, stir it up, and escape under this cloak of concealment. Another species, having a light brown hue on the left side,

and a light brown on the right, is caught in Fuca Straits, and is known specifically as the *P. umbrosus*. The *parophrys vetulus* is a denizen of the waters around Astoria, Yaquina Bay, and Port Orford. Its ground color is cinereous, interspersed with black; the head and body is a reddish ash; the fins are maculated and olivaceous.

The viviparous or sapphire perch is the handsomest species of the *embioloideae*. It is a deep purplish blue above, lighter beneath; fins, except pectorals, reddish purple; latter yellowish. It is very abundant, and presents a striking appearance as its gaudy colors change from purple to olive, green and glistening golden, according to the way in which the light strikes it. It can be taken readily in summer, as it frequents shallow water, but the Indians capture it extensively at all seasons. This species must remain pregnant a long time, as the flesh is even soft in mid-winter. Some caught as late as January by the Pingallup Indians contained over forty young, and others had several in the uterine sacs. An old swash fisherman told me that it always contained young, or, as he expressed it, "Yuka miltite konoway hiyon tenas fish," always full of young fish.

The silvery perch (*Dunalithys vacca*), which is also quite common, never takes bait. It is of a grayish olive color; scales have a silvery and golden reflect; fins unicolor. The male carries the sac on the anterior third of the anal.

The golden barred perch (*Holconotus rhodoterus*) has a small mouth, sub-conical head, large eyes, and the colors vary from a bluish gray above to a silvery white, with three transverse bars of golden on the belly and sides. It arrives in immense schools as early as May, keeping close to the surface, so is caught quite readily. It bites freely at a hook baited with salmon roe; but the mode of taking it adopted by the Indians is to push their canoes among a school, and as it has a habit of leaping out of the water the canoes are filled in a short time, especially when the fish are crowded towards the shore. It leaps to its death quite frequently, without any other motive than sportive playfulness. It has rather good edible qualities, but this does not induce fishermen to seek it.

The *cypripidae* are best represented by the Columbia River dace (*Mylicheilus caurinus*), but its gastronomic qualities are poor indeed, being bony and soft. This has a round, somewhat blunt, sub-conical snout; the posterior end of the maxillary extends to a vertical line drawn across the posterior rim of the nostril. The colors are a brownish black above, golden beneath, the two lateral bands being darker, the inferior one as far as the vent.

Several true suckers are found in Klamath Lake, eastern Oregon, but they scarcely deserve a description. About the most common is the *Alganensis bicolor*, whose back and sides are a metallic blue, intermingled with a golden yellow; inferior region a whitish yellow. Some species are quite common in the upper Willamette River, and in the streams of northern Idaho.

Of the *gobiidae*, I know only one species, the *Gobius lepidus*, found in southern Oregon; the *ophidiidae* is also represented by only one, the *Ammodontes persimilis*, or sand lance. Two species of killy are found in the Sound, the *Richardsoni latiratis*, or spotted, and the *R. bulteatus*, or Puget Sound killy. They run in large schools, bite readily at a bait, but are not very edible. The color of the latter is a grayish black above, silvery white beneath; fins unicolor. The *Argyreus nubilus* is also common.

The most abundant chub is the *Utheodonta cooperi*, or Vancouver chub, which has a subfusiform profile and elongated body. The head is about one fifth of the body; snout thick, overlapping lower jaw; eye and fins well developed. Superior region reddish gray; sides and belly yellowish white, with metallic reflect. Bites at hook baited with meat; useless as food.

The *C. coerulea* is found in the Willamette.

The Western dog fish, *Acanthus suckleyi*; *Raja cooperi*, northwestern skate; *Ptychocheilus Oregonensis*, Oregon carp; and *Oncopeltus transmontanus*, or sturgeon, are very abundant. The carp, which is common in the Columbia, is about fifteen inches long, and bites readily at a hook, but not

For Forest and Stream.

A NOVEL BUFFALO HUNT.

WE have now been on the plains twenty days, and have had but a few antelope to supply us with fresh meat. Some Indian hunting parties (probably the Prairie Gros Ventres) have ranged through this section of the country, driving and scattering the game before them. Numerous frames of huge buffalo bulls, and an occasional cow's skeleton, are seen scattered over the plain, as evidence of a successful hunt by the Indians. At this season the Indians seldom use the buffalo skins, selecting but a few of the largest for making lodges. They dress their game "Indian fashion," simply unjointing the legs from the body, and stripping the flesh from the carcass in thin pieces for drying. The larger bones are cracked, boiled in a large camp kettle, and the marrow skimmed from the water and used in boiling pemican.

Several old bulls have been seen by our party, and were chased by a mob composed of teamsters and cooks, mounted on mules, others on foot, and one individual was seen tearing over the prairie on a gaunt looking mule with a deer skin folded on the animal's back for a saddle. Strange to say, one man mounted on a mule actually overhauled a buffalo bull, and succeeded in severely wounding him, but brought in no meat. The large bull examined the carcass from a "hole" in the prairie until there were within a few hundred yards of him, and already several were thinking seriously of fresh hunt rump, when the bull threw up his tail and head and immediately went galloping over the plain, giving the "good day" to his hungry pursuers. One Nimrod was heard to remark, "I am going to wait until we find them thicker."

But few sage hens, and no sharp tailed grouse have been seen since leaving the Milk River. An occasional prairie falcon, a few of the rare longspurs (particularly *Petrophaga ornatus*), and numerous prairie dogs and gophers are all that have been observed during the past few days. One of our scouts has just come in from Fort Benton with the mail. He has brought me two copies of the FOREST AND STREAM, which are rapidly passing through camp, as there have been but few papers received. Very truly yours,

JOSEPH H. BARR,
Sweet Grass Buttes, Montana Territory, August 8th, 1874.

For Forest and Stream.

A NEW RESORT FOR SPORTSMEN.

BY MOLLAWR.

A NARROW strip of sandy and meadow land, twenty miles long, and from a half mile to a mile wide, runs from Barrenet inlet to Little Bear Harbor inlet. Between it and the main land on the West, is Tuckerton Bay, in some places seven miles wide; on the East side is the Atlantic Ocean, and directly opposite Tuckerton a part of this land called Beach Haven, which, but a year since, was nothing more than a barren, sandy waste, such as you find on all lands so situated. This year it is an established summer resort, having two excellent hotels, far better than the average, three cottages and a restaurant, the latter named the "Hotel do Crab." I presume, from the fact that if any crabs are to be had, you can get them there.

The Parry House can accommodate between three and four hundred people. The charges are \$3 a day, or \$14 a week. The table is excellent—there being always plenty, and of good quality, great variety and well cooked. The Bay View House is a smaller hotel, said to be well kept, charges \$3 a day. The three cottages are owned respectively by Mr. Archibald R. Pharo, of Tuckerton; Dr. Albert H. Smith, a leading physician of Philadelphia; and Mr. Phillip Dun, of Trenton. Next year there will be several more cottages erected, and four new hotels will be completed in time for the season of 1875. As a resort for sportsmen and those fond of yachting, I know of no better place. One evening last night, a sportsman can take their families to a restaurant, the latter named the "Hotel do Crab," I presume, from the fact that if any crabs are to be had, you can get them there.

There were many there this year who had failed every where else to find relief. The bathing is very fine, and the still water bathing equally good. The facilities Beach Haven has for yachting are excellent, there being a stretch from inlet to inlet of twenty miles, and across from shore to shore of from six to seven miles. For those who prefer the ocean to sail on, it is easily reached by going out through Little Egg Harbor inlet, which is a short sail; also by a continuous stretch of eighteen miles, Atlantic City can be visited without going outside.

The shooting and fishing are excellent, as good, if not better than anywhere else on the coast. Willet, marlin, curlew, large and small yellow legs, black breasted plovers, dowitchers, robins, and the various kinds of wading birds are to be found at the proper time in great numbers on the bars, meadows and islands in the bay; and the larger rail are quite numerous on the salt marshes. The fishing for sheephead is said to be superior to that of any other place. Certain it is that they are found in large numbers. The Parry House employs two fishermen all the time to do what is termed "sheepshead" for them, and whose catch for this season has been, with hook and line, over 400 each. At the table of this hotel the sheephead is to be found every day for dinner. For fourteen days I lived on sheepshead; not a mouthful of this did I eat during that time. I have never before been able to live on fish alone for such a continuous length of time, and I understand it is one of the peculiarities of the fish that no one tires of it.

Some pot-fishermen some two or three weeks ago drew a seine on the sheepshead fishing ground and got about 800 at a haul. This net much incensed the bay men, hotel proprietors, and all those interested in the preservation of their valuable fisheries, and they were so successful in their action upon these miscreants should they ever attempt the repetition of the villainous act. In order that there shall be no repetition of this offense, the people of Beach Haven are endeavoring to have passed a legislative enactment for their protection.

Weak fish are also in large numbers, one gentleman having caught over eighty in a morning; and sea bass and striped bass fishing is really good. The water is very fine, and with competent seamen and fishermen and gunners are always to be had at reasonable charges. The great feature of the place, as a resort for sportsmen and their families,

is, that while you meet respectable people, the fast and rough element is absent. Yet there are none of the restrictions of more fashionable places. For example, gentlemen wear blue flannel shirts instead of white ones, and the ladies consider it no disgrace to wear every-day home toilettes. Beach Haven owes its prosperity to the energy of Mr. D. K. Allen, of the Tuckerton Railroad, who may be said to have made this charming resort what it is.

The most direct route to reach there is by the New Jersey Southern Railroad from pier 8, North River, by way of Sandy Hook and Long Branch. At Whittings you connect with the Tuckerton Railroad, a splendid piece of the under Southern Railroad, and in every-day life it is a live Vermont. At Tuckerton you take the steamboat across the bay to Beach Haven, affording a most delightful sail of seven miles.

Duck and brandt shooting is very fine in the Fall and Spring, and also for geese in the Spring in Tuckerton Bay; and excellent accommodations can be obtained at Van Note's Hotel, Tuckerton.

OUR BEST GAME BIRDS.

BY HOMER, NO. 1.

"Ruffed Grouse and Ruffed Grouse Shooting."

THE wide extent of country which the Ruffed Grouse, (or, as they will call it, Pheasant in Pennsylvania, and Partridge in New England), inhabits, causes it to be well known in almost every section of the United States, and there are few sportsmen who have not toiled and been tantalized in its pursuit. Early in April the cock grouse begins his wooing, and perched upon some fallen log, commences his amatory drumming, calling to his side the unfortunate mate whose family duties he will soon refuse to share. Unlike the quail, who assists his partner in hatching and rearing her young, the ruffed grouse deserts his better half after she has finished her nest and completed her laying, to seek the company and enter the society of just such other lazy and selfish fellows as himself; but he leads a life of ease until his progeny have become almost as large as the mother, when the packs of grass widows are broken up, and all mingle indiscriminately with the broods of grown birds.

Doubtless, in point of flavor and delicacy, the ruffed grouse may be awarded the palm above all other birds of the gallinaceous tribe, but on account of its extreme wariness and the almost impenetrable nature of the grounds it frequents, its pursuit when no other game is sought is accomplished only by extreme labor and fatigue, requiring likewise a thorough knowledge of its habits before even a passable bag can be made. Sometimes when come upon suddenly, and when we least expect it, they squat and lie close to the ground, but far more frequently they do not admit of approach and make off at the first intimation of danger, running and taking wing to some tree where they remain closely concealed under the branches near the butt, until the sportsman has passed. When the ruffed grouse is young, however, they lie better, but at all times silence should be observed when the near proximity of game is supposed, as it will more readily bear the approach of the dog than the sound of the human voice, or the noisy footstep of the shooter. The most favorite resorts of the grouse are the sides of hills overgrown with hemlock and cedar, with undergrowth of laurel. In level countries they frequent swampy coverts and scrub oak patches, and if such places have a tangled and briery bottom, the better will they lie, as it impedes their running.

A good grouse dog is a rarity; he should be thoroughly up to his work, long accustomed to it, staunch, game, and satisfied with his point the instant he catches scent. The fast ranging, busy youngster, no matter how fine he may be on other game, had better be left at home, for he will certainly do more damage than good.

When a grouse is put up at the foot of a hill he will most likely ascend it in his flight, and if not alighting on its side, can generally be found directly over the summit, and will lie better and give a closer shot than when first disturbed. I have always met with some success when I could find a swamp or thicket at the base of a mountain to which the birds came in the morning to feed, and posting myself between the hill and their feeding place, while a companion started the grouse, would obtain fair shots as they passed near me.

Fully ten thirds of the ruffed grouse we see in the markets are either caged, trapped or killed by professionals, who free them by the aid of small dogs trained for the purpose, and while the poor bird is gazing at what he most probably takes for a fox beneath him, the pot hunter murders him as he sits. It was related to me by a brother sportsman a few days since that some years ago, while stopping at a public house in Burlington county, N. J., where he had gone on a shooting trip, he met a fellow of this stripe, hailing from New York city, who regularly visited and attended one hundred and more snare sets for grouse in the scrub oaks and swamps, and that almost daily he would return with fifteen or twenty, which would be packed and shipped to market. To the doors of such worthies can be laid the disappearance of the bird where it was once so plentiful.

I have a number of shooting friends who are quite enthusiastic in regard to the sport and eagerly indulge in it, feeling amply repaid after a day of weary tramping over rocky hills and through dense coverts to be able to bag one or two brace, which, take it the season through, may be considered an average score for the sportsman. The laws of the State of New Jersey protect the grouse until November 1st, (when also the season for quail commences), and although it is argued that the October and even September 15th should be the opening days for ruffed grouse shooting, as the young at this time are large enough to be shot and fully able to take care of themselves; still I think the law a good one, and if properly enforced, will greatly tend to increase their number.

The sportsmen of Newton, N. J., I am told, have brought grouse raising (page 102) to such a high state of perfection that they may be called a "game" setter, and the neighborhood I have yet visited. Their hills still contain a fair proportion of birds, and the season for the sport is as eagerly looked for as that of quail shooting. Fully acquainted with the country, they know almost to a certainty where a grouse will be found and the direction of the flight it will take when started. During my visit to this pleasant town in the past summer, I was called upon by a sportsman who was noted for grouse, and judging from the carelessness with which all their stock had been bred, I have no doubt fully as much attention had been paid to training.

At most I have always found ruffed grouse shooting unsatisfactory; so much so that I never care to choose as a ground a region where I may expect to find this bird only. In Monroe County, Penn., while autumn cock shooting, I was frequently put up grouse, and occasionally get fair enough shots to kill, but never leave our regular beat for them.

I have promised myself a trip to Newton, N. J., during this coming November, and shall be shown the *modus operandi* of their grouse shooting; but from the appearance of the surrounding country, it will be hard work. I am convinced, and should I relate of my exploits to the Forest and Stream on my return, I fear the same old story will have to be told—namely, that ruffed grouse shooting is the most tedious I have yet indulged in.

HOMO.

ABOUT SOME FISH AND BEARS IN MAINE.

By the courtesy of George Shepard Page, Vice President of the American Fish Culturists' Association, and President of the Oquossoc Angling Association, we are permitted to give to our readers the following interesting extracts from a letter recently received by him from Hon. Henry O. Stanley, of Dixfield, Me., one of the Fish Commissioners of that State, and a veteran angler and sportsman:—

DIXFIELD, ME., September 2d, 1874.

Since last I wrote you I have been on most of the fishing grounds of any importance in Maine, and part of New Brunswick; have visited the Sebago Lakes (Grand and Scodisc) and Syssissadobets, and the lakes above. Have also been to the Miramichi. The best of fishing is found in the chain of lakes above Grand Lake. The number of lakes there is legion, and the fishing magnificent and easy of access. I went to Bangor, then took the E. and N. A. Railroad to Wino, then the team to Springfield, twenty miles, (good road) to Duck Lake, then took canal across Duck Lake to Junior Lake, across Pecumans to Syssissadobets. The above route I accomplished in about ten days.

There are some fifteen or twenty large lakes that are accessible with a canoe, with short thoroughfares between and good fishing in them all. But few fishermen go there, and a party could have it all to themselves. Plenty of land-locked salmon (the best and gamest fish in the world). Also some brook trout (small, two pounds is large to take them), any number of trout, pickerel, and whitefish. I could head almost the whole of Maine to the first of July. The close time commences there the 15th of September, so there is no fishing in the fall. The salmon do not commence running till the last of September. I would like to go there with you next June. I think you would say it exceeded any fishing you ever had. Stillwell and myself have also been to Bangor, and we went to catch salmon, but did not so much as we see a salmon. The natives had been up the river and speared and netted, shot and killed every salmon above Burn's Hill. The shores were lined with the remains of pitch wood and burnt bark used in spearing. I should judge by appearances that they did not protect their rivers at all. We had the pleasure of seeing four bears. Doctor J. and myself went down the river thirteen miles in a canoe, and Stillwell and another gentleman took down the team. Dr. J. had the gun, a breach loader, and I paddled the canoe. In coming round the point I saw the bushes stirring about twenty rods ahead. I immediately told the Doctor there was a bear or a deer. He took up the rifle and began to load; before he got loaded I ran the canoe up to the shore, and Doctor J. fired and killed a bear. He set down on his back, and I could have reached him with my fishing rod, and think with fly and plenty of line would likely have hooked the "critter." Before the Doctor got the rifle loaded he walked over the bank into the thick bushes out of sight. The Doctor crawled upon the bank to get a shot at the varmint, and I sat in the canoe. While I sat there, enter bear No. 2 on the beach, in a few steps to me. He set down on his back, and I was almost as close to him. He looked at me; I looked at him. He looked wise; so did I. I did not speak to him, for fear he might not understand, and was very anxious for the Doctor to pay him his compliments first with the rifle. You can imagine my feelings, sitting in a canoe trying to look a bear out of countenance, and no gun. I think I should have parted with what little scrip I had in my pockets for a gun well loaded. I did not dare to speak to the Doctor, for fear of frightening him. After we had looked at one another as long as we pleased, he got up and walked off without saying good-bye. So ended case No. 1. After we got down to the forks, where we intended to camp, we pitched our tent, took dinner, and the Doctor, Stillwell and myself went down the stream about a quarter of a mile, fishing, and left a boy about seventeen years old to pick some houses for our camping place, and went on several miles. We had not been there long before the boy hallooed as though there was some trouble. I took the canoe and went up to the camp, and when I got to the shore I hallooed, and asked what was the matter. The boy stuck his head out of the tent—white as chalk. Said he: "The woods are full of bears. While I was breaking tonight from a tree close by I heard them coming towards me. I ran for the tent, and the bears came along and set down within ten feet of me, and remained some time after I hallooed for you." I did not credit the story till I had examined the ground, when the many tracks corroborated it.

As for the fishing down there, it was poor enough. I have no doubt it was the best of the river was protected. The bears are the best feature I saw in the whole country. Deer are also very plenty. There are hard trodden paths on the shores, and through the woods where the bear and deer have travelled, with occasionally a moose track. I should like to go there bear hunting.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising of any omission in this respect. Price of books entering when desired.

OREGON STATE DIRECTORY FOR 1875. S. J. McCormick, Portland, Oregon.

What further evidences could we have of the rapid civilization of the extreme West than the production of an excellent Directory of the far off State of Oregon? In the Directory under review each county in the State is described in a geological, agricultural, and general manner, and the four main lines of interest for the merchant, the trader and the farmer. The pages devoted to the Zoology of Oregon are singularly full of varied information, and from the perusal of the Directory one can acquire an excellent idea of the birds, beasts, fish, trees, and plants which are indigenous to the State. If ordinary Directories are of a quasi humdrum character, the Oregon Directory rather tends to us here in the East as a marvellous production, indicative of an amount of push, energy and determination which is unknown in the older States. The compiler of the Directory, Mr. John Mortimer Murphy, is thoroughly conversant with the great State of Oregon, as to its past and present, and our own columns have often been enriched by the vivid descriptions of hunting scenes written by Mr. Murphy under the pen name of "Merimere Kerry."

OVERLAND TRIP WITH SALMON EGGS.

[Below will be found an account of an overland trip with one lot of California salmon eggs, kindly sent to us from the Fishery Commission located on the McLeod River.—Ed].

EDITOR FOREST AND STREAM.—

At four o'clock on Tuesday afternoon, September 30th, 1873, all the eggs for one shipment, to the number of 600,000, having been packed in three large crates, we began moving them to the wagon, which was to carry them to the railroad station at Redding, California. The crates containing the eggs averaged in weight about 350 pounds apiece, and it was a difficult job, in the burning sun, to get them up the long steep to the stage road, where the wagon was waiting. With the help of half a dozen Indians it was accomplished at last, however, and at about five o'clock I started with the eggs for Redding, California, distance twenty-two miles. So rough and difficult is the road that we did not reach our destination till one o'clock the next morning. I had previously arranged to have two hundred pounds of ice provided at Redding, which I distributed on the crates upon my arrival. The eggs were consigned as follows:—

Seth Green, Rochester, N. Y., three boxes, 200,000.
R. G. Pike, Middletown, Conn., two boxes, 150,000.
F. W. Webster, Cold Spring Trout Ponds, Charlestown, N. H., one box, 50,000.

E. A. Brackett, Winchester, Mass., one box, 50,000.
C. G. Atkins, Ipswich, Mass., one box, 50,000.

The train left Redding at three o'clock A. M. on Wednesday, October 1st, for Sacramento City, which I reached safely at one P. M., the crates apparently in good order. I left Sacramento on the Central Pacific Railroad on the train going East at two P. M. the same day, the eggs being in Wells, Fargo & Co's express car. The morning was warm. The night had been quite cool. The next morning, Thursday, October 2nd, at seven A. M., we reached Omaha, and the crates were transferred to the express car of the Union Pacific Railroad train, which connects here with the Central Pacific Railroad. In the afternoon of Friday I opened one of the crates, and examined the top layer of eggs. They were in perfect order, and looked precisely as well as when first packed. I put on more ice, and left them till morning. On Saturday, October 4th, I got up early and went to the express car to examine the crates. The night had been cool, but the express messenger had kept a hot coal fire in the car, and it was very hot. I procured a lot of ice at Cheyenne, Wyoming Territory, which I used at once, and telegraphed ahead to Laramie for more. The day was comfortably warm. No mishaps except the heating up of the car the night before. On Sunday, October 5th, at one P. M., we reached Omaha, crossed the Missouri River, and entered Council Bluffs at three P. M. on Chicago, Rock Island and Quincy Railroad. That day was quite cool. On Monday, October 6th, at three P. M., we reached Chicago. The last night was cold and favorable for the eggs. Left Chicago on the Michigan Central at quarter past five P. M., with the eggs apparently in good order. Up to this time I had kept constantly replenishing the crates with ice. On Tuesday morning, October 7th, at four o'clock, we entered Camden on the Great Western Railroad, and the Union Pacific express car, which was accompanied the train, was sealed up by the custom house officers, and I would not enter it till we left Suspension Bridge that afternoon at two o'clock. The crates had been well provided with ice, however, the night was frosty, and the day was cool, so I did not feel uneasy about the eggs. The car which contained them had a large amount of gold and silver coin and bullion in it, and the messengers had instructions to resist every one out of the car. Their instructions were so imperative in this particular that they would not even listen to explanation. I had fortunately provided myself with a letter from Mr. Tracy, of Sacramento, one of the head managers of Wells, Fargo & Co's express, and by means of it managed to get aboard the express car and attend to the crates. Without the letter there would have been no chance of getting at the eggs. Even with such a letter, and with every one out of the car, I ran a risk of being shot by the messenger's revolver. We arrived at Rochester about five P. M. on Tuesday, October 7th. Here I left three boxes (a crate and a half) for Seth Green. Tuesday night, at two A. M., the train reached Albany, with the crates in good order. I went to bed, supposing that the express car would go on to Boston; but in point of fact it is the custom to switch it off at Albany. On Wednesday morning, October 8th, at eight o'clock, the train arrived in Boston, to my great surprise and disappointment. I could not find the salmon eggs for Mr. Atkins and Mr. Brackett, and then learned for the first time that they had been left with the car at Albany. I was the more chagrined at this because I had been so very careful to keep with them. I might almost say I had hardly let them go out of my sight, and now, at the end of this long and exceedingly anxious journey, just as I thought my care had been rewarded with success, and was at hand, there came this disappointment and new anxiety. I could not get track of these eggs again, nor learn for some time what delayed them, and it was three days before Mr. Brackett got his, and four days before Mr. Atkins received his. It was very provoking, when time was so precious, to reflect that the eggs were one half as long going from Albany to Winchester, three hundred miles, as they were from Albany to Boston. The weather was warmer during the intervening days, it is surprising that more boxes of eggs were not entirely lost. Mr. Brackett, however, saved one half of his, and Mr. Atkins one tenth of his consignment. The eggs for Mr. Pike and for the Cold Spring Trout Ponds, were put off at Springfield, Mass. The latter arrived in good condition, but there was a large loss to the former lot. I learned subsequently from Seth Green that his lot of 200,000 arrived in excellent order, and that the eleven per cent. of the eggs were lost, both in transportation and in hatching.

To EDITORS.—We beg our contemporaries to pardon us for declining their requests to exchange, as our list is already so cumbrous as to be burdensome.

DISEASES OF FISH.

The following letter is worthy of the serious consideration of our Fish Culturists. We trust that some of them will be able to give Mr. Kent the information he desires. Moreover we earnestly beg all those gentlemen interested in this paper and in the diseases of fish to use our columns freely for the dissemination of such information upon this most important subject as they may be able or willing to communicate.—Ed. F. & S.

BALTIMORE Md., September 15th, 1874.

EDITOR FOREST AND STREAM:—
Though much has been said in your excellent paper on the general subject of Fish Culture, I have never been able to find anything touching the particular branch of this subject on which I find myself most in need of information—viz: that of diseases in fish. Among the many works published on pisciculture I have met with but one—that of Mr. Stone—giving any consideration to this topic, and this book deals only with such diseases as affect the small fry. Some of our fish have ulcerated fins, and we are at a loss both as to cause and remedy. The water is pure and abundant, the ponds are kept clean, and until within a fortnight the fish seemed to be in the prime of health and beauty. Now several are affected with what appear to be ulcers at the roots of the fins. I would attribute, if unobstantially to the character of the food—hog's livers and lights—were it not that they thrive so well for nearly a year, and also that the young trout, though kept on the same kind of food, are in excellent condition now. I have changed the food, however, hoping for favorable results, and in the meantime would like to hear through your paper whether others have had this disease among their fish, and what remedy, if any, they found successful. Yours truly,

ALEX. KENT.

OYA.—The United States Fish Commission on the McLeod River, California, under charge of Livingston Stone, Esq., is now taking about a quarter of a million of salmon eggs per day, and hope with good luck to get a large supply. A correspondent of the *Evening Mail*, writing September 13th, says:—On or about the 22d instant the first shipment of salmon eggs, from the Salmon Breeding Works here, will leave for the East. The orders from the different States for these eggs have just reached our camp from Washington, and are as follows:—

Maine.....	100,000	Pennsylvania.....	400,000
Vermont.....	50,000	Maryland.....	500,000
New Hampshire.....	100,000	Michigan.....	700,000
Rhode Island.....	100,000	Wisconsin.....	100,000
Connecticut.....	50,000	Minnesota.....	350,000
New York.....	250,000	Iowa.....	250,000
New Jersey.....	250,000		

Besides, there are the States of Virginia, Indiana, Illinois, and Utah and Colorado, which have not reported. The first shipment will be for Iowa, Wisconsin, Minnesota, and Michigan, and will be under the direction of E. Conklin.

THE ORIGINAL AMERICAN FISH CULTURIST.—MR. W. H. Brewer, in a contribution to the *American Naturalist*, gives an interesting account of an old traveller, Peter Kalm, who at the suggestion of the illustrious Linnaeus came to North America to make such observations and collect such seeds and plants as would improve Swedish husbandry, gardening, manufactures, arts and sciences. In Kalm's travels it may be found that it was Ben. Franklin's father who was the first fish culturist of America. Kalm says, vol. 1, page 229:—

Mr. Franklin told me that in that part of New England where his father lived two rivers fell into the sea, in one of which they caught great quantities of herrings, and in the other not one. Yet the places where these rivers discharged themselves into the sea were not far asunder. They had observed that when the herrings came in spring to deposit their spawn they were wont to come to the river mouth, and catch them, but never came into the other. This circumstance led Mr. Franklin's father, who was settled between the two rivers, to try whether it was not possible to make the herrings likewise live in the other river. For that purpose he put out his nets, as they were coming up for spawning, and he caught some. He took the spawn out of them and carefully carried it across the land into the other river. It was hatched, and the consequence was that every year afterwards they caught more herrings in that river; and this is still the case. This leads one to believe that the fish always like to spawn in the same place where they were hatched, and from whence they first put out to sea; being, as it were, accustomed to it.

Here is another item Mr. Brewer has found in our old authority. While speaking of New York, and the oysters found there, Kalm says, vol. 1, page 187:—

Lobsters are likewise plentifully caught hereabouts, picked much in the same way as oysters, and sent to several places. I was told of a remarkable circumstance about these lobsters, and I have afterwards frequently heard it mentioned. The coast of New York had already European inhabitants for a considerable time, yet no lobsters were to be met with on that coast; and though the people fished ever so often they could never find any signs of lobsters being in this part of the sea; they were therefore continually brought in great well boats from the sea to the shore, and it happened that one of these well boats broke in pieces at Hell Gate, about ten English miles from New York, and all the lobsters in it got off. Since that time they have so multiplied in this part of the sea that they are now caught in the greatest abundance.

—A parliamentary return has recently been issued giving the extreme limits to which salmon can ascend the Irish rivers. From this we gather that in the twenty-two fishing districts into which Ireland is divided, the total length of river is 5,894 miles, 454 miles of which salmon are debarred from entering by the existence of natural obstructions, while 537 miles are closed by artificial impediments. If the return in question gives an accurate estimate of the exact length of rivers to which the fish have free and easy access, the country may, we think, on the whole be congratulated on the comparatively "open" condition of its water. Compared with England, the number of miles of water unobstructed in Ireland certainly bears a favorable proportion. We fear, however, on many waters where it is stated in the return there is "no obstruction," the salmon where they are plentiful, but in the meantime would like to hear through your paper whether others have had this disease among their fish, and what remedy, if any, they found successful. Yours truly,

—The finest potatoes we ever ate are the Early Rose variety, grown in Muskego district of Canada.

Natural History.

THE GRAYLING ONCE MORE.

GRADUALLY we are reaching an accurate determination of our species of American grayling, and our readers will note with interest the progress of the development. For our own part, we have been inclined to think that our own and the English grayling possessed nearly the same characteristics, and that they were possibly identical, but it seems now that they are no nearer allied than are the English trout and our *salmo fontinalis*—the distinguishing marks of the two varieties being quite apparent, even to the novice. Our opinion was formed, however, from written descriptions and plates only, as we had never seen a live specimen of the English grayling. To assure ourselves that this opinion was correct, we recently forwarded to Francis Francis, Esq., of Loudon Field, a dorsal fin taken from a full grown grayling, (in the absence of any better means of determination,) and received from him an autograph letter, in which he advanced the opinion that the grayling of Michigan is akin to the Arctic grayling of Richardson, (see plate in Dr. Suckley's Reports,) and quite different from the English variety. Of the latter there seems positive proof enough, while in confirmation of the first position, we may state, as we have already done, that we were reliably advised by a U. S. Army Officer, some months ago, of the existence in Montana of grayling like those of Michigan; and as these occupy a locality intermediate between Michigan and the Arctic belt, the identity of the three is more than probable.

Since receipt of the letter of Mr. Francis referred to, the London Field of Sept. 5th has reached us, which compares the characteristic features of the fins of the English and American varieties, as follows:—

THE ARCTIC GRAYLING, &c.—We have received from Mr. Hallock, the editor of FOREST AND STREAM, (the New York Field), one of the dorsal fins of the newly-discovered grayling. The fin is quite unlike ours, and leaves us little doubt that the Michigan grayling is nearer akin to Back's Arctic grayling than to our fish, though it may not be identical with either. It is clearly larger in comparison, and even though dried and the colors dimmed by time, we can see how brilliant it must have been when the fish was newly caught. Five transverse lines, composed in part of the most brilliant spots, and edged with crimson, make the fin even now much too remarkable to be confounded with that of any grayling in this country. It has been discovered since this subject was first broached that the grayling has a larger habitat than was at first supposed, and that it is found in some of the lakes and streams of Minnesota—that country of lakes and streams, which, to judge from the map it would almost take a lifetime thoroughly to become acquainted with, and in which the head waters of the Red River rise. If this statement be accurate, then no doubt the grayling will be discovered in the great Winnipeg lake, when another step towards the Mackenzie river district, the home of the Arctic grayling, will have been gained. Forney and Graham's dollar good service to the cause of acclimation in seconding and recording the efforts made to distribute the shad, and to place the pinnated grouse in England; and generally it endeavors to raise the tone of sport in America as well as to forward its interests. As these are objects in which we, with all English sportsmen and gentlemen, warmly sympathize, we can but wish that its efforts may meet with the success they deserve.

With regard to the very graceful compliment conveyed in the last clause quoted above, we can only say that we rejoice that our humble efforts should have earned it, and we may add that each weekly mail from abroad brings us substantial evidence of the benefit which the endorsement of so distinguished an authority carries with it.

MORE RARE FISH.—Among the rare fish which have recently made their appearance in Fulton Market are two species of small tunny, obtained by Mr. E. G. Blackford and forwarded to Prof. Baird, at NOAA, for determination. One of these he reports to be the coast tunny of the Mediterranean, *Oreogerys altilateralis* of Mr. Gill's catalogue of east coast fishes, as published in Prof. Baird's report. This is best known as an inhabitant of the Mediterranean, where it goes in large schools, and is extensively used for food. It appears to be a great wanderer, however, as specimens have been figured and described, taken on the coast of Norway.

This dwarf tunny, as we may call it, made its appearance on the coast of the United States in 1871, many specimens having been taken in Buzzard's Bay and Vineyard Sound and shipped to New York, where they brought a very small price, owing to the rather strong flavor of the fish. It is said that five hundred were taken at one haul in a pound near Gay Head. These fish usually weigh from ten to fifteen or eighteen pounds.

The other species is much shorter and stouter in its proportions; its precise name has not been determined by the Fish Commission. He thinks, however, that it is either a young horse mackerel or a species described by Gunther as *Thynnus argente-vittatus*. Comparison with the collection in the Smithsonian Institution, Washington, will settle this question, and we shall inform our readers in due time of the result of the examination.

The horse mackerel, (*Oreogerys vulgaris*), on our coast attains a very great size, sometimes weighing as much as 1,200 pounds. A fine specimen in the National Museum at Washington, taken in one of the fish ponds at Gay Head, weighed about 400 pounds. It is very seldom that those of the smaller size are seen on our coast, and our fishermen are not acquainted with them as young fish.

What was probably a third species of tunny was obtained at the same time, but was received in too bad a condition to be considered fit for transmission to the Commission.

This was marked with longitudinal lines on the side. Tunny must be excellent food, from the great pains taken to catch it in the Mediterranean, and not only Frenchmen but Italians delight in it. Said an ancient Greek poet:—

"Basse, conger's head, and tunny's underside,
Are luxuries to slender males denied."

On the coast of Sicily tunnies have been caught weighing 800 pounds. Aristotle speaks of one weighing 1,200 pounds, the tail of which measured two cubits and a palm across.

ZOOLOGY OF THE BLACK HILLS.

We clip the following letter from the New York Tribune:—

COR. Wm. LUMFORD, Chief Eng. Dept. Dakota.
SIR:—In accordance with your request made to me while at Fort Lincoln, viz: that I should make such notes on the zoology of the region as I could, in connection with my other duties, I have to report that although my opportunities for zoological observations and collection were very limited, owing to the rapidity of my travel and the necessity of devoting the greater part of my time to the study of the geology of the region, I have been able to collect a few specimens of mammals, about one hundred and twenty species of birds, and a few reptiles. A full enumeration of the animals observed, and with such observations as are capable of making upon their habits, will appear in a detailed report, which I shall have the honor to make to you as soon as practicable.

As a genus region the Black Hills will compare very favorably with any locality in the country. Deer of two species are most abundant, the white-tailed deer especially being so numerous about the head-waters of Elk Creek that one hundred were killed in a single day. Elk, from indications, are numerous, although only a few were killed. Several bears were secured, and not a few exciting incidents occurred during their capture. No mountain sheep were obtained, although there were many indications of their presence and a single female was seen. Almost all the streams that we passed were dammed in many places by beaver, and fresh tracks and signs were very plenty.

Game birds are well represented by several species of geese and ducks, which are to be found along the various water-courses in and about the Hills, and by at least two species of grouse, the sharp-tailed and the ruffed. The former are numerous along the open valleys and in the sparsely wooded hillsides, and the latter among the dense pines of the Black Hills. Although the Black Hills offer to the sportsman an abundance and variety of game, and if opened to the white man will be so much esteemed as a hunting-ground by him as they now are by the Indians.

The fuller details which I shall present later will, I trust, be found interesting to the zoologist as presenting information on the fauna of a region of which so little has been told. Yours, respectfully,
Geo. BIRD GRINNELL.

[Mr. Grinnell is known to the readers of FOREST AND STREAM by the sobriquet of "ORNS."—ED.]

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Sept. 20, 1874.

Animals received at Central Park Menagerie for the week ending September 19th, 1874:

One Red Deer, *Caracus Virginianus*. Hob. Florida. Presented by Captain E. E. Vail, St. Augustine.

Two Iguanas, *Iguana Noronhaiensis*. Hob. South America. Presented by N. B. Davis, Steamship Colon.

One Agouti, *Dasyprocta agouti*. Hob. South America. Presented by Miss Mary C. Valentine.

The following were presented by Major General G. A. Custer, U. S. A., which were captured in the Black Hills:—

Five Rattlesnakes, *Crotalus Marshi*, One Badger, One Jackass Rabbit, One Yellow-haired Porcupine. W. A. COCKLIN.

Woodland, Lawn and Garden.

A PLEA FOR THE FOREST.

"WOODMAN SPARE THAT TREE."

OF late the great drain upon our forests has been almost appalling. To sit down quietly and think for a few moments seriously upon the inevitable consequences of the ruthless raid upon our native wilds will be truly one of sorrowful regrets. Why is timber already so very scarce at the present time in many of our States? You will find everywhere a bare, treeless landscape, the forests from which to replenish the devastations by the axe not of the pioneer, but of the ship builder and the mechanic. Time was, within our own recollection, that a single advertisement inserted in that old and well remembered newspaper, the *Essex Register*, printed at Salem, Massachusetts, would bring the good old oak trees and tall pines into Salem in such quantities that Europe's cities, who contracted to receive this timber, found himself compelled, in consequence of the great quantities supplied to him, to insert another advertisement, thanking his patriotic friends for their favors, and asking for a discontinuance of the same. This was in the years 1812-13. Do we now hear of anything of this kind relating to our ship-timber forests of live oaks, or our dense forests of pines for ships' masts and spars? In large portions of many of our States timber forests are being cleared, or are being cut over, every year. Thousands, I had almost said, of land holders now own whole leagues of acres of land with scarcely a saleable stick of ship timber upon them, to say nothing of the wood denominated cord or fire wood. How many acres of dry, rocky pasture lands, without a single stream of water, now greet our eyes, where once the deep, umbrageous shades covered many pebbly brooks and pools of silver water. Gone, gone, are the wide-spreading forests of the Ohio, the deep, dark pines of Pennsylvania, and the axe of the lumber merchant is at this time also making sad havoc among the pine woods of our eastern State of Maine. Does the warning come any too soon to stay this vandalism of the axe? Somebody has a duty to perform to save our forests that yet remain to us. Some one must talk and write, and impress, if possible, upon the public mind, the value of our forests, and prevent any further innovation and destruction. For this purpose we of the FOREST AND STREAM would again urge all lovers of good sport, all lovers of the wild woods and mountain fastnesses, as well as all who appreciate the value of timber for business uses, to lift up their voices for the woodland forests. Can you save only one forest from the axe you will not have spoken too soon or too vain. If a single tree of self-interest pervades your breast, and in sparing the forests from a further destruction you do so merely for the preservation of game for your own shooting, then obey the lower instinct, and we will thank you for this little boon, small as it may be.

Again, in view of the effects of the great devastation of forest trees upon any given section, the voice of true forest cries out:—

"WOODMAN SPARE THAT TREE!"

for in these woods are the lives of yourself and families.

Every one who is at all observant of the effect produced by an exceeding sparseness of dense forests, must at once be convinced that sickness of many types is sure to become prevalent in districts denuded of forests and timber, and equilibrium of the shady, cooling wild woods. Now there is a simple duty that can be performed by every one of the thousands of farmers and land owners in the United States, and they are culpable for a single season's neglect of so obvious a duty.

You own acres and acres of land that you do nothing with year after year except to pay taxes upon, and I have seen land in many States of this kind, which I would accept as a gift, provided that I should have to pay the taxes. As it lies, it would scarcely support a rabbit, but this land, poor as it is, can be brought into forest culture at a very small expense. We urged something like the above on the owner of thousands of acres in what are called the "pine barrens" at the South. He was a free and easy looking customer, and did not seem to understand our inquiry, "Did anything ever grow on these barrens?" "There did once; cut off now," he somewhat curtly replied.

In answer to further inquiries, I learned that cutting off the oaks and pines of the few forests that were left constituted his principal business. I then said to him that a man must own considerable of pine woods to be a rich man in that section? He replied, "You bet the more such land a man owns the poorer he is."

Finding my accidental friend growing communicative, and a man of good sense, I drew much information of value from him in relation to wood growing, as he termed it. He very readily coincided with my views of what was evidently his duty, and eagerly asked me to give him my idea upon the same. I said to him what I to-day say to the thousands of readers of FOREST AND STREAM, Would it not be very commendable for every farmer in every State in this Union, who has large tracts of lands, to bear seed and plant several acres every year with the seeds and young trees of the forest? You are well acquainted with your locations, with their capabilities of production, and the old pine barrens can be made to bear a beautiful growth of the different kinds of forest trees. Suppose you select for experiment the quickly growing chestnuts, walnuts, pines, or any other trees best suited to the locality. You will not mind to apply cultivation after the first two years, when your work begins not only to grow upon your lands, but to interest you in spite of yourself. Plant, if you can, twenty acres the first year, and ten the second, and so continue on planting every year some acres, and you will in five years from your first planting find that you have fencing rails that will be sufficient for all your wants, and which will need cutting out to give the others room to grow. Now there is no fancy about this; it is a sober, earnest fact. Do you not perceive that as the years progress your woods also increase in size and value, and you will be the first to acknowledge that three years' cuttings will pay all your cost.

Then, again, it is the duty of every good husband and father to look out for those he may chance to leave behind him. Can he leave a better or more substantial legacy to his sons than thousands of acres of the large forests of oak, walnut, pine, chestnut, etc.? Just cast your eye forward over thirty years, and you behold a rich and lasting inheritance of many acres, lifting their majestic heads, where once you saw naked prairies or sedge fields, and do you not rejoice in this the labor of your hands?

We urge upon all our readers who possess many or few acres of worthless lands, to see it that they do not neglect this very simple matter, that the timely effort the growing scarcity of timber would be stopped, and our forests would become once more the beautiful woodlands for which, as it now is, no substitute can be found.

OLLIPH QUILL.

PONDS.

UTICA, N. Y., September 9th, 1874.

BROTHER FOREST AND STREAM:—

I have often been impressed with the injustice of designating many of our inland woodland waters by the name of ponds. It arises, I suppose, from the comparative diminutiveness of their proportions. In the luxuriance of lakes to the number of six or seven hundred, all of them beautiful, grand, or lovely, which are the pride and glory of our Empire State, we afford to despise the little ones, which, nevertheless, in their secluded, quiet places in other surroundings, or in States otherwise without waters, would be regarded as attractive lakes. My first revision at the name of pond occurred many years ago, on visiting the hills with bear skins and deer heads in the Raritan River country, found it in every sense an admirable lake of fresh water, set in lofty hills of magnificent verdure, varied, peninsular, or promontorial, and abounding with excellent fishing. I caught many lakers there, sometimes before breakfast, and before my party comrades had finished their muzzles, and many large speckled beauties. And is this only a pond? Not large, I grant you, in the sense of the Requette, Champlain, or Erie are large, but large enough for all practical intents and purposes of admiration, pleasure, or fishing; for exercise, health, bathing, rowing, hunting, camping, etc., &c. For fuller accounts of it see Street's "Woods and Waters." We know that many lakes are, by reason of their vastness of proportion, spoiled of much of the attractiveness which would otherwise pertain to them. We cannot see across them, and the consequence is that they present only the dead level of monotony, while many "ponds" surpass them in all the elements of attraction, though bearing an unequal and libelous name. They can stand it, being superior to their professions, while many lakes fall below them. I was impressed with the truth and justice of such observations during the late season, on visiting in July the Sargent Pond. There are three in number, and of unequal dimensions. The second may be regarded as small and inconsiderable, but the third, and particularly the first, are above their title, and elsewhere might attract such appellations as those of Derwent Water, or Windermere. The third is irregular in form, but possesses of those charms of inland, bay, promontory, ridge, hills, which are peculiar to the first. The first of the three is symmetrical, oval, and in effect circular in shape, beyond any lake with which I am acquainted, and I have visited in all severity of those adorning waters of my native State. It is set in a corresponding frame of forest and wild lands, in a region of utter silence and seclusion. By the way, I caught in this charming lake an extraordinarily beautiful specimen of white trout. I have caught similar ones elsewhere, but never in the Raritan region. I took eight lake trout in July from Blue Mountain waters, but not one of them would compare for beauty with that which the pond supplied, and the white was as large at least as any of the blues. I was substantially informed that a ten-pounder was taken in the third Sargent pond the 25th of July last, and conversed with the party by whom it was caught. Will not that do for a pond? Would it not be quite respectable coming from a lake?

My sole object in taking my pen was to say a good word for the ponds

of New York, and suggest that they are lakes well worthy of the attention of the sportsman and the lover of nature. Having done this, I make my respectful bow, admiring that as my subject is moderate in dimension, my communication should also be. As with communications, so with lakes; as with lakes, so also with communications. They do not depend for acceptableness upon their size or great dimensions; but other things being equal, the shorter may be the more interesting, prepossessing, and engaging.

AMATEUR.

NEW YORK, September 19th, 1874.

EDITOR FOREST AND STREAM:—

When any lover of FOREST AND STREAM (as I acknowledge myself) discovers an article therein relating to a subject on which he imagines he has something to say, he is bound to do so. Therefore, having read an article in your paper of September 17th, entitled "Wild Pines of Kansas," I do hereby certify that, to the best of my knowledge and belief, I have on several occasions partaken of those self same pines, or plants similar to them in every respect. Three years ago this month I found quantities of this fruit near the Elkhorn River, a few miles from Fremont, Nebraska. They grew in the thickets surrounding the many little ponds or springs near said river. The fruit was green, grew from six to eight feet in height, and bore abundantly, the fruit being perfectly round, of a beautiful light pinkish color, and when fully ripe were very sweet and pleasant to the taste. I have also picked many a basket of wild pines on Sandy Hook, N. J., between the fort and railroad dock. They are called there black pines, but, as far as I am able to judge, they are identical with the wild pines of the West, only smaller, which is easily accounted for by the difference in climate and soil. Yours, respectfully,
LUKE TRUPP.

The Kennel.

THE TENNESSEE FIELD TRIALS.

We have already called the special attention of sportsmen in previous numbers of this journal to the approaching field trials to be held under the auspices of the Tennessee State Sportsmen's Association, and acknowledge with pleasure the receipt of the following letter from one of its officers:—

MEMPHIS, September 14th, 1874.

EDITOR FOREST AND STREAM:—

Dear Sir:—We hope for success. If energy and money will accomplish such an end success is ours. Up to this writing everything looks most favorable. The committee, or rather Secretary, has just received two pups from Canada, entered for the bench show. We have several other dogs from different points, including New York and Lexington, Ky. If our brother sportsmen will only meet us we will more than satisfy them in every respect. The right hand of fellowship will be extended to them all. To welcome them at every step, and treat them with the true hospitality of the Southerner, will be our aim. The field trial grounds are adjoining the fair grounds, where we have the bench show. The trial will be on equal. The grounds are stubble, corn fields and waste lands. The grounds are noted for the quantity of birds that inhabit them. The grounds are posted, and have been for years, and are carefully guarded night and day. No form of snipe or any other section will be permitted to stick a nose in the grounds until October 8th, the first day of the trial, so that no party from abroad wishing to enter a dog can have that as an excuse for hesitancy. The reason why I explain it is, that I am in receipt of a letter to-day from a gentleman wishing to enter dogs, who asks the question whether dogs from this vicinity are allowed to hunt on the field trial grounds prior to said trial day. My answer (that can be made) shall be made to secure fair play, and fair play everybody shall have. Again, a person may enter as many dogs in each class as he likes. We would be more than delighted to have you with us in October during our show, etc.

Permit me further to say that your comments in your issue of the 10th Sept. upon the Association's program, and the lead many sportsmen to believe that we Tennesseeans wish to abandon retrieving in setting and pointers. Such, however, is utterly wrong, for we do believe in retrieving, and nine tenths of us would not buy or have a setter that did not retrieve. The reason why the Association omitted the points for retrieving in field trials was simply for the want of sufficient time to try the dogs. We will fully agree with you that the points for retrieving is not sufficient to try a dog thoroughly. To allow points for retrieving, and to do justice to all entries, we could not have allowed less than ten to twelve hours for each brace, which, if allowed, would take four weeks or more to get through with thirty or forty dogs. Will you do us the justice to correct the error in your next number?

With many thanks for your kindness, I am yours truly,
Deo.

JUDGING ON THE SHOW BENCH.—NO. 8.

THE POINTER.

Head should be moderately long, narrowing from the skull; the skull not too prominent above the eyes, as this gives a heavy appearance; rather deep in the lip, but not any flatter, or very slight, nostrils open, with level jaw; eyes moderately bold; ears thin, set in to the head, long where the skull begins to recede at the sides of the head, hanging flat on the cheek; throwing the ears back so as to show the insides has a bad appearance, and too often indicates a cross; neck medium in proportion to head, and body rather inclined to be long, but not much so, thickening from the head to the set in of the shoulders; no loose, or foul skin; coat short, smooth, glossy, the meeting of the blade bones, with a great amount of muscle, long in the blades, set slanting, with arm of the leg strong and coming away straight, and elbow neither out nor in; the legs not great heavy bones, but with a great amount of muscle; leg pressed straight to the foot, well rounded and symmetrical, with foot well rounded, this is the fore legs and feet; chest moderately deep, not over wide, but sufficient of wide and deep to give plenty of lunging room; back level, wide in loins, deeply ribbed, and with ribs carried well back; hips wide and full of muscle, not straight in the hock, but moderately bent; stifles full and well developed; the stern nearly straight, going off tapering to the point, set in level with the back, carried straight, not above the level of back; symmetry and general appearance necessary, and much beauty of form appears to the eye of a real pointer breeder and fancier. The weight may be considered best for different purposes are from fifty pounds to about sixty-five pounds. Coat short and glossy, but a deal here depends on condition.

THE ENGLISH SETTER.

Head long and somewhat narrow, with a fair distance from the eye to the end of the snout, which should not be snipy or ant-eater-like; skull a little prominent, ears set on low and flat, not thrown back; the least stop just above or across the eyes; jaws level, with a little fullness of lip just at the back of the mouth; eye large but not protrud-

ing, with a quick appearance; neck thin and deep at setting in on chest, moderately long and slightly arched, with no appearance of throatiness; shoulder blades long and well receding at the points, with a fineness at shoulder blades not noticed in any other of the narrower at shoulder point, but great muscular development in the shoulder blades and fore arms; chest very deep, not over narrow between the forelegs. It is seldom you find the setter with such a round, cat-like foot as the pointer. Forelegs strong and muscular in the fore arm; leg straight, with a slight, elastic appearance; foot moderately round, but offender for a back wide, deep, ribby, lowering of the hind quarter to the shoulder to the hip, loins wide and very muscular; stifles full and well developed; hock well bent; stern carried almost level with the back, a moderate length, well flagged from the root, wearing off to nothing at tip of stern; coat wavy or straight, fine and silky, free from curl, especially on hind quarters. The colors most in fashion at the present day are Belton or blue Beltons; black, white, and tan; and lemon and grey; and white and lemon; black and white; and white show just the least lemon color on the ears. Black is not objectionable, and now and then a good liver and white is seen.

THE GORDON SETTER.

DELAWARE CITY, Delaware, September 16th, 1874.

EDITOR FOREST AND STREAM:

A letter in a recent number of the FOREST AND STREAM from your interesting correspondent, "Home," and your comment on it, prompts me to a few remarks. You tell us that the black and tan setter existed in England before the present breed of the Gordon family was born, and that the true color of the Gordon setter was black and tan, as usually understood, but that it is black, white, and tan. Now, Alexander Duke of Gordon, Murrayshire, Scotland, whose name this far famed strain of setters bears, is dead. If living he would probably settle the question beyond dispute. Istene, in his work on the dog (page 100), says that the black and tan setter was originated by the Gordon family fifty years ago or more. Stancheyne says "the color of the Gordon is a coat point. The black should be a rich black, with a blue or plum bloom on the bright lights. The tan rich red, or burnt sienna color. There is no objection to a white shirt frill, although the absence of white is a good thing." Laverack says, "originally the Gordon setters were all black and tan." And all of the acknowledged authorities agree that the Duke bred red, tan, and black, and tan, black, white, and tan, and black and tan. They also all agree that the dogs which the Duke's strain families were the black and tan in color. The same authorities also tell us that the black and tan, and black and red dogs, are one and the same strain, and that either color would throw the other two, but that black and tan was the prevailing color, and that the black, white, and tan, which you speak of as being the true color, was bred by a cross with a foxhound, and prized by the Duke because he thought it crayer, and not so difficult to back on the hillside as the dark colors. In your quotation from the Fancier's Gazette, would not the experimenter lose efficiency of point by crossing with the spaniel? I think that this cannot be the way in which the Gordon setter originated, for the reason that of all the celebrated strains of setters the Gordon is acknowledged to be none in splendour or beauty equalled by any of the other strains, point at all, but I have never seen him accused in this respect, and if there was a spaniel cross in him, beside giving him insufficiency of point, would it not give him a disposition to tongue? There is no strain of the setter which has less of the spaniel characteristics in it, which characteristics all of the successful breeders have done all in their power to obliterate, and for which resemblance in coat alone the fox liver and liver and white setters have been excluded from the show bench.

To my mind, the Scotch color argument is equally as far fetched. They in no way resemble each other, but in color and tan, and in color not so much as they do the black and tan foxhound. According to Istene, the black and tan Scotch color has a white collar, white legs, and white belly. The head is pointed, and marked with a regular white line in the forehead, and a white blaze down the nose. Then, says the same author, nothing is more characteristic of pure colley origin than a sharp, fox, pointed face. There is not the slightest plea for a resemblance in faces. The colley ears are small, half pricked, and sometimes erect. The Gordon is known to have the largest, most pendulous, and handsomest ear of the setter race. The tail, together with the legs, neck, and bounding, bounding, power of endurance, and speed, with the knowledge that foxhounds make a short point (and sometimes a long one), on feathered game especially, are arguments in favor of the foxhound cross. My opinion is that he has not a drop of spaniel, colley, or hound blood in him, but that he is a cross between a black English, or a red Irish setter, with blood the richest and bluest of the white, and a foxhound, says much has been written as to the color (and I add, order) of these famous setters, but no dispute has ever been raised as to their quality; and he says that he has seen better setters of black and tan than of any other breed, and says they are very beautiful dogs, and that he has seen many good ones. In speaking of the merits of the Gordon setter I speak from experience, as I have shot over several, and now own dogs bred from the Duke's kennel, both black and tan and black, white, and tan. Yours respectfully, Wm.

MONTREAL FOX HOUNDS.

The first "meet" of the Montreal fox hounds took place on Saturday, 14th September, at the residence of D. Lorn McDougal, Esq., Montreal. The Gazette of that city gives the following sketch of their early history. It is the only pack in America—

The first record of their "meets" was as far back as the year 1829, when the following gentlemen of well known names were appointed to manage the affairs of the club then formed, viz—the late F. Wentworth Monk, John Jones, Dr. Arnold, John Molson, and Edward Jones (brother of the late Hon. Robert Jones), who is now the only survivor. To give the names of those who followed the hounds and rode right across, would only recall old feelings, as nearly all have long ago gone to their rest. In the year 1835 the late William Forsyth, of the old and respectable house of Forsyth, Richardson & Co., who had always taken a great interest in the pack, became "master," which position he held for some years, and on his retiring from the firm to reside in England left a property on the "Baginno" road for the use of the hounds and pack, and which was occupied by both until a few years past. Many, no doubt, will remember old Kennedy, the huntsman, who is still living, though quite blind. On the retirement of William Forsyth, his brother John took his place, and remained master until he also left to reside in England, in the year 1848. For some years after this date it was a hard struggle, and after the question was raised as to the advisability of selling the pack, now reduced, and almost worn out pack, the principal supporters being the military and a few very civilians, but among the latter was our much respected and true sportsman, D. Lorn McDougal, who, when things were darkest, came to the front, and at his own expense, in the year 1852, imported fifteen and a half couples from the best strains in England, and not only acted as the master, but for a period of five years, during which necessarily took up much of his time, and no inconsiderable amount of his money. To him, then, alone is due the credit of their

being to-day in Montreal the only regularly organized pack of fox hounds in America. In 1858 Mr. McDougal offered, indiscreetly to Mr. Alloway to come and reside in Montreal, and take charge of the pack and hunt them. Mr. M. still retaining the mastership until the year 1865, when, feeling that he had done his share towards the maintenance of the hounds, resigned his position, much to the regret of all the members, who, as a slight token of their appreciation of his efforts, presented him with a piece of plate.

From that time till now the membership has been yearly increasing, owing to the prejudice which existed among a few of the strictest class being overcome, and it is a fact worthy of note that many of the strongest opponents a few years ago are now the principal supporters of the hunt.

In the year 1866 John Crawford, Esq., of Verdun, was unanimously elected master, and it is unnecessary to say how efficiently he filled his office. In wet or shine he was found at his post, and whether in "covert" or "tran" he kept the field moving. Last fall, feeling he should give place to some other member, his resignation was very reluctantly accepted, when Mr. Andrew Allan, with one consent, was elected master, and from the interest he has shown in the hounds for some years past we feel certain the prestige of the Montreal hunt will not fall away under his charge.

It is expected that the steeplechases, under the auspices of the hunt, which are to come off on the 14th and 17th of October, will be superior to those for many years past; a number of our young sportsmen have purchased first class horses, and we hear a rumor that "Somebody" intends inaugurating his first year with a hunt sumo cap.

SHELBYVILLE, Tennessee, September 15th, 1874.

EDITOR FOREST AND STREAM:

O. H. H., in a letter published in a late number of your paper, tells of how his dogs, on one occasion, pointed a tortoise. The same thing happened to me this afternoon. I had my dogs out in the field for the purpose of training one of them—a pointer pup seven months old. We were in some stable, when I perceived my setter come to a point. He held his point for an instant only, and then began trailing. He trailed for about fifteen yards, and then came to a dead point over what I thought at the time to be a covery of quail. I advanced, and trampled the weeds down in front of him, but nothing stirred. He still held his point, and the pup, to my great delight, was barking him about twenty yards off. I examined the ground, and soon discovered that the dog's nose was a box tortoise! Hoping the new pup in "Dogology" may be of some interest to you, I remain, very respectfully, YR. Obedient.

[Pointers standing to the scent of a tortoise is bad; the backing of the pup was all right enough.—Ed.]

—Mohawk requests us to state that his imported bitch, Brosna, has a handsome litter of puppies. These are the only stock of Macdonald's Ranger in the United States. As only two dogs would be sold, those that want them can apply to Mohawk at this office.

Rational Pastimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

—But three championship games were played on the professional arena during the week ending September 19th, four days of rain having stopped play in this vicinity. The games played since our last issue were as follows:

September 14—Chicago vs. Boston, at Boston.....	10 to 6
September 15—Mutual vs. Athletic, at Brooklyn.....	6 to 3
September 16—Boston vs. Chicago, at Boston.....	12 to 2
September 21—Philadelphia vs. Boston, at Boston.....	10 to 10
September 21—Mutual vs. Chicago, at Brooklyn.....	14 to 7
September 21—Athletic vs. Mutual, at Philadelphia.....	12 to 7

The full record showing how many games each club has won and lost with every other contestant, is as follows:—

CLUB.	Athletic	Athletic	Baltimore	Chicago	Philadelphia	Mutual	Philadelphia	Games Won.
Athletic.....	0	4	2	2	3	4	7	34
Atlantic.....	0	2	1	2	1	2	1	7
Baltimore.....	5	4	3	3	4	5	4	32
Chicago.....	1	4	3	3	4	5	4	32
Hartford.....	0	3	2	1	1	1	1	1
Mutual.....	3	6	5	5	6	4	1	31
Philadelphia.....	0	6	4	0	6	3	4	23
Games Lost.....	13	28	23	10	26	23	17	20

This leaves 115 games to be played within the period of thirty-six weeks still left before November 1, the close of the season. The Chicago nine have finished two of their series of ten games, and the Boston and Baltimore clubs one each.

—The President of the Knickerbocker club, Mr. James W. Davis, is desirous of getting up a game of base-ball, in which none but veterans of not less than 40 years of age shall take part. In a letter on the subject, he says: "I want you to say that the Knicks over forty desire to play with any veis over forty who have been members of the old Gotham, Eagle, Excelsior, Futurum, or Empire nines, and those desiring to participate to send to my address; and then if I have sufficient answers, I will arrange the match on our ground the latter part of this month or the first of next." Mr. Davis' address is No. 42 Clinton place, New York. Mr. Dick Stevens, of the old nine of the Knickerbockers, is desirous of playing in this match. His address is Long Branch, care of N. J. Southern R. R.

—On the 21st ult. the Chicago Cricket Club played with the St. Louis club at St. Louis, and were defeated by a score of 107 to 67, the Chicago eleven scoring but 47 off the bat. On the 22d they played the St. George eleven at St. Louis, the score being St. George 51 and 36, to Chicago 45 and 41, only three Chicago wickets being down when the stumps were withdrawn, the first innings score deciding the game. Control's 20 was the best St. George score, and Street's 12 the best on the part of Chicago.

—Weston has again failed to walk 500 miles in six consecutive days. At Barnum's Hippodrome last week he accomplished 323 miles. He will make another attempt during the week commencing October 5th.

—Rudolph and Cyrille Dion played a game of billiards at Tammany Hall last week, 600 points up, \$500 a side. Rudolph won by a score of 600 to Dion 338.

—Wm. Cook, the champion billiard player of England, who arrived in this country last Saturday, is matched to play against Rudolph, the French billiard expert, for \$1,000, 400 points, French game, on an English table with English balls. Cook brought a table from London, which differs from the American in being considerably larger and having six pockets. The men are to play between the 8th and 10th of October.

—The annual meeting of the Germantown Cricket Club was held on Monday, September 14th, 1874, when the following officers were elected for the ensuing year: President, Thomas McKean; Vice-President, Samuel Welch, Jr.; Secretary, Wm. H. Castle; Treasurer, Elliott Fisher; Ground Committee, F. E. Brewster, H. W. Brown, John W. Hoffman, James Large, Joseph Hargraves.

—James Adams, of England, a pedestrian, walked in the Wigwam Hall, Haverstraw, September 19th, a distance of 115 miles in 23 hours, 31 minutes, and 30 seconds. He made the fourteenth mile in 7 minutes and 44 seconds, and the last mile in 8 minutes and 58 seconds.

—The New York Athletic Club's annual fall meeting will take place on their new grounds at Mott Haven on Saturday, September 26th.

Yachting and Boating.

All communications from Secretaries and Friends should be mailed not later than Monday in each week.

Sept. 30.....	3 55	11 42	10 58

EASTERN YACHT CLUB.—The prize for sloops not having been awarded upon the occasion of the regular regatta, from the fact that according to club regulations two vessels in each class must start, in order to constitute a race in the class, Wednesday last, the 16th instant, was appointed by the committee for another race. This amounted to simply a match between the Vindex and the Coming, as these were the only entries. The Vindex was probably the favorite, from her success in previous encounters with the Coming this season, but when the day broke cloudy, almost calm, and with no prospect of a breeze, the stock of the Coming rose rapidly. The start was to be from Shamvut, and over a course to be specified on the morning of the race, which eventually proved to be from the Shamvut anchorage to Pig stakes, leaving them on port haul to and around Half Way Rock, thence to the Harding's bell buoy, leaving Egg Rock on starboard hand, a course of twenty-five miles. Promptly on the time the signals for starting were given, and the Coming, trimming on the starboard tack, bore down on the line, and crossed at 11:05, the Vindex following at 11:06:30. Just at the start a slight breeze sprang up from the S.W., and the yachts with the wind on the quarter, steered for the Pig stakes, the Vindex overhauling the Coming very rapidly, until when three-quarters the distance had been run down she found herself close on board her adversary, and ending a ending race, finally abandoned by the Vindex, who preferred going through the lee of her competitor. After passing the "stakes," the course for Half Way Rock brought the wind dead aft, both vessels setting their jib topsails, whiskered out to windward, while the Coming, set in addition a balloon jib top-sail to leeward. She now gained perceptibly on the Vindex, and continued to do so all the way to Half Way Rock, where she passed as follows:

Coming.....	12:01:30
Vindex.....	12:03:15

From here to the Hardings the course was to windward, and the racers and large fleet of yachts following, found they had very little wind to get there with. Among the fleet of spectators, may be mentioned the Tempest, Fearless, Julia, Belle, Gracie, Latona, Brinda and Haleyville schooners, and the Maraquilla sloop. The Coming continued to gain in the very high blowing. The yacht was been selling tack and tack until at about 2:15 the Coming tacked to the westward, the Vindex keeping on until she could clear the Hardings on the othertack. After going about for this purpose, she found herself on the weather quarter of the Coming, and as the wind then hauled aft a trifle, it enabled the latter to round, which she could only have done without a stretch, except by a piece of bad luck, and the Vindex, finding herself going down for the buoy with a fore-sheet. The Hardings was rounded as follows:

Coming.....	3:09:30
Vindex.....	3:13:30

From here to Egg Rock there was little of interest, the Coming increasing her lead more and more as the wind died away; both the sloops, however, creeping through the fleet of small schooners. The Egg Rock was passed as below:

Coming.....	4:21:15
Vindex.....	4:29:00

As the yachts sailed into the harbor, and the Coming crossed the line, the last breath of wind died away. The gun announcing the arrival of the Coming was fired from the judge's boat, the schooner Foam at 4:32:30, the Vindex being then about one-third of a mile astern. There is some prospect that this race may be re-sailed, to be determined by the decision of the Coming, as to whether the results, specifying that a race must be sailed at the rate of five miles an hour, refers to nautical or statute miles.

THE BOSTON YACHT CLUB.—The seventh annual regatta of the Boston Yacht Club took place Saturday off the Club House, City Point. The day was pleasant, and a strong wind blowing about southeast by east, sent the boats flying through the water at a rate of speed that made the races both exciting and interesting. The first class comprised sloops and schooners measuring 35 feet and upward, and four entries were made, a first and second prize being offered for schooners and a third prize for sloops. The start was a flying one. The whole course sailed was 23 miles. The following is a summary of this race:

	Yacht.	Captain.	Time.	Regular Time.	Correct Time.
--	--------	----------	-------	---------------	---------------

Fearless.....	E. R. Phillips.....	4 59 55	8 32 06	
Gracie.....	Tower.....	4 55 45	8 47 55	
Tempest.....	J. Lee.....	4 19 50	8 51 10	

First prize, second prize, Gracie. The second race was for keel and centre-board boats, measuring 26 feet, and less than 36. There were eight entries, and two prizes for each kind of boat, and at 12:50 o'clock a start was made from anchor. The whole distance

which these yachts were obliged to sail was 13 miles. The following is a summary of the race, giving the boats in the order in which they rank, according to the corrected time, the first two of course receiving prizes:

SECOND-CLASS CENTRE BOARDS.			
Yacht.	Captain.	Time.	Cor. Time.
Clyde.	Duplain.	2 02 00	1 31 15
Nina.	Whitely.	2 01 30	1 31 05
Neale.	Neale.	2 01 00	1 30 45
Eagle.	Neale.	2 14 25	1 34 20
Neale.	Neale.	2 09 51	1 34 48
Bald.	Bald.	2 12 00	1 34 48
Gardner.	Caray.	2 14 36	1 44 12

SECOND CLASS KEEL.

In this class there was not one entry, as follows:—

May Ellen.	Lord.	2 18 01	1 51 02
------------	-------	---------	---------

The third race was for boats, both centre board and keel, measuring 18 feet and less than twenty-six feet. There were eleven entries, seven centre board and four keel boats. The course for these boats was nine miles. The following is a summary, the boats being arranged according to the corrected time, the first two of each kind obtaining prizes:

THIRD CLASS CENTRE-BOARDS.

Yacht.	Captain.	Reg. Time.	Cor. Time.
Faust.	Wander.	1 32 15	1 03 45
Wander.	Russ.	1 35 30	1 03 45
Maad.	Fuller.	1 42 15	1 06 30
Maad.	Hessey.	1 39 00	1 06 30
Firely.	Bald.	1 45 30	1 13 59
Alie.	Smith.	1 50 15	1 16 58
Secret.	Libby.	1 50 10	1 17 39

THIRD CLASS KEELS.

Ruby.	Preston.	1 48 10	1 13 56
Newham.	Nickerson.	1 44 30	1 16 53
Alert.	Lawley.	2 02 36	1 26 10

The prizes were principally diplomas.

QUINCY YACHT CLUB.—The third and concluding race of a series for the championship prizes in each class of the Quincy Yacht Club took place Sept. 16th. The wind was light, scarcely any stirring.

The length of the course sailed by the first and second class yachts was eight miles, by the third class seven and a half miles, and by the fourth class five and one-third miles, with four entries in the first, five in the second, seven in the third, and four in the fourth.

The yachts were in sight from the Judges' boat all the time, but so snail-like was the pace at which they moved, did not inspire the spectators with even ordinary enthusiasm. Most of the second and fourth class yachts were compelled to use their oars to reach home. The Vision having won the first prize in the race of August 15, and also in this contest, was declared the champion and awarded a silk flag mounted on a black walnut standard. The Nettle, which was first in the race of August 29, was second on this occasion and won a silver goblet.

In the third class the Dolly Varden and the Rocket had each won a race prior to the present, in which the Rocket was the victor. The champion colors were accordingly awarded to her, while the Dolphin, which had previously been second in a race, won the cup.

The judges were Marcus E. Wight, James T. Pennington and Charles F. Pierce.

BEVERLY YACHT CLUB.—The Beverly Yacht Club held their sixth regatta of the season, Sept. 16th, on the waters of Beverly Harbor. Three yachts entered in the first class, in the second class and two in the third class. The start was a flying one. Prizes of solid silver were won in the respective classes by the yachts Eva, Peri and Tulip.

A regatta for working sloops owned on the north shore of Long Island Sound was sailed off Port Chester Harbor on Monday, 21st instant. The prizes as follows:—First, a champion pennant, fifty feet long, and \$40; second, \$30; third, \$20; fourth, \$10.

The Regatta of the Brooklyn Yacht Club takes place to-day, the 24th.

While in Toronto recently we saw the ill-fated yacht Foam anchored near the Royal Yacht Club House. She was a pretty craft. A sad history attached to her. She sank in Lake Ontario with several well-known citizens, all of whom were drowned. The yacht was afterwards raised and brought to Toronto. On Thursday of last week, Mr. Anderson, father of one of the six who were lost in her, purchased her and destroyed her by fire in the harbor the same night, so that she might no longer remain a memento of the disaster.

SEBAGO LAKE REGATTA.

PORTLAND, Maine, September 18th, 1874.

EDITOR FOREST AND STREAM:

The regatta at Sebago Lake, under the management of the Emerald Boat Club, which came off on the 16th instant, was witnessed by about 5,000 people, and proved successful in all respects. The distance rowed by double and single sculls was about two and a half miles, and for the four nearly twice that distance.

The first race was for double sculls; first prize, \$75; second, \$25. There were four entries, but only two boats started—The Emerald, rowed by Alex. Bailey, of St. John, N. B., and A. T. Stewart, of Portland, and the Geo. McDonnell Sr., pulled by McDonnell Bros., of Boston. The Emerald took the lead at the word, and easily maintained it throughout the race, winning by over 200 yards in 18 min. 45 sec.

Next came the professional single scull race, for prizes of \$100, \$75, and \$25, for which the following men were entered and came into line:—T. C. Butler and Plaisted, of Boston; Rourke, of Lowell; Landers, of Salem; and Bralley, of St. John. Plaisted got the best start off, and led by a length for a short distance only, when Butler, Landers, and Bralley went to the front in a bunch and kept well together for half a mile, where the latter, who was a length ahead of the other two, broke an oar, and withdrew. Butler and Landers showed each other the way alternately until near the stake, when the former, pruned by his continued spurring, let up for a season, and was passed by both Plaisted and Rourke, Landers turning well ahead, and keeping a good lead to the line, which he crossed in 18:45; Plaisted second, in 19:30; closely pushed by Rourke in 19:45. Butler was a long way behind.

The third race was for amateur single sculls. First prize, gold watch, valued at \$150; second, silver service, value \$100; third, gold medal, value \$50. There were eight entries—"Sonny" Butler, of Boston; Lynch and Donovan, of Salem; Stewart, O'Donnell, and McShane, of Portland; Stevens, of Bath, and Tracey, of Bangor. Lynch and Stevens (who were the favorites) fouled with each other when a dozen lengths from the start, and did not clear themselves until they were rowing within the other six were well down the course, thus losing their chances for the foremost places. McShane, O'Donnell, and Stewart were the leading boats, and kept well together to the stake, making a splendid race. Stewart succeeded in turning first, and kept just clear of O'Donnell up the home stretch, winning the race in 19:38; O'Donnell second in 19:42. Lynch and Stevens, who were the last to turn the stake, kept pluckily to their work, rowing down one after another of their competitors, and managed to secure the third and fifth places respectively, Mc-

Shane being fourth, Donovan sixth, Tracey seventh, and Butler in the rear.

The last race was for four oared shells. First prize \$300; second, \$100, and was between the Faulkner-Regan crew, of Boston, and the Emerald, of Portland. The contest was close and exciting all the way down, and the Faulkners only reached the stake half a length ahead, but out-stroed and out-rowed the Emeralds on the way back, and eventually crossed the line over a minute ahead in 30 min. 5 sec.

The stormy good order prevailed throughout the entire day, and the Emeralds are to be congratulated on the general good management of the affair.

"Viol."

SCHUYLKILL NAVY REGATTA.

PHILADELPHIA, September 21st, 1874.

EDITOR FOREST AND STREAM:

The entries for the Fall Regatta, published to-day, are not so full as was hoped, neither the Philadelphia University, neither nor West Philadelphia club coming to time. This leaves the field to the other four. The Crocets have it their own way on doubles, being the only entries. It is a pity they didn't put in a four, but it seems they are laying themselves out to beat the Pennsylvania's six. They have a new six from Metcalfe, with sliding seats, and may, perhaps, retrieve their defeat of last year; but I don't think the game worth the powder; also they are ill for racing nowadays. The club entered for "single sculls" lies in the single sculls. It will no doubt be hot between McBeath, Leibert, and Schmitt. The sympathies of most everybody are with "Mac."

Commodore Ferguson has been doing good work on the other side. He has enlisted Capt. Gustaf, of the London Rowing Club, and John Tyler, of the West London. At their meeting on the 14th several prominent Americans were expected, among them were Geo. Schmitt, United States Minister; Hon. B. F. Moran, Secretary of Legation, London; Hon. John W. Forney, Geo. Wilkes, and Theo. Cuyler, of our Park Commission. The President of the Dublin University Rowing Club (who, by the way, is a clergyman) is already trying to get up a crew for the "Centennial." Besides the amateurs, there will be some professionals on, and we may see what the St. Johns crew can do again. When the Commodore returns, which will be on Monday, we will know more fully what he has done. Truly yours,

SCULLS.

The following entries have been made for the Schuylkill Navy Regatta, to be held on Saturday next:

Single sculls.—Joseph B. Leibert, Quaker City Club; John McBeath, ditto; Max Schmitt, Pennsylvania; Wm. G. Thomas, ditto.

Double sculls.—C. E. Steel and H. F. Witmer, and George Miliken, Jr., and George Young, both of the Crocets.

Four-oared gigs.—Crescent Club, Hinchman (stroke), Young, Steel, and Miliken; Philadelphia University, Leibert, Schmitt, Leibert, and Schmitt; Zolner, Haldorn, and McBeath; Fairman (coxswain).

Six-oared barges.—Crescent Club, Hinchman (stroke), Young, Barnhurst, Sperry, Witmer, and Miliken; Steel (coxswain). Pennsylvania Club, Lavens (stroke), Cox, Hensenbach, Conrad, Williams, and Steiner; F. Fairman (coxswain).

Four-oared shells.—Quaker City Club, McBeath (stroke), Adams, Streeter, and Gormley (bow). Pennsylvania Club, Lavens (stroke), Henderson, Schmitt, and West (bow).

The races will be in the following order, beginning at 2 P. M., and following one another at intervals of half an hour each:—Singles, Gigs, Doubles, Barges, and Fours. The latter will be one and a half miles, finishing as follows: from the Falls to Rockland; the others from Rockland up one mile and return.

The officers of the regatta are as follows:—Umpire, John Cain, Pennsylvania Club; Timekeeper, W. R. Tucker, Undine Club; Starter, N. Thornton, Philadelphia Club; Judge, P. Mitchell, Quaker City Club.

The committee having charge of the regatta are A. Krumpholtz, Philadelphia Club; chairman, R. B. Fairman, Pennsylvania Club, and Geo. W. Parker, Quaker City Club.

J. GILLINOLAND, Secretary Schuylkill Navy.

The Columbia Boat Club, of Brooklyn, held their annual regatta on Saturday, September 19th, in Gowanus Bay. The first race was a pair-oared, distance two miles, the course being from the Twenty-fourth Street Dock to Stewart Docks. There were only two entries. Blue, J. D. Halsey, stroke; H. T. Dunham, bow. White, J. D. Purss, stroke; C. S. Quinn, bow. The boats were started evenly, the Whites a little ahead, but after pulling for five minutes they suddenly stopped, and on rowing up to the steamboat Wyoming, which was specially chartered for the guests and lady friends, the crew stated that one of the sliding seats had got out of gear. The Blues simply rowed over the course in fair time. The second race was the Junior Single Sculls, for which there were three entries. Mr. Blocker, of the Emerald, was expected to appear, but having sprained his arm, so this race resulted in a match between C. S. Butler, color blue, and C. O. Lewis, color blue and white. The course was from the Twenty-fourth Street Dock to Hunt's Dock. At 4:40 the word was given. Lewis started off with a fine spurt, leading his antagonist by two lengths before the latter caught the signal. Before the close of the first half mile, however, Butler had overtaken his constant, and with a fine, powerful stroke, led to the home line, coming in in 8:42. Lewis was out of condition. The third and last race was the Senior Single Sculls, over the same course as the previous race. There were three entries and all started. Osborn led and rowed in beautiful style, Purss dropping out, having injured his boat, Lippitt pulling a good game stroke; but Osborn was too much for him and won the race by six lengths. The prizes for the first race were two silver medals; for the second, one silver medal, and for the third a handsome silver soup tureen.

The Alevone Boat Club held their regatta over the same course on Saturday, September 19th. There was but one race, between the six-oared gigs Blonde and Brunette. The race was fairly contested, the Blond crew winning in 52:53 seconds.

The Nereid Boat Club had also a little affair of their own, which was a four-oared gig race with coxswains over the same course as the previous clubs. This race was by far the most interesting and well-rowed contest of the day. The following are the names of the crews:—

Undina.—W. S. Earle, bow; H. C. Brown, No. 2; W. Wise, Jr., No. 3; J. P. Earle, stroke; W. J. Cowing, coxswain; color, red.

Penelope.—J. E. Bone, bow; Wm. Fehr, No. 2; W. D. Johnson, No. 3; Geo. H. Earle, stroke; S. W. Brown, coxswain; color, blue.

Off they started as evenly as possible, sometimes a spurt would throw the Undina ahead, then again a vigorous stroke from the crew of the Penelope and the nose of their boat would verge ahead; this fine racing continuing until within one hundred yards of the home stakeboat, when both gigs were almost abreast of each other; when within twenty yards from the finish the crew of the Undina made a glorious spurt and their boat went over the line with an advantage of one half length. The time of the winning crew was 12m. 39s.

The Schuylkill Navy, of Philadelphia, will hold their annual fall regatta on September 26th.

Answers To Correspondents.

MAX, Mott Haven.—You can shoot deer on Long Island only by stalking, and then only between the 1st and 15th of November.

IL C. H.—Please answer, through the columns of your paper, where is the best place for gunning ten miles from Philadelphia. Next week's paper, if possible? Ans. Chester—both island and mainland.

Books.—With you to recommend a good, reliable book, giving the particulars of the time and manner of running and training horses, and details in connection with racing? Ans. Wallace's or Bruce's Turf Registers are equally reliable.

SUSCRIBER, Buffalo.—Are you really in earnest when you recommend the use of No. 6 shot for woodcock and snipe?—See Sept 24? We think in this locality that No. 10 is amply sufficient here. Typographical error, was corrected in the next issue.

BROAD STREET.—Can you give me, through the columns of your paper, the name of some good work containing instruction in salt water fishing for inexperts who fish for the commonest ones? I shall be greatly obliged, as also I've no doubt many others. Ans. "Fishing in American Waters," by Scott; Harper & Bros.

BOOTS, Boston.—Will you be kind enough to reprint the recipe for water-proofing boots, which you published last Spring? I have given it a fair trial and it is of great aid in putting on. Ans. Six oz. mutton suet, 6 oz. beeswax, 1 oz. rosin, and a pint of lard, cut up, mix these three first ingredients together and add the last. Apply on uppers and soles of boots.

G. N. B., Delphos, Kan.—Any papers calling the Springfield sporting rifle are in error. Those used at Creedmoor are just as they come from the National Army. These arms can, we believe, be obtained by purchase, by addressing the head of the Ordnance Department, at Washington. Your suggestion in regard to cooking game is an excellent one, and we will make use of it above description, loaded with buckshot, No. 3, give as good results in hunting deer as a muzzle loading rifle, calibre .38s. Ans. It entirely depends on what kind of a shot you are. You would undoubtedly wound and lose more with the shot gun, but the rifle would be most effectual and sportsmanlike.

A SUSCRIBER, Middletown, Del.—Can you name to me any good person near Middletown, Delaware, or the adjoining States, to whom I can send a fair spool of net for all I properly and thoroughly broken in to general shooting, say for quail, snipe, woodcock and duck shooting, and to retrieve from land and water? Ans. Perhaps Mr. Carnon, of Bridgeville, Del., would recommend some reliable person.

PLUM, Boston.—Will you please inform me where I can find good ducks from within one or two days' ride from this city, also the best time to go? Ans. Eastern end of Long Island is the best place we know of near Boston for ducks. By addressing a letter to Squires, Ray View House, at Good Ground Post Office, you will obtain information when the fowl are dying in quantity. October is a good month for ducks there.

M. B., New York.—Please inform me what railroad to take for Perry Branch, New Haven, N. Y., and the best time to go. We use ducks, also the station for getting off, and the most convenient way to reach it? Ans. Southern New Jersey to Tuckerton. Tickets \$8. What kind of game will be found there in the middle of next month. Ans. Ducks, snipe, plover, widgeon, and the various kinds of bay birds; also rabbits on the islands and quail on the main land.

W. C. B., Akron, Ohio.—1st. What size shot in a 30-inch, 12-bore brush lander, weighing 72 pounds, should I use in shooting wild geese? Ans. No. 5. 2d. Would it be of any advantage to load with buckshot, No. 3, give as good results in hunting deer as a muzzle loading rifle, calibre .38s. Ans. It entirely depends on what kind of a shot you are. You would undoubtedly wound and lose more with the shot gun, but the rifle would be most effectual and sportsmanlike.

UNCLE GEORGE, New Haven.—I take the liberty to ask your important and valuable advice with respect to the choice of best pocket pistol. I want a small, light, revolver, all things considered. Ans. We use Smith & Wesson, 2" inch barrel, calibre, 22-100. Its mechanism is simple, it is easy to clean, while its accuracy and range are remarkable. We have carried this pattern many years and desire no better. We have seen this little weapon repeatedly hit a 12-inch billisey at 100 yards.

S. C. McC., Atlanta.—Would you refer me, through your columns, to some book on breeding, especially of dogs? Mr. W. W. Reid, of England, sent me the pedigree of his dog Sam, in which I see he has crossed border and sister for four generations. Do you think I could adopt this plan profitably? Ans. Hutchinson on Dogs, also Laverack on the Setter. We are opposed to breeding so much in-and-in, as it renders the progeny undoubtedly delicate. The pups of different sires and dams, although of the same strain, might be bred with success.

Wm. S., Denver, Col.—I have a dog, a pointer, who is afraid of the report of a gun. He runs away when one is fired. How can I give him confidence and get him over his provoking timidity? Ans. "Homo" says: "When my youngster had reached the age of four or five months I would never feed him without directly before discharging a pistol or gun, beginning first with light charges, increasing the loads when he began to show the report with the greatest satisfaction. If I could take him unawares, when he was really asleep, I might be able to teach him, dropping to shot or coming to shot, the sight of the gun would be a pleasure rather than the reverse. Read FOREST AND STREAM, April 2d, 1874.

W. L. B., Stamford, Conn.—Having ten days to spare from October 1, will you kindly tell me where (near New York) I can get the best hunting and fishing in the latter part of the season? I am a sportsman, I am anxious to get a name to much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. If I could take a yacht to place named so much better; also please state the expense of trip and name of best guide (if one is needed), and greatly oblige one who enjoys "sporting," but who has had small experience? Ans. One who will find sport across the Sound at Northport; or why not try the Thimble Islands, or Guilford? Both places afford good fishing and duck and snipe. The latter are especially good during the season. A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK.

125 SOUTH THIRD STREET, PHILADELPHIA.
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscribers and Ten Dollars will receive a copy of Hallock's "FRANKIE TOURIST," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. less. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEWYORK, THURSDAY, SEPTEMBER 24, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of the portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, September 25th.—Brown and Morris boat race, Kenebecasis River, St. John, N. B.—Seawanhaka Yacht Club regatta, Newton Creek.—Trotting meetings at Prospect Park, N. Y., White Marsh, Pa., Sandusky, Ohio, Evansville, Ind., Ambler Park, Pa., Folsom, Cal., Meridan, Conn., Monongahela City, Pa., Cuba, N. Y., Tippencanon City, Ohio, Middleton, Del., Sharon, Pa., and Lockport, N. Y.

SATURDAY, September 26th.—Bogardus vs. Paine, pigeon match Schuylkill navy regatta, Philadelphia, Pa.—New York Athletic Club, Fall games, Motl Haven, N. Y.—Practice day, Harlem boat clubs.—Trotting meetings at Sharon, Pa., and Lockport, N. Y.

MONDAY, September 28th.—Atlanta Boat Club regatta, Harlem River.—Trotting meetings at Fleetwood, N. Y., and Easton, Pa.

TUESDAY, September 29th.—Trotting meetings at Woodstock, Vt., Ypsilanti, Mich., Greensburg, Pa., Taunton, Mass., Bangor, Me., Dayton, Ohio, Lexington, Ky., Omaha, Neb., Manchester, N. H., and Delaware, Ohio.

WEDNESDAY, September 30th.—Match day, cricket clubs Hoboken, N. J.—Trotting meetings at Fleetwood, N. Y., Easton, Pa., Woodstock, Vt., Ypsilanti, Mich., Greensburg, Pa., Taunton, Mass., Bangor, Me., Dayton, Ohio, Lexington, Ky., Omaha, Neb., Manchester, N. H., Delaware, Ohio, Manhattan, Kan., and Charleston, Ill.

THURSDAY, October 1st.—Boston Yacht Club rowing regatta, Boston, Mass.—Anasloosia vs. Potomac, rowing regatta, Washington, D. C.—Trotting meetings at Taunton, Mass., Bangor, Me., Delaware, Ohio, Woodstock, Vt., Ypsilanti, Mich., Greensburg, Pa., Manhattan, Kan., Omaha, Neb., Charleston, Ill., Manchester, N. H., Easton, Pa., Greensville, Pa., Fleetwood, N. Y., Dayton, Ohio, and Lexington, Ky.

THE ENGLISH RIFLE TROUBLES.

THE contest in regard to the Martini-Henry rifle in England still continues. In referring to our Ordnance Memoranda XV, we find that the Ordnance Board were inclined to attach "considerable importance to diminishing recoil, deeming that refinements of action in other directions are largely thrown away if there is to be any flinching in the soldier who pulls the trigger." The table of recoils the Board found to be as follows:—

Fifty caliber service (U. S. arm), 129.6 pounds.

Forty-five caliber service (U. S. arm), 133.6 pounds.

Martini-Henry, 139.3 pounds.

The Board adds "that though acknowledging 2' 4 additional inches of penetration, made by the Martini-Henry, it was too dearly bought at sixteen pounds increased recoil, leaving out of consideration the much heavier ammunition."

This question of the weight of ammunition—a most im-

portant one—seems clearly in favor of the cartridges used for our Springfield arms when compared with those necessary for the Martini-Henry.

Springfield, 50 caliber, 40 rounds weighed 3 pounds, 13 ounces.

No. 58, 45 caliber, 40 rounds weighed 3 pounds, 7 ounces.

No. 49, 45 caliber, 40 rounds weighed 3 pounds, 5 ounces.

No. 59, 40 caliber, 40 rounds weighed 3 pounds, 5 ounces.

Martini-Henry, 40 rounds weighed 4 pounds, 6 ounces.

From which it is evident that fifty-one rounds of ammunition for No. 58 could be carried at less weight than forty rounds of the only foreign ammunition whose performance assimilates with it, viz., the Martini-Henry, (Ordnance Manual, page 876). From this it is apparent that the United States soldier can carry with the same load over twenty-five ounces more cartridges than the English infantry soldier. This question of supplying the rapid waste of ammunition on the field of battle is fast getting to be an important one, in fact may be regarded as an essential point, especially as the magazine gun seems to be coming every day more into repute, and forcing itself into notice like the breech loader and revolver have done before it.

Undoubtedly a great deal of the trouble our insular friends have found in the Martini-Henry may arise from the defective holding of the piece, though it is an undisputed fact that the recoil of this arm is at times hardly endurable. At Springfield, where daily trials of arms take place under inspection of competent ordnance officers, the regular marksman who shoots all the guns has complained of the severity of the Martini-Henry recoil. The bruising of the cheek, arising from the firing of this gun, does not necessarily follow from the rising of the butt, but probably from the violent throwing downward of the head by the recoil on the shoulder. Such devices as cheek pieces, crescent butt plates, etc., would be of general inconvenience in a military arm.

The apparent simplicity of the Martini-Henry, and its fewness of motions, may have certain merit, but if the character of the arm is such that a violent shock is given to the system when the piece is fired, such simplicity of parts is of little advantage.

In target rifles it requires no comment on our part to explain how any arm having a violent recoil would be prejudicial to shooting. At Creedmoor, with the Remingtons, Sharps, Ward-Burtons, or Springfields, any remark on the recoil, or "kicking," is unheard of. Sometimes some few marksmen wear a pad, but its use is exceptional. Occasionally muzzle loaders brought on the range have been found difficult to handle on account of the butt fitting to the shoulder with a narrow slip of crescent-shaped metal. The recoil in this case, coming almost on a knife edge, gives increased concussion. As we remarked in our last, we have every reason to be contented with our present systems of breech loaders as to comfort. Perhaps in the field, when the contest comes off with our Irish guests, our breech loading rifles will play no undistinguished part. *Qui vivra terra.*

COLLEGE JOURNALS.

THE College terms began with September, and we are again in receipt of the characteristic publications—be they oracle or organ—that emanate from the several universities of learning throughout the land. Nearly every college has its representative journal, and very creditable indeed are the most of them, both in typography and contents. Often there is evidence upon their pages that the maturer thoughts of the teacher have been added to those of the student; and we believe that both Faculty and undergraduates take pardonable and natural pride in maintaining for them a high tone and enviable standard of literary excellence. Each journal serves as a sort of compendium and record of the year, and is made valuable to parents, alumni, and any others interested in the progress and success of the respective classes or institutions. The first of these that has reached us this term is the *Trinity Tablet*, of Hartford, Ct., a sixteen-page, 8x10 sheet, printed on tinted paper, with exquisite taste, and carefully compiled. Very similar, but more pretentious, are the *Harvard Magnolia*, the *College Argus*, of Middletown, Ct., and a half dozen others; while a few, like the *Yale Record* and *Amherst Student*, affect rather more the character of the general newspaper. We shall hope to welcome these to our table in due course of their publication. Some are hebdomadals and others are printed monthly. No doubt they serve as a very instructive practical school for a rising generation of editors with *utensils and brains*, who will do credit to a profession to which men are very apt to resort after they have failed in a variety of other pursuits. One thing is certain, they outrank 50 per cent. of the journals of the country in all those qualities requisite to make a newspaper and to give it a character above that of an advertising sheet and chronicle of vegetable monstrosities and neighborhood casualties.

This college journalism has grown to be quite a feature of late years—very different now than in the early days of the *Yale Banner*, which was the pioneer of College periodicals, not quite thirty years ago. Such publications were simply tolerated then. They were looked upon by the staid professors rather as puerile emanations, which, while admitted to give relaxation to pre-occupied minds, were nevertheless disencouraged as tending to encroach upon the studies of the curriculum. At that time, too, the range of subjects for consideration was circumscribed. Topics could be found only within the envelope of the academic walls; and because these were grave and trite, and distasteful to minds that craved a change of pabulum to spice their daily routine of thought, it happened that such extraneous

subjects as were selected to give variety to the contents, were trivial and shallow; so that the "light literature" of the paper comprised a *melange* of frivolous criticism of unpopular tutors and students; of personal banter, stale jokes, quiddities, and chaff. The "body" of the paper (certainly not the brains) consisted of wise essays on abstruse subjects suggested by college text books, which ovals might possibly have read with profit. No wonder that college papers were distasteful to the Faculty, or that their rapid utterances cloyed upon the students, whose minds, however fond of pranks and fun, nevertheless wanted strong food to aid the development of their vigorous growth.

Circumstances are very different now. As we have said, almost every college has its representative paper, and teachers unite with students in making their contents entertaining, instructive, and dignified. The nonsense column is very modestly assigned to an obscure corner, like the school-boy with the fool's cap; there is a marked absence of childish personality or cruel criticism; the cultivation of physical studies in later years, has given a wide scope for useful essays upon which both mind and muscle may develop and harden, and the relation of physics and metaphysics, of gymnastics and moral science, are so combined and presented as to afford a study exceedingly attractive to those who impart, as well as to those who receive. So that we find our college editors really at work in a sphere of labor peculiarly their own, and accomplishing results which cannot be measured for their usefulness. They are adding height to mental stature and weight to cubic inches, that will make *men* of them instead of cynics when they mature—men shaped in a natural mould—a mould that gives freedom and play of limb, while at the same time it is plastic in its operations and conservative in its forces. In lieu of printing dry homilies, or dissertations on Tacitus and the Sphinx, they induct us into the mysteries of sliding-seats, of scientific training for physical contests, of the philosophy of putting the stone and the standing jump, of the anatomical structure of the biceps, and the mechanism of the lungs. They give us current records of college events, both in the curriculum and the campus, so that the private life and employments of the students are measurably indicated thereby, and anxious parents may no longer worry as to what is done with a leisure hour. Betegging confidence in themselves, they learn to confide in others, yea, even in the magisterial Faculty whom they formerly regarded with awe; and they find their reward in liberal contributions to boat clubs and gymnasias, as well as to those higher arts which grace their Alma Mater and give her substantial character and enviable reputation.

Success to the college papers!

HO! FOR FLORIDA.

THE usual migration of sportsmen and invalids to Florida will soon begin. We have several letters from gentlemen who purpose leaving the North about November 1st, asking for information as to routes, hotel accommodations, fares, shooting grounds, etc. This we shall furnish to our readers from this time henceforward throughout the season. We have unusual facilities for gathering reliable information of highest practical value not only to sportsmen and tourists, but to invalids and persons seeking lands with a view to settle. We have correspondents at St. Augustine, Jacksonville, New Smyrna, St. Lucie, Melbourne, Palatka, and Glen Gove, the objective points of all tourists visiting the Land of Flowers. We made Florida statistics and resources a specialty of this paper last winter, and succeeded in sending at least fifty sportsmen and two settlers there. This year we shall devote our columns still more largely to this section, and doubt not their use will serve the reader and advertiser better than any other paper of whatever circulation. Our statements are accepted as facts, and our recommendations are confided in and acted upon. It is this that gives our journal precedence and value. We trust that hotel and boarding-house proprietors at favorite Southern resorts, agents of popular railway and steamboat lines, land owners and others interested in the development of the South, will recognize this fact by giving us their patronage, and eventually realize it in pecuniary profits. We are prepared to offer the testimony of those who used us last winter as to the advantage thereby gained.

The increase of Northern patronage of Southern winter resorts, especially at St. Augustine, within the past two years, is something remarkable. Present hotel accommodations have proved insufficient, and several additional and more commodious buildings are being prepared for the reception of guests upon the opening of the season. Traveling facilities are being everywhere increased; better boats will be supplied and more of them, and better railway coaches. New routes of travel will be opened, both in eastern and western Florida. The long contemplated railroad from Jacksonville is in process of rapid construction, as we learn from the *St. Augustine Press*, and even the shakily, rickety wooden railroad from Tocoi is being replaced with iron rails. On the 7th instant 200 yards of new rail had been laid, and all the iron required for the whole fifteen miles is reported soon to arrive. All the neighborhood is agog. Tocoi, which contained only three buildings two years ago, has now grown to the dignity of a hamlet.

It is quite probable that we shall fit out an expedition to explore the whole western coast of Florida this fall, provided we can receive the necessary assistance and co-operation of the railroad and steamboat lines in transporting our correspondents with their boat, and adding them otherwise.

Moreover, we are exerting ourselves to secure the opening of a comfortable, clean hotel at some desirable locality on the Indian River, and we think have secured the proper man to take charge of the enterprise. Such a hotel will be available both for sportsmen and their wives, and is very much needed. It will be sure to remunerate anyone undertaking the venture, and we would herewith advise any persons contemplating such a movement to put themselves at once in communication with us, as we can furnish them with points of the utmost value. Parties having orange groves and farms to sell would also find it to their advantage always to advertise them through our columns, as we have frequent enquiries respecting such from intending settlers.

Mr. Whitney, of the St. Augustine Press, will receive subscriptions and orders for this paper.

MORE NITRO-GLYCERINE.

WE see no reason why a weekly magazine of undoubted excellence and merited popularity, under the heading of "Science and Invention," should give unusual space (at least without condemnation,) to a method for destroying fish with nitro-glycerine, employed by a gentleman attached to the United States coast survey. It strikes us that gentlemen attached to this useful department, even those of the most inquiring minds, have a sphere of usefulness not confined by the theodolite, the plumb line, or their instruments for triangulation, yet, to go out of their way to detail the barbarous methods of slaughtering fish by the thousands, by means of infernal devices, is certainly stepping beyond geodetic limits.

If fishing by means of nitro-glycerine ever comes into vogue, it means not only the destruction of the fish, but the ruin of those who follow fishing as a vocation. For one fish taken by this abnormal process, thousands are stunned, maimed and killed, which are never seen. Since it is pretty well determined that even noises and surface disturbances, such as cannonading, drive fish away from certain localities for a season, if nitro-glycerine explosions are used, we may bid good-by to our sea coast fish. It seems strange that Professor Baird, the United States Fish Commissioner, on the one side should be laboring manfully to protect the fish, and that on the other side, some one in Government employ should be doing his best to destroy them.

To use nitro-glycerine, or any explosive material for fishing, no matter whether on our immediate coast or in California waters, is as reprehensible as would be the employment of strychnine on the wild waste of the prairie to kill buffalo.

People must be bred up to proper ideas on these particular subjects; and all wholesale and indiscriminate slaughter of God's creatures, whether on water or land, should be discountenanced.

THE IRISH TEAM GOING FOR GROUSE.—Very few sportsmen come to us from over the water at this season who do not improve the opportunity to take a hack at the pinnated grouse, or "prairie chickens," as they are called in the Western vernacular. The recent efforts to acclimate this desirable game bird in England, made by the Prince of Wales and others, have given them something of a widespread fame abroad, and therefore increased the interest in them. The Irish Team are not behind Dunraven, St. George Gore, the Earl of Roseberry, Dr. Kingsley, and other cosmopolitan crack shots, in their desire to test their quality in the open field; and several of their members have expressed their intention to go West after the conclusion of the international rifle match. The matter of securing them good sport has been left entirely in the hands of the Editor of FOREST AND STREAM. We have accordingly placed ourselves in communication by mail and telegraph with our friends in Iowa, Missouri, Kansas, and Nebraska; and if the Irishmen do not get a good bag of chickens, it will not be the fault of ourselves and our friends. We have already received such replies to our inquiries as to assure us that arrangements will be made that cannot but prove satisfactory to them. A deputation will probably meet the team at St. Louis, and escort them to the locality determined upon for the sport. We will announce the programme as soon as it is perfected, which should be by next week.

THE FRENCH GUN TRADE.—We notice in *La Chasse Illustrée* the advertisement of a three-barrelled breech loader. Two barrels are placed as in an ordinary double gun, and the third barrel is piled on top of that. A party with a gun of this kind would of course load for a flock. We see too, manufactured by the same maker, Lainé, a revolving shot gun, which has in addition a magazine for cartridges. By St. Hubert! game must be plenty in France when they want such engines of destruction. There is a great deal of prejudice against French arms, which arises from ignorance. There is no more beautiful gun in the world than those which are turned out by the Parisian artist. Material, finish and shooting qualities are admirable. Englishmen and Americans object to too fine a worked up gun on the outside; but if you want a good arm, you can have one made in France as plain as a pick-staff. We scarcely know in this country what an *arme de l'usage* is. People who shrug their shoulders at French guns would do well to remember that we owe our present system of breech loaders entirely to France, and as has been said before by Greener and Gloan that all our turn or slide barrels, whether horizontal or lateral, are simply modifications of Le Faucheur's first breech loaders. *La Chasse Illustrée* is now publishing

a most thorough and interesting account of the French arm trade, to which we would call the attention of our readers. Monsieur de Bevens is a thorough master of the gunsmith's art, of which he treats, and we have to remark that our own manufacturers might read with no little profit his articles on *Les armes de Chasse*.

A RELIC OF THE MOUND BUILDERS.—Major G. C. Alden, of New Smyrna, Florida, who has been excavating the ancient Indian mounds in that vicinity, has sent us the skull of an individual of the ancient race exhumed. It is a noble skull, with monumental occiput, and every tooth perfect—the entire knowledge-box in as good a state of preservation as when it was stored with its fulness of cerebrum and cerebellum, before it was discarded by the middle-aged man whose shoulders it once adorned. Whenever that time was—how many decades of years ago—no exhumation will reveal, for there are neither signs nor tokens to indicate identity of birth or race, except a few arrow heads and bits of pottery. The eyeless sockets are filled with white beach sand, and through the jaws there has been growing the root of some vine whose slender tendrils have crept up into the brain-pain; so that we can easily understand that, long after the human life had passed away, a vegetable life quickened within that skull and made it throbb once more.

This is no "poor Yorick." This cranium doesn't look as if it could ever have contained a joke. No "infinity of jest" is there! Evidently it belonged to a member of the "Serious Family." Only the stern realities of life were met in its day and generation—the struggle for existence, the battle brunt, and horrid wars. Perhaps this vacuous thing was the very "head and front of the offending." Strange that the empty shell should so long outlast the entity that vivified it and gave it power! It is useless now, except to speculative anatomy. Therefore, we shall lay it away upon the shelf of our miscellaneous collection, and patiently await the arrival of bones that shall complete the skeleton, even if it be until doomsday. Of what service is a head without the members? At the resurrection all will reunite.

WANTED A FISH.—We are very desirous of obtaining for Professor Baird, United States Chief Commissioner of Fisheries, a specimen of a peculiar species of tunny, one of which we saw in Fulton Market a week ago. The fish wanted is larger than a bonito, and has blue bars on it, something like the bonito, but instead of these bars running slanting to the top of the fish, the bars in this species of tunny run in parallel lines from head to tail all around the fish. If any of our numerous friends in Fulton or Washington market, will inform us when such a fish turns up, we will be glad to purchase it, in order to forward it to Professor Baird. Questions of the identity of fish, or of the finding of new fish on our shores, are not alone of importance in a scientific way, but may be rendered profitable in an economic sense.

KENTUCKY STATE SPORTSMEN'S ASSOCIATION.—The Tournament of the Hunters' Club of Lexington, Kentucky, opened on the 22d inst. and is advertised to continue until to-morrow—three days. The sum of \$1,400 in cash prizes will be divided. We have a special representative on the ground, through whom we shall be enabled to give full details. From this gentleman, who is an officer in the Club, we are pleased to learn that a called convention will be held at the Phenix Hotel, Lexington, on the 1st day of the shoot, to organize a State Sportsmen's Association, a grand movement, and one much needed in Kentucky. A full delegation will be designated for the National Convention in 1875. The Hunters Club, we ought to say, has been chiefly instrumental in drawing attention to the necessity of suitable game laws for the State, and securing the co-operation of citizens for their construction and enforcement.

WASTE OF PHYSICAL FORCES.—A French author, M. Menier, in a clever book called *L'impôt sur le Capital* says "Homer shows us twelve slave women preparing meal with stone mills for the daily consumption of the heroes." Now a woman working hard all day cannot make meal for more than twenty-five persons. Of course then, in the heroic ages, there must have been absorbed an enormous amount of capital paid out for labor. To day twenty millers in an ordinary establishment, can produce by means of machinery flour enough for the daily consumption of 72,000 people, or each man can feed 3,600 men. In Homer's time it would have taken 144 millers. If all the machine made cotton thread produced in England was turned out by hand, it would represent the individual labor of ninety-one millions of people. A smart woman can make eighty stitches a minute with her knitting needles, while a machine is working 490,000 stitches. The machine then represents 6,000 work-women.

ADIRONDACK WOODS AND WORRIES.—We have a letter from a retired Adirondack lumberman which takes issue with the sportsmen, guides, hotel-keepers, &c., of that region, and which we shall print next week, in order to show plainly the relations that exist between the parties. It is well that the grievances of both sides should be heard, and if there is likely to be any conflict or exhibition of bad blood, the sooner the State inaugurates her proposed Adirondack Park, the better for all interested and concerned.

—The fires in the woods of New Jersey have made a clean sweep from Sandy Hook to Tuckerton, and were only subdued by the rain. Long Branch escaped with the loss of a few fences and fields.

CREEDMOOR.

THE IRISH TEAM—FALL MEETING—SCORES.

WOULD we had the pen of the Wizard of the North! Then we might slightly paraphrase Walter Scott's wonderful description in *Ivanhoe*, of how the smiths and armors worked manfully for the knights who were to try their skill at the Grand Tourney of Ashby de la Zouche. In our prosaic times the simple substitution would be that of a rifle for a lance, of a butt for a shield; for now rifle makers and gunsmiths are busy getting their arms in order for the Fall Meeting of the National Rifle Association, which takes place on the 29th of this month. Last year this most important event in the annals of the National Rifle Association, took place on Wednesday October 8th, and was continued on until Saturday. Very probably as the contestants may be more numerous this year, the same length of time, three days, will be consumed in shooting, but as the officers have no doubt gained additional experience as to the carrying out of the programme, we see no reason why it should be extended beyond that time.

Great additional *clat* is added to the Fall Meeting by the presence of our most excellent friends and guests the Irish team, who have most gallantly crossed the Atlantic, in order to compete for rifle supremacy with our own men. We give a very brief *resumé* of the matter. On October 3d of last year, Major Blennerhassett A Leech, through the medium of the New York *Herald*, sent a challenge to American riflemen offering to meet our men on the range at Creedmoor, to shoot for £100. Some of the leading provisions were as follows:—

Targets, scoring, &c., same as adopted by the National Rifle Association of Great Britain, at Wimbledon, 1874 (when the Irish eight won the international match for the Elcho Shield, beating England and Scotland).
Ranges—500, 300, 1,000 and 1,100 yards.
Rifles—Any not exceeding ten pounds weight, but without telescope sights or hair triggers.

Position—Any, but no artificial rest permitted, either for the rifle or person of the shooter.

The American team to be composed exclusively of riflemen born in the United States, and to shoot with rifles of American manufacture.

The Irish team will shoot with rifles by Rigby, of Dublin.

On December 20th 1873, Col. George W. Wingate, then Secretary of the National Rifle Association, and then as now President of the Amateur Rifle Association, entered into a correspondence with Major Leech, and in time, with some very slight alterations, principally that of the extreme range 1,100 yards being altered to 1,000 (the range at Creedmoor having for its extreme range 1,000 yards), the match was satisfactorily arranged. It must be here distinctly placed on record that Col. Wingate by no means arrogated to the Amateur Rifle Club or to himself the choice of those who were to represent the American team. Great care was taken, and a considerable amount of money was expended in addressing riflemen all over the country, requesting them to come forward and to give some evidences of their skill. Of course it was absolutely necessary to have some standard of excellence, and as the Amateur Rifle Club was the only regularly organized association of the kind in the United States thoroughly conversant with rifle shooting according to the Wimbledon rules, it was perfectly proper that the Amateur Rifle Club should take precedence in this matter, as it was the only rifle board, as we may call it, capable of according a diploma of excellence to riflemen. The FOREST AND STREAM has unceasingly requested riflemen out of the State to send in their scores to the Amateur Rifle Club, and has been equally urgent with manufacturers of arms, other than breech-loaders, to bring their rifles to Creedmoor. As to the men who are to shoot with the Irish team at Creedmoor on the 29th of this month, we must unhesitatingly declare them to be the best shots in the United States. Perhaps in the South there are individual riflemen who at 100 and 200 yards, can equal our Creedmoor men with peculiar sights and hair triggers, but over that, or beyond 300 yards, we may safely assert that save in California, where shooting at extreme distances under Wimbledon rules, is having a most excellent development, pretty generally our people are quite ignorant of how to use the rifle at very long ranges. How could it be otherwise, when one year ago long range rifle shooting even at Creedmoor, was in its infancy? We are thus careful to state this fact at the very outset. If we are beaten, we do not wish it to be said, "There are better men;" or if we are the conquerors we do not desire to have the merit of our team diminished one tittle by the carping remark, "Oh, there are quite as good men to be found down South, or out West."

Nevertheless, it is a matter of regret to us—which, no doubt the Amateur Rifle Club feels—that the element composing our team should be entirely composed of those living in or around New York. We should have been glad to have seen the team composed of men from every section. We would have welcomed any of the clever shots from Mobile, New Orleans, St. Louis, or San Francisco, and would have been glad to have fraternized on the range with the hunter of the trackless prairies, or with the trappers from the far off plains of the Pacific slope. Still there is a certain amount of excuse for all this. If the trite saying, "*Ars usculitur, non fit*," is true, rifle shooting may be a little inborn; but its development with arms of precision is very much of a study, and a protracted one. Men have not always the time to devote to such matters. Then, again, systematic rifle shooting in the United States, by military organizations, is yet in its infancy. The excellent example shown by our own National Rifle Association must have its effects. Before next year there is not a doubt but that other ranges will be established, on the model of Creedmoor, in large centres of population. Then contests will take place between Chicago and New York, or between St. Louis, San Francisco, and New York, and

thus will be eliminated the best shots in the United States, and the time may come when an American team, representing all sections of the country, may send a challenge across the water to our present guests.

The Irish team arrived in New York on Wednesday, 16th September, accompanied by Right Hon. Morris Brooks, M. P., Lord Mayor of Dublin, and the Lady Mayoresse; his daughter; Alderman Manning and daughter; W. W. Waterhouse, Esq., and Messrs. E. B. R. and F. Kelly. The distinguished guests—twenty-eight in number—were received at the Cunard wharf by Col. George W. Wingate, Messrs. J. T. B. Collins, A. Alford, and G. R. Schierhorn, of the Amateur Rifle Club, and escorted in carriages to the Windsor Hotel, corner of Fifth avenue and Forty-sixth street, where they are to remain during their visit to this city. The following are the names of the team—Major Arthur Blenherbasset Leech, of Dublin, captain; John Rigby, A. M., a graduate of Trinity college, Dublin, and a member of the firm of Rigby Bros., gun makers, Dublin, aged forty-four years, and who will hold the first place in the team; James Wilson, a merchant of Belfast, aged twenty-six years; Edmund Johnson, of Dublin, aged thirty-two years; Joshua Milner, of Dublin, merchant, aged twenty-four years; John B. Hamilton, M. D., of Dublin, an army surgeon, aged thirty-six, the champion rifle shot in India in 1870; Capt. Philip Walker, of the Thirty-fourth Regiment, a native of Kilkenny county, Ireland, aged thirty-six years. The "reserves" are as follows: John A. Doyle, Fellow of All Souls' college, Oxford; John J. Kelly, of Kildare county; Viscount Masserene, Antrim Castle, Dublin, the latter accompanied by his lady; H. H. Foster, Esq., Dublin; and John J. Bagnell, Esq., Civil Engineer, Dublin.

On Friday the various members of the team paid a visit to Garden City, Long Island, passing by Creedmoor; but as the day was rainy no stop was made. At Garden City Messrs. H. C. Poppenhausen and E. C. Hinsdale received the team, who had been under the escort of General Shaler, Col. Wingate, Capt. Bruce, Lieut. Fulton, and other leading members of the National Rifle Association, and dinner was partaken of.

For two days this week the members of the Irish team will take their practice at Creedmoor, where, no doubt, every facility will be given them, so that they may be thoroughly acquainted with the peculiarities of the range.

On Tuesday, September 15th, the Twelfth Regiment held their contest for the Gildersleeve badge; won by Sergt. Reddy, with the score of twenty-eight—five shots at 200 yards, and five at 500 yards—not very good shooting. The Ross badge, open to members of the Seventy-ninth, was awarded to Private Robertson, Co. B, with a score of forty-four—seven shots at 200 yards, and the same at 500 yards. Shooting fair, and just above the average. The Twelfth Regiment team's practice was better, Sergt. Murphy scoring thirty-three—fifteen in five shots at 200 yards, and eighteen in five shots at 500 yards. It must be borne in mind that the day was a most unpropitious one for rifle practice.

On Saturday, September 19th, the handsome trophy presented by the Messrs. Remington, known as the Remington Diamond Badge, was shot for. Arm, any breech loader, according to the rules of the National Rifle Association; seven shots each, at 500, 800, and 1,000 yards. The members of the Irish team having been invited to shoot, Mr. Alford had placed at their disposal Remington rifles. Dr. Hamilton, and Messrs. W. Waterhouse, J. Doyle, H. H. Foster, Capt. Walker, James Wilson, and J. K. Milner, all of the Irish team, then became acquainted with the range, and for the first time tried their hand with an American breech loader, and their general performance was of the most creditable character. The Irish gentlemen showed their skill by using an arm entirely unknown to them, differing in every way from what they were accustomed to—as to sights, elevations, etc.—and still made most excellent shooting, showing convincingly that a "good workman can handle any tools."

The day was rather overcast; wind blowing across the range from H. L., but allowing of good shooting. Mr. L. L. Hepburn's score—seventy-eight in a possible eighty-four—is the highest yet made on the range, and is *superlatively* good shooting, and the four scores under the winning one are also excellent. We append the twelve best full scores, in which it may be noticed that two of the Irish team—Messrs. Hamilton and Waterhouse—had places:

L. L. Hepburn	200	33	44	44	44	26	100

	100	44	33	44	33	25	100

Capt. Bodine, after making twenty-five at 500 yards, very unfortunately made an error in elevation, shooting at 800 yards as for 900, and was off the target for the whole 800 yards. A lesson of this kind is a most disagreeable but useful one. We are quite willing to believe that on the occasion of the International match Capt. Bodine will get his elevations just right, for there is no steadier, nor better, nor more lasting shot than he is.

We give the handsome score made by Dr. Hamilton at 500 yards—3 4 4 4 3 3—twenty-five in a possible twenty-eight. This was made with a rifle the gentleman had never seen before, and on his first visit to the range.

The Irish team, on the occasion of the match, will wear an exceedingly appropriate badge, embroidered for them by the Irish ladies. Two hands are interclasped; there is a wreath, and the colors of England and the United States are blended. This pretty emblem is to be worn on the arm. Should our men be the conquerors, we understand that it is intention of our Irish friends to place them on the arms of our team.

May the best men win! Though it may not be our good fortune to sport the favors worked by fair Irish woman's hands (not recalling old Esop's sour grape fable), we are sure that the presence of these ladies and our Irish friends will ever be pleasantly remembered by us in the United States.

The match with the Irish team will take place on Saturday, September 20th, at ten o'clock.

THE RIFLE ASSOCIATION.

Programme for the Fall Meeting at Creedmoor.

LIST OF PRIZES TO BE CONTESTED FOR—NAMES OF DONORS—CONDITIONS OF THE MATCHES.

The Fall meeting of the National Rifle Association will open on Tuesday, the 26th inst., and continue four days. The following is the programme:

COMPETITION I.	
Opening Match—Open to all members of the association. Weapon, any military rifle. Distance, 300 yards. Position, standing. Rounds, seven. Entrance fee, \$1.	
First Prize—A silver cup, value.....	\$30 00
Second Prize—A silver medal, value \$20 and cash \$10.....	40 00
Third Prize—A silver medal, value.....	50 00
Fourth Prize—Life Membership National Rifle Association, transferable by winner, value.....	50 00
Fifth, Sixth, Seventh, Eighth and Ninth Prizes—Silver badges, value \$20 each.....	100 00
In all, nine prizes, total value.....	\$245 00

COMPETITION II.	
Cavalry Match—Open to teams of five from any troop of the National Guard, N. Y., each being certified to by their commander to be a regular member in good standing of the troop he represents, and to have been such on June 1, 1874. They shall appear in uniform (full dress or fatigue). Distance, 100 yards. Position, standing. Weapon, Remington breech loading carbine. Sight model. Trigger pull not less than six pounds. Entrance fee, \$1 each man.	
First Prize—To the troop whose team makes the highest score, a richly embroidered cash badge, presented by the Commander-in-Chief, on behalf of the State of New York, value.....	\$150 00
Second Prize—To the second highest individual score, a life membership, authorized by Adjutant General, Rathbone, on behalf of the State, value.....	50 00
Third Prize—To the third highest individual score, a life membership, authorized by Adjutant General, Rathbone, on behalf of the State, value.....	25 00
Fourth, Fifth and Sixth Prizes—To the three next highest individual scores, cash, \$5 each.....	15 00
In all, six prizes, total value.....	\$240 00

COMPETITION III.	
Sportsmen's Match—Open to all comers. Weapon, any rifle. Distance, 500 yards. Position, standing. Entrance fee, \$1.	
First Prize—A gold glass, value.....	\$45 00
Second Prize—A silver medal and cash, \$10.....	40 00
Third Prize—Silver medal, value.....	50 00
Fourth Prize—Life membership, N. R. A., transferable by winner, \$25.....	25 00
Fifth, Sixth and Seventh Prizes—Each a silver badge, value \$20.....	60 00
Eighth, Ninth, Tenth, Eleventh and Twelfth Prizes—Each \$5.....	50 00
In all, twelve prizes, total value.....	\$325 00

COMPETITION IV.	
First Division Match—Open to teams of twelve from each regiment or battalion in the First Division of the National Guard, N. Y. All competitors to appear in uniform (full dress or fatigue), and to be certified by their regimental commander to be regularly enlisted members in good standing of the regiment they represent, and to have been such on June 1, 1874, as required for the State Prize. Weapon, Remington rifle. State model. Distance, 200 and 500 yards. Five shots each distance. Position, standing at 200 yards; any position at 500 yards. Entrance fee, \$1 each man.	
First Prize—To the regiment whose team makes the highest score, the State Division Prize, value.....	\$100 00
Second Prize—To the regiment having the second best team, a silver cup, value.....	50 00
Third Prize—To the regiment having the third best team, a silver cup, value.....	30 00
Fourth Prize—To the best individual score, a silver medal, value \$20, cash \$10.....	30 00
Fifth Prize—To the second best individual score, a silver medal, value \$20, cash \$10.....	40 00
Sixth Prize—To the third best individual score, a silver medal, value.....	30 00
Seventh Prize—To the fourth best individual score, a life membership, value.....	25 00
Eighth, Ninth, Tenth, Eleventh, Twelfth and Thirteenth Prizes—To the next six highest individual scores, silver badges, value \$20 each.....	120 00
In all, thirteen prizes, total value.....	\$450 00

Competitors failing to score eight points at the first distance will be excluded from firing at the second distance.

COMPETITION V.	
Second Division Match—Open to teams of twelve from each regiment or battalion of the Second Division of the National Guard of the State of New York, upon the same conditions as prescribed for competition IV. Weapon, Remington rifle, State model. Distance, 200 and 500 yards. Five shots each distance. Position, standing; 300 yards, standing; 500 yards, any. Entrance fee, \$1 each man.	
First Prize—To the regiment whose team makes the highest score, the State Division Prize, value.....	\$100 00
Second Prize—To the regiment having the best team, a silver cup, value.....	50 00
Third Prize—To the regiment having the second best team, a silver cup, value.....	30 00
Fourth Prize—To the best individual score, a silver medal, value \$20, cash \$10.....	40 00
Fifth Prize—To the third best individual score, a silver medal, value.....	30 00
To the five next highest individual scores, a silver badge, value \$20 each, making.....	100 00
Ten prizes, value.....	\$430 00

Competitors failing to score eight points at the first distance will be excluded from firing at the second distance.

COMPETITION VI.	
New York State Match—Open only to teams of twelve from each regiment or battalion of the National Guard of the State of New York, each being certified to by their regimental commander to be a regularly enlisted member in good standing of the regiment he represents, and to have been such on June 1, 1874. They shall appear in uniform (full dress or fatigue). Distance, 200 and 500 yards. Position, standing at 200 yards; any position at 500 yards. Entrance fee, \$1 each man.	
First Prize—To the highest individual score, a gold medal, presented by the Adjutant General, Rathbone, on behalf of the State, value.....	\$500 00
Second Prize—To the highest individual score, a gold medal, presented by the Adjutant General, Rathbone, on behalf of the State, value.....	100 00
Third Prize—To the highest score in each team of the ten best teams, a gold and silver mounted Remington rifle, presented by the Adjutant General, Rathbone, on behalf of the State, value.....	750 00
Fourth Prize—To the regiment whose team makes the second best score, a silver cup, value.....	50 00
Fifth Prize—To the regiment making the third best score, a silver cup, value.....	25 00
Sixth Prize—To the second best individual score, a life membership, value.....	25 00
In case teams from two or more regiments from any of the divisions of the National Guard (outside the limits of the First and Second Divisions) shall participate in this match, the one of such teams making the highest score will be presented by the Adjutant General, on behalf of the State, with a division prize costing \$100, as the prize of that division, in all, six division prizes, value.....	600 00
Total, thirty prizes, value.....	\$2020 00

Competitors failing to score eight points at the first distance will be excluded from firing at the second distance.

Competitors failing to score eight points at the first distance will be excluded from firing at the second distance.

listed member in good standing of the regiment he represents, and to have been such on June 1, 1874. They shall appear in uniform (full dress or fatigue). Distance, 200 and 500 yards. Position, standing at 200 yards; any position at 500 yards. Entrance fee, \$1 each man.

COMPETITION VII.	
Officers' Match—Open to all general and staff officers in the First Division, N. G. S. N. Y. Conditions same as in Competition IV.	
First Prize—To the highest individual score, a gold badge, presented by the staff of the State, on behalf of the State, value.....	\$100 00
Second Prize—To the second highest score, an elegant Ward-Burton magazine carbine, presented by First Brigade Headquarters, value.....	50 00
Other prizes as the prize of that division, in all, six division prizes, value.....	600 00
Total, thirty prizes, value.....	\$2020 00

Competitors failing to score eight points at the first distance will be excluded from firing at the second distance.

COMPETITION VIII.	
Army and Navy Journal Match—Open to teams of twelve from all regularly organized military organizations in the United States, including the regular Army, State, and Marine Corps, and to be regularly enlisted members in good standing of the regiment they represent, and to have been such on June 1, 1874, and to appear in uniform (full dress or fatigue). Distance, 200 and 500 yards. Entrance fee, \$1 each competitor.	
First Prize—To the regiment whose team makes the highest score, a silver trophy, presented by the Adjutant General, Rathbone, on behalf of the State, value.....	\$750 00
Second Prize—To the highest score for a regular member of the regiment, the winning corps, it was won last year by the Twenty-second Regiment, N. G. S. N. Y., and is now held by that regiment, value.....	50 00
Third Prize—To the regiment whose team makes the third best score, a silver cup, value.....	30 00
Fourth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Fifth Prize—To the second best individual score, a silver medal, value \$20, and cash \$10.....	30 00
Sixth Prize—To the next best individual score, a life membership, value.....	25 00
Seventh, Eighth, Ninth, Tenth, and Eleventh Prizes—To the five next best individual scores, silver badges, value \$20.....	100 00
In all, eleven prizes, value.....	\$1,025 00

COMPETITION IX.	
The Gatling Match—Open to teams of twelve from each regiment or battalion of the National Guard of the State of New York, including members in good standing of the regiment they represent, as required for the State Prize. Weapon, Remington rifle, State model. Distance, 200 yards. Rounds, seven. Position, any. Entrance fee, \$1 each competitor.	
First Prize—To the regiment whose team makes the highest score, a silver trophy, presented by the Adjutant General, Rathbone, on behalf of the State, value.....	\$2,000 00
To be won twice (not necessarily consecutively) before becoming the winner's property. The gun to be held for the year by the Twenty-second Regiment, N. G. S. N. Y., which won it last year.	
Second Prize—To the regiment whose team makes the second best score, a silver cup, value.....	50 00
Third Prize—To the regiment whose team makes the third best score, a silver cup, value.....	30 00
Fourth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Fifth Prize—To the second best individual score, a silver medal, value \$20, and cash \$10.....	30 00
Sixth Prize—To the next best individual score, a life membership, value.....	25 00
Seventh, Eighth, Ninth, Tenth, and Eleventh Prizes—To the five next best individual scores, a silver badge, value \$20 each.....	100 00
In all, eleven prizes, value.....	\$2,275 00

COMPETITION X.	
All-Comer's Match—Open to all comers. Any military rifle. Distance 200 and 600 yards. Seven-hits each distance. Position, any. Entrance fee, none.	
First Prize—A Sharpe's target rifle, with all appliances, presented by Sharpe's Rifle Manufacturing Company, Hartford, Ct., value.....	\$125 00
Second Prize—A silver trophy, value.....	40 00
Third Prize—A gold medal, presented by Patrick Rooney, Esq., value.....	60 00
Fourth Prize—A silver medal, value \$20, and cash \$10.....	30 00
Fifth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Sixth Prize—A life membership in N. R. A., transferable.....	25 00
Seventh Prize—Cash.....	10 00
Eighth, Ninth, Tenth, Eleventh, and Twelfth Prizes—Each cash \$5.....	20 00
In all, twelve prizes, value.....	\$425 00

Competitors not making fourteen points at first distance will be excluded from further competition in this match.

COMPETITION XI.	
Press Match—Open to newspaper editors, or any newspaper or periodical, to be required to be a bona fide employee thereof. Weapon, any military rifle. Distance, 500 yards. Position, any. Rounds, seven. Entrance fee, none.	
First Prize—A gold badge, value.....	\$30 00
Second Prize—A fishing tackle, to be selected by the winner; presented by Messrs. Peck & Snyder, value.....	25 00
Third Prize—A silver trophy, value.....	10 00
Fourth Prize—A silver medal, value \$20, and cash \$10.....	30 00
Fifth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Sixth Prize—A life membership in N. R. A., transferable.....	25 00
Seventh Prize—Cash.....	10 00
Eighth, Ninth, Tenth, Eleventh, and Twelfth Prizes—Each cash \$5.....	20 00
In all, twelve prizes, value.....	\$425 00

Competitors not making fourteen points at first distance will be excluded from further competition in this match.

COMPETITION XII.	
Press Match—Open to newspaper editors, or any newspaper or periodical, to be required to be a bona fide employee thereof. Weapon, any military rifle. Distance, 500 yards. Position, any. Rounds, seven. Entrance fee, none.	
First Prize—A gold badge, value.....	\$30 00
Second Prize—A fishing tackle, to be selected by the winner; presented by Messrs. Peck & Snyder, value.....	25 00
Third Prize—A silver trophy, value.....	10 00
Fourth Prize—A silver medal, value \$20, and cash \$10.....	30 00
Fifth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Sixth Prize—A life membership in N. R. A., transferable.....	25 00
Seventh Prize—Cash.....	10 00
Eighth, Ninth, Tenth, Eleventh, and Twelfth Prizes—Each cash \$5.....	20 00
In all, twelve prizes, value.....	\$425 00

Competitors not making fourteen points at first distance will be excluded from further competition in this match.

COMPETITION XIII.	
Press Match—Open to newspaper editors, or any newspaper or periodical, to be required to be a bona fide employee thereof. Weapon, any military rifle. Distance, 500 yards. Position, any. Rounds, seven. Entrance fee, none.	
First Prize—A gold badge, value.....	\$30 00
Second Prize—A fishing tackle, to be selected by the winner; presented by Messrs. Peck & Snyder, value.....	25 00
Third Prize—A silver trophy, value.....	10 00
Fourth Prize—A silver medal, value \$20, and cash \$10.....	30 00
Fifth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Sixth Prize—A life membership in N. R. A., transferable.....	25 00
Seventh Prize—Cash.....	10 00
Eighth, Ninth, Tenth, Eleventh, and Twelfth Prizes—Each cash \$5.....	20 00
In all, twelve prizes, value.....	\$425 00

Competitors not making fourteen points at first distance will be excluded from further competition in this match.

COMPETITION XIV.	
Press Match—Open to newspaper editors, or any newspaper or periodical, to be required to be a bona fide employee thereof. Weapon, any military rifle. Distance, 500 yards. Position, any. Rounds, seven. Entrance fee, none.	
First Prize—A gold badge, value.....	\$30 00
Second Prize—A fishing tackle, to be selected by the winner; presented by Messrs. Peck & Snyder, value.....	25 00
Third Prize—A silver trophy, value.....	10 00
Fourth Prize—A silver medal, value \$20, and cash \$10.....	30 00
Fifth Prize—To the best individual score, a silver medal, value \$20, and cash \$10.....	40 00
Sixth Prize—A life membership in N. R. A., transferable.....	25 00
Seventh Prize—Cash.....	10 00
Eighth, Ninth, Tenth, Eleventh, and Twelfth Prizes—Each cash \$5.....	20 00
In all, twelve prizes, value.....	\$425 00

Competitors not making fourteen points at first distance will be excluded from further competition in this match.

COMPETITION XV.	
Press Match—Open to newspaper editors, or any newspaper or periodical, to be required to be a bona fide employee thereof. Weapon, any military rifle. Distance, 500 yards. Position, any. Rounds, seven. Entrance fee, none.	

Sporting News from Abroad.

(FROM OUR SPECIAL ENGLISH CORRESPONDENT.)

AS I write I can hear the breech-loaders cracking away right merrily amongst the turpils, and see white puffs of smoke rising on the hillsides, whilst two spots, one white and one red, denote two dogs which have dropped, or have been dropped to shot. The weather is inauspicious, for the rain "it raineth every day," and during the past week it has blown half a gale, and spoilt the very best meerschäum I could choose from my tobaccoists' stock. I don't think there has been on the whole so bad a crop of birds as the dyspeptics say. I for one have seen plenty, and killed enough to show me how beautifully developed is the instinct and sagacity of my black and tan stud setter, who is as good as wedded to me, and too good for any man's money, as the farmer said to the old duke who wanted to buy his old mare. As for the rain, I can laugh at it, for Cording's water-proof keeps it off like a cuirass would arrows, and I take good care that my boots are not of the light fantastic toe pattern. When a friend of mine in the North asked me to stalk deer with him, and throw flies over the bawling mountain streams, I may have hesitated and lit an extra pipe over it, but my mind was set on "things below," and I don't regret my choice, though twenty-five brace all told has been the best bag at present made by two games of which one is myself. The worst part of my shooting is, or perhaps are, the red legged Frenchmen. These wretched foreigners, unlike our English birds, and like enough to the Gauls themselves, are so terribly foad of running, especially where there is any chance of their being shot. They were imported by some lunatics, and have gone on and prospered, and like the Hanoverian rats, cannot be exterminated. "I doubt very much," said a distinguished naturalist to me the other day, "if it even really pays to acclimatise birds or animals." I laughed at him, then, and said something I thought very crushing about pheasants, but he bowed me over by some clever arguments about pheasants dying cut if artificial means were not employed to prevent it, and it never struck me to mention the French partridges. There is no fearing their dying out. They abound in some parts, and my shooting teams with them. My dog makes a point. "Now for it," I mentally ejaculate, and go up to him, and there is nothing there. Fifty yards further on he becomes cataplectic again, to all like effect, and after some mysterious roading and feathering and champing, the scent ends by putting up one of these red legs, and he looks as big fool as his master. They spoil the best of dogs and the best of tempers, and I wish the acclimatists had chosen pinnated grouse instead of them, or even quail, though I believe the latter are to be found in the fens of Lincolnshire in some abundance, and require some little "straight powder" to hit them.

Hunting men will soon have their turn again, and the advertisements for cleaning top boots and stretching breeches are fast re-occupying their old places in the sporting journals. I read some accounts of excellent sports with the cubs, but this is a schoolboy's sport, and as it necessitated nothing better than an ordinary hack and a knowledge of the country, it isn't quite good enough for me, at all events. The Carlisle otter bounds would be more in my line, if 250 miles didn't separate us. It is often difficult, even behind as plucky a fox as ever broke cover, to get up much feeling of excitement when your horse is blown, and you have to get across ten acres of ploughed ground; but with wild woodland scenery, and a frothy, sparkling river in the foreground, with the rough, unkempt and picturesque bounds trying every nook and "holt" along the banks, it is very suggestive of too many glasses over night, and strongish cigars, if you don't feel a hunter's joy, let the morning be bleak and cold as it may. There are no spears or other such atrocities allowed at Carlisle. The varmint has a fair chance, and though the bubbles mark his track, not a single thrust is leveled at him. The killing part of the programme is left to Lucifer, Dellman, Matchless, and Mermaid, the grand old bounds which, almost unique in their style and beauty, have won Mr. Carrick the master, fame, both in the field and on the show bench. If they can't follow him up drains or under the tree roots, there is another sort of physic in store for him; but it is purely of a canine nature, and consists of the terriers, and a terrier that will face an otter in his lair is no pampered drawing-room favorite or carpet knight. A badger is a joke to the salmon poacher, and not a patch on him. Talk about a dog beating his weight in wild cats, and you will yet have cut your meat lean. These otters bite, and then hold on and tear out their teeth without loosing their grip, and they tell me the way the old bounds are cut and scarred is a caution to snakes. Apropos of hunting, a Mr. Fitzwilliam, a well-known M. F. H., has started a theory (not a new one by the way, but an old one revived), that bounds don't require "blooding." This, coming from a man of Mr. Fitzwilliam's experience, carries some weight with it, but I do not agree with him, as I think an occasional taste of blood gives a bound far more dash and go than forced abstinence. Beckford, who is to bounds as great an authority as Stonehenge is to other dogs, is on my side; but the Cotley harriers, it seems, have not eaten a hare for the past five years, although they killed no less than 138 last season. Mr. Meynell, another hunting authority, was very indifferent about blood, and Mr. Osbalstone, who ranked "faerie princeps" in his day, says the best sport he ever had was on nine days in Leicestershire (our best hunting county), where his bounds never tasted a single fox, the system of rewarding hunting leopards in India with

the deer's entrails, and trained falcons with some portion of the quarry, seems opposed to this theory, and I cannot but think that it must beget indifference.

I have to record a pedestrian feat in the behalf of a somewhat brilliant amateur. Lieut. Byrnie, of the 38th regiment, (who a short time ago walked from Aldershot to London in less than seven hours), recently for a considerable wager walked twice the distance, nearly 70 miles, within 17 hours. He started from the officer's mess for London at 3 P. M., on Wednesday, and arrived at the mess at 7.39 A. M., on Thursday morning, thus winning by half an hour. He was heartily cheered, and appeared but little distressed. It is said a good deal of money changed hands over the affair.

The death has just been announced of a celebrated tragedian, known in professional circles by the *soubriquet* of Master Betty, at the mature age of 83. This pupil of Thespis some seventy years ago was the idol of all theatre loving London; and one of the shortest, yet most brilliant runs which ever an actor experienced in public. It is said that at seven years old he became almost miraculously "stage struck," whilst witnessing the acting of Mrs. Siddons, and when eleven, he prevailed on his friends to allow him to appear as Osman in the play of Zara. His success was wonderful, and far exceeded every one's anticipations at Belfast. He next played Douglas, in Homes' once famous play of that name, and when he betook himself to Dublin, crowded houses witnessed his rendering of Hamlet, Prince Arthur, Romeo, and other difficult characters. When he made his debut in London at Covent Garden theatre, the place was crammed within half an hour after the doors were opened, and he received an ovation unprecedented since the first existence of the stage. He was then engaged at Drury Lane for twenty-eight nights, at £50 a night, and the receipts for those twenty-eight nights reached the sum of £18,000, or about £600 a night. So great was the enthusiasm he inspired that Mr. Pitt actually used his influence to adjourn the House of Commons on one occasion to see him play Hamlet, and the University of Cambridge made him the subject of a prize poem. This case of a boy of 13 making at least £10,000 a year has never been equalled, and the extraordinary part of his history is, that when he grew older his talents decreased, and though at 13 he had thrown Macready, Kemble, and a dozen talented men into the shade, yet at 30 he failed to secure the slightest notice, and finally fell in disgrace, but with a large fortune.

The mare "Apology" is still well up in the betting for the St. Leger, but Atlantic, another favorite it is said, has broken a blood-vessel; and though Hermit won the Derby after a similar disaster, yet it is to be feared that he will not perform a similar feat. For account of this race, second only to English Derby, will be found in a future letter from

LISBON, J. R.

Shot Gun and Rifle.

GAME IN SEASON FOR SEPTEMBER.

Moose, *Alces Melchior*.
Elk or Wapiti, *Cervus Canadensis*.
Hares, brown and gray.
Wild Turkey, *Meleagris gallopavo*.
Woodcock, *Scolopax rusticicola*.
Ruffed Grouse, *Tetrao canadensis*.
Esquimaux Curlew, *Numenius borealis*.
Plover, *Charadrius*.
Gowit, *Limosa*.
Rabbits, *Lepus Virginianus*.
Snipe and Bay Birds.
Caribou, *Tarandus Jangifer*.
Red Deer, *Cervus Virginianus*.
Squirrels, red, black and grey.
Quail, *Gryz Tringoides*.
Pinnated Grouse, *Tetrao cupido*.
Curlew, *Numenius Argyreus*.
Sparrows, *Tringoides*.
Willetts.
Red or Rice birds, *Dolichonyx oryzivorus*.
Wild Duck.

Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish these entire sections that relate to the kinds of game in season. This would require a great number of our pages. In describing game we are guided by the laws of nature, upon which legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—Woodcock not plenty, though a shade lower in price, and selling at \$1 50 a brace. Perhaps the proportion of birds coming from the West is 100 to one killed in the States adjacent to New York. Prairie chickens rather scarce. Worth \$1 50 a pair. Birds in nice order. Majority young birds. Pinnated grouse in good demand, but hardly any supply. Selling at \$2 00 a pair. Reed birds from Delaware and rice birds from Savannah, all in prime order, selling at \$1 25 the dozen. Ox eyes—plover—and small bay birds, coming in, in good quantity, and in nice order. Wild pigeons, the early flights killed in Fulton county in this State, are selling at \$2 00 a dozen.

VERMONT.—*Grafton, Sept. 16.*—Any persons desiring some good partridge shooting would do well to visit this section. As I remarked to FOREST AND STREAM once before, there is not a good dog nor gun in this town. The country is rough and birds plenty, and we have a first rate hotel. —S. W. G.

MASSACHUSETTS.—*Salem, Sept. 20th.*—Bays birds plenty, black breast, plover not having been so numerous for years. Two Salem sportsmen, in one week, at Chatham, shooting 383 good birds, including duck, wild, yellow legs, plover, &c., not bad this for the old bay State. Coots are also reported in the bay. Prospects for quail fair. Woodcock and snipe scarce. Rail, a few of them. Quail on Cape Cod thick. Yours, R. L. N.

NEW JERSEY.—*Wareton, Sept. 21st.*—Shooting has improved, and fine bags are reported as having been made. On the meadows near West Creek, Barnegat, and here, curlew and brown backs have appeared in great numbers. One party in West Creek killed over forty on Thursday. On the same day several fine bags were brought in from the Barnegat meadows. While here I saw one sportsman come in with twenty brown backs, and another with curlew and brown backs; how many I cannot tell. Yours, A. BRICK.

PENNSYLVANIA.—*Philadelphia, September 16th.*—The eastery winds of the past two or three days prompted us to experiment with the rail at Chester yesterday. Fully twenty boats started from that point, some to try the flats on the Jersey shore, and others Chester Island; but nothing was done by any. My pusher, uncle Ed. Rump, brother of the famous defunct Bill, so long noted for his prowess with the push pole, worked over ground enough for me to have killed one hundred rail, but a lack of water prevented their being started, and we heard them all around us. Never have I seen the reeds and cover so dense. I boated all I saw, and was in number and five in one day, and counted up but twenty-one on their return. We need rain and "a big blow of weather" to make shooting good. To-day's showers savor well, and I hope to give you a better report the latter part of this or the beginning of next week.

I hear of nothing but small scores at all points on the Delaware. At Port Perio, 90, 84 and 78 rail have thus far been "high boats." This does not compare favorably with the record of the shooting of about the same date, and some places last year, which was published in the FOREST AND STREAM. At Chester 38 birds is the highest up to 15th, and at the Lazaretto, 29. On the flats in the neighborhood of Bristol, it is said 39 birds were boated by a sportsman one day this week, but I doubt it, for we have always had better shooting down the river, and birds are more plentiful there. I learn from parties at Chester that a company of three sportsmen boated 575 rail at Augustine in flats in three days the first of the season. Black ducks, teal and summer duck are beginning to arrive in the Delaware, but shooting for them will not commence until the weather is cooler.

HOMO.

VIRGINIA.—Snicker's Gap, of the Blue Ridge, Va., is said to be alive with quail.

—Between one hundred and fifty and two hundred of the different varieties of plover, besides immense numbers of snipe and reed birds, were killed in the marshes near this city yesterday. A pair of fine blue wing ducks lighted among a flock of tame ducks swimming near Jones' Point, this morning, but were soon singled out and shot by some of the many sportsmen who continually roam about that locality. —*Alexandria Gazette.*

—The Mount Vernon Ducking Club has been reorganized, and has elected the following officers:—J. H. Krubling, President; A. S. Bryan, Vice President; Henry R. Searle, Secretary; J. R. Moorehouse, Treasurer. They are now actively engaged in improving the marshes and quays, and as they have from Port Washington to Ocoquan Bay as their hunting grounds, taking in Mount Vernon, we expect to hear a good report of them. They propose to commence their shooting about the 1st of November, and continue during the season.

Messrs. Smith, Creevy, Woods, and Hagner paid a visit to the Duxbury on Wednesday last, and returned Thursday evening, having been successful in bagging in the order named 143, 87, 92, and 97 rail, (ortolan). This is the work of one tide, and is a fine showing. —*Washington Sunday Herald, 20th.*

MICHIGAN.—The St. Clair flats are favorite resorts for gunners, both from Canada and the United States. The Indian reserve on the Canadian side, has been overrun of late years by crowds, who have made a pretty clean sweep of the ducks, muskrats, fish, &c., without recognizing the rights of the Indians at all. To counteract the mischief the Indians have leased their marsh shootings for ten years at an annual rent of \$400, while they retain for their own exclusive use the animals of the fish. Trespassers will be warned off, and if they persist, will be prosecuted. This is a capital move; it will benefit the Indians and the duck-shooters, and preserve the animals. Any respectable person will find little difficulty in securing permission at reasonable times and on reasonable terms, and surely this is all that is necessary.

FLORIDA.—*Jacksonville, Sept. 19th.*—The weather is getting very pleasant and cool. Wild ducks have made their appearance on the river, a sign of early winter at the North, (so southern papers say) and an early crop of visitors South.

CANADA.—Game is plentiful in the North this season. A Parry Sound correspondent of the *Free Grant Gazette* reports that deer, duck and partridge are numerous.

—Wild pigeons are in great numbers through the States of Michigan, Indiana, and Wisconsin, and can be shot without much difficulty. These birds come in very nicely for the pot, especially when grouse and other game birds are scarce. They are generally to be found in the beech woods, and as there are large quantities of mast and beech this fall, they are likely to be plentiful.

—Moose have become so scarce in Maine that a bill will be brought before the Legislature at the next session to prohibit the killing of these animals for a period of five years. The bill ought to pass without debate.

—They have at least one vigilant and earnest conservator of game in Connecticut, and I am glad to know that our readers as an occasional correspondent of the FOREST AND STREAM. This is Mr. S. Chamberlin, of New Haven, who advertises in the city papers, over his own signature, a reward of \$25 to any one who will detect and prosecute any person violating the game law by shooting woodcock, quail, or ruffed grouse out of season, trapping or snaring game on another person's land at any time, or dealing in said game out of season. Mr. Chamberlin's offer holds good until July 1st, 1875.

—The Waltonian Club of Elgin, Ill., dedicated with all due honors their fine club house at Fox Lake, Wis., on Tuesday last.

—The Virginia Shooting Club of Illinois is an organization comprising nearly 130 members. On the 15th of September they shot a pigeon match which resulted in the killing of nineteen birds by one side and thirteen by the other, each side shooting at thirty-six birds. This week six prominent shots of the club, three on each side, will shoot for \$50 a side.

—Last week our Scotch friends began to ride shooting held a meeting. Colonel Laug was chosen chairman, with Sergeant Cameron as Secretary. Colonel Beattie, Captains Munro, Dingwall, Lyndsay and Bruce were appointed a committee to consider the matter, and to report on the qualification of membership and nomination of officers. After a short recess the committee reported that the name of the organization be "The Scottish-American Rifle Club

of New York;" that all men of Scottish descent be eligible for membership, and that the officers consist of President, Vice-President, Secretary and Treasurer. The committee's report was accepted, and a committee of three was appointed to wait on James Gordon Bennett, Esq., and ask if he will consent to become the President of the club.

—At Ottawa, Canada on the 18th, the Dominion Rifle Matches were continued. The Provincial Match—300, 500, and 600 yards was won by the Ontario team. Ontario 610; Quebec 287; New Brunswick 290; Nova Scotia 595. Asst. Surgeon Arkin made the highest score, seventy-six points.

—On the 21st at Creedmoor the contests took place between members of the Forty-Fifth, Ninth, Seventy-Ninth and Twelfth Regiments. The Twelfth team made the highest aggregate score yet recorded, 355. Their team will consist of Messrs. Gildersleeve, Fulton, Smith, Wood, Smith, Murphy, Roddy, Dolan, Van Rensselaer, and Beattie. The shooting of all the regiments was remarkably good. Very remarkable progress has been made in regimental practice during the year, which will no doubt be apparent at the Fall Meeting.

—It is not often that our breech loaders are directly pitted against the Metford rifle. On the 10th of this month at Hamilton, Messrs. Adams and Mason, with Remington's shot against Messrs. Morrison and Schwarz, the latter using Metfords. The shooting was to have been ten shots each at 800, 900, and 1,000 yards, but the Remington ammunition having given out, it was agreed that averages should be taken. Mr. Adams score was at

800 yards	4 3 3 4 4 4 4 4 4 4	—31	
900 "	—	4 3 4 3 4 3	—29
1000 "	—	4 3 4 3 4 4	—32
			83

The total averages were as follows:

Morrison	3.60	3.25	3.00	9.85 Metford.
Schwarz	3.14	3.28	2.90	9.32 "
Adams	3.10	3.25	3.00	9.35 Remington.
J. Mason	2.80	1.80	3.75	10.35 "

A few facts of this character may do a great deal to keep up our men in heart.

—The following very handsome score was made lately with a Remington military rifle by Mr. F. J. Millen of the *Herald* staff, and President of the Irish-American team, 500 yards. 4 4, 4, 3, 3—18.

—It is highly probable that the Third Regiment National Guards of New Jersey will construct a range.

—A. H. Bogardus, of Chicago, and Ira A. Paine, of New York, will shoot a match at pigeons on September 26th. Paine to select the place. They are to shoot at one hundred single pigeons each, from ground traps, twenty-one yards rise, eighty yards boundary, with one ounce and a quarter shot, for \$1,000 a side and the championship of the United States.

FRANKLIN, Tenn., September 17th, 1874.

EDITOR FOREST AND STREAM:—

On the 17th inst. trap shot came off at this place. Thinking you would like to hear from this part of the country, I send you the score.

D. K. H.

ANOTHER GUN TRIAL.

JACKSON, Miss., September 8th, 1874.

EDITOR FOREST AND STREAM:—

Since my letter of July 20 on the Chicago Gun Trial, in order to verify my conclusions, we have had a gun trial of our own, the result of which you will below. Very few persons know the capacity of their guns, except the actual result in the field, and few are acquainted with the proper charges of powder and shot necessary for their respective pieces. I am more or less convinced of this fact from inquiries I see in your "Answers to Correspondents." Why do not those querists go out and try their guns, say with one ounce of shot from No. 7 to 30, and use 3, 34, 31 to 4 drachms of powder, according to weight. If a 12 bore gun use but very little, if any, more shot and powder than for a 10 bore, except No. 7, when 4 or 5 oz. more might be advisable. Shoot each charge six times, three from right and three from the left barrel, as we did, at 30-inch circular targets, remembering that over 130 pellets is fair shooting, so far as pattern is concerned, when shooting No. 7 shot, the standard at gun trials. We used Laidlaw's No. 7, and our own ducking No. 4 powder.

GERMAN GUN, 12 BORE, 32 INCH, 8 LBS. 1 OZ. WEIGHT.	
3 drachms powder, 1 oz. No. 7 shot; average, 77.	
34 " " 1 oz. No. 7 " " 91.	
31 " " 1 oz. No. 7 " " 91.	
4 " " 1 oz. No. 7 " " 124.	
DOUGAL GUN, 12 BORE, 30 INCH, 7 LBS. 1 OZ. WEIGHT.	
3 drachms powder, 1 oz. No. 7 shot; average, 113.	
31 " " 1 oz. No. 7 " " 128.	
34 " " 1 oz. No. 7 " " 143-1-3.	
CLARKE & REINER, 10 BORE, 30 INCH, 8 LBS. 1 OZ. WEIGHT.	
3 drachms powder, 1 oz. No. 7 shot; average, 135-1-6.	
31 " " 1 oz. No. 7 " " 160-1-6.	
34 " " 1 oz. No. 7 " " 201-1-6.	
4 " " 1 oz. No. 7 " " 217-2-8.	
GERMAN GUN (Same as above).	
3 drachms powder, 1 oz. No. 8 shot; average, 185.	
31 " " 1 oz. No. 8 " " 166.	
34 " " 1 oz. No. 8 " " 150.	
4 " " 1 oz. No. 8 " " 175-1-2.	
DOUGAL GUN (Same as above).	
3 drachms powder, 1 oz. No. 8 shot; average, 218-1-2.	
31 " " 1 oz. No. 8 " " 153-1-3.	
34 " " 1 oz. No. 8 " " 129.	
CLARKE & REINER (Same as above).	
3 drachms powder, 1 oz. No. 8 shot; average, 212-3-8.	
31 " " 1 oz. No. 8 " " 217-3-3.	

From these tables you will see that the German gun and the Dougal distributed No. 7 shot better with increase of powder, while almost exactly the reverse is true for the two guns when No. 8 shot was used. The Clarke & Reinier, on the contrary, counted more pellets in the ratio of its increase of powder, except when four drachms were used with No. 7 shot. We had no penetration sheets; the German gun penetrated three

Hostetter Bitters almanac. Target was made of white pine, nailed against a stump, and not at all solid. Distance forty yards, measured with tape line.

There are some things in a gun's shooting that cannot be accounted for. In one batch of six shots the Clarke & Reinier had five shots with over 300 pellets each, the sixth had less than 100 pellets; the German gun drove one wad one-fourth of an inch into the target, and showed less than fifty pellets at the same time.

I would mention that a 10-bore gun will not chamber five buckshot, (see FOREST AND STREAM Sept. 3d) but only three No. 0, and would at five sportsmen to use No. 0, No. 8, 9, or 10 shot only.

Very respectfully, GEO. C. EYRICH.

NOT DERELICT.

We are glad to print, on so good an authority, a flat denial of the report alluded to in the letter subjoined.—ED. PHILADELPHIA, September 17th, 1874.

EDITOR FOREST AND STREAM:—

"I feel no foundation whatever in the report that a member or members of the Philadelphia Sportsmen's Association have been shooting rail before the season began on the Delaware River. A report was so circulated, and such a charge was made at a meeting of the club by one member against three or four others, but merely on the strength of what somebody had said—current rumor. I am glad to state that the gentleman who was charged with violating the laws of the society are men of *reputation and standing*, and have emphatically denied it to the satisfaction of their fellows.

There are always dissatisfied members in every association, who are ever ready to listen to evil reports and create mischief and trouble. After carefully looking into the whole matter, I am satisfied the charges were made, not in the interests of the club, but instigated by malice. All the market shooters are good fellows in Philadelphia, and the sportsmen's association, for the reason that they are restrained from violating the law. A number were prosecuted last winter, and now take every opportunity to spread all manner of evil reports. For their benefit, let me state, they will be as closely watched in the future as in the past, for we intend that our game laws shall be recognized.

"IHXO."

NOVEL CAPTURE OF A DEER.

MARQUETTE, Mich., August 26th, 1874.

EDITOR FOREST AND STREAM:—

I will tell you of a little adventure that happened here a short time since. Last week, as a party of three were returning from a day's fishing at Presque Isle, which is a few miles from Marquette on the lake shore, they espied something dark in the water, which, as they neared, was found to be swimming towards them. It was almost dark, and they were in a small boat, a mile or more from land. Getting closer it proved to be a large buck. They waited until the horse and placed his head over the edge of the boat. He made several frantic attempts to get up, but having no foot hold he was unable to do so. Before reaching shore they decided it was best to kill him, as they were afraid if he once touched bottom it would be good-bye, so they slaughtered him then and there with a dark knife which one of the party fortunately had. He had long prongs on his horns, which he had had to have been at least ten years old, and weighed, when dressed, 287 pounds. Why he was there at that time of day no one can conjecture. Several years ago another one was taken in almost the same place and manner.

In your publication of my last you make me say that fourteen trout were taken in two hours in a lake near Grand Marais. It should have been fifty-four trout.

Partridge are very plenty now in the woods. Two guns bagged twenty-five on last Tuesday afternoon. I remain yours truly, H. R. MATHER.

Sea and River Fishing.

FISH IN SEASON IN SEPTEMBER.

Black Bass, *Micropterus salmoides*, *micropterus nigricans*, *striatus*, *lunulatus*, *salmoides*. Weakfish. Striped Bass, *Morone saxatilis*. Sheepshead.

Trouting is permitted in Maine and Canada until October first. Trout (black bass). Sheepshead. Drum (two species). Tallofish. Grouper. Kingfish. Sea Bass. Rockfish. Striped Bass.

FISH IN MARKET.—What fish is that lying gaudy and glisty on the slabs? Certes! he is not a pretty fish. He has an ugly snout; his under jaw is hooked and has worked up into a socket in his upper jaw. He looks slimy and out of shape; has huge girth and squat form. He no more looks like the lordly salmon than does a pewter mug look like a silver flagon. He is more *esot* than *salmo*; and yet it is a true specimen of the king of fish, the beautiful shapely salmon, but now in the neglect of his Protean forms. We turn from him in pity and think it a shame that he has been caught in the Miramichi and sent to New York market, but that full of milk he should have been left to reproduce his kind in the Canadian River. Nature points so clearly when the salmon is out of season that simply to look at this fish, makes one loathe him. As it is, he is worth only thirty-five cents a pound, with no takers. Fish, owing to the storms of last week, are rather scarce. Blue fish, however, "animated chopping machines," as Professor Baird calls them, "the business of which is to cut to pieces and otherwise destroy as many fish as possible in a given space of time," these hungry blue wolves are in great abundance, and worth eight cents. By the end of next month blue fish will be even finer, and then our winter stores will be put up. Spanish mackerel are very scarce. It is likely that by the end of the month the finest of the *Scomber* family will betake themselves to warmer climes. Spanish mackerel are worth fifty cents a pound. Perhaps Spanish mackerel have not been quite so plentiful this year as last; at least fishermen say, so but we can never determine these points accurately, until Professor Baird's tables of receipts are used by the fish dealers, when more exact data will, we trust, be obtained. Weak fish in great abundance, selling at ten cents. Some cern, caught off Long Island, coming in, worth twenty-five cents. This fish should be better known, as it is very excellent food. Sheepshead scarce, and selling at twenty-five cents. Old Wadenoth in 1649 says: "This fish makes broth so like Lutton broth that the difference is hardly known." Sea bass hard to find and worth twenty-five cents. The catch will increase before long, and later this fine fish will be plentiful. Soft crabs in

abundance at \$1.25 a dozen. Frogs scarce at sixty cents a pound. Noank lobsters in good supply. "As the harvest of the ocean diminishes, not as to quantity but as to variety, we will commence to draw on the fish of our inland seas, and soon salmon trout and white fish from the lakes will be on the slabs.

New Jersey.—*Beery, Sept. 18th.*—Friday, 11th, crossed boat and found numbers of sea buck, but they refused bait. Sailed to the northward about eight miles, and found immense quantities of blue fish, but they refused to look at a squid. Worked south with the fish and succeeded in landing twenty-four. As soon as hooked they would commence disgorging young porgies; and when landed in the boat they would scatter them far and wide. Curiosity induced me to open one fish weighing about three and a half pounds, and I removed from its stomach thirty-five young porgies averaging about three inches in length. The opinion of the Smithsonian authorities appears to be, that blue fish do not prey upon porgies, but my experience proves the opposite. On Saturday we proceeded to sea at 7 A. M., and returned at 12 M. with forty-one blue fish and one Spanish mackerel. From the amount of food disgorged by the fish, I have deemed it best to abandon the sport and wait until the blue fish have captured all the young porgies between Barnegat and Sandy Hook. If this is accomplished by the 25th, I am satisfied that there will be rare sport at Barnegat for the disciples of the squid.

AL. PRESCO.

RANGELEY LAKES.—During the two months of July and August the fishing in this vicinity has been remarkably good, better than usual in fact. But from September 1st to the week ending September 14th the fishing has been very poor, and at a time when it ought to be perfection. The following large trout only have been captured, two pounds and over in weight:—

Mr. Hobbs, of New York, captured at the mouth of the Rangeley River, on the 7th instant, two trout weighing each four pounds. Mr. E. S. Sykes, of Hartford, Conn., took on the 11th instant, off Sandy Point, Mooseheadmagnum Lake, in half an hour, three trout of two pounds each. Mr. T. L. Page, of Boston, Mass., landed at the outlet of Rangeley Lake, on the 12th instant, one trout weighing five and a half pounds, also had a rise from two other fish, judged to be about the same weight, but he failed to strike them. Mr. Stadlinair, of Brooklyn, N.Y., captured on the same day in Rangeley Lake one trout weighing 25 lbs. The temperature of the Rangeley and Kennebec lakes is 60°, of the Mooseheadmagnum Lake, 64°. The weather has been clear and bright, only a few light storms since the month came in. The thermometer at 6 A. M. ranges from 34° to 38°, at 12 M. 70° to 85°, and at 7 P. M. from 50° to 58°, and the black flies and mosquitoes are as plenty as in June. Dr. Ordway and party of Boston have been camping on the Cupsuptuck stream and fishing with fair success. John J. G. Whittier, the poet, has been stopping on the Rangeley Lake the past week.

CANADA.—A great improvement is taking place in the salmon fisheries of Quebec, and in some localities the yield has increased 300 per cent. This result the Commissioner, Mr. Whitcher, attributes entirely to protecting the fish whilst breeding, and in reducing the number of nets used. The river Moisie has improved greatly, and the beneficial effects of decreasing the netting is proved by the fact, that with 15,000 fathoms of nets in 1859, the Moisie yielded 75,000 pounds of salmon, whilst in 1873, with only 2,500 fathoms of nets, it yielded 204,000 pounds.

—The Cape Ann Advertiser mentions a swordfish captured by the crew of the fishing schooner Laughing Water of Swampscott, Capt. John Higgins, while off Moon Island, on Friday evening, probably the largest ever caught in northern waters. Upon being "dressed" it weighed 690 pounds, and must have turned 1,000 pounds when caught.

AS TO BASS.

LEESBURG, Virginia, September, 1874.

EDITOR FOREST AND STREAM:—

I promised to let you know if the black bass took the fly in Elk River, near Sewanee, in Tennessee. Dr. Elliott, one of the professors in the University of the South, whipped the above mentioned stream upon two different occasions with no response. I tried the same rod from Andrew Clerk & Co., in the same stream, but failed to take a bass. I caught, however, a black perch about fourteen inches long on a bass fly. The black bass certainly will take the fly, notwithstanding all this, for as I passed through Knoxville I found that sportsmen take them there with the fly. And upon my arrival in Leesburg I found that Mr. Perry, fish commissioner for Maryland, taking them with the fly when none else could catch them with live bait. I heard of authentic instances of their capture on the Tennessee and one of its tributaries before I left the West. Leesburg is quite a sporting town now. Nearly every young man has a good rod, breech loaders are common, and fast horses are not unusual. With boats and bait furnished on the river, fishing has ceased to be that laborious pastime it used to be. Twenty-three bass, weighing fifty pounds, were brought to town yesterday by one of our enthusiastic anglers. T.W.

SALMON SCORES OF THE RESTIGOUCHE.

METAPEDIA, QUEBEC, September 8th, 1874.

EDITOR FOREST AND STREAM:—

The season for salmon fishing has closed, and as I know you are fond of statistics I thought I would let you know what has been done on the Restigouche this summer. The first caught was by Captain Llewellyn, on June 20th, and his score on August 6th was 96 salmon, 14 grise; average of salmon, 19 pounds. Mr. Whitty, a person, killed 187; George Stephen and two friends, 147; Mr. Perry, 117; Mr. Llewellyn's party, 75; other friends of the Leesons, 149, the largest 42 pounds. A brother of Llewellyn, 35; friends of Sir Hugh Allan, 34; residents of Metapedia, 82. And now my score, which is the biggest in the river. I commenced on last day of June, when I caught 1; on the 8th of August I stopped at 117, the largest being 34 pounds and smallest 10 pounds, including 25 grise. I started up river and returned on the 15th, the last fish, including 25 grise, I killed 13, one of them the largest ever caught in this river. It weighed 45 pounds. This makes my score 130, and gives an average of 19 pounds. Beside these I have 22 grise. So you see the fishing has been good. I was disappointed in not seeing you here, but hope to have you for a month next year. Yours truly, C. S. SNOW.

[Mr. Shaw's average of 19 pounds is very remarkable, although it is said that forty years ago the salmon used to run eleven to the barrel in this river. His 45 lb. fish is the largest we have ever heard of, and we have talked with Adam Ferguson, the oldest settler on the Restigouche.—ED. F. & S.]

The Horse and Course.

—The Fleetwood Park Association gave a purse of \$10,000, free for all, barring Goldsmith Maid, also \$1,000 purse for the 2:31 class. This exciting trot took place on Monday, September 21st, over the Fleetwood Park course. The weather was cool, but the track was heavy, owing to the late heavy rains, and the vast gathering of people, among whom were several ladies and gentlemen who accompanied the Irish riders to this city, was present. The first race being a purse of \$10,000 divided as follows: the first horse to receive \$4,000, the second \$3,000, the third \$1,500, and the fourth \$1,200; the distance, mile heats, best time in five in harness. The entries were:—Mr. Alden Goldsmith's brown gelding Gloster, W. Lovell's bay mare American Girl, A. T. Morrill's black gelding Camors, and William Humphrey's chestnut gelding Judge Fullerton. There were several false starts, and at the eighth they were given the word. Gloster won the race easily by four lengths in 2:20, Camors second, American Girl third, Fullerton nowhere. In the second heat American Girl won, Gloster having broken badly at the start. Time—2:22. The third heat Fullerton led, but Gloster, who had broken at the quarter pole, came under the wire a winner by a length. Time—2:21. The fourth and final heat American Girl led all the way until coming to the three-quarter pole, when Gloster closed on her and came home a winner of the race and first premium in 2:21. American Girl took the second prize, Camors the third, and Judge Fullerton the fourth. The second race was for a purse of \$1,000 for horses that had never beaten 2:31. There were eight entries in five horses started. Geo. D. Deane won the first, third and fourth heats and race. Time—2:29, 2:34, 2:34.

—The Mystic Park races, Boston, Mass., which were postponed last week, were continued on September 21st. The first race was for the Ladies' Stake, for two-year-olds, \$80 entrance, half forfeit, \$300 added. Of the seven entries only three came to the start, viz.:—Eulster, Ino and Elmwood. Eulster was the favorite and won in fifty-two seconds. The second race was for the Morris Club purse of \$400, mile and a half, for all ages; \$300 to the first, \$75 to the second, \$25 to the third. The starters were Lizzie Lucas, B. F. Carver, Lorena, Stockwood and Belair. Lizzie Lucas won after a warm contest with B. F. Carver. Time—2:40.

—The Society of Agriculture and Horticulture, of Westchester County, N. Y., held their first day's exhibition of trotting horses on September 1st. The first race was for a purse of \$500 for horses that had never beaten three minutes, mile heats, best three in five in harness. James Patterson's May Bird won in three straight heats. Time—2:41, 2:44, 2:30. The purse of \$100 for three-year-olds, mile heats, in harness, was won by Fearless.

—The Pacific Jockey Club has postponed the great four mile running race for \$25,000 until the 14th of Nov., in order to accommodate owners of eastern horses. The entries to close October 2d.

—The great St. Leger race for three year old colts and fillies came off on the Doncaster course on September 16th. Mr. Laundes' chestnut colt, Willy Apolonia won, carrying 17 lbs. Sir R. Bulkeley's chestnut colt Leolinus came in second, and Mr. W. R. Marshall's brown colt Trent third. Our special correspondent Idstone, Jr., from whom we expect a full report of this important race, has repeatedly stated in these columns that Apology would win; and she did.

—The Maryland Jockey Club have erected a new club house for their course at Pimlico, which will add not a little attraction to the coming fall meeting. The first day of the races will take place on the 20th of October, and will continue on the 21st, 22d and 23d. The following are the most prominent stakes which will be run for:—Lexie stakes, the Gentlemen's Post stakes, Grand People Club stakes, Bowle stakes, four mile heats. The amount of stakes and purses will reach in the aggregate \$30,000.

—A man bought a horse. It was the first one he had ever owned. He saw in a newspaper that a side window in a stable makes a horse's eye weak on that side; a window in the front hurts his eyes by the glare; a window behind makes him squint-eyed; a window on a diagonal one makes him shy when he travels; a stable without a window makes him blind. He sold the horse, —Exchange.

THE CHECK REIN.—Why is it that so many of our farmers, and nearly all of our city carters insist in using a tight rein on working horses? When a horse, left to his natural inclination, has a heavy load to pull, he can best exert his back bone in one continuous line, and this he will probably do if not prevented by a tight check rein. Some claim that it prevents a horse from falling down, but when a horse falls, a tight rein will most effectually prevent him from getting on to his feet again. Try it without the rein and see if we are not correct in our practice and theory both. —Journal of the Farm.

Miscellaneous.

THE TENNESSEE

SPORTSMEN'S ASSOCIATION

WILL HOLD

A GRAND PIGEON SHOOT,

A BENCH SHOW OF DOGS,

AND A SERIES OF

FIELD TRIALS,

FOR POINTERS AND SETTERS, AT THE

AGRICULTURAL FAIR GROUNDS,

MEMPHIS, TENN.,

ON OCTOBER 7th, 8th, 9th, and 10th.

The attention of owners of Kennels throughout the country is invited to these, the first Field Trials in America.

H. C. PRITCHETT, Supt.

W. H. HOLABIRD,

Valparaiso, Ind.

INVENTOR AND MANUFACTURER OF

Holabird's Shooting & Fishing Suits

Made of the best English duck, rendered Water and Wind proof, and great color arranged so as to carry a large load of shells and game and balance well. A vest with sleeves which will carry shells to be worn with without a decrease in the freedom of the freest movement of the arm, the coat worn without the vest for grouse and quail shooting, and the whole suit for waterfowl.

Price—Coat, \$20.00; Pants, \$3.50; Vest, \$3.50; Cap, \$3.50.

The goods are made up splendidly, and will be made to measure at the above prices, and sent C. O. D. Address: W. H. HOLABIRD, Valparaiso, Ind.

Sep 24-61

Field, Cover and Trap Shooting.

By Capt. A. H. Bogardus, Champion Wing Shot of America. A valuable book for all sportsmen. Containing practical hints and instructions for marksmen of the present day, upon guns and dogs, their use, &c., and hints and habits of game birds, water fowls, &c. Large 12mo., cloth binding, 250 pp. \$2.00. To be had of all booksellers and the leading gun stores, or will be mailed to any address, post paid, on receipt of price, by Publishers, 27 Park Place, N. Y.

A. W. LONG. A practical treatise on the habits, habits and methods of shooting, and some special explanations for building blinds and decoys, the training of water retrievers, and other valuable miscellanea. American Game in its seasons, duck shot, her. 12mo., 250 pages, cloth, illustrated. \$2.00. To be had of all booksellers and the leading gun stores, or will be mailed to any address, post paid, on receipt of price, by J. B. FORD & CO., Publishers, Ready Ship, 25th, 27 Park Place, N. Y.

The Publishers of FOREST AND STREAM

In order to stimulate the development of

MANLY AND ATHLETIC EXERCISES,

AS OF

FISHING, SHOOTING, ARCHERY, CRICKET, FOOTBALL, and CROQUET.

Offer the following prizes for clubs (clubs to be selected by the Association).

Single Subscription per Annum \$5

Starting Clubs.—Agents, and others interested, are advised that we do not insist upon their starting with all clubs to secure our prizes. They can send three or more at a time, and on forwarding the requisite number within 60 days will be entitled to same premiums as if all were sent together.

CRICKET.

For \$30 00 four copies, one year, with one best spring bat, one Colledge bat, one Dark cricket ball, price \$7.50.
For \$25 00, five copies, one year, with a complete cricket set, one Colledge bat, one polished bat, Clapshaw; one Dark cricket ball; one set of stumps; price \$12 00.

FOOTBALL.

For \$15 00, three copies, one year, with one Rugby football; price \$6 00.

FISHING RODS.

For \$15 00, three copies, one year, with one superior four joint light rod, suitable for all kinds of fishing; price \$7 00.
For \$25 00, twelve copies, one year, with one suitable for trout, black bass with fly, or for trolling bass or pickerel; as fine a rod as can be made, German silver tipped, with three tips; price \$25 00.

CROQUET.

For \$30 00, four copies, one year, with very handsome set of croquet; price \$7 00.
For \$25 00, five copies, one year, with superb set of croquet; price \$10 00.
For \$30 00, six copies, one year, with the finest set of croquet made; price \$14 00.

REMINGTON RIFLE AND SHOTGUN.

For \$75 00, fifteen copies, one year, with one Remington Deer rifle; price \$38 00.
For \$50 00, ten copies, one year, with one Target rifle, 30-inch octagonal barrel, to be used for sporting, hunting, or target shooting; price \$38 00.
For \$100, twenty copies, one year, with one Remington double barreled, breech-loading, shot-gun, one of the best guns ever offered to American sportsmen; price \$45 00.

SHARPE RIFLE.

For \$100, twenty copies, one year, with one Sharpe sporting on target rifle, best quality; price \$40 00.

WARD-BURTON RIFLE.

For \$300, forty copies, one year, with one Ward-Burton rifle magazine gun, for large game, price 30 00.

SINGLE AND DOUBLE BARREL MUZZLE LOADING SHOT GUNS.

For \$20 00, four copies, one year, with one American single barrel gun, perfectly safe, five barrels, walnut; price \$10 00.

For \$35 00, seven copies, one year, with one American double gun, handy and reliable gun every way; price \$18 00.

For \$50 00, ten copies, one year, with one double boys' fine steel barrel gun, a safe gun every way for boys; price \$36 00.

For \$75 00, fifteen copies, one year, with one double gun, English laminated steel barrels, handsome finish; price \$45 00.

CASH PREMIUMS.

To those who prefer cash premiums a discount of 25 per cent. will be made on all clubs of three and upwards.

Every article is of the finest quality and will be sent free of expense.

Remitting Money.—Checks on New York City banks and bankers are best for large sums; make payable to the order of FOREST AND STREAM PUBLISHING COMPANY, 103 FULTON STREET, NEW YORK. Post Office Money Orders for \$50 or less are cheap and safe also. When these are not obtainable, register letters, adding stamps for postage and registry; put in the money and seal the letter in the presence of the post master, and take his receipt for it. Send the names with the money as fast as obtained, that subscribers may get the paper at once.

ery, Randolph, Cattaraugus county, N. Y.

REMINGTON'S Long Range Breech Loading TARGET RIFLE.

Weight, 10 Pounds.

Length of Barrel, 34 inches.

Calibre, 44-100 Bchies.

By a careful examination of the records (see this paper May 21st to July 20th inclusive.) it will be seen that
the above rifle stands over 22 PER CENT. ahead up to date, in the average of all the Long Range matches
that have taken place this year, and winner Nine out of Twelve FIRST PRIZES, including the "Rem-
ington Diamond," "Amateur Club" and "Amateur Club Long Range" badges—having made the highest score
ever made at Creedmoor. Send for illustrated treatise on Rifle Shooting, just out, for particulars concern-
ing the above rifles. Sent free.

The Great American Coffee Pot.

THE CHAMPION OF THE WORLD.

Perfection in the Art of Making Coffee at Last Attained.

This household wonder makes coffee by steam and boiling water combined; it never boils over, makes its own
hot water, does its own dripping, and in the shortest time on record it yields coffee as clear as amber, extracts all
the strength of coffee, and retains all its aromatic and nutritious properties. The only perfect working coffee
ever offered to the public, and yet so simple in construction and operation that even a child cannot fail to
make most delicious coffee. Family size, copper bottoms and wire gauze strainers, one gallon, \$3; three
cups, \$2.75; two quarts, \$2.50; one quart, \$2.25; sent to any address on receipt of price. Tin bottoms, 30
cents less. Coffee and Tea Urns, plain or nickel-plated, furnished hotels and saloons to order. Royalty stamps
for sale to manufacturers.

Send stamp for illustrated circular and terms.

**THE BEST SELECTION OF TROUT AND SAL-
MON RODS, REELS, LINES AND FLIES.**

Medals awarded at the World's Fair and American
Institute for our superior Artificial Flies.

Miscellaneous.

This arm was submitted in competition with over
one hundred different systems, American and Euro-
pean, to the Board of United States Officers, appointed
by Act of Congress, 6th June, 1872, for the pur-
pose of selecting the best arm for the service, and of
which Brig. Gen. A. H. Terry was President. It suc-
cessfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for
the military service by all nations is only a question
of time; that whenever an arm shall be devised which
shall be as effective as a single breech-loader, as the
best of the existing breech-loading arms, and shall at
the same time possess a safe, easily manipulated
magazine, every consideration of public policy will re-
quire its adoption."

Resolved, further, That the experiments before the
Board with the Ward-Burton Magazine System have
so impressed the Board with the merits of this gun,
that they consider it as more nearly the best of the
magazines above specified than any other tried by them
or of which they have any knowledge, and it does
recommend that a number of magazine muskets be
sent on the plan for further trial in the field." (See
Ordinance Report.)

We are now receiving orders for these guns, and due
notice will be given in this paper when they are ready
for delivery.

The following is our scale of prices: Special Maga-
zine for large guns, carrying from 5 to 8 cartridges,
70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10
lbs. weight, from \$60 and upwards, according to finish.
Special Long-range Magazine Rifle for Creedmoor
shooting, 90 grs. of powder, 450 grs. of lead, carrying
3 to 5 cartridges, weighing 10 lbs. from \$100 and up-
wards. Magazine guns for general use, carrying 8 to
9 cartridges, 60 grs. powder, 350 grs. lead, from \$40
and upward. Single Breech-Loader, Creedmoor
shooting, for long range, 90 grs. powder, 450 grs. lead,
from \$60 and upward. Single Breech-Loader for
general use, 6 to 7 lbs., 60 grs. powder, 350 grs. lead,
from \$30 and upward. The calibre of all our rifles,
unless otherwise ordered, will be 45-100 in.

THE SINGING LESSON.

A NIGHTINGALE made a mistake;
She sang a few notes out of tune;
Her heart was ready to break,
And she hid herself from the moon.
And wrung her claws, poor thing,
But was far too proud to speak;
She tucked her head under her wing,
And pretended to be asleep.

A lark, arm-in-arm with a thrush,
Came sauntering up to the place;
The nightingale felt herself bluish,
Though feathers hid her face;
She knew they had heard her song,
She felt them quicker and snerer;
She thought this life was too long,
And wished she could skip a year.

"O nightingale!" cooed a dove
"O nightingale! what's the use?
You bird of beauty and love,
Why behave like a goose?
Don't skulk away from our sight,
Like a common, contemptible fowl;
You bird of joy and delight,
Why behave like an owl?"

"Only think of all you have done:
Only think of all you can do;
A false note is really fun
From such a bird as you!
Lift up your proud little crest;
Open your musical beak;
Other birds have to do their best,
You need only to speak."

The nightingale shyly took
Her head from under her wing,
And, giving the dove a look,
Straightway began to sing.
There was never a bird could pass;
The night was divinely calm;
And the people stood on the grass
To hear that wonderful psalm!

The nightingale did not care,
She only sang to the skies;
Her song ascended there,
And there she fixed her eyes.
The people that stood below
She knew but little about;
And this story's a moral, I know,
If you'll try to find it out!

JEAN INGELV.

Muskoka Land.

I PROMISED a few facts respecting the Muskoka country, which lies a hundred miles to the northward of Toronto, in Canada, and stretches away to Georgian Bay. Until recently it was a wilderness, but within five years or so, numerous towns and hamlets have sprung up, many summer hotels have been opened at attractive points, and settlers have poured in with a rapidly equal to the settlement of many parts of our own Western country. A railroad has penetrated into its heart, steamboats ply upon its larger lakes, and some excellent highways traverse its length and breadth. It is emphatically a country of forests, lakes and rivers. The lakes vary greatly in size; the larger ones thirty or forty miles in length, and the smaller ones mere ponds, but clear and deep, and all abounding in salmon trout, perch, black bass, &c. The principle rivers are the Muskoka, with its two branches, both heading in lakes, and broken by many falls; the noble Magnetewan, the Severn, Moon River, Sharpe's Creek, South River, and the Kashehebagomog. Large trout abound in the South branch of the Muskoka, which is broken by thirteen falls. This stream is some ten rods wide and uniformly deep, with forests impinging upon the margin, in which deer are very numerous. There are but few ruffed grouse here and but little small game. In the North Muskoka, there are no trout. In the Magnetewan, which empties into Georgian Bay, the speckled trout reach five pounds in weight, black bass eight pounds, and pickerel fourteen pounds. This river traverses the finest deer country in Canada. Grouse are also numerous, and ducks in their season. In Moon River

are monster muskallonge, or maskinonge. This stream is the outlet of Lake Muskoka. On the Severn, between the towns of Bracebridge and Gravenhurst, is a fine ruffed grouse district. The whole country is now so accessible that the sportsman can easily visit the principal hunting and fishing grounds in the space of a single month. At the most frequented places, boats, canoes, dogs, and guides can be procured. A canoe with guide will cost \$2 per day. Provisions and wagons can be obtained at the larger towns, but it is advisable for the sportsman to bring his own camp kit and tent. Heavy clothing is requisite at all times of the year, although the mid-summer days are often very hot. On September 3d I sweltered at mid-day, and suffered from the chill of a frosty night. For a successful and enjoyable trip, I should recommend a complete tour of the lakes upon which the several steamers ply, with stoppages at each, making the very comfortable hotels headquarters, and taking excursions to the adjacent hunting and fishing grounds; camping a week on the South Muskoka, and ten days on the Magnetewan.

Perhaps I can make the tour and route intelligible to intending visitors by taking them with me from the point of departure. To those leaving the States, Toronto is the first objective point, reached from New York by the Erie and Central railroad, via Niagara Falls and Suspension Bridge, and from the West by Lake Shore and Great Western. The great bugbear to strangers is "crossing the line." At Clifton, we encountered his much-dreaded Eminence, the Customs Inspector—one Mr. McGrath—whose stature reaches six feet and more or less inches. His face is familiar to those who have travelled this route for many years past, and many wayfarers have had occasion to acknowledge his friendly offices, especially if they be ladies or nervous old women. His gallantry and his consideration are only exceeded by his volubility on the fish question. On all sporting matters he is enthusiastic. Gentlemen of the rod and gun are his especial favorites. It may readily be imagined, then, that when we presented ourselves, with our luggage, for inspection, his sympathies were at once touched. Locks and straps remained sacred.

"So you are sportsmen, you say?" chuckled Mac. "Faith, I never trouble sportsmen. Sure, I'm a sportsman myself. Is it for salmon you're going? Many's the beautiful big salmon I've taken from under the bridge on the Liffey at Dublin. You should have seen the fly I hooked them with—one of my own pattern, with a brown body, and a blue wing, and a red tail, with a bit of hog's fur for a hackle! That's the fly that will take the salmon. What's that you say? not going for salmon? well—no matter—success to you, whatever you do, and may you have plenty of luck! Now here are the checks for your luggage and there is the cars, and you'll have plenty of time for dinner."

Here, surely is a model that Custom House officers should be fashioned from. After all, there's "nothing like fish." "By the way," we said, detaining him to hand him a copy of *FOREST AND STREAM*. "Here is a paper perhaps you may be pleased to read. It tells all about angling and gunning, and sports generally."

"Let me see it. Oh! I know that paper very well. Sure and I read it every week. Begorra! the beggars have sent me a bill for the same, and I have it in me pocket now, and its not paid yet. A good paper it is, too. Now I must go. Good morning, and a pleasant journey to you!"

The remembrance of this episode amused us till we reached Toronto. After a comfortable night at the Rossin House, where much information as to game and game localities was obtained from the proprietors, who are thorough sportsmen, we took passage on the Northern Railway for its terminus at Washego, distant 100 miles. This is the expeditious course to the back settlements, but with a few days to spare, the tourist should leave the train at Belle Ewart, and there take the very elegant and comfortably appointed steamboat, the "Lady of the Lakes," up through Lake Simcoe, into Lake Couchiching, where two bodies of water are connected by a navigable channel. Near Starvation Island at the head of Simcoe, and two miles from the inlet, is a famous place for black bass. The steamboat

passes, or crosses, the railroad here through a drawbridge, and presently lands at the Couchiching Hotel, which is located at the point of a peninsula or tongue of land, about a mile in length, the whole of which belongs to the hotel company, artistically laid out in woodland, lawn, and garden, and embellished with rustic fences, arbors, summer houses, and kierd attractions. The Canadians are justly proud of this summer resort, which compares most advantageously with any in the States. Indeed it is much patronized by people from the other side. The main building accommodates about 200 guests. The establishment in its entirety is owned wholly or in part by the railroad company, and both hotel and railroad are managed and equipped in the most creditable manner. Fred. Cumberland, Esq., of Toronto, is the leading spirit of each.

The pleasant town of Orillia occupies a hillside two miles distant, across the bay which the peninsula forms. From thence a steamer runs to Washego at the head of Couchiching Lake. This lake is filled with islands, around which the fishing for bass is fine. Guides and boats can be obtained at the hotel or at the Indian village of Rama, three miles above. At Washego one must take stage and travel fourteen miles to Gravenhurst on Lake Muskoka, but there is a good plank road, and the change is not altogether disagreeable. In two years the stages will be superseded by the continuation of the railroad.

From Gravenhurst the route is all by water through lakes Muskoka, Rosseau, and Joseph—all connecting—and the whole may be said to be under the sole charge of A. P. Cockburn, Esq., a member of the Dominion Parliament, who has been mainly instrumental in opening up this region. Intending visitors will receive all required information by addressing him at Toronto. After a few miles run through picturesque islets, the steamer turns abruptly into the river Muskoka, which it ascends seven miles to the thriving village of Bracebridge—where a beautiful cascade prevents further navigation. After a brief stop it returns to the lake and continues its voyage through the chain before mentioned. Bracebridge is the starting point for the South Muskoka and for Trading Lake, sixteen miles distant, both splendid deer and trout districts, with guides, boats, and dogs at both places. It is necessary, however, to haul a boat over to the former, some ten miles. Next year the road will be passable. Mr. Higgins, of Queens Hotel, Bracebridge, will be of service in securing guides and conveyance. At the head of Lake Rosseau is a fine hotel that will accommodate sixty guests, kept by Mr. Pratt, a New Yorker. Every convenience there. At the head of Joseph Lake is a very comfortable hotel kept by Mr. Fraser, and quite romantically situated. There is a road from there to Parry Sound and Georgian Bay. From Rosseau there is an excellent mail road to the Magnetewan, thirty-three miles distant, and extending as many more miles to Lake Nipissing. Telegraph communication between all these points, which are designated here merely as places of rest and departure, accessible to the most feeble and comfortable in all respects for the wives of sportsmen. There is no end to minor objective points which can be reached by steamboat, skiff, or wagon—Gull Lake, near Gravenhurst, at the beginning of the interior route, with fair fishing for salmon trout, speckled trout, pickerel and bass, and some deer and ducks; Moon River, twenty miles northwest from Gravenhurst, with a beautiful fall, and very good fishing for the fish above mentioned, and maskinonge; Perch Lake, Silver Lake, Pickerel Lake, and Terry's Lake, all near the head of Muskoka Lake, and well stocked with fish; Sharpe's Creek, near Bracebridge, with speckled trout; a chain of lakes, reached by sixteen miles staging from Bracebridge, called Fairy Vernon, Fox, and Peninsula lakes, with the Lake of Bays, reached by a portage of three-fourths of a mile; and best of all, the waters edgicant to and including the famous Magnetewan, all of which teem with deer, ducks and fish of various kinds. Of these are Amuck Lake, Seel Lake, White Lake, and Doe Lake, the last little visited but highly spoken of.

I have simply designated these lakes, so that the sports-

man may have some idea of their locality and value, without attempting anything like description. If he is located in one place, he can easily change his base to another. June, September, and October are the best months, the former for fish, the latter for game. The weather is not severe in October, and navigation does not close until the end of the month. Expenses of round trip for a month, say \$100.

PENMAN.

For Forest and Stream. TROUT FISHING IN MAINE.

ABOUT a week was pleasantly spent in discussions as to the relative cost, time, and advantages of a trip to the Nepigon, the Adirondacks, or Maine. Finally all things considered, I decide in favor of Maine, aided in our choice by FOREST AND STREAM, to which we hereby tender our hearty thanks.

Starting from Gotham July 31 by the Fall River boat, we arrive at Boston on the morning of the 4th, take breakfast at the Parker House, then start out to make the few needful purchases to complete our outfit, and at half past twelve are off for Portland by the Boston and Maine Railway. From Portland, via the Grand Trunk, to Bryant's Pond by the midnight train, through thunder, lightning, and rain, we wended our way, arriving at Bryant's Pond at four o'clock on a most uncomfortably damp Sunday morning. Here we got a substantial breakfast at the Bryant's Pond House, and made acquaintance with several local characters, from one of whom we hired, for five dollars, a horse and "carriall" to convey us and our big box of traps to Andover, where we arrived a little before sunset. We put up at the hotel of Mr. Albert Thomas.

From Bryant's Pond to this point a daily line (Sundays excepted) of old fashioned stage coaches runs over a first rate road; but we, wishing to gain time, took the private conveyance. At Andover there are three men who take parties to the lake (the first of the Richardson lakes), whose charge is generally five dollars each passenger, in or out, though for parties of three or four it is somewhat less. These wagoners are Cushman, Thomas, and another man of a Scotch cognomen, which latter we do not recommend, for reasons not wholly unconnected with his manner of keeping his engagement with us. We have employed both the other teamsters, and found them obliging and reliable. Albert Thomas and his better half will take the best of care of any tourist, and will give all needful information by letter to any one intending to visit this region, concerning the best season for fishing, guides, teams, and boats. We found at his house good rooms, clean beds, good, plain fare, and an exceedingly obliging and attentive host and hostess; board, two dollars per day.

The ride from Andover by buckboard wagon is for about three miles over a fair country road, the remaining nine miles being about the roughest. At eleven o'clock in the morning we reached the Wewakenebacook Lake, and found our guide, who had walked in by a short cut, waiting for us with a good boat. Putting our traps aboard we stepped in, and were rowed past Middle Dam, about four miles up the lake, through the narrow straits into the Molechukne-moche Lake, and across it to a point which looks as if it might receive the breeze from all quarters, and thus protect us from the flies, situated about half a mile southwest of the mouth of the stream through which the Moosehuc-magnotic pours its waters into the Skunkie.

Here we debark, and pitch our tent, getting everything shipshape at about six in the afternoon. Leaving B. to put the fishing touches to our temporary home, N. started for the Upper Dam to catch enough trout for supper. Just below the dam, in a deep pool near the white water, a trout about a half pound and a broken tip are the result of his first cast. Landing the fish, and replacing the tip with another, he soon placed four other fine fellows alongside of the first, and returned to camp and to supper—our first supper in camp, with trout cooked by ourselves. No fisherman need be told that this was superb. Bacon, the best that could be had in the New York market; coffee, as strong as horse's hind leg; and clear white clam with corn-milk, bold butter, hard crackers, and fried eggs. After supper a pipe, a *poisson* cup of Purdy Rye, unlimited chat, and then our luxurious couch of arbor vite branches, and the sleep of the just, superinduced by the cheerful cry of the loon on the lake.

For ten days we caught all the fish we cared to take, fishing about an hour in the morning and about the same time in the evening—killing no trout we did not eat or save in cans, to bring out when we should leave. Our catches were all from one point, and in four pounds and a half. We brought home in good condition all our catch, about 150, all taken with the artificial fly. After our experience in these waters we do not care to look elsewhere for trout fishing.

Black flies? Well, yes; a few; but with plenty of our war paint they didn't bite us. A few mosquitoes; but by far the greatest pest was the little midge. These attacked us sometimes by night, taking us at a disadvantage without our paint; but this only happened once or twice during our stay.

There are three routes to this locality—one via Farmington, Bangley, a long and tedious trip; one by Bethel and Upton, thence by steamboat through Umbagog Lake to the mouth of the Rapid River, thence a carry of four miles to Middle Dam; and the third and best, we think, is that already described, via Bryant's Pond, Andover, and the boat up the lakes to Upper Dam. Fare from Portland to the Upper Dam, via Andover, \$6.50. Andover, which is situated on an extensive plain, surrounded by high rugged mountains, is a favorite resort for a few Philadelphia and Bostonians, with a sprinkling of New Yorkers. Putting into this sort of amphitheatre are half a dozen beautiful streams, well stocked with brook trout. Take it all in all, there are few places where one fond of sport could spend a month or two more pleasantly.

And now, having given a few of our impressions, there recurs to the writer a passage read with hearty approval while lying in the hammock on the shore of the Molechukne-moche Lake—there is no region in the United States (I speak advisedly) equal to it. As to the fishing, who that has ever wet his line in these waters could thereafter be content to angle elsewhere, unless it be in the more distant waters of the Canadian Dominion? F. F. C.

TO DRIVE AWAY HATS.—Harnessed upon in a sulkey, at Fleetwood Park, and then say: "Go."

A LITTLE DINNER ON THE RESTIGOUCHE.

AS we were sitting at breakfast on Saturday morning, the Engineer, H. and I, over our morning's fishing, (which, by the way, had been particularly brilliant), the Engineer suddenly remarked:—
"I say boys, let us ask the Inspector and the Warden to dinner with us to-morrow. They will camp at Patapedia to-night, and will be glad to come down and spend a quiet Sunday here with us at Indian House."

Myself—"All right, but what can we give them?"
The Engineer and H. simultaneously—"Lots of nice things, we have several kinds of soup and some mutton cutlets in cans. Then the regular staid dishes, salmon, trout, and pork and beans, are not to be despised."

Myself—"Not bad for the wilderness. Then there is lots to drink. I will have a jorum of punch; and thanks to C. J. B. there is plenty of ice to ice it and other liquors with."

The Engineer—"Come, do you write the Bill of Fare."
Myself—"Compose the *Menu*, is the proper expression. Here Francois, bring me a clean and thin piece of birch-bark to write upon! Now then, here goes: Scribbles awhile furiously. Now my friends listen to this; reads:—

MENU.
Coup Maison-Sauvage.
Riviere des Indes.
Dinasse fine soit.
AYANT DINER.
Oiseau qu'en de Cuck à la Quaqueur de Philadelphie.
PORTAGE.
Green turtle de Londres.
Pouche-glace.
POISSON.
Saumon en treuil.
Pouche-glace.
ENTREES.
Pommes de terre frites avec oignons.
Truite avec herbes.
Pouche-glace.
BOUL.
Grand jambon de Maryland.
Basse à la moutonaise.
RELIEVES.
Cotelettes de mouton avec sauce tomate.
Baked pork and beans à la Yankee.
Cognac glace.
ENTREMENT.
Shapajoles et noisettes.
APRES DINER.
Chasse cake.
Pipes and tobacco.

Engineer—"Why! hang me if he has not composed a bill of fare worthy of the 'Trois Freres' in its best days. I like the persistent manner in which his head punch shows itself in every course. That grand jambon de Maryland ought to read ancient grand jambon, etc., for I believe it is nearly half eaten. Never mind! If the day is fine we will make the dinner a success."

Accordingly the guests were invited, the dinner was prepared, fortunately, without accident, and the day being delightful, our Indians rigged us up a table outside of the tent of sticks covered with hemlock bark. Punctually at five minutes before twelve, the canoe, containing our three guests, appeared around the point of rocks above camp. Everybody who has been on the Restigouche knows the Warden, and has experienced his kindness. To praise him would be superfluous. Suffice it to say that he is a good fisherman and an honest man. The Inspector is a gentleman, known to fame as the originator of fish culture in Canada; and is one of the kindest and most successful, as well as one of the most intelligent anglers in the Dominion. The third guest was an exceedingly agreeable French-Canadian gentleman connected with the Fisheries Department at Ottawa, Monsieur B.

As the canoe glided up to the beach the Warden cried out: "See what we have brought to put in your ice-house!" We all ran down, and there in the bottom of the canoe lay four fish, the finest salmon quartette, we all admitted, that we had ever seen. One weighed 25 lbs., one 27, one 28, and the last and greatest, 40 lbs. These, the Inspector told us, were all taken by him yesterday in Red Bank pool, along with three others of less size.

"And when you consider," said he with pardonable pride, "that even the Warden said it was a waste of time to stop and fish Red Bank, you may well believe that I am not a little proud of my day's sport."

So saying, we all sat down to dinner. The soup was discussed in solemn silence; and after a mighty draught of cold punch, conversation began.

The Engineer—"Mr. Inspector, had you much sport killing that forty pounder?"

The Inspector—"No. I can't say I had. I landed him in eight minutes with single gut. I never let my fish have their own way more than I can help."

Mr. B.—"But tell us; how do you land them so quickly?"

Inspector—"Oh! I give them the butt, and they have to come. This fellow never jumped once, and I had to tow him round the pool. It required as much force as it would to tow a big saw-log."

The Warden—"A fish of fifteen pounds, fresh run from the sea, will give you more sport than one of double his weight who has been long in the river."

Myself—"What is the reason of that?"
The Warden—"During the winter the salmon feeds voraciously, and when he first enters fresh water he is very fat and strong. During their stay in fresh water the fat is turned into eggs in the female and into milk in the male. They then get thin, are poor eating and are heavy and dull on the hook."

Mons. B.—"This is my first experience of salmon fishing, and I do not claim to be an expert as to that, but I do know something about salmon eating, and I must say I never ate a finer cooked fish, or one in better condition. The fat, which the Warden speaks of, is all here."

The Inspector—"Cooked Tweed side fashion, I suppose?"

The Engineer—"Yes, or Restigouche side fashion. Take a fresh run fish of from fifteen to twenty pounds weight, let the belly part be gusted and put in water with a handful of salt. Boil this twenty minutes and another minute for each pound, say twenty-six minutes in this case. Serve him in his own juice, and don't be ass enough to put on sauce of any kind."

The Inspector—"Always exceptions, lemons and cayenne, which I see you have."

The Warden—"I am sitting on a crate of onions. I suppose now you brought them all the way from St. John, for there are devilish few about here; more's the pity."

Myself—"Yes. I never trust myself in the wilderness without onions. I fancy I am descended from the ancient Egyptians, who are said to have worshipped them."

Warden—"And a much more sensible object of worship than those beastly beetles, which are of no use to anyone."
Mr. H.—"I am inclined to worship that big fly I see in you hat, Mr. Inspector. He is as large as a scarabee. Do you prefer such a large fly?"

The Inspector—"Yes, for these heavy waters. Some very notable Bostonians who fish on the Caspe waters use that a bigger fly than a bigger fish, but for big fish give me one of these largest sized Jack Scott's, Fairies, Butchers, or Silver Doctors."

The Warden—"These big fellows are the killing flies for heavy waters, but when the water gets clear and without ripple, as it generally is at this time of year, you should use a smaller fly. The big one makes too much of a splash and scares the fish."

The Inspector—"The bigger splash the better, I have always found. Why, sometimes I have risen a salmon when all flies failed, by tossing a big stone into the pool."

All—"Let us take a drink after that."

The Engineer—"He is right. Look at the pool at Fraser's. It is constantly crossed by scows, horses and boats employed about the bridge, and yet the fish increase in it from year to year. I don't believe that you can frighten salmon away, except by the net and the spear."

The Warden—"On this river, before 1860, when protection really began, the fish were so wild, on account of being chased with nets and spears, that no fly-fisher could come near them. Now if they don't rise it is not from fear, but because they are not in the humor. Since 1860 the take of salmon in the Restigouche has increased over 300 per cent, and is increasing faster every year."

The Inspector—"A remarkable case is that of the River Moisie, where in 1859, 75,000 lbs. of salmon were taken out of 15,000 fathoms of nets, while in 1872, 204,000 lbs. were taken out of 3,500 fathoms of nets, showing clearly that the fish were scared out of the river by the multitude of nets."

The Engineer—"I came down this river in 1865 on one of my trips of reconnaissance for the Intercolonial Railway, and although I profess to know something of the gent art, I could not rise a fish. Now any tyro can find them."

Mons. B.—"Yes. I can find them myself. Another cup of coffee if you please. Thanks, that is perfection. Mr. Inspector, return thanks."

Mr. Inspector—"Serenely full we all of us say; Fate cannot harm us. We have dined to-day."

All—"Amen!"

The Warden—"I suppose you have had good luck?"
Myself—"Yes, very fair, considering the big water. But as Theodore Winthrop, one of our clever writers, says: 'The luck of all fishermen is pretty evenly balanced; since men who cannot master facts are always men of imagination, and it is as easy for them to invent as for the others to do.'"

Mons. B.—"Now I understand what is meant by a fish story."

Mr. H.—"What success, Mr. Inspector, have you had with your proposed establishments this year?"

The Inspector—"The prospect is very encouraging. The percentage of fish hatched from eggs is increasing, and we can count on 95 fish out of 100 eggs, or 475,000 fish this year. Salmon are now visiting the streams on Lake Ontario, where none have been seen for fifty years. In the creek at Newcastle, where the propagating establishment is, it is not uncommon now to count from twenty to thirty salmon at once in the mouths of the pools. In some of the other creeks, where young fish have been placed, forty salmon nests have been counted in a mile. If we can only keep the poachers away for a few years we will fill Canadian waters full to overflowing with not only salmon, but also trout, black bass and white fish."

Myself—"God speed you in your laudable efforts, Mr. Inspector. My countrymen have to thank you for the introduction of fish culture into American waters; for it was your success that encouraged our Fish Culturists to really practical efforts."

Mons. B.—"It grows late, we have four miles of rapid water to pole up, and these lads make me do all the hardest work. Au revoir, my friends."

So the last drink was taken, the last pipe was lighted, and our passengers immediately added away to their camp at Patapedia. A few days after we a-so struck camp and left the lovely Restigouche, Queen of salmon rivers! What, though heavier fish have been taken out of the Cascapedia, or more in a day out of the Godbout, yet no other river combines so many charms of beautiful scenery, and uniformly successful fishing as the Restigouche. Long may these beautiful waters be free from the profanation of cockney tourists, pot-hunters and snobs, whether of American or English origin, is the prayer of

Philadelphie, 1874. T. C. C.

FROM THE ROCKY MOUNTAINS.

The following letter from a well known naturalist and explorer, whose communications frequently find place in our columns, will be found of interest.—Ed.

WE have reached the Rocky Mountains at last. We are now camped on a lake, and near a river, where salmon are plenty, and brook trout can be caught by the dozen, the trout weighing four pounds. My largest trout scaled four and a half pounds. I have not killed much salmon since we have been here, but I have stalked a large game, excepting a few waterfowl, and a few great many sheep. A few nights ago we came across four, great many sheep. As they were running I rolled over the biggest ram, and had to sleep all night alongside of the meat, so as to keep my share from the wolves. Early in the morning I went back to camp, got a horse, and proceeding to the spot where my sheep was, loaded him on my sled and rode away. I slept to camp again, just in time to find our party gone. I leaped soundly in the desert camp, and my sunrise followed our trail, and struck our party by eleven o'clock in the morning.

In about three weeks we will start for the head waters of the Missouri River, and once there we will take boat for a trip of 1,100 miles, until we strike the Northern Pacific Railroad. We will divide the party into flat boats, and so paddle and float along. I have some curious relics, having done some trading with the Sioux, Assinibons, Sios, Gros Ventres, and miscellaneous Indians.
June 19th.—Our camp is gloriously pitched at the base of a spur of the Rocky Mountains. We are killing for camp use sheep and beaver, and for their pelts occasional wolves. Of course hostile Indians, or suspected to be such,

I have seen in quantity. They are good enough Indians when in camp, but bad enough when out of it. They are willing to swap and dicker, but our chances of trade will be better when we reach Milk River or Horse Run. Our position is close to the 49th parallel. I trust to see you sometime about the end of October.

GROUSE SHOOTING IN COLORADO.

FOR weeks previous to September 1st, all the good, bad and indifferent shots in this city had been on the quest for intelligence relative to the "chicken crop" for the year. Every ranchman and charcoal burner, whose ranch or camp was located near the "divide," was, on their arrival in town, butted and questioned by some eager Nimrod, as to whether chickens were plenty in their neighborhood or not.

None had been more anxious than the Doctor and Sierra for the 1st to come, and they, with Clarence as a volunteer driver for the occasion, left town on the afternoon of the 31st of August. They had with them Sam, a red setter, which Frank, a liver and white pointer, from whom great success had been expected, and the best horse in the State in time for tea, the team was put out and arrangements effected with mine host Parker for the night. Parker's is twenty miles from Denver, as the name of the house indicates. In order that an early start in the morning might be obtained we retired at 9 o'clock.

Breakfast was over by 6 o'clock, and soon after we were on our way to the hunting grounds. They are in the gulches, Colorado, are to be seen from where we had stopped the night. These gulches are water courses in wet weather for the drainage of the surrounding country, are from ten to fifty feet in width, with thick cover on each side for some distance; beyond this, open prairie, affording most capital shooting at chickens when routed out of the gulch and passing in open view. As a rule the sharp tailed grouse, (*Tetrao phasianellus*) the only prairie chicken we have in Colorado, are to be seen in these gulches. Unlike the pin-tailed grouse or prairie chicken of Illinois, they are but seldom found away from cover.

Arriving where we wished to hunt, the dogs were sent in, Sam taking to business splendidly, Frank acting only middling well, and placing ourselves on opposite sides of the gulch, we hunted for a mile without seeing a bird. We were becoming somewhat discouraged when a jack rabbit started and took to the hills. The Doctor and Sierra, who sent a charge of number eight shot after him. Immediately Sam bolted and ran the rabbit, and after a chase of one hundred and fifty yards it fell dead, when he brought it in. It has been a matter of great speculation to Sierra since, as to how, or in what manner Sam knew this rabbit was wounded, as he never runs a rabbit, and during the day at least a hundred jumped up in front of him and he paid no attention to them. Breaking a switch from a plum bush, Sierra was about to reprimand him severely when, just as the rod was descending the whir and kuk, kuk, of chickens with the sharp reports of the Doctor's gun, drove every other thought, except chickens, out of Sierra's head, and Sam escaped for this time.

"What luck Doctor?" "A clean miss, but we can get more; one left to the right and two to the left. You take one of the willows and I'll take those on the hill." "All right," said Sierra. "Here Sam, go on." The dog had scarcely got to the willows when he came to a point. Landseer never drew or issued so handsome a picture—the beautiful sheen of Sam's light hairy coat—the out-stretched neck—straightened tail—quivering lips—uplifted foot—the rigid body—in all, one of the most exhilarating sights in the world. With a loud whirr, up through the willows, arose a full grown bird, bang was Sierra's cry, and the bird was in the air. "Fetch him here, Sam." "Good dog."—And the joyous voice of Sierra is heard to shout, "Hello Doctor, you owe the champagne, I've got the first bird." Soon after a covey of five birds was found and all bagged, then more birds, Sam doing wonders in the way of finding birds and retrieving them after they had been dropped. The Doctor in the meanwhile was not finding much, and the Doctor, in having trouble with his dog, which finally ran off entirely to Parker's, where we found him in the evening.

Hunting all day with varying luck, on our return to Parker's we counted heads. Sierra produced thirty-one, the Doctor eleven—and two that both had shot into at the same time, making in all, forty-four, as fine full grown fat prairie chickens as were ever bagged. Our volunteer driver, Clarence, did not get in the way of driving, and since his return I understand has applied to the proper authorities for the position of referee in the horse racing at the coming Territorial fair—says he has had experience in racing.

We arrived home at 9 o'clock in the evening tired, but so enthusiastic and well satisfied that we have determined on making one more hunt; when it occurs I'll let you know the result.

Sam, the dog who so distinguished himself on this occasion, is a deep red Irish setter, with a most silky coat that glistens in the sunlight, white breast, white feet; small white spot on the back, and white tip on the tail, was four years old on May 21st, 1874. I have owned and hunted him for three seasons and have never owned so good a dog. He is indefatigable, as fast as well in the afternoon as in the morning, and fresh. Money would not buy him, he is not for sale, but deserves to be immortalized by having his good qualities lauded in the FOREST AND STREAM.

Denver, September 5th 1874.

SIERRA.

SPORT IN NORTHERN CANADA.

YOUR favor of the 4th found me at Alexandria Bay on my arrival. I found that place so crowded, fashionable, and dressy, and so fishing, that I stayed there only one day, then, taking my old boatman, Jerome Thomson, I started for the Canada lakes, first fishing Charleston Lake, some twenty-two miles back of Gananoque, reached by row boat via Gananoque River and Wiley Creek, also by stage from Brockville out. This creek flows through drowned lands, and in the proper season is full of ducks. The black bass of Charleston Lake are small, averaging one and three quarter pounds, but are very game, a one pound bass giving as much sport as a three pound St. Lawrence bass. I caught 110 in one day with the minnow.

There are two fair hotels, charging one dollar per day. Boat accommodations poor. The lake is full of islands, and affords excellent camping grounds. At Gananoque we took the Canadian line of boats to Port Hope, thence

by rail to Lindsay, where we launched on the Seagow river, and pulled nine miles to the entrance of Pigeon Lake, and at the foot of the lake on Little Bob River, made our headquarters at Bobcaygeon.

This is a good place for any sportsman desiring variety. In May, June and July muscalonge can be caught in any quantities. They run from five to twenty pounds, averaging about nine pounds. Black bass are also plenty, game, and large. Duck were scarce this year, still we got a few. Partridges and snipe were plenty. Deer plenty, and hounds and starters can be found at the village. Half a mile beyond Bobcaygeon the river enters Pigeon Lake, and from this lake can be reached numerous others, all well supplied with fish. At Bobcaygeon hotel board can be had at five dollars per week. The best place is kept by John Simson, whose wife makes it a place of home neatness. This place can be reached by steamboat (Capt Crandall from Lindsay). There are no boats or guides.

I do not write this for publication, but often see in your answers to correspondents inquiries where the above might come into play. And again, I see by your issue of the 10th you were but a few miles back of where I was and might compare what you saw with what I saw. In Pigeon and Sturgeon lakes we caught from seven to ten muscalonge spiece per day, fishing only one or two hours early, and the same late in the day. The Indians from Buck Horse Lake, six miles away, bring in the "lunge"—as they call them—and sell them at five cents per pound, dressed; head and tail cut off, and back bone taken out. Yours truly, W. C. EOAN.

Chicago, September 14th, 1874.

For Forest and Stream.

A DAY WITH THE BAY SNIPE.

A FEW days since, with Major Beckwith and C. K. Smith, Ex-Superintendent of Telegraph of the New York Fire Department, (and two more genial spirits and keener sports, to say nothing about practical jokes, one does not often find) the undersigned, with his new breech-loader, took the morning train at Hunter's Point for Shinnecock Bay, and on the way made a speaking of that gun, allow me to remark that it is a splendid article, and proved well worthy of its generous donors. A ride of three and a half hours on the cars, and a couple of miles in a lumber wagon furnished at the station by the miller of the place, brought us to the domicile of William Lane, the best shot, the most successful duck stooper, and one of the best fellows in all that region. We met with a hearty reception, and soon had our feet on his table and an enjoying satisfactory dinner. After our meal, with the stools in the trim sail boat and Lane as steersman, we started for the meadow across the bay. As we sped on our way a shrill, peculiar cry broke on our ears:

"Wild as the scream of the curlew."

From crag to crag the signal flew. Now as these birds were crying anywhere in view around that salt marsh, and as the birds would not to be a loon some half a mile down the bay, I don't know as the above quotation is very appropriate, but I thought it sounded well, and rather wanted to put it in.

We were soon at our point; having located our boat in the grass and put out the stools, we awaited further developments. The Major had made a bet of a dose of medicine (7) and a round of cigars, and I would like to see him. Lane called out, "down boys," and commenced a peculiar whistle, and we perceived a half dozen large birds coming towards us, and as they dropped their long legs preparatory to alighting among the stools, the Major let drive, and sure enough, he killed his bird; but had he waited a moment longer, we could all have got a shot and probably bagged every one of the bunch. Many and harsh were the expressions of the Major, and soon had our feet on his table and a splendid marlin, he coolly said "I guess I'll take that prescription," (beverage he called it)—the check of that man is wonderful. Soon we got a crack at some yellow shanks and jack snipe, they call them. Then for some time nothing coming to us, Smith and myself went off prospecting down the meadow. We soon got among the dowitchers, and had some fine sport, getting some twenty or more; a half dozen bay snipe, a bittern and a couple of hawks that came sailing by, we dropped out of pure cussedness I suppose.

I had forgotten to mention that Lane, previous to starting had put a dozen or two clams in the boat which (the birds not tying with sufficient rapidity) for excitement he was to roast for us before our return to the boat. We found them about ready, nicely roasted, and with melted butter and a dash of vinegar, and as we were gathered around and Smith had a nice fat one well buttered on his cake of hard tack, a Wilson snipe came sailing by and dropped about a hundred yards astern of us. That was enough for me, and off I started, telling them to save me a clam. Upon nearing the long bill he again arose and dropped a few rods further off. The next time he came up, I fortunately brought him to bag, though a long shot. The report of my piece another arose and slightly closer by, which I soon also bagged. Upon returning to the boat I was chagrined to see the last clam disappearing down the Major's capacious throat. In vain were my expostulations that it was a shame and an outrage; the Major coolly said he thought I was having a good time, and wouldn't want any, and that there was only enough for them. And all the way back across the bay how he expatiated on these luscious clams, exclaiming "an ounce of prevention," etc., and we took along several ounces of course.

Upon reaching the ground Lane proposed dividing our party—to leave the Major on one point, or bar, with a dozen or more stools, while he took Smith and myself across the channel to a point opposite. While putting out the stools and the Major was busy fixing up his place to lie in, (no pun intended) Smith managed to empty one of the bottles of repellant I called my salt water while I slipped the agree preventive into my shooting coat pocket. We were soon at our stations. Lane returned to the Major, and a few birds began to show themselves. Ah, then I realized the benefit of a good whistler, or caller, for snipe. Lane could call the birds right away from us, and they had double the sport we did. Finally I saw the Major looking anxiously around in the boat; I knew very well he was

afraid of a snake; he has those fears very often when out shooting, sometimes as often as every half hour. They effect him more frequently though in the evening after our day's hunt, and when sitting around with the party all at home.

At lunch time I saw the Major dipping into the basket; soon he seemed dry, and poured out a cup of water from the bottle, tipped back his head, took a couple of gulps—a spitter, an awful contortion of countenance—a general out-throwing of the lunch previously taken in, and I called out "how are you, dandy?" The language that then and there issued from that young man's lips could never have been uttered in the Sunday school in that shape, or been inspired by the Apostles of old. Upon meeting later in the day he cried quills.

We arrived at Lane's in due time, and after an ample dinner of duck, tender and juicy—for Mrs. L. does know how to roast a duck to a nicety—we were off for the train. Our birds—tied up in neat bunches, between seventy and eighty in all—consisting of marlin, yellow shanks, or rattler, and summer snipe, brand birds, rail, and others. Well satisfied with our two half day's sport, we need not repeat here that there are few spots contiguous to New York that furnish such facilities for sport as Pon Quogue, and that more efficient and gentlemanly gunners than William Lane and his son it is rare to find. But the duck season, which commences about the middle of October, is the time to take it at its best. Lane has twenty-four wild geese that he has trained down to use as stools, and to see these geese perform, especially two famousanders that will back and call down their fellow bipeds to destruction, is a sight well worth going a hundred miles to see. About the 20th we propose to again witness the performance, and they say Major Billings will go with us, if he does, then there will be fun and you may again hear from JACOBSTAFF.

QUAIL AND QUAIL SHOOTING.

I MAY be prejudiced in favor of the quail, as giving a greater amount of real enjoyment to the sportsman than any of the game birds of the United States; but surely will find many who will side with me in placing its pursuit foremost in the list of American field sports. The American quail breeds in almost every State in the Union, and there is a diversity of opinion among naturalists and sportsmen, whether it regularly hatches two broods a year. Both sides have strong advocates, and I am inclined to believe that the entire continent is divided into the climate of season and climate. In latitudes where spring and summer are short, very likely but one is raised as a rule; but in more southern sections, probably two are often reared. If the parent birds are successful in the hatching period and the nest and young have not been destroyed, they remain with the brood and do not hatch a second; but on the other hand, if any mischance befalls their eggs or young in the hatching period, the hen begins another set and hatches again. This may account for the great diversity in the size of quail in different coverts we so often notice in Maryland, Delaware and Virginia. As late as the middle of November the writer has found them too young to be killed, plainly showing they were brought forth late in the summer, and I have always observed that a great number of half-grown coverts are seen in seasons which follow cold and cold springs.

We can have no better law in regard to the quail than the present one of Pennsylvania, which protects them from January 1st until November; but in Kent County, Delaware, quail shooting is tolerated until February 15th, and I can see nothing more damaging to the increase and preservation of the bird, especially if deep snows cover the ground after the 1st of the year, and shooting continues. All persecution at this time should cease, and the quail be allowed to seek what little food there is for them during such periods. In Maryland October 20th is given as the opening day for the sportsman, which is almost two weeks sooner than it should be.

It must be urged by the National Sportsmen's Association that a United States law shall be passed making the season for quail shooting a uniform one throughout the country—namely, from November 1st until January 1st in each year.

The quail is by far the best bird we have on which to break setters and pointers, as the trail the feeding covey leaves behind it is stronger in scent and undoubtedly of greater scope than that of any other game, giving the young dog an amount of independence, range, speed and caution attainable in the pursuit of no other; besides the stubbornness with which the bird resists the lure of the well-setter and pointer that staunchness of point which the sportsman so anxiously looks for and so greatly values in his young beginner. After starting a covey and scattering the birds no doubt every observant sportsman has noticed how difficult it has been for his dog to find the single quail although directly marked to a particular spot. This habit of the bird to lie until almost trodden upon, and so seemingly to be the body of the finest setter or pointer, has given rise to the question whether it can voluntarily relinquish its scent, but there is no reason for attributing to it such powers, and I think it readily explained. After being flushed and shot at, the covey, in its flight, scatters in every direction, making all haste to escape from danger, and each quail pitches into whatever cover offers the best concealment—crouching into the smallest possible space, or, if a pointer, has its eye on the mover, preventing little if any scent to pass off for a time, or at least until they move and suppose danger has passed. Thus it is not a will power on the part of the bird, but resulting entirely from the body (from whence their scent issues,) being so firmly pressed by the quail with its plumage in its endeavors to hide.

In the latter part of September and first of October the quail in some sections of the country begins what is termed the "mating season," which may be accounted for in a measure as follows:—In cultivated and settled regions where many broods have been hatched during the summer, much of the food on which they were dependent is destroyed and taken away by the farmer in putting in his winter grain and turning the soil; a part of the birds impelled by instinct to seek other quarters for the winter, the movement of the farmer and the great disturbance and shelter and ground is discovered, where they settle for the season.

In the work the sportsmen of the United States will have before them in connection with the National Association, let all attention be paid to the protection of the quail in those States where no law is known, and where if steps are not taken to punish unreasonable slaughter, we will have the bird as scarce as it is in the Eastern States. HOMO.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

THE U. S. FISHERY COMMISSION.—The season's work of the Fish Commission party at NOAA has just come to a very satisfactory close. The steamer Bluegill has gone out of commission and is laid up for the winter at the New London Naval Station. Prof. Baird will spend a month at various points on the coast, looking into the condition of the fisheries and taking the statements of the fishermen relative to the results of their season's work, but the members of the party have, most of them, returned to their homes. The results of the campaign have been quite equal to those of any previous year, and will, we trust, soon be brought before the world in tangible shape.

DESTRUCTION OF FISH IN THE CONNECTICUT RIVER.—We may well despair of ever restocking our streams with fish, and consider the money appropriations of the States and General Government as utterly wasted, if mill owners are to so wantonly disregard the public interests and the efforts that are being made, as to deliberately pollute the waters in which the fish swim. A case in point is thus referred to in the Rutland (Vermont) Herald, of Sept. 22d:

In the early summer the fish commissioners placed a large quantity of young salmon in the Connecticut river at Bellows Falls. A gentleman of experience in fish culture sends us the following account of what he saw there recently. He says: "We observed a severe discoloration of the Connecticut river for more than half a mile below the mills. Thinking that the matter would bear investigation, we proceeded toward the river, before reaching which we made inquiries in regard to it, and were told that the Fall Mountain Paper Company had dumped their chloride of lime box into the race. We proceeded to the race, and found the water therein about the consistency and color of a tub of half-seen white wash. The water was rising to the surface in the same manner that fish will do after partaking too freely of oculus indicus. We were, however, much pleased on receiving information from a gentleman present that they would all recover. We did not see, but were told by reliable parties that eels were seen in the same condition. We trust that they are by this time convalescent, and also that it will have a beneficial effect on the hundreds of thousands of young shad and salmon which have recently been placed in the river by the commissioners of fisheries." We had heard something of this before, and hope the fish commissioners will, now their attention has been called to the subject, take some action to prevent the destruction of these salmon and shad.

PROGRESS OF FISH CULTURE IN ILLINOIS.

MEETING OF THE STATE FISH CULTURISTS' ASSOCIATION.

EDITOR FOREST AND STREAM:

"The nullity of the gods grid exceedingly slow, but fine." While nearly every State in the Union has an efficient Fish Commission, and laws for the protection of fish, Illinois is far in the background in this great and important subject. Save what the writer of this article and Dr. W. A. Pratt, of Elgin, Ill., have done in the field, few kindly attentions have been made in behalf of this industry. Six months ago a few benevolent gentlemen united in a call for a State Association, which met in Elgin, and "The Illinois State Fish Culturists' Association" has grown out of that meeting. On Thursday evening, September 17th, the first semi-annual meeting was held in Peoria, Ill., during Fair week, and the meeting proved an interesting and profitable one for the association. Several influential men were made members. The following proceedings of the meeting may not be without interest to the numerous readers of your excellent journal:

K. K. Jones, of Quincy, in the chair. The proceedings of the last meeting were read by the secretary, N. E. Ballou, of Sandwich, and adopted. Several of the citizens of Peoria joined the society.

Dr. Pratt, of Elgin, called for the report of the committee appointed to draft a law to be presented to the next Legislature for the protection of the food fish in the Illinois River.

Mr. Ballou, chairman of the committee, reported progress, but said the committee had not completed the draft.

It was moved that the report of the committee, be received and the committee discharged. Carried.

It was moved that Dr. Ballou and Dr. Pratt be directed to draft a law for the protection of food fishes, with power to act in the whole matter. Carried.

A general discussion took place upon the subject of fish culture by the members present.

Dr. Ballou stated that the food fishes of the Illinois River were excellent, and that they ought to be protected, so that they might be made valuable as one of the food resources of the State. He denounced the present methods of "cavorting fish as crocodiles." There ought to be an effort to regulate the taking of fish. He referred to the condition of the fish at our Peoria fish-locks—a mass of dead and decaying fish, contaminating those which were alive. He wondered how the people of Peoria could consent to eat fish thus treated. There ought to be a law regulating the time when fish should not be taken. The black bass should not be taken during the spawning season, and there then unit for food. There is in the Illinois River many varieties of food fish.

Dr. Pratt, of Elgin, said that we could all fish with a hook and line, and that in the spawning season fish would not rise to a bait. Therefore, in fishing with a hook and line, we can be sure that we can catch only healthy fish.

K. K. Jones took issue with Dr. Pratt, and said he had caught fish out of the river with a hook and line while full of eggs.

Dr. Pratt insisted, and mentioned the wall-eyed pike or jack salmon, which would bite only at certain seasons. The Doctor said that the pike required better water than most any other fish. The pickler was a poor fish to his taste.

K. K. Jones said any person who had water to water his horse had a place to raise fish. Black bass and croppies would thrive anywhere. The brook trout, in poor water, would deteriorate. The rule is, the better the water, the better the fish.

Dr. Ballou offered the following resolution, which was unanimously adopted:

Resolved, That the State Board of Agriculture, having generously appropriated sufficient money to project an exhibition of trout, salmon, and other native fishes of Illinois, at their annual fair, therefore be recommended, That the Illinois State Fish Culturists' Association, on account of this noble generosity, tender their thanks for the aid received in projecting and carrying on the exhibition.

The Convention fixed its next semi-annual convention at Peoria, on the first Thursday of May next.

A committee consisting of K. K. Jones, of Quincy, N. E. Ballou, of Sandwich, and E. Emery, of Peoria, were appointed to prepare a programme and procure essays at the next convention.

Dr. Pratt, of Elgin, was requested to prepare a paper in regard to Fall-spawning fish.

The meeting then adjourned.

It is proposed to organize a Fish Commission, and to procure laws for the protection of fish, for our State has sadly neglected this feature of State legislation. We have at least a half million acres of water area, and every means should be used to make it valuable as a source of food.

N. E. BALLOU, Secretary.

Natural History.

STRANGE INCIDENT IN FISH LIFE.—Our correspondent J. L., of Galveston, who contributes frequent notes upon the sports of Texas, has sent us an account of a yachting and fishing cruise in the western bay (Galveston), in the course of which he mentions having captured a large sting-ray, or stingaree, three feet wide, with a tail five feet long. It required the strength of several of the party to bring him to beach. But the most remarkable part of the incident lies in the fact that the monster, after being landed, gave birth to three little ones, each four inches in diameter, with tails five inches long. The little ones, he says, upon being thrown into the water, swam away as if they had always been accustomed to the brine. A description of this singular parturition would prove extremely interesting.

THE DESTRUCTION OF BUFFALO.—It is estimated that the "hide hunters" of Kansas, Texas, Colorado, and Southern Nebraska kill 50,000 each year for the skins alone; that the Indians kill three times that number, and that perhaps 10,000 more are killed by sportsmen and those pioneers who depend on buffalo for their winter meat; thus we have the enormous figure of 210,000 as the annual slaughter. But this does not represent the grand total, for many calves are captured to be sold to menageries, museums, and to private gentlemen who desire such pets. I cannot approach a summary of the latter, but I think that from five to ten thousand would be an approximate estimate, though a low one. I have known instances where a hundred of these creatures were caught in a day by being run down, and not more than one tenth were alive the next day, though apparently strong. They cannot endure much hardship. By giving the figures in round numbers, we may estimate that a quarter of a million bison are destroyed annually.—Correspondence of the New York Times.

—Dr. La Conte, the distinguished naturalist, of this city, has read a paper before the American Association for the Advancement of Science, in which he recounts the experience of Philadelphia in its efforts to get rid of "measuring worms" by the introduction of town sparrows. A description of this worm, and of the white moth into which it develops, is scarcely necessary here, as the appearance and characteristics are well known. The town sparrows brought from England soon put an end to the "measuring worm," and restored to the trees the power to retain the green leaves put forth in spring. But soon after this had been done another pest appeared, which is becoming, in its turn, a great nuisance, although it is not as annoying and disgusting to pedestrians as its gymnastic predecessor. This is a slender caterpillar, covered with stiff yellow and black hair, with tufts of much longer hair. The sparrows decline to eat it, not because their tastes have been pampered by other food, but because they cannot, on account of the worm's hairy covering. Fortunately, however, the structure and habits of the caterpillar and the "measuring worm" are so different that the means which failed to exterminate the latter will be found efficient in use against the new pest. The wings of the female moth are like the wings of a house fly, and she is obliged to crawl up the trees to deposit her eggs. If the cocoons in which the larvae are developed into moths be destroyed, and girdles of tar or some similar substance be put around the trees, the propagation of the caterpillar will be prevented. The same remedy failed against the female moth of the "measuring worm," because its wings were fitted for flight, but with the sparrows to prevent the continuance of "measuring worms," such means as above described would be against the caterpillars, but pests may be removed from city shrubbery and shade trees.—Public Ledger.

—Buffon, the great French naturalist, becomes quite enthusiastic in his description of the humming bird. "Of all animated beings," he says, "the humming bird is the most elegant in form and splendid in coloring. Precious stones and metals, artificially polished, can never be compared to this jewel of nature. The emerald, ruby, and topaz sparkle in its plumage, which is never soiled by the dust of the ground; for, its whole life being aerial, it rarely lights on the turf. It dwells in the air, and flitting from flower to flower, it seems to be itself a flower in its freshness and splendor."

—The Salem (Mass.) Register, makes mention of a canary bird in that city which has laid thirty-four eggs since January 1874, fifteen of which hatched out, thirteen of them still living, and seven of the thirteen singers. She is now setting on six eggs.

DO PINNATED GROUSE REMAIN IN "PACKS" ALL THE SEASON?

EDITOR FOREST AND STREAM:

In reply to your Philadelphia correspondent in FOREST AND STREAM of September 10th, who says why less shot should be used for pinnated grouse shooting than for ruffed grouse, in the course of your explanations you state: "Pinnated grouse, at the beginning of the season, say August 20th, are mostly in packs," &c. &c., and then continue: "In a week or so, when the pack or brood disperses, each seeking its own livelihood," &c. Now I cannot see how any naturalist or sportsman who has ever shot this bird can agree with you, or pinnated grouse are known to keep together in covets or packs (as the phrase is) until the next pairing season, and do not disperse in a week or two, as you say, to seek their own livelihood. On the contrary, two packs often run together, and I have known a hundred and more "chickens" to have been seen in one gathering, composed, no doubt, of a number of broods. They are, however, as above described, in packs, at the following spring, and or packs never disband until the next spring. I have seen a single prairie chicken is put up without companions, but it is generally an old cock or hen.

—As Charles E. Thompson, who resides on West street, Concord, N. H., was engaged in digging up an old fence post one spring day, he discovered a settlement of toads under the post, of all sizes—from a ten cent piece, to a full grown garden toad, and in such abundance that he concluded to gather them in a pall, and did not stop until one hundred and forty-two live ones had been collected.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Sept. 27, 1874.

Animals received at Central Park Menagerie for the week ending September 25th, 1874:
Two Sparrow Hawks, *Pipilo sparcarius*. Presented by Miss Emily Ayrault.

One Raccoon, *Procyon lotor*. Presented by Mr. Henry H. Havemeyer.
One Rattlesnake, *Crotalus durissus*. Presented by Mr. Julius Arnold.
W. A. CONKLIN.

Woodland, Lawn and Garden.

A BEAUTIFUL GARDEN.

IN OCTOBER PREPARE FOR APRIL AND MAY.

AS April and May are the months in which you are to plant many of your choice seeds, you can, at the time you make your flower beds, lay out and arrange, either in spring or fall, a circle for the display garden or decorative mosaic upon the green lawn in front of your windows. In order to have a fine show of herbaceous flowers, you will prepare your ground for the reception of the same by the selection of the best combinations of colors. First strike your circle; let it be twelve feet in diameter, and raise the earth in the centre point sixteen inches higher than at the outer edge of the grass. This should present the appearance of a watch crystal when well dug, manured, and carefully and smoothly raked off. It is now ready to plant with your choicest specimens of herbaceous plants, which you will procure whenever you can. For your centre you can suit your own taste. You will at once see what flowers harmonize in color if you have a good eye. Many persons, however, are color blind, and are what is termed "color blind"; they confound one color with another, and thereby make bad mistakes in the arrangement of flowers.

Having prepared your circle as above named, you can commence in the centre with your embellishments. Here, if you choose, if you have water from public pipes, or an elevated source, you can attach a small quarter inch lead pipe, and sink the same about one foot beneath the surface, so that it will not freeze in winter, as you will shut off by a cock the water from your main supply. Run this pipe under the soil, and make its termination in the centre of this mound, precisely as you would for a fountain, as it is a small fountain to a certain extent, and so designed to be used. This is necessary to be done at this stage of proceedings, as it can be made at a very trifling cost, and you can assure yourself that no more graceful or beautiful garden arrangement can be had than this will afford. I have such an arrangement attached to a fernery in my own grounds, where I can so adjust the quantity of water as to run only a barrel during the twenty-four hours.

Having thus arranged with or without water, your plot or circle, I will give you some suggestions of my own for laying it out, which I have frequently adopted with pleasing variations, as circumstances may require. Under the most favorable circumstances you will find yourself lacking this or that plant or shrub. Now don't fret about it, or waste unnecessary time over it, but get the next best plant, set it out, and wait until you find the plant you wish for, and then replace the one first planted. I rather prefer to "change base" sometimes, and professionally I am often compelled to do so. One will be truly astonished to behold the pleasing results arising from when after all is a harmonious combination of particular plants, and their development of color. To understand my idea, you will call to mind the wonderful combination produced by the cultured landscape gardener in what is known under the familiar name of ribbon gardening. One single row of china asters are of a deep purple, the next may be a pure white, a third scarlet, then an almost infinite variety may be added. You have seen one stretch across with its dozen blossoms, giving you the perfection of plant growing. The association of numbers in an extended line gives you the ribbon style of gardening, on which I shall in future give you a full practical paper.

If you have no water to use, or only such as you give through the watering pot, you will find the following selection, with the necessary variations you will have to make, probably as good as you can select. Herbaceous plants, you will find, have been too many of them very beautiful, and quite readily adapt themselves to the place assigned them in the garden. The system known as the "modern bedding system," whereby many of our old, well known herbaceous plants are less used than formerly, gives us a very great advantage in the arrangement and use of new garden materials. The first plants we would use in the centre of our circle would be a very fine specimen of *Gyneneth argenteum*, with a mass of grass, a very fine, rapidly growing grass in warm localities, but not well adapted to our more Northern States. If this grass would stand our winters it would be considered one of the most valuable acquisitions to our Northern gardens. The best we can do with it is to plant in a goodly sized tub, house it during the winter, and subject it to a gentle heat in the early spring, before placing it out of doors. It deserves all the care you can give it, and extra supplies of this in the spring by the sowing process, and with early planting and extra care may see a tall, beautiful centre piece in your garden. If all our New England subscribers are not willing to encounter these risks, we advise them to choose some other plant for a centre. The *Eranthis* may be chosen; this is a beautiful grass, and perfectly hardy. The leaves are narrow and pointed, and grow in a dense, upright, bushy habit, and after growing to flower stand in length, have very little drooping habit. The flower stalks are numerous, feathery and always agreeable. It may be planted either in the spring or autumn. You can next plant, say three and one half feet from centre plant (which, if you have no water, will be the *Eranthis*, and if you have water the caladium or canna), the *Trilium ucaria*. The effect of the contrasting fountain shaped leaves of the pampas grass, in this respect, resemble a covey of quail. Sometimes a single prairie chicken is put up without companions, but it is generally an old cock or hen.

the *Tritonia*, of two feet between each plant, I have placed with good effect a plant of the *Arundo conspicua*; this plant grows all winter with a fine green leaf. Or you can use in its place, with fine effect, the *Stipa*, a curious and interesting plant. You can now place the *Spiræa filifolia* and *Statis inflata* in position. These will be found graceful and pleasing. Now if you place in your next row outward, at two feet distance from the first, any light good, strong, well growing plants of the *Amaranthus trifolius*, at equal distances, you will, if you fill up the intermediate spaces with the *Schiller aster*, or any dwarf variety, have a fine circular show. Now we propose to fill up in like manner in groups, at equal distances, with the *Silene* leaves, for one continuous circle, six inches distance from plant to plant, will give us a circular ribbon or belt running around our entire circle. For this purpose we choose good strong plants of the purple aster, or any color you may desire. Between the ribbon of asters and the extreme front of your circle you will have considerable space left, which I usually plant with groups of *Dracuncus* and *cannas*, four plants of each in groups, and running around the extreme circle within one foot of the grass edge, at equal distances of four or five feet, we set out the finest plants of the *Caladium esculentum*, and have the plants started well before putting out. Your best way is to buy all your plants previous to making your garden, and then place them out as I have named, or just as your own taste may suggest. Or you can write the names of your plants upon a piece of silingie, or label, and stick them where you desire to place your plant. Between these plants in the outer row (we mean the calladiums) you can place very small zonal geraniums—scarlet or white—but never mix colors in this arrangement. Remember, you must have space to give a fine effect to such a garden. Though but small, your flowers and plants need room to show; and for development take particular notice that you had better by far look upon the soil than to muss up or crowd your plants. At some future time I may tell you how to make a tropical or water garden, and a similar plan, and give you a list of plants suited for the same.

ANSWERS TO CORRESPONDENTS.

BLOOD RED WATER.—Can you give me the reason of the very red color of the water contained in the accompanying vial? I took the same from a small pond in our State, which at times has this peculiar red appearance. It remains sometimes from three days to a week, and then it becomes clear again.

We find the first mention of the "blood red water" as far back as the days of Moses, and had not modern science dispelled the old charm of this ancient superstitious omen we should be left to search for the truth of this interesting scientific fact in vain. The microscope has stripped the subject of much of the mystery which has for so long surrounded it, and in the dim redness of the water we find only a natural cause, interesting and valuable to the student, as well as to the individual searcher after the hidden beautiful. The real cause of the redness of the water contained in the vial before us is the presence of an innumerable multitude of *legions* of extremely small plants and animals, which, under the influence of certain atmospheric states and conditions, multiply in such wonderful myriads that the mind can scarcely realize the wonderful extent of their procreation. The water contains a species of *Tribolium*, not very unlike those found on the borders of the Red Sea. This animalcule, when seen under the microscope, will be found composed of a gelatinous matter of a purplish red color, termed microscopic alga, having the appearance of slightly curved scales of half an inch in length, some of them variegated in color, and belonging to the lowest forms of animal and plant life. They may be considered as belonging to the class of *Hydras*, and are very minute. The reason concerning these minute animalcules is that the supposed weight of a single one would be less than the millionth part of a milligramme, (0.0154 grain).

We have another letter upon this subject, relating to another species of these *Infusoria*, and will answer the same as soon as we can give the subject a careful microscopic investigation.

OLLIPPO QUILL.

CLARA WESTON, River Road, New York.—The verbenas mite, for which you ask a remedy, is a mite indeed. It is not so large as the spider pest, and much unlike him in his operations. You cannot see this mite unaided by the glass, but with it it appears as large as a common sized house fly, and is seen very zealously at work. Plants attacked by this mite, sprout a dingy, brown appearance, as they are very social, and congregate together in great numbers. If your verbenas are troubled with them you will do well to examine other tender leaved plants, such as the heliotropes and petunias, for they love them also. You can kill them with most any mineral fertilizers. We use Gould's and Grafton's mineral fertilizers; both are good and effective. After showing your plant leaves all with tepid water, sprinkle a dingy powder over them, and the mites will leave at once. Lime water, tolerably hot, poured over your flower pots, will also exterminate them. The other insect of which you write is a species of thrip. The fumes of tobacco well applied will kill them. Two or three good smokings will compel them to change their quarters.

ADIRONDACK WOODS AND WORRIES.

SANDY HILL, N. Y., September 21st, 1874.

EDITOR FOREST AND STREAM:—

In your issue of September 17th is an editorial paragraph, relating to some acts of C. F. Norton & Co., and the subsequent proceedings of the sportsmen, hotel keepers and guides of the Saranac region, that appears to me to be ill considered, very nearly to the verge of hypocrisy. I have bought your paper for some months past, and have the impression that you would not wilfully go off on a wrong tack, and will venture to ask what legal or moral right the sportsmen, hotel keepers and guides had to put their feet upon the Sanguine Carry, or to launch their boats in the outlet of Big Clear Pond? Is not this land and this stream the property of C. F. Norton & Co., upon which they pay taxes to the State, and which C. F. Norton & Co.'s property beyond dispute? The sportsmen, etc., do not, I presume, claim any shadow of title to the land and waters upon which they are removing these obstructions, and have no more right there than they would have to enter your office and pitch any piece of furniture out of the window that chanced to be in their way. But why this controversy between these parties? Norton & Co. are lumbermen, and have large tracts of timber exposed to the incursions of the Arah of that region, the Saranac epidemic. They would not incur the ill will without great provocation. What Norton & Co. have suffered I

do not know, but will give you a couple of instances from my own experience in doing a lumbering business on the Saranac waters. From 1853 to 1855 inclusive I was getting saw logs out of the Upper Saranac; was part owner of the northwest one-third of Township Twenty-three. Upon this land was a quantity of valuable pine timber. A fire, which started from the shore of Lead Pond, burned about 15,000 standard logs of that timber, causing me a loss of at least \$5,000. That fire, I can now prove, was caused by the carelessness of a wealthy sportsman (since dead). These men, and their appendages (the hotel men and the guides) caused me great loss and annoyance. We were compelled to watch our rafts and home night and day, until our logs were safe in the keeping of the current in the river. Our lumber camps were burned, or the roofs used for fuel, or carried off; our dams destroyed, timber lands burned; our timber systematically stolen for the use of the country about. I had occasion to build a couple of boats, and not having any lumber suitable, I applied to a man by the name of Reynolds, who I was told, had found a man I paid him a large price, and when the lumber came to hand found my own log mark on a number of the pieces. The fellow had selected the right kind of a log and stole it from my drive when it was passing Miller's Pond. I believe that up to 1885 there was not a half dozen boats floating on the Saranac waters that were not made from stolen timber. I am sorry to say that the sportsmen that I have chanced to fall in with in fifteen years' experience, have not secured my admiration, or even respect (with a few notable exceptions). As a rule, they were ready to back up the guide in any devilry he might take in hand. Now the whole crew—sportsmen, hotel keepers and guides, were and to a great extent, are, now, more or less, and trespassers. Having no permanent interest in the country, nine-tenths of them don't own a foot of land—not one-half of them have even a nominal home—they are a nuisance and a curse to any country which they invade. And the fact that they are a convenience to your sporting people had not ought to blind you to their faults, or make you willing to encourage or assist them in such enterprises as they appear to have got in hand now, for you may feel assured that C. F. Norton & Co. have not braved a general condemnation of their property without an adequate cause.

I know the hotel keepers and guides of the Saranac through and through, and I do not believe the FOREST AND STREAM has anything in common with them, and will not, after the second thought, make itself their mouthpiece or champion.

[Our correspondent has stated to us in a supplementary note that he speaks in general terms in his strictures above. He recognizes honorable exceptions among guides, and other classes, who have come under his displeasure. This matter of trespass and rights involves serious and complicated questions, which can only be settled by wise adjudication in the future.—Ed.]

The Kennel.

DOUGHT SETTERS TO RETRIEVE?

BY E. S. CARMAN.

IT is a matter of the greatest surprise to me that gentlemen who profess great experience in the rearing and training of hunting dogs, can advocate retrieving in setters. Either in their experience they have not closely considered the effects of this practice, or my own experience has been made up of exceptional instances not generally applicable. If upon any one principle connected with the rearing of setters I entertain a stronger conviction than upon all others, it is that teaching young setters to retrieve has wrought an injury which, in its direct and hereditary effects, has well nigh rendered impossible that willing, unquestioning obedience and discipline, at all times and places, of which the setter that has never dreamed of fondling a wounded or dead bird is easily capable.

The natural instinct of hunting dogs, as we all know, is to seize and devour their game. The pause made by lions, panthers, cats, dogs, and many others, preparatory to springing upon their prey, has in the setter been converted by training into a stop, that should terminate only with the flight of the birds. Any relapse upon his native prompting to seize and devour the bird is so severely punished that he must in the future choose between the pain of such punishment and curbing the passionate temptings of his nature. If the latter, so far so good; if the former, the dog generally becomes eager, headstrong, and unruly to worthlessness.

Now, we will suppose our young setter thoroughly house broken. He charges at a whisper or a point of the finger. He remains as long as required. Whining, barking, furious demonstrations, and all puppyisms, are suppressed or under control. He seeks, finds, and fetches any article from a three cent piece to a handkerchief, ball, or hat. He ranges satisfactorily, obeys the wave of the hand, charges at a distance upon signal, and is altogether mellow for the practice to which this education has tended to fit him, and we are now to ascertain how far our dog is worthy of the patient, steady, affectionate instruction we have lavished upon him.

Most gratifyingly he points his first quail, remaining steadfast under fire and the tempting sight of the fall of the bird. Though aglow with excitement, and trembling in every nerve, he wistfully charges at his master's well known word, to await in anxious, nervous expectation his further command. Is it to "go" and "fetch" that bird? (I

If birds, when shot, dropped dead in every instance, the vital objection to retrieving might no longer exist. But it may be conceded that in a majority of cases there continues a muscular action of the dying bird perceptible to the sensitive mouth of the dog to invite or justify a closer hold. Occasionally, though falling as if dead, the bird is only wounded, and flutters off when it catches a glimpse of the dog close upon it. Disregarding the sternest warning from the master—if, indeed, there is time to utter a warning—the dog rushes after the bird, that now appears for an instant, is then hidden in the grass, again manages to fly a few feet, and releases itself from the first cautious grasp of the dog to be bitten, through and through, and held as in a vise at last.

This is not theory or conjecture. It is an old story, to be repeated as long as retrieving is tolerated. Thus our

promising dog tastes the blood that his keen, vivid, electrical nature, untutored, craves. It is brandy to the lips of the drunkard that struggles to reform; it to the veins already red hot. A lesson has been taught too well that he will never unlearn, and for the future, unless we break his spirit by overbearing and cruel drubbings, his retrieving will prove mortifying and unsatisfactory. As a rule, the dog will either mouth or bite his birds, or drop them several times in his return to his master as an excuse for mauling them without seeming to do so. I have seen dogs waver for moments, in the act of returning, between their well conceived allegiance and duty and a gnawing desire to mutilate or destroy their birds, sometimes with one, sometimes with the other result. As injurious, however, as this objection may be in itself, it is a hundred times more harmful in one of its bearings, as I beg very briefly to consider.

Setters should never once become familiarized with live birds. Their province is to find and point live birds, and their sole reward is to see and smell the dead birds shot over them through their sagacity.

Retrieving, as I have before remarked, tends to establish a connection between seeing and pointing in lieu of smelling and pointing, and the dog, from contact with live birds, is ever goaded by gradual steps to catch a glimpse of the bird which he should be well contented to point from scent alone, if acting under a well advised discipline. Staunchness is therefore impaired, and the already too impetuous nature of the setter rendered more impetuous.

It is urged that we lose birds by hunting over non-retrievers. There are occasions certainly when birds are lost, but they are rare. When wounded we can sometimes shoot them again. Seldom it is that a bird falls in bushes which we cannot penetrate; and not once in fifty times does it fall in a stream or body of water that we cannot ford. What sportsmen will not agree with us that it is better to lose one bird in fifty—yes, one in twenty—than to suffer his dog to depart from the staunch, artistic, incomparable maneuvers that we can never witness without admiring? I believe that nine dogs out of every ten will either, at odd times, mouth or bite their birds, and that the tenth dog, perfect in retrieving, will be deficient in nose, enthusiasm, or some other essential qualification.

My dear FOREST AND STREAM, you cannot perform a richer service to the true sportsman—whom you serve so splendidly—than by a conspicuous and continued denunciation of this pestiferous practice.

FIELD TRIALS—No. I.

BY SNAPSHOOT.

I HAVE often wondered how it was that there were still judges to be had, both for dog shows and dog trials, considering the treatment the said judges invariably receive, particularly at shows, and the number of a considerable percentage of owners of the dogs under inspection. I, for one, would not be a judge under any consideration. *Le jeu n'en vaut pas la chandelle*. To be abused, reviled, ridiculed by every dissatisfied exhibitor must be an ordeal which, I imagine, but few men could withstand tamely. It is terribly trying, even to a bystander, to hear the rough observations made, so what must it be to him against whom the shafts of the satire are directed, and who can plainly enough hear the innuendoes and double entendres directly or indirectly heaped upon his devoted head? His post is certainly an unenviable one, for whichever way he decides there must be some dissatisfied parties; and it is not pleasant to know beforehand that, whatever your decisions may come to, there will be some one to find fault with them.

Such being the case, and the arrangement of having a judge or judges proving an unsatisfactory, why not have a jury? Surely no one would have the audacity to find fault with a body of gentlemen for coming unanimously to a decision; and if any one did they would hardly have the "cheek" to express aloud their doubts about the juryman's integrity in the way one may hear them expressed now-a-days in connection with the judge's or judges' name.

Field trials are not quite so open to adverse criticisms as dog shows are, for every one for the present can see readily enough, from the various competitors' performances, which among them are worthless, which are good, and amongst the good ones which are the best. But then, again, as concerns these last, there comes a hitch occasionally; for though there are two or three judges they, even they, sometimes disagree. And you know the saying, "When doctors disagree, etc." This happens mostly from one of the judges nursing some pet theory of his own, which clashes with that of his conferees. Perhaps that pet theory of his will be style. It used to be said of one celebrated judge that, if allowed his own undisturbed way, he would always have placed first and foremost any fast ranging and high stepping dog over the heads of his more steady and more staunch opponents, simply because he (the judge) is so taken in by a flash that it happens to him every other defect. Now, this is simply absurd. Style is all very fine, certainly, but it is not a *sine qua non* in setting dogs. The quality *pur excellence* is staunchness. If a setting dog be not staunch he ought to be disqualified at once; for what is he good for? A dog that does not keep steady on game (whatever may be the value placed upon him on account of his pedigree, his appearance, his temper, and his winning ways) is worse than a bore to a sportsman, for he does not give the guns a chance to fire, and a party of shooters might go quattering 10,000 acres for a whole week with such an animal, and not be able to bag a head of game, except by chance, or by a mere fluke. Of course, the dog's style would be very much admired at starting, but the right value of the animal would pretty soon be estimated by the shooters.

Owners of such flashy dogs are always to be found either too ready to reason that it would be seem boorish and rather unkind, after being invited by a friend to his shooting party, to find fault with his dog, or dogs, of whom he has evidently such a high opinion. The consequence is, that though you inwardly curse the dogs, you are obliged

NEW YORK, THURSDAY, OCTOBER 1, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, October 3d.—Trotting meetings at Ypsilanti, Mich., Greensburg, Penn., Manhattan, Kan., Omaha, Neb., Charleston, Ill., Manchester, N. H., Boston, Penn., Greenville, Penn., Fleetwood, N. Y., Dayton, Ohio, Lexington, Ky., Cassville, N. Y.—Mutual vs. Baltimore B. C. Union Grounds, Williamsburg, N. Y.

SATURDAY, October 3d.—New Jersey Athletic Association, Ridgewood, N. J.—American Jockey Club, Fall meeting, Jerome Park—Practice day boat clubs, Harlem, N. Y.—Trotting meetings at Easton, Penn., Greenville, Penn., Fleetwood, N. Y., Dayton, Ohio, Lexington, Ky., Cassville, New York.

SUNDAY, October 5th.—Trotting meetings at San Jose, Cal., St. Louis, Mo.—Racing meetings at Galesburg, Ill., Nashville, Tenn.—Western's Walk begins.

TUESDAY, October 6th.—Trotting meetings at Corning, N. Y., Mount Holly, N. J., Prospect Park, N. Y., Boston, Mass., Goshen, N. Y., Pittsburg, Penn., Uden, N. Y., Danbury, Conn., Galesburg, Ill.—Racing meetings at Galesburg, Ill., Nashville, Tenn.

WEDNESDAY, October 7th.—Blight vs. Ten Eyck, boat race on the Hudson River at New York—American Jockey Club, Fall meeting, Jerome Park—Aerial floral and dog show, Mineola, Long Island—Trotting meetings at Corning, N. Y., Mount Holly, N. J., Prospect Park, N. Y., Boston, Mass., Goshen, N. Y., Pittsburg, Penn., Uden, N. Y., Danbury, Conn., Galesburg, Ill.—Racing meetings at Galesburg, Ill., Nashville, Tenn.

THURSDAY, October 8th.—Tennessee State Sportsmen's Association, field trials for dogs, Memphis, Tenn.—Trotting meetings at Prospect Park, N. Y., Boston, Mass., Goshen, N. Y., Pittsburg, Penn., Uden, N. Y., Danbury, Conn., Galesburg, Ill., Newport, Ohio, Chagrin Falls, Ohio—Racing meetings at Galesburg, Ill., Nashville, Tenn.

—We beg to acknowledge the receipt of a capital likeness of Major Arthur B. Leech, Captain of the Irish team, sent us under cover of a paper published in Dublin entitled *Ireland's Eye*. Having had the pleasure of a visit from Major Leech we must declare the cartoon, from our personal knowledge, to be an excellent one. In the picture the Mayor is depicted with his clear cut features and flowing beard, and for the back ground there is a flag and the Elcho Shield, while the Captain of the team holds jauntily in his hand a rifle—a Rigby, we suppose. The picture has for a title, "MAJOR SCORCH," and the motto, "Near or far off, well won is still well shot." (King John: Act I, Scene 1.) In the text of *Ireland's Eye*, we find the following:—"Major Leech, as leader of the Irish Rifle Association, is well known. He organized it and brought it to its present state of efficiency. Last year, under him, the Irish team carried off the Elcho Shield." * * * We have given the gallant Major Leech's semblance an appropriate niche in our Pantheon of Worthies.

CREEDMOOR.—THE IRISH AND AMERICAN COMPETITION.

WE must confess to something of a tumultuous feeling now that the contest is over, and our emotion finds its natural expression when we declare that the victory won by the American team was merited, and that it was the fruit of their patience, industry, and hard plodding toil. Full praise is due to their Captain, Colonel G. W. Wingate, whose zeal has been untiring, and who has labored in this matter night and day in order to uphold the reputation of American arms and American riflemen. We are not in the least abashed when we say to-day that we were not at all sanguine of success. Notwithstanding the fine effort made by the American team two days before the match, in our own experience we had seen so many wonderful preliminary trials, which ended in overwhelming defeats, that we were doubtful of the final effort. It may do very well for those who are always certain of events after they are decided, to say "we told you so." We had the best reasons to believe, and our opinion was backed by the most expert riflemen in the country, that if we could only hold our own, or should be beaten by a few points, the National Rifle Association of America and the Amateur Rifle Club would have deserved the highest praise. In our last issue we made the assertion that the men composing the American team were among the best riflemen in the United States, and their performances have proved our dictum. We can make no distinctions. Comparisons just now in regard to our *materielle* would be invidious. Take any six men in the world celebrated for peculiar skill, all to do the same thing at the same time, and the idiosyncracies of these men may exert themselves so differently that some may do better and some worse in the prescribed period.

There is one thing we see in this match, and it is an important one, and one as yet overlooked by the general press, and that is the question of arms. It cannot be dodged any longer. The match at Creedmoor, shot on the 26th of September, was a battle fought not more with arms than with men. It was the contest between muzzle loaders and breech loaders.

The FOREST AND STREAM has been asked time and time again, this question: "Which are the better rifles for accurate shooting, muzzle loaders or breech loaders?" and we have been unable to reply. We do not say that now—today we can positively and decidedly affirm that breech loading arms are as accurate as the muzzle loaders, for it may take another match, and even more than one, in order to decide the question in our minds between the two systems, but we openly declare, that as one of a jury, we would incline to the American breech loading rifles, such as are made by the Remingtons and Sharps, believing that they will be found to be quite as accurate as the Rigby or Metford muzzle loading arms. We trust to be fully understood in this matter. Questions of nationality, of particular prowess, we put aside for the moment, for it is with us simply the problem of the two systems—the point at issue the comparative excellence of two kinds of arms.

The match between the gallant Irishmen and our own team, though having a natural home interest to us, was even something more than that. Our Irish friends used an admirable gun—the Rigby, a muzzle loader, a rifle the peer and equal of the Metford. It was handled by John Rigby, Esq., in a mastery way. All the members of the Irish team used the same arm, and wonderful was their performance. Pitted against them were the members of the Amateur Rifle Club, representing the American riflemen, using Remingtons and Sharps, the most approved breech loaders our country could produce. The skill evinced on both sides was immense. Scores were rolled up, showing a lasting power and endurance of men and arms which was unparalleled, and the American breech loaders held their own. The Remingtons scored 473, the Sharps 456; the total was 934 for the American team, 931 for the Irish team. Let, then, both the makers of our American arms, the Remingtons and Sharps, hold their heads high, for they have brought out results which neither the English makers of breech loaders, or any other European makers have ever accomplished. If we are elated, it must be remembered that our victories in national contests have been few and far between of late, and that the last occurred so long ago (that of the yacht America) as to have been almost forgotten. We recall, however, the America for this reason: "Our friends on the other side, though acknowledging the speed of the vessel, declared that rapidity of movement was accomplished at a sacrifice of safety or convenience. It is said that American breech loaders recoil, that gas escapes, and lastly, that our breech loading arms for accurate shooting require constant and careful clearing. Noticing fully the match of the 26th September, we do acknowledge that more time was occupied by the American team in cleaning their rifles, but this inconvenience on the occasion of delicate practice is quite overbalanced by the amazing rapidity with which these breech loaders can be used on all other ordinary occasions. This objection does not however in the least militate with their accuracy. The question of the fouling of breech loaders has been settled long ago. Military experts, who urge their adoption in every part of the world, find that such difficulties in regard to fouling do not exist to such a degree as to impair their accuracy in continued firing. The Remington or Sharpe does not foul any more than does the Springfield, the Martini-Henry, the Snyder, or the Swinburne. To conclude these introductory remarks, we look upon the match at Creedmoor as a great advance made in the history of arms of precision, and a signal triumph of American manufacture.

THE MATCH.

As early as nine o'clock the broad green lawn of Creedmoor was dotted here and there by gentlemen of the N. R. A., and of the Amateur Rifle Association, who, as committee of arrangements, were already on the ground. Every detail had been carefully thought of, and at the appointed hour, the whole machinery of the range was in complete working order. At the proper time the shooting commenced, the Irish team using targets 16 and 17, and the Americans 10 and 20.

Captain of the Team—Colonel G. W. Wingate.
Lieut H. Fulton, Remington Sporting.

The diagram we print shows the exact position of each several shot.

The score made by Lieut. Fulton was an amazing one. In a possible 180 he scored 171, making 38 bulls-eyes and nine centres. To show how close was the contest, we give the scores at the various stages of the match, as follows:

Yards.	Rounds.	Irish Team.	American Team.	Dif.
800	5	100	106	6
	10	205	215	10
	15	317	326	9
900	20	413	427	14
	25	527	538	11
	30	629	638	9
1000	35	732	734	2
	40	841	848	7
	45	931	931	0

The very last shot was that on the American side by Captain Bodine. It was a moment of intense excitement. Though a gentleman of unflinching nerve, the steadiest of the steady, with no end of lasting power, though ignorant that everything depended upon him, indifferent as to the anxious crowd surrounding him, his right hand slightly scared and bound up with plaster, having just been cut by the explosion of a most unpoetic ginger bottle (and it is surprising what little in momentous occasions disturb the equilibrium of the greatest men), Captain Bodine slowly bent breast down to the ground, as carefully drew a long breath (so did we), held his Remington straight on, then gradually gave that pull on the trigger, when eye and brain and every nerve work in sympathetic tension, and the report of the last shot rang through the silence. Slowly came the first signal. "We are on!" was said with bated breath; then there was a pause. It may be a tie, perhaps a centre, when we would win! But no, by Phœbus Apollo! (who was a noted shot), it is a white disk, a BULLSEYE which looms up. Hurra! hurra! we have won by three points! Captain Bodine is no sooner on his feet than he is surrounded by a group of frantic men, who yell around him; who almost insist on carrying him in triumph in their arms. Then Mr. Bodine understands what the last shot meant.

We relate this incident as one of the most pleasant occurring on the occasion. Lieut. Fulton's manner throughout (for he was the great hero of the day) was superb. He was the embodiment of all that was cool and determined. There is a peculiarity about Lieutenant Fulton's loading which requires particular mention. This gentleman has accurately measured out just 95 grains of powder in glass vials. He loads his metal case with this powder, then places a wad on the powder; the cartridge is then introduced into the chamber, and into the muzzle of his Remington he pushes down his ball. Mr. Fulton is thus enabled to add somewhat to the strength of the charge. We are by no means prepared to state what the advantages of this method, nor would we advise other riflemen trying this extra charge. All we can say is, however, that in addition to practical skill with the rifle, Lieut. Fulton is thorough master of the theory of projectiles.

Our Irish friends, capably cared for by Major Leech, shot magnificently. It must be said that the weather in [CONCLUDED ON PAGE 123.]

[CONTINUED FROM PAGE 120.]

every way was as favorable to the Americans as it was detrimental to the Irish team. It was very hot; there was scarcely a breath of air, and though there was but little mirage, the glare was excessive. In fact the heat was at all times wilting. If the moral effect of a considerable advance in the 800 yard range made by our men, might have had a depressing tendency on a less gallant team than the Irish, with them it had no effect. Sturdily, bravely they fought, and struggled manfully, and came near, very near, within an ace, of winning. If, unfortunately, a wrong target had not have been taken by a gentleman of the Irish team, it might have gone hand with us. It is highly probable that a score was lost by General Dakin from a defective cartridge. Mr. Rigby's score, 163, was immense, and Dr. Hamilton's first score at 800 yards of 58 rivalled that of Lieut. Fulton. Every man on both sides did well, and they did their best.

SPEECH-MAKING AND FESTIVITIES.

At one o'clock, after the shooting at 800 yards was ended, the gentlemen of the two teams assembled at a refreshment tent, handsomely decorated, where they found the Lord Mayor of Dublin, the Lady Mayoress, Lady Masserene, and a number of distinguished guests. Here a charming episode took place. After an excellent luncheon, Major Leech presented a splendid silver vase of Irish design to the riflemen of America. The vase bore the inscription: "Presented by competition to the Riflemen of America by Arthur Blennerhassett Leech, Captain of the Irish International team of Riflemen, on the occasion of their visit to New York, 1874." An appropriate and happy speech was made by Major Leech, which was responded to by Colonel Wingate. After the luncheon the shooting recommenced. The match was concluded at about half-past 5 o'clock.

Here another charming and graceful act on the part of Lady Masserene occurred. Not content with the magnificent present of Major Leech, to cap the climax, each member of the American team and their captain was decorated by the fair hands of Lady Masserene with an elegant badge, to be worn as a souvenir of the occasion. The emblem was of gold, the flag of England and America being blended. Among the many pleasant things said by the grateful recipients of her ladyship's favors, none was more to the point than that expressed by Mr. Hepburn: "Your Ladyship," said he, "I feel the more proud to receive this emblem, because the rifle I shot with was all made by my own hands."

So ended the first great rifle match held in America. The officers of this match cannot but be of immense advantage to the N. R. A., and we are indebted to Major Leech and to his gallant team for having assisted us in founding rifle shooting under systematic rules in the United States. May the Irish team have better luck next time, but they can never well meet more sincere friends, or find better wishes than among our American riflemen.

—Just complaint is made in regard to the railroad company, who try to carry passengers from Creedmoor to Hunter's Point. Last year the service was badly performed, and this year it was worse. It must materially affect the interests of Creedmoor if such delays or difficulties occur.

—We regret to announce the death of C. F. de Bost, of Company G, Seventy-first Regiment, who was badly injured at the railway station by falling from the overcrowded platform of a car attached to a train returning from Creedmoor. He fell under the wheels. Lieut. de Bost was twenty-seven years of age, and he formed one of the team of the Seventy-first Regiment. His death will materially affect the chances of the regimental team at Creedmoor.

—An effort will be made to get up a match between four of the Irish team and four of the Americans, at Creedmoor, on Saturday next; distance 1,000; the Irishmen to use the Rigby, the Americans any arm. We should be glad to see this match come off. As it is, we trust to see some of our gallant Irish friends taking home a harvest of prizes.

—In addition to the prizes offered at Creedmoor, (see our last issue,) the following handsome gifts have been added, all presented by Mr. J. H. Stewart, of London, who is the official of the English N. R. A.:—

To the Marksman making the highest aggregate score in Competitions I, II, VI and VII, or IX, XI, and IV, a Stewart's New Camp Binoocular Field Glass, to be used officially at Wimbledon.....Value, \$45.00
To the Marksman making the highest aggregate score in Competitions III, X, and XIII, a Lord Ray Telescope.....Value, \$40.00
To the Marksman making the highest score in the Third Stage of Competition XIII, a Stewart's Improved Watch Aneroid Barometer, for ascertaining mountain heights, and foretelling weather, with the addition of Compass and Thermometer.....Value, \$50.00
A third prize is added in Competition VII, as follows:—

To the third highest score an Officer's Dress Sword, to be selected by the winner, presented by Horstmann Bros & Allen.....Value, \$40.00

ACKNOWLEDGMENT.—We are indebted to the New York Herald for the use of their prints of the targets, which appeared in their editions of Sunday and Monday last. Though through the bad management of the railroad train the staff of the Herald, leaving Creedmoor at six o'clock, did not reach their office until ten o'clock at night, yet a perfect copy of the targets was produced in the Sunday edition, showing where every shot struck for all the twelve marksmen at the three ranges. In no other way could have been produced so truthful or accurate a picture of the match, nor one so readily understood. This is a journalistic feat which has never been attempted before, and was thought by the gallant captain of the Irish team, and by the Irish gentlemen, to be one of the marvels of American journalism. The admirable résumé of the shooting at Creedmoor, and its clear analysis, was the work of Mr. O'Kelly, of the Herald staff, well known for his intrepid experiences in Cuba as the correspondent of that paper.

At the practice match, on Thursday, 24th, the following were the scores of the Irish and American teams:—

Score of the Irish Team.			
	800 Yards	900 Yards	1000 Yards
J. Wilson.....	57	57	47
Captain Walker.....	64	51	52
E. Johnson.....	55	53	49

G. W. Yale.....	54	50	46
E. H. Sanford.....	48	52	44

The following telegrams have been interchanged with the Canadian riflemen and the N. R. A.:

HAMILTON, Ont., September 28th, 1874.

H. A. Gildersleeve, Secretary Amateur Rifle Club:
Will the American team shoot against the Ontario team at Creedmoor this week. If so, I will endeavor to take the team down.

(Signed) J. J. MASON, President Ontario Rifle Club.
To this message Colonel Gildersleeve sent the following reply:
New York, September 28th, 1874.

Mr. J. J. Mason, Hamilton, Ont.:
Creedmoor range will be occupied this week by announced matches. I shall be pleased to meet you all in the "Barn or mecca." The American team will not engage in any contest this year.
(Signed) H. A. GILDERSLEEVE, Sec. American Rifle Club.

THE IRISH TEAM OUT WEST.—Major Arthur B. Leech, and several members of the Irish Rifle Association, including Messrs. Rigby, Millner, the brothers Kelly, several ladies, and probably Viscount Masserene, will start next Saturday on their chicken shooting excursion to Kansas. They will be accompanied by Mr. Hallock, the editor of this journal, by whom the entire programme of their trip has been arranged. They will go by way of the Erie, Lake Shore and Toledo, Wabash and Great Western railroads, the officers of which have freely extended the courtesies of their respective lines to the distinguished guests, providing special cars, &c. At Hannibal, Missouri, they will be met by Colonel H. W. Lamb, the President of the Hannibal and St. Joseph Railroad, who has provided a sleeping car specially arranged for the trip, and will join the party for the purpose of accompanying them to the shooting grounds.

They will also be accompanied by a delegation of Western sportsmen, headed by G. W. Dorman, Esq., a wealthy merchant of Hannibal, who has been chiefly instrumental in arranging the programme at the western end of the route. They will then proceed to St. Joseph and farther West. Dogs, tents, &c., have been provided. The guests will lodge in the sleeping cars during their sojourn on the prairies. They will be absent about ten days, and upon their return will visit Chicago and some other places of interest. The Winkler Club, of Lawrence, Kansas, has sent us a telegram, through its President, E. D. Thompson, Esq., extending special trains, &c., with a deputation to meet them at any given point. Although the party is under charge of Colonel Lamb and Mr. Dorman, it will experience great pleasure in meeting the Winkler Club delegation, and in thanking them for their attention. Dr. Rowe, ("Mohawk") has very generously offered his splendid imported Maedona dog "Dan" for the use of the party in Kansas.

QUEEN'S COUNTY AGRICULTURAL SOCIETY.—The event of the season in the exhibition of stock, machinery, works of art and products of the soil, is to take place on the 7th, 8th and 9th of October on the spacious grounds of the Queen's County Agricultural Society. These grounds are situated about twenty miles from this city at Mineola, L. I., adjoining Mr. A. T. Stewart's Garden City, and embrace one of the handsomest parks (of 40 acres) in the State, in the midst of high cultivation, with shrubbery, walks, &c., with a drive for the exercise and use of horses. There are stands, stalls, an exhibition hall, and all the appurtenances of a first-class exhibition ground. Judging from the entries for exhibition alone, it is expected the display will be unusually fine. The railroads from Hunter's Point carry all articles to and from the grounds free of charge; the East River Ferry Company are equally liberal. Among articles promised is a steam plow, the property of Mr. A. T. Stewart. It is of English make, and used for the cultivation of his immense purchase, the Hempstead Plains. The engine attached to the plow is of ten horse power, can draw over twelve tons on a common road, will turn as short as an ordinary wagon, and drives four plows set ten to twelve inches apart. Some new Syria tobacco is to be on exhibition, which is an item, when we know 322,407 cigars were made in Queen's County alone during the month of August last. Mr. Samuel Thorne, of 76 Gold street, has received from England a handsome pair of setter dogs, which may be on exhibition. Mr. E. W. Karker, of College Point, L. I., will exhibit a new patent "Extension Table;" and for the horses and cattle, Messrs. Durkee, Delamater, Fells, Parke, Ingraham, Swan, Jones, Wolbert, and many noted breeders and raisers of fine stock, will be in attendance. Special trains and excursion tickets have been arranged with the railroad companies, and for the convenience of the public. Mr. John C. Jackson, 69 Barclay street, is the president; Mr. Benjamin D. Hicks, of Old Westbury, L. I., treasurer, and Samuel Willets, Little Neck, L. I., secretary. The directors are, one gentleman from each town in the County of Queen's. With fine weather we predict an unprecedented display, and fine sport for lovers of horses, &c. Communication for entries for exhibition, also copy of the premium list, can be had by addressing the secretary at Little Neck, or the Fair Grounds, Mineola, Long Island.

GAME IN FLORIDA.—The St. Augustine (Florida) Press utters the following timely remarks upon the reckless destruction of game in that State. Were it not for the almost impenetrable jungles and swamps that overlie so large an extent of the territory, the wanton slaughter that goes on constantly at all times and seasons would soon render game as scarce there as it now is in the Eastern States. It is extremely important that Florida should enact a game law immediately, in view of the increased facilities for reaching her interior regions, and the rapidly increasing number of sportsmen who annually visit them. The Press should be encouraged to urge this measure upon the Legislature. It says:—

We have commented somewhat on this subject before. We were informed that the Legislature, at its last session, would very probably take up the subject. It is evident that some legislative action is requisite to preserve the game, of all kinds, in this State, from the merciless and unnecessary slaughter to which they are now subjected by the thoughtlessness of hunters and sportsmen. Moreover, it is necessary to pass laws, by which game that have been slaughtered, or driven from a range, can be restored.

Our suggestions are very simple; but they may be worthy of some consideration. Let the Legislature enact, that from the 1st of September to the 1st of June, no deer, without horns, shall be shot, under a severe penalty. It is during that period that the females calve, and the destruction of one is more frequently the destruction of three. This law would also protect the young deer, until of a suitable age for increasing. Unless this regulation is enforced with regard to the game of all kinds, they will soon be exterminated in this section at least; whilst a wise protection of them would cause them to "increase and multiply," in a wonderful degree.

Next, let it be enacted that whoever shoots the old hen—the patriarch and leader of a flock of wild turkeys—shall be heavily fined. There is no difficulty in distinguishing her from the rest by her color and general appearance. When she is killed, the whole flock, which have kept together for years, disperse. Allow no quail to be shot or trapped from the 1st of March to the 1st of September. In addition to the latter species, it is worthy of remark, that four years since there were any number of them just outside the City Gate. They have disappeared, owing to the thoughtlessness of the residents out there, who trapped whole coveys that had, in a measure, been domesticated—we may almost say in wantonness.

THE RIGBY SHOT GUN.—We call attention to the advertisement in another column of the Rigby Shot Gun. The Rigby Rifle is already made famous by the recent International contest at Creedmoor, but the shot gun, a most superb arm, is not as well known in this country. Parties desiring guns, would do well to examine the Rigby.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass, *Morone chrysops*, Weakfish.
Bluefish, *temnodon cillolator*, Sheepshead.

SOUTHERN WATERS.
Pompano, Trout (black bass), Sheepshead.
Snapper, Drum (two species), Tailorfish.
Groupers, Kingfish, Bluefish.
Rockfish, Striped Bass.

FISH IN MARKET.—Last week, at the close of it, the first California salmon appeared in New York Market. These fish were in beautiful order, and would weigh fifteen pounds; selling at fifty cents a pound. Our California salmon, first cousins to the Canadian fish, are three weeks earlier this season than last. They were caught and put up by Mr. A. H. Cammings, of Sacramento. The characteristics of the *Salmo gairdneri* we have before described. There is also in market some preserved Nova Scotia salmon. It is quite an art to keep a bouquet of flowers so they may retain their bloom and fragrance. Similar skill is now evinced in preserving fresh salmon. This most excellent of all fish, must keep up his reputation for good looks. Not only inside must his flesh be creamy and flaky, but his outside must retain its burnished silver sheen. Enoch Piper, of Bathurst, Nova Scotia, is the inventor of the refrigerating process, and his *salmon*, as the French would call it, is but half a mile away from the salmon fishery. Piper prepares his fish in some peculiar way, (the secret of which after some little trouble we found out for ourselves) which keeps every beautiful scale in place. Such fish are in active demand all through the winter, and are bought by the hotels and leading restaurants.

Welcome the first of the smelt, coming from Massachusetts. If insects look like leaves, (and there is a wonderful assimilating power in animals,) the peculiarities of the odors of fish and their resemblance to fruits and vegetables have perhaps never been thoroughly studied. Does not Seth Green say that he can tell various species of fresh water bass, with his eyes shut, only by the smell? Green, cucumber-like to a degree, if we may use the expression, is the odor of the first smelts. Did you close your optics and use your nose only, you would declare that a dish of sliced cucumbers had been put before you. Smelts in market are rare as yet, and worth thirty-seven cents a pound. By the time of the first frost they will be worth twenty-five cents, and when it passes, some fifteen cents. Blue fish were never so abundant, and are fatter than pigs. We don't like to mention wholesale prices, but at retail you are asked to "take 'em, boss, at seven cents a pound." Ten pounders are common. Spanish mackerel are hard to find at sixty cents, though the last caught scaled seven and a half pounds. This fish is now heading southward. We will intercept the school off the Chesapeake; head it off again

—James Barton of Brooklyn, and Richard Hall of this city, rowed a race on September 28th in nineteen feet working boats, on Gowanus Bay, for \$200 a side. The distance was one mile and a half to a stake boat and return. Both men got away together, Hall verging slowly ahead, and when within one quarter of a mile of the home stake-boat the row-lock of his boat gave way and he was capsized. Barton rowed across the line, winning the race. Hall was much exhausted.

—The Gramercy Boat Club held their fifth annual regatta on the Harlem River on September 23d. The day was beautiful and the water as smooth as could be desired. The first race was a single scull, distance three miles straightaway, for the championship of the club, and the silver belt held by George Pierce. There were ten entries, and eight started, as follows:—H. R. Mills, F. Winnie, C. F. Neuching, E. B. Webb, George H. Pierce, David Roach, E. Wiesner, and E. J. Aikinson. Mr. Peverly started the men evenly. Roach was the first to get away, followed by Mills; then Aikinson, followed by Webb, and so on all the way and finally won the belt in twenty minutes and thirty seconds. Nothing second and Mills third. The next race was the Senior Sculler's race, one mile straightaway; the starters were:—E. J. Aikinson, R. J. Seeborg, J. C. Pentz, E. B. Welch, F. Winnie, H. Mills, and R. W. Zoller. Mills got away with a lead, but was soon overhauled by Winnie, Welch and Aikinson. At the half-mile Aikinson passed to the front, and after a spirited contest with Winnie, was declared the winner by half a length, in 6:10. Winnie's time was 6:12, Welch came in third. Zoller fourth, and Seeborg last. The fourth event was the four-oared shell race, distance two miles. There were three entries, as follows:—

No. 1. Charles Earwicker, bow; M. L. Sutton, W. H. Smith, R. E. Wiesner, stroke.

No. 2. H. Mills, bow; C. H. Wilcox, George H. Pierce, H. R. Mills, stroke.

No. 3. David Roach, bow; George Krapp, F. Winnie, C. F. Neuching, stroke.

The Mills crew led for the first quarter of a mile and then the collision took place with the Weisner crew. The Neuchings now led, and before the other boats could be separated, had gained such a decided advantage that with all the spurring on the part of the Mills crew, they were easily in 19:44. The Mills crew second. It was now getting a little dark, so the double scull race had to be omitted and the day's sport was concluded with an eight-oared barge race. The following are the names of the crews:—

Barge Nautilus.—H. F. Kennedy, D. Pentz, Frank Hopper, J. Baird, H. Mills, C. H. Wilcox, H. Brown, H. R. Mills, stroke; C. Hudson, coxswain.

Barge Atlanta.—David Roach, bow; George Krapp, A. Spina, M. L. Sutton, R. W. Zoller, W. H. Smith, R. E. Wiesner, Charles Earwicker, stroke; F. Winnie, coxswain.

They started very evenly and kept abreast of each other to the first mile, and on crossing the score the barges unfortunately collided. Commodore Brady, who acted as referee, decided that the race should be rowed on another day.

SCHUYLKILL NAVY REGATTA.

PHILADELPHIA, September 28, 1874.

EDITOR FOREST AND STREAM:—

The fall regatta of the Schuylkill Navy was held on Saturday 28th instant, and everything seemed to combine to make it a perfect success. The arrangements of the Committee were perfect, the races for the most part exciting, the weather smooth and the weather fine. The river was alive with boats, and the banks were well lined with spectators. The tug Fraley was filled with guests, members and reporters, while the Empire's boat, the Diamond, had, as should always be the case, only the officers of the regatta and of the Navy.

The races, which were for the champion flags of each class and special prizes to competitors, were as follows:—

—The first race was a single scull, distance two miles with one turn, except the four-oared shell race, which was one and a half miles straight away. At 2:30 the singles were called into line, and of the four entries, three started: John D. McLeath, Quaker City Club, on the west Jos. B. Leibert, of the same club, on the east, with Max. Schmitt, of the Pennsylvania, between them. They were a good start, and held almost for that quarter of a mile, but then McLeath came on to the island, until in self-defense McLeath started to the lead. Leibert, who was well out in the middle of the river, was nearly level with McLeath at the Willows, when the latter was forced to "duck" under the tow lines of a couple of canal boats, which on regatta days appear to come out as far from the tow-path as their pilots can make them. This gave Leibert a short lead, and with his usual buoyancy, under the caution of the Regatta Committee previous to the race, he attempted to turn McLeath's skis back, purposely making a foul, and was disqualified by the Empire. McLeath having a race to pull later, wisely saved himself, coming in in 16 min. 10 sec., followed by Max, who had been left out of the race on the first mile—time not taken.

For the gig race there were two entries:—

—Hornet.—Crescent Boat Club.—H. K. Hinchman, stroke; G. W. Young, Geo. Miliken, Jr., C. E. Steel, bow; F. W. Witmer, coxswain.

Phantom.—Pennsylvania Boat Club.—E. C. Cox, stroke; C. Zeller, Geo. Haldor, J. McElmell, bow; R. H. B. Fairman, coxswain.

The Crescents caught the water first, and rowing well together at 38 to the minute, soon gave the Phantom a lead. The Pennsylvania boys pulling well at forty strokes and making too much "water work." At the "Willows" Wilmer gave the wash to their opponents, but made such violent use of his rudder as to materially check his boat. At the stake he muffed it so badly that a two-length lead deviated to two seconds, turning in 6 min. 53 sec., the Pennsylvanians in 6 min. 55 sec. The first 30 sec. they were in the lead, the Pennsylvania boys pulling on next Saturday. While waiting for the doubles to start, a crowd just above the landing gave signs of an internal disturbance, which was not to be wondered at when it was found they had located right over a "Yellow Jacket's" nest. The bees disputed possession, and served an ejecution.

There were three entries for the six-oared barges:—

—Anchovy.—Malta Boat Club.—E. H. Brooker, stroke; E. Ilman, Aug. Dunlop, Wm. Hopper, J. Ilman, J. Holscher, bow; W. F. Warthman, coxswain. Position west.

—Falcon.—Pennsylvania Boat Club.—Thomas Massey, stroke; W. G. Thomas, C. E. Hasenbruch, H. Conrad, J. McElmell, A. Street, bow; R. H. B. Fairman, coxswain. Position center.

—Jaws.—Crescent Boat Club.—H. K. Hinchman, stroke; George W. Young, H. R. Barnhart, A. Sperring, H. F. Witmer, Geo. Miliken, Jr., C. E. Steel, coxswain.

From the start the Crescent had its own way, Steel taking his boat straight up the east side to his stake boat, around it and back without apparently noticing the desperate struggle for second place. Along the island going up the Pennsylvania crew were fighting to lead the Malta, but after getting a clear length couldn't shake them off. The Malta was rivaled at the stakes, Crescents in 6 min. 55 sec., Pennsylvanians 7 min. 15 sec., Malta 7 min. 55 sec. The latter making a splendid turn, overhauled and passed the Falcon, and for half a mile held nearly a half length, but Brooker, stroke of the Malta, who rose almost from a sick bed to row the race, was fast falling, and although sticking to it with wonderful pluck, fell into his coxswain's arms as they crossed the line, two lengths to the "last." Crescents, 14 min. 38 1/2 sec.; Pennsylvania, 15 min. 17 1/2 sec.; Malta 15 min. 28 sec.

The last race was for four-oared shells from Falls to Rockland. The entries were:—

Pennsylvania Boat Club.—John Lavens, Jr., stroke; F. Henderson, Max Schmitt, O. F. West, bow.

Quaker City.—J. D. McLeath, stroke; S. Stinson, James Fowler, S. Gormley, bow.

There was much speculation on the race. The "Quakers" used to win all the four-oared shells in our Navy regatta, and still have their old stroke, the best on the river. Their team was certainly strong, but one week's practice was not enough to get the "wast men" into the proper trim. The Pennsylvania crew was the same that beat the Philadelphia in June, and that is credited with giving the Argonauta a hot race in the final heat at the same regatta. There is no denying that it is a strong crew, and with a change at No. 3—the work spot—three little jollies racing, would not be likely to be "hindmost of three" in any of the entries that we have seen on this river. The boats got away well together. Gormley steering beautifully right down the middle; West going close to the tow-path, so close in fact that off Laurel Hill he found himself close under the stern of a canal boat, and had to go sharp out into the stream. Being nearly a length ahead of the Quakers, he was able to cross the line and to cross their bow, and offered them a chance to win on a foul. Gormley, however, with consideration not often seen in the excitement of a race, gave way, jannining his rudder hard to port and coming to oars. Upon straightening out, being on the outside of the curve, he found his boat a clear length behind, and having to take a severe wash (which, by the way, the Pennsylvania crew were not allowed to take), the other might have not caught their leaders. The Pennsylvania's time was 9 min. 15 1/2 sec.; Quaker City, 9 min. 30 sec.

SUMMARY.

Schuylkill Navy Regatta, Sept. 28, 1874.

Single shells, three entries, two miles, one turn from Rockland, won on a foul at stake by J. D. McLeath, 15 min. 15 1/2 sec.; for champion belt and special flag.

For champion and special flags, same course, four-oared gigs, two entries: Pennsylvania, 1 h. 14 min. 18 sec.; the Quakers by this time, 1 h. 14 min. 34 sec. Double Sculls, two entries; Crescent, 1 h. 15 min. 22 sec. Six-oared barges, three entries; Crescent, 1 h. 11 min. 34 sec.; Pennsylvania, 1 h. 12 min. 10 sec.; Malta, 2 h. 15 min. 28 sec. Four-oared shell, National Course, one and a half miles straightaway: Pennsylvania, 1 h. 9 min. 15 1/2 sec.; Quaker City, 2 h. 9 min. 30 sec. —"Victory" Commodore John Lester, Jr., Starter.—Star.—Thompson, "Philada." Timekeeper—W. H. Tucker, Umpire, Judge—J. Mitchell, Quaker City. Very truly yours, SCULLS.

—The badge presented by the Schuylkill Navy to James M. Ferguson, Esq., is a beautiful specimen of the jeweller's art. The clasp represents two sailors, with oars crossed saltierwise, from this, by two chains, hangs the main emblem of the badge. This is the monogram of the Schuylkill Navy, surrounded by the pennant of all the various clubs, the colors being faithfully represented. The badge was designed and made by L. Bedichimer of Philadelphia.

—The Fall Regatta of the Yale Navy will take place at Lake Saltston on the afternoon of Wednesday, October 14th. There will be a shell race, a barge race, and a single scull race.

—At Grand Rapids, Mich., a regatta for single and double sculls and duck boats, will come off on Monday, October 2, Yates and Curtis, of Chicago, have entered. Curtis will row singly against a double scull.

—Under the auspices of the Cincinnati Commissioners of the Exposition, a regatta took place on the Ohio River on September 24th. The Cincinnati and Pittsburgh clubs, and the Naiaid club, of Toledo, took part. There were four races, all down the river, without return. The first race, three quarters of a mile, single shells, was rowed by three boys, nine years old. Time, eight and a half minutes. The second race, two miles, single junior shell, was rowed by boys not over 16. Time, 14 min. 58 seconds. The third race, 11:50. The third race, senior sculls, two miles, was won by Risley, in 14:18; Waddle, 14:20. In the fourth race, three miles, four-oared shells, three entries. Won by Duquesne club, Pittsburgh, in 15:03; Cincinnati club, 15:08; Naiaid, of Toledo, 15:30.

—The great international single scull race between Geo. Brown, of Halifax, and E. Morris, of Pittsburgh, Penn., for \$2,000 in gold a side, was rowed on the Kennebec river, near St. John, N. B., on Saturday, September 26th. The course was the same as that over which poor Renforth pulled a few years ago, and when Brown put on a magnificent clock the men were started evenly, and dipped the oars simultaneously, and the light craft flew over the water, Brown pulling about thirty-seven strokes, and Morris forty-two to the minute. The America was ahead until turning the stake boat, when Brown turned the quickest, and gained at least a boat's length. This lead he maintained throughout the race, which was a very close contest. Both were doing their level best, when Brown put on a magnificent spurt just at the end of the race, and showed his boat home by two lengths; time 37 minutes. It is said by competent judges that this was the best contested race and the most evenly rowed match that ever was seen on these waters.

—At Teddington, near London, a boat, forty feet in length, built from the design of Mr. H. M. Stanley, the discoverer of Livingstone, and intended to accompany that gentleman's expedition to Central Africa, was launched. It can be divided into five sections, weighing 120 pounds each, and a section can be carried, after the fashion of an Indian palanquin, by two men. *Irish Times, Dublin.*

—We regret to hear of the death of W. J. Shipton, of Burton, Eng., who was drowned in Lake George, near Hobart, Indiana, on September 17th, while on a fishing and shooting excursion. His body has been recovered.

—The Farrago Boat Club, of Chicago, held a meeting at the Tremont House last week, Mr. George Murison presided, and Mr. A. S. Porter was secretary. Mr. A. D. Downs was chosen to represent the club as a member of the Executive Committee of the Northwestern Amateur Boating Association, with headquarters at Toledo. Among other matters of importance the following resolution was passed:—The Captain is to have charge of the club boat on Sunday. Some routine business was then transacted, after which the meeting adjourned until the second Monday in October.

—The champion four-oared crew of England, composed of J. H. Sadler, Robert Bagnall, Joseph Taylor, and Thomas Winship, recently issued a challenge, offering to row any four men in the world a four-oared shell race for 2500 a side. This challenge has been accepted by the Hon. Bernard Biglen of this city, who agrees to select four men from New York and to have charge of the English challenge race to take place at Philadelphia, Springfield, Mass., or Saratoga. The distance to be five or six miles straight away, or with a turn. The stakes to be \$2,500 to \$5,000 a side, and the New York crew to be allowed \$1,000 for ex-

penses. The American four will be selected from the following noted oarsmen: Bernard Biglen, John Biglen, Josh Ward, Dennis Leary, of New York; Epil. Morris, and Wm. Schmitt, of Pittsburgh. The proposed contest is creating quite a stir in sporting circles.

—The members of the Boston Yacht Club will engage in a roving contest for the single scull championship of the club October 1, on the Charles River course, and an exciting race may be expected.

—The Murphy Brothers and Messrs. Worthington and Comstock rowed a match race on the Thames River near Norwich, Conn., on September 10th. The course was two miles to a stake boat and return, in working boats, four oars each. The contest was a closely exciting one, the boats keeping close together most of the way, but the Murphys leading by from a half to one and a half lengths, which was increased just at the finish, and they came in four lengths ahead in 15 1/2 minutes.

—The Annapolis and Potomac boating clubs of Washington, D. C., will hold their annual regatta on October 1st. The following is the programme of the races. The first race will be for four-oared shells over a straight course from King's wharf, just below Potomac boat-house, one and a half miles and return. The second race will be for six-oared shell gigs, on 2d October, on the old course, known as the Aqueduct course, one mile and a half and return. After the races both clubs will proceed to Baltimore to take part in the Patapsco regatta, which will take place on October 3d and 4th. Then again the crews will arrive in New York to row their return race with the Nassau club on the Harlem river, which will probably come off on October 13th. The following are the crews: Annapolis, shell, Prescott, (stroke); Nesbitt, (bow); Stowers, (2); Brown, (bow); gig, in addition to the above, Messrs. Prescott and Corson, Potomac, shell, Coughlin, (stroke); McBair, (3); Randall, (2); Truax, (bow), and for the shell, Clair and Sam. Wheatley will be added.

TO RESUSCITATE THE DROWNED.

GRANTVILLE, MASS., August 25th, 1874.

EDITOR FOREST AND STREAM:—

There are two things to add to the directions of the Massachusetts Humane Society—how to restore the apparently drowned. Pull the tongue forward when you are about to make incision, and raise the arms at the same time from the sides, through the angle of about 120°, retaining them as soon as the lungs are filled; continue these movements for twenty minutes. The only reason why I write these directions is, that I am confident that lives will be saved by following these instructions that would otherwise be lost. I like to see all advice given by the FOREST AND STREAM perfectly correct. Very truly yours,

J. H. HAZELTON, M. D.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the paper, and the authors will be notified of the receipt of their books by way of omission in this respect. Prices of books inserted when desired.

THE MAGAZINES.

Harper's.—With a charming poem of Mr. Trowbridge, entitled the "Enigma's Story," there follows an interesting article on English decorative art, where Mr. J. P. Aldrich contributes a pleasant description of Portsmouth, the old town by the sea, and a few pages are taken from the *Nimrod of the Sea*, where the capture of the whales is told. Two capital stories, "Ami Julie" and "The Golden Girl," follow, and the ballad of the magazine is represented by Signor Castellar's "Republican Movement in Europe."

Seribner's.—Mr. Edward King's "Great South," with charming illustrations, takes us down the Mississippi, and that most difficult question—negro labor—is discussed. For a charming story, we recommend our readers to "Poule Poterie," which, full of local color, is thoroughly Croc, and is not only daintily, but pathetically written. Mr. Cable has evinced in this little story a sweetness of manner and a carelessness of finish which are entitled to the utmost praise. With a fond expectation there follows a series of letters, in which Mr. Cable, in descriptions of our manners and customs only fifty years ago. Mr. Wilkinson gives a fair and dispassionate analysis of George Eliot. The whole number of Seribner's is excellent in quality and variety of matter.

The *Galaxy*.—"Lyny Rockford," now in the thirty-third chapter, is still cleverly managed, and in the present number we bid good-bye, with regret, to the gallant Ooster, and read with no little emotion how the white girls were at last rescued from the villainous Indian. In the General's article is a very interesting and valuable contribution. It is shown that Joe does not favor California fish culturists. General Castellar's articles in the *Galaxy* are of distinguished merit. To be a *beau sabreur* is one thing, but to combine with it that of a pleasant writer, is to add an additional plume to the General's cap. Miss Woolson's poem, "The Florida Beach," is most musically descriptive. Mr. Grant White's "Poplar Pie," a clever philological digression, has his peculiar idiosyncrasy.

Commend us to the *St. Nicholas* for our children, little and big—children as big as we are—who read heavy magazines. How clever are the illustrations, and nicely written are the stories! Miss Louisa M. Alcott's autobiography of an omnibus is admirable. When our little ones drop *St. Nicholas* we take it up and delight in it. How cunning is the picture of the little girl who has a party all to her own self, seated in her own room.

"But as her friends were shy and wary,

Nobody came but her own company."

FIELD, COVER, AND TRAP SHOOTING. By Adam H. Boggs. Champion vinyl shot of America. Enlarging hints for skilled marksmen, instructions for young aviators, habits and habits of game birds, flights and resorts of water fowl, breeding and breaking of dogs. New York: J. B. Ford & Co. 1874.

A RIFLE RANGE AT PERU.—In July last a meeting was held at Lima, for the purpose of organizing a shooting association, to be styled the "American Rifle Club of Lima." C. T. Rand, Esq., was made President. It was determined that the committee should send to the United States for information as to the construction of ranges, &c. Major DeGreiss, of New York, a life member of our N. R. A., was elected an honorary member of the club.

—Some of the old shoulders still live at the Isles, and one of them, eying with critical eyes a pretty little yacht that was moored at Star Island, spied its name, Psyche. Spelt the old man slowly, P-s-y-c-h-e, "Well, if that ain't the dundest way I ever did see to spell ship!" said he.

—A Boston woman who objects to nude statuary, has ordered a figure of Venus cut out of dressed marble.

A GOLD MEDAL TO W. S. KIMBALL & Co.—We announced a few months ago the award of a prize by the Vienna Exposition to the above firm for their "Vanity Fair" smoking and "Peerless" chewing tobacco. This indorsement has just been supplemented by the award of a GOLD MEDAL from the Western New York Fair. These brands have required wide popular favor with astonishing rapidity. They have been popular with everybody, and with no class more so than with sportsmen, who know what a good article of tobacco is and how to enjoy it when they get it. The fragrant fumes of Vanity Fair enliven any smoke camp, and add to the piscatorial delights of lake and stream. In fact, Vanity Fair for smoking and Peerless for chewing, are universally popular with sportsmen, who are constantly sending for it in large quantities. Kimball & Co. supply many sporting clubs throughout the country with these brands. They are now manufacturing it on a much larger scale than ever before, and are able to ship the largest orders to the trade at a moment's notice.

—TO:—
THE NEW ORLEANS is a Toilet luxury which we are convinced from personal experience is invaluable, because of the health and refreshing life-giving breath. It is adapted for all climates and conditions, the old use it with satisfaction, the young with delight; the ladies find it an exquisite toilet luxury, and the *crème de la crème* endorse it. Its properties are entirely harmless, for while it removes tartar stains and restores decay, it does not inflame the gums or injure the enamel of the teeth. It is prepared by Dr. J. H. Haugworth, whose name itself is a guarantee of its freedom from deleterious substances, and is prepared exclusively for Messrs. LORD & TAYLOR, of this city, who are the sole agents.

—TO:—
PHILADELPHIA AND SOUTHERN STEAMSHIP LINE.—The managers of the lines of communication with our South Atlantic and Gulf ports appear to fully appreciate the importance of the increasing Winter travel, and are affording increased facilities for the comfort and safety of passengers. The steamship Junonia, plying between Philadelphia and New Orleans, via Havana, has been undergoing very extensive alterations, refitting and furnishing, and has just resumed her regular trips in connection with the Yazoo. A gentleman who was on board the Junonia last before the season sailed last week, writes that it is in every particular one of the best vessels on the Atlantic coast. The main saloon is superbly fitted up, the berths richly upholstered, and every part of the vessel re-arranged, re-furnished, and put in splendid condition. This line also runs the C. W. Lord and W. H. West between Philadelphia and New Orleans, via Tampa and Pioneer between Philadelphia and Wilmington.

—TO:—
THE UNITED STATES CENTENAL COMMISSION announces its readiness to receive applications for space in the International Exhibition of 1876, at Philadelphia. It is especially desirable that early application should be made for the organization of those collective exhibitions of the natural resources and raw materials of different sections of the country which cannot be made by individual exhibitors. As an incentive to immigration and the investment of foreign capital, such collective displays are most important, and a prompt and liberal provision for the performance of this work will amply repay those States which undertake it.

The advertisement of the Director-General of the International Exhibition tells in what manner applications should be made.

The Horse and Course

—The Prospect Park first fall meeting took place on September 23d. The first race was for a purse of \$500 for horses that had never beaten three minutes. D. Mace's Arthur won; time 2:39, 2:37, 2:39. The second race was a purse of \$800 for the 2:31 class. D. Mace's Vanity Fair won the three last heats and race; time 2:34, 2:36. On September 24th, the first race was for a purse of \$600 for 2:35 class. D. Mace's Arthur won the three last heats and race in 2:33, 2:34, 2:36. The second race was a purse of \$1,000 for the 2:24 class. J. L. Doy's Thomas L. Young won the three last heats and race in 2:25, 2:23, 2:26. On September 24th, the first race was for a purse of \$1,000 for double teams. A. H. Schenck's Listener and Adonis won in three straight heats; time 2:47, 2:45, 3:14.

—The trotting meeting closed on September 25th. The first event was the unfinished race of the 2:27 class, Katie D. and Mystic having won two heats each. The start was an excellent one. Katie D. led throughout the race, and won easily in 2:27. The second race was for a purse of \$600 for horses that had never beaten 2:45. There were three heats, and the first was won by Falmouth Boy won the first heat in 2:24, the second heat 2:24; Arthur the third heat in 2:25, fourth heat 2:24, and fifth heat and race in 2:24. The last race was for a purse of \$2,000 for horses that had never beaten 2:20. The entries were Fletty Goldust and Hunter, and the first heat was won by the first named horse, and the second heat by the second named horse, the second heat by a length in 2:23; Fletty Goldust the fifth heat and race by a length in 2:26.

—At the San Francisco race course on September 25th there were about 20,000 people present to witness the great trot between Occident, Sam Purdy and Blackbird,

for a purse of \$5,000. Occident won the first heat in 2:31, the second in 2:24, and Sam Purdy the three last heats and race in 2:24, 2:20, 2:28.

—The American Jockey Club will begin the fall meeting at Jerome Park on Saturday, October 30th, and continue on the 7th, 10th, 14th and 17th. The following prominent stakes will be run for: The Jerome stakes, Nursery stakes, the Manhattan stakes, Hunter stakes, Maturity stakes, for four year olds, three miles; the grand annual handicap sweepstakes, the Champagne stakes; also one handicap steeplechase, and two hurdle races.

—The Mystic Park running races closed on September 23d. The first race was for the citizens' handicap stakes for all ages, two mile dash, \$50 entrance, h. f., with \$500 added; second horse to receive \$100, third horse to save his entry money. The starters were Lizzie Lucas, B. F. Carver, Limestone, Eclipse and Quips. Lizzie Lucas was the favorite at 40; Quips, 20, and the field 30. The race was won by Limestone in 3:37, Lizzie Lucas second, Eclipse third. The second race was for a Consolation purse of \$400, mile and a quarter. Spendrift and Ida Wells started, and the former won in 2:14. The third race was a steeplechase handicap, over two and a half miles of country, including the track and a run out over one side of Winter Hill. Tom Collins, Blind Tom and Vesuvius started. The run was a very good one, and was won by Blind Tom in 6:37, Vesuvius second.

The following stables have arrived at Jerome Park, and most of the horses have engagements at the coming meeting: McDaniel's, Lawrence's, Lewis & Co.'s, Snellick's, Walden's, Donahue's, Stringfells, Coffey's, Hunter's, O'Neill's, Murphy's, Bannan's, Moore's, Fershay's, Babcock's, O'Donnell's, with a few horses belonging to other parties; Littell's Fellowcraft and Reform; Morris, Withers, Lloyd's, Sandford's, with Pecknase, male, and Brigard; Lorillard's, with Saxon and Atilla; Hitchcock's, Chamberlin's, with Survivor and Joseph; Cotterill's, with Sallie Watson and Bonaventure; McComb's, McGrath's, with the famous Tom Bowling, Aaron Pennington, Calvin and Chesapeake; Belmont's magnificent appointed stable, with Gray Planet, Steel Eyes; Davis', Morris' Lloyd's, Reynolds' and Moore's horses. Mr. Davis' stable consists of Alie Hunt, aged, by Vandal; Fadadon, aged, by War Dance; Frank and Merodac, 4 years, by Australian; Hunt Reynolds' bay colt Whisper, 4 years, by Planet. Morris and Cameron's string consists of a four year old Lexington colt, the Eclipse filly Regardless, a three year old, and two two-year olds. Mr. Lloyd has Wildade, four years, by Australian, out of the famous Idlewild; the formidable three year old Acrobat, by Lexington; and Court Hampton by Hampton Court.

RESPONSIBLE AGENTS WANTED.

1776. 1876.

INTERNATIONAL

EXHIBITION.

OFFICE OF THE

UNITED STATES CENTENAL COMMISSION.

PHILADELPHIA, PA.

In accordance with the several Acts of Congress of the United States, providing for the celebration of

the

Centennial Anniversary

of American Independence, there will be held in FAIRMOUNT PARK, Philadelphia, in the year 1876, an

INTERNATIONAL EXHIBITION

of Arts, Manufactures, and Products of the Soil and Mine.

The Exhibition will be opened on the 19th of April and closed on the 19th of October.

APPLICATIONS FOR SPACE.

To secure space for exhibits in the Buildings or the Park, early application should be made. The necessary form for application, together with the Regulations for Exhibitors and needed information, will be forwarded on application to the Office of the Centennial Commission.

A. T. GOSHORN, Director General.

J. L. CAMPBELL, Secretary.

HOME!

HEALTHFUL, CONVENIENT, LOVE-

LY! Just think! Only 23 minutes, and seven cents fare, commutation, to Liberty street, New York, from PARKMAN, whose gently rolling land, from the crown to the shore of New York Bay on the one side, and Newark Bay on the other, unfolds a panorama of such exquisite beauty, such charming prospects, and ocean views far in the distance, that for a moment, one finds it, in its every sense, of fancy and reality, in this lovely place. Remove from the noise and dust of the great city, yet so near that the time and expense of transit thereto is less than from Wall to Broadway street. Fishing, boating and bathing unapproachable. Lots in the most beautiful locations rapidly sold; the choicest will soon be taken up, while the cost of purchase will again be far advanced, owing to the rapid appreciation of property here. Delay in securing two losses: First, the choice of a building site; second, the price at which it can now be obtained—on \$25 monthly installments. When \$500 is paid in, a nice home will be erected at cost for the lot purchaser, and the same amount of monthly installment required. This you own your house and lot for less than you are paying rent. JOSH. HALLOCK, FOREST AND STREAM Office, 17 Chatham street, Oct 1-4.

Prize List!

SPORTING BOOKS.

HIRAM WOODRUFF'S—THE TROTTER HORSE OF AMERICA. New edition (the 15th), with nearly 100 pages of entirely new matter by CHAS. J. FOSTER, bringing the work down to May, 1874, with a new record of performances, giving the best times made in the last fifty years, and with seven new full-page engravings of celebrated horses. Cloth, black and gold, \$2.50. This is the standard book on the subject, and the additions just made add greatly to its value and interest. Every horse lover should own a copy.

STONEHENGE'S—THE HORSE IN THE STABLE AND THE FIELD. The management in health and disease. By J. B. Walsh, F. R. S. C. ("Stonehenge"). Thoroughly revised and Americanized by ROBT. McCLELLAN, M. D., V. S., and with an essay on the Trotting Horse, his breeding and training, and with full tables of pedigrees. Illustrated with nearly 100 engravings. \$2.50. This is universally admitted to be the best horse book ever published.

DR. McCLELLAN'S—THE AMERICAN GENTLEMAN'S STABLE GUIDE. Giving full directions for the management and care of stables, horses, and carriages and harness. By ROBT. McCLELLAN, M. D., V. S. A practical manual for every sportsman.

THADDEUS NORRIS'S—THE AMERICAN SPORTSMAN'S BOOK. The Natural History of sporting life and the art of taking, with instructions in Fly fishing, Fly making, and Rod making, &c., &c. With 50 engravings. 8vo. cloth, gilt top. \$2.50. A classic on fishing by the best sportsman in America. Should be in the hands of every sportsman.

THADDEUS NORRIS'S—THE AMERICAN FISH CULTURE. Embracing all the details of Pisciculture. 12mo. Cloth. Illustrated. \$1.75.

STONEHENGE'S—ENCYCLOPEDIA OF RURAL SPORTS. Comprising Shooting, Hunting, Coursing, Fishing, Hawking, Allister, Fencing, Boating, Racing, Pedestrianism, and the various rural games and amusements. By J. B. WALSH, F. R. S. C. ("Stonehenge"). Illustrated in 200 engravings. Revised and Americanized. A sine qua non to sportsmen. Crown 8vo. Cloth, black and gold, \$5.

For Forest and Stream.
THE GRAVE OF CAPTAIN HALL.

THE day was night, and the night was day,
And the earth was cold and drear,
An iceberg nigh loomed ghostly high
O'er a funeral train and bier.

The starry flag hung half-mast high,
While the kindly stars above
In the night-moon day looked down alway
With a distant, helpless love.

God's sun was dead so long ago
We lived in endless night,
But the sad, far stars, gazed through the bars
Of the weird Boreal light.

The Polar blast swept o'er a plain
As smooth as the waveless sea,
Like a voiceless breath from the lips of Death,
So fiercely, silently.

We scooped his grave in the iron earth
Of the ever frozen zone,
And the strong man lay with his kindred clay,
As cold, and dead, and lone.

No choir may sing his requiem,
No shaft may mark his tomb;
Go, place his name on the roll of fame,
Where the brave find ever room.

Though flowers deck not the distant grave,
Nor tears bedew its turf,
We hear his dirge in the solemn surge
Of the ever sounding surf.

J. J. ROCHE.

ritories.**

THE ANSERINÆ AND CYGNINÆ.

THE anserine, notwithstanding all references to their ungainly movement and doltish intellect, still maintain their exalted position in the sportsman's estimation, and he, if keen of observation, will learn from them many things that will materially entitle them to advancement in the mental grade, and prove the truth of that very old adage which specifies that you cannot judge of things by their outward appearance. A goose, waddling around the barn yard, may not present a very graceful appearance, nor seem anything above an idiotically obtuse bird mentally, yet that ungainly creature, when in its natural state, has an ease of motion in flight which will compare with any of the feathered tribe, and evinces a knowledge of the means of defence and of overcoming its enemies that few can excel. I am unacquainted with any bird more cautious, vigilant, and apprehensive of danger than this, and these qualities alone should entitle it to more respect than writers unacquainted with its habits have shown when speaking of it, for few carry the objection as far as the table. A round, plump wild goose makes a delicious *morceau* for the palate; and all the trouble of hunting after it through marshes, morasses, or lakes is amply repaid when its succulent flesh, moistened by the contents of a musty old bottle marked "Lafitte" passes down the thoracic cavity. Wild geese of different varieties are so dense in Oregon, Washington Territory, Alaska, and Idaho in certain seasons as to require one to use the millions to number them. Not a species of the family known to this continent leaves the region unvisited, so that it is, in my estimation, with all due allowances for other places, the greatest resort for geese in the world.

Certain portions of California, such as the Sacramento and San Joaquin valleys, will compare with Oregon in the profusion of geese, but shooting is enjoyed at least a month earlier in the northern than in the southern State. One of the commonest is the snow goose (*Anser hyperboreus*), and that is found from Alaska to Mexico. This variety has reddish legs and bill; body color pure white; primary quills silvery bluish, gray towards the base; spurious quills bluish; inside of wings, except primaries, white. It fre-

quents the sand bars of the Columbia and Willamette rivers in countless numbers in the autumn, especially during the night and dry weather, the plains being preferred during the cool of the day, or in rainy weather. The usual mode of hunting it is to lie in ambush behind a fence on the prairie, and as the waddlers approach to give them both barrels, heavily laden with No. 1, or buckshot; this is sure to leave half a dozen *hors de combat*, and very often double the number. If the hunter does not show himself, he is liable to get several volleys at them, as the noise frightens them only for a few moments. Should their suspicion be aroused, they rise upward slowly in a dense cloud of white, and sound their alarm notes; but they may not go over fifty yards ere they alight again, so that the amusement may be continued without much toil or inconvenience. Another mode is to mount a horse and approach them as close as possible, then give them the contents of your barrels, and if they do not fly to draw still nearer and give them smaller shot at from forty to sixty yards.

I have seen hunters west of the Rocky Mountains approach a flock under shelter of oxen or cows, and bag forty or fifty brace ere the foolish natatores could tell what was the cause of the noise and their own destruction.

In Oregon, the *chasseurs* hunt on the prairies during wet or lowering weather, but resort to the sand bars of the rivers during moonlight nights and sunny days. Some excellent sport can be enjoyed by shooting the birds on the bars as they return from their feeding grounds late in the evening, or taking them on the wing as they fly past. A favorite method for hunting them at night is to light a fire on the river bank, or bar, so that its glow may illumine the honking natatores adjacent, and then pouring volley after volley into them as they rise in the air to escape the unusual apparition, or to study its meaning and purpose.

No matter in what way the birds are killed, there seems to be no diminution in their numbers at the return of each season, as they are reported abundant everywhere, from the Pacific Ocean to the Missouri River. This species winters in southern California, Texas, and Florida, reaching its grounds about the first of December, though of course many arrive at their southern home a couple of months before that time.

The white fronted, or laughing goose (*Anser gambeli*, or *Albigifrons*), has reddish legs and bill; alongside of bill and forehead, white; margined behind with blackish brown; remainder of neck and head grayish brown, but paler on the fulgum. The back is bluish gray; the feathers anteriorly tipped with brown; the breast and belly are grayish white, blotched with black; the anal region, flanks, beneath tail and upper coverts, white; greater coverts edged with white. Tail, sixteen feathers, and colored brown, with white tips; axillars and under surface of wings ashy plumbeous. This species is very abundant in the autumn, and some remain all winter; but the greater number go farther South. At the mouth of the Columbia River, and in the valley of the Willamette, it can be found in large flocks, but it seems to be quite scarce along Puget Sound. It appears to prefer the grassy patches along streams flowing into the ocean, or the tidewater flats so abundant in several parts of Oregon and Washington Territory.

The *Bernicla Canadensis*, or Canada goose, is the largest, as well as most abundant, of the family. This has black legs, head, neck, and bill; a large triangular patch of white decorates the cheeks behind the eye; the two of the opposite sides are broadly confluent beneath, but do not extend to the *rami* of the lower jaw; a few whitish feathers on eyelids. The superior region is brown, with paler edges; anterior light, with tinge of purplish gray; body of feathers darker on inside of wings, sides, tibia, and axillars. The upper tail coverts are white; the primary quills and rump blackish brown; tail feathers black. This bird has a length of 35 inches; wing, 18 inches; tarsus, 3.10 inches; and commissure, 2.10 inches. It breeds from Alaska to Oregon, but its favorite habitat for that purpose is the streams flowing from the higher mountains into the Columbia. I have seen more of them on the Snake River,

where it flows through northern Idaho, than in any other section of country. Their selection of this region for the purposes of incubation is an excellent one, as they find a profusion of tender grass along its margin, and it is, besides, free from any disturbing elements, for nothing larger than an Indian canoe traverses its waters during the greater portion of the year. While passing up this river on a steamer, last May, I saw several couples parading their young broods along the beach, and, though naturally timid, yet they took no notice of our puffing monster until it approached close to the shore, when they trotted off very quietly, and apparently in no hurry. We chased a few in the water, but the parents remained with the youngsters until we approached close enough to almost touch them; they flew, then, but with great reluctance, and left the piping, alarmed goslings to look out for themselves. This the latter apparently understood, for when the steamboat sent a volume of water rolling towards them they dived under the miniature mountain of hyaline fluid, and by this means escaped. It was exceedingly interesting to watch them seek cover under the muddy billows, and in a few moments emerge, with open bill, in the greatest excitement, and in a soft, musical tone call for their guardians. About the middle of June these are half grown, and are then killed in large numbers by both Indians and whites. I have shot them with my revolver from the deck of a steamer, as they were quite numerous even within the distance that would carry. With a shot gun one could reap an anserian harvest that would set the sportsmen of the East or Great Britain in an ecstatic frenzy.

This goose is a denizen of all the high plateaus between the Missouri River and the Pacific Ocean, and rears its young in many of the streams percolating the country, especially those which have a medium altitude and a northern latitude. It is exceedingly abundant throughout the West from the 1st of October to the middle of December. On the plains of Nebraska flocks numbering thousands are found along the Platte River late in the autumn, and large numbers of these are killed by both sportsmen and pot hunters. The favorite method of hunting here, is to dig a hole in the stubble fields frequented by the geese, cover it with straw, and lie in wait until four o'clock in the afternoon, when the birds return to feed, then shoot into them as they fly over, and in this way the hunter manages to return home each evening heavily laden with his spoils. Wounded or dead geese are often used as decoys, and prove valuable auxiliaries to the sportsman. Shooting them on the sand bars, as they return to their sleeping grounds, is also practiced extensively, and generally with excellent success.

The *Bernicla Hutchensii* resembles the *Canadensis*, except that it is smaller. It has a length of about 30 inches, the tarsus being 2.70, and the commissure 1.76 inches. Its weight ranges from eight to twelve pounds, whereas the preceding will often reach eighteen, and sometimes exceed this figure.

The black brant (*Bernicla nigricans*), the most duck-like in its habits of all the anserine, frequents the coast region principally, making its habitat among the salt marshes or tidewater lands. Its head, neck, and body, anterior to the wings, are a deep black, passing into sooty plumbeous on the remainder of the body, except the rump, where black prevails. The throat has a white patch in the middle and on the sides; the collar on the nape is interrupted behind by an isthmus of black. The body is small, but the flesh is excellent; the voice is quite thin, not being by any means as full and vigorous as that of its congeners. When flocks are flying over at night one can readily detect this species by its vocal peculiarity. Another means of distinguishing it in the air is that it does not adopt the V shape in flight, and that the flocks, in their migrations, are much smaller in numbers than the other varieties or species. It seems to be very fond of the water, as it is liable to be found at any moment riding the billows flowing shoreward, or wafted about by the gentler current of a lake. A large portion of its food is composed of fish, yet the flesh is free from

the disagreeable flavor generally produced by its plumage. It is not hunted as much as the others, owing to its more aquatic habits and solitary habits.

The *H. leucophaea* of Cuvier, which resembles the Canada goose, except being darker, is found from British Columbia to California—sometimes in flocks by itself, and frequently mixed up with its congeners. It has a length of about thirty-five inches, and its weight varies from twelve to sixteen and even eighteen pounds when in good condition.

The cygnine we have two varieties—the American and the trumpeter swan. The bill of the former is as long as the head, broad and high at base; feathers extending on the forehead in a semi-circular outline. The anterior extremity of the nostrils is forward of the commissure. It has a length of 53 inches when full grown; wings 22, and tarsus 4.25 inches. This beautiful bird is an inhabitant of the Columbia, Snake, and Lower Willamette rivers. Flocks varying from twenty to one hundred can be seen on the Columbia late in the autumn, and they present a handsome ornithological scene as they soar over the bluish-green forests of firs, or sail gracefully with the current. Several are captured or shot for their feathers, and I understand that some are eaten. I have heard hunters speak of them as good eating, and others say they were tougher than tanned buffalo skin; but from personal experience I am unable to decide their gastronomic qualities.

The *Cygnus buccinator*, or trumpeting swan, is also quite common. It differs from the preceding in having a bill larger than the head, and the feathers on the forehead ending in a semi-elliptical instead of crescent-like outline, while the anterior extremity of the nostril is only half as far forward as the commissure. This species derives its name from its peculiar voice, for it forms an exception to the general silence of the family, at least to those in a domestic state. I shot one on Swan Island, in the Columbia River, to see if I could catch a note of that delicious sound which it is said to pour forth when about to bid farewell to the joys of this world, but I failed to hear it, perhaps because, like the music of the spheres, my sense of hearing was not acute enough to catch its enchanting tones.

MORTIMER KERRY.

For Forest and Stream.

THREE MONTHS IN FLORIDA FOR A HUNDRED DOLLARS.

IT is a pity that people other than rich, should be afflicted with sickness or diseases that spring from a craving for a change of climate. So wide a difference exists between the climatic conditions of the North and the South, that it is rather marvellous that it is quite practicable for one possessed of means to remedy any defect in his constitution, pulmonarily, if this expression be allowable, merely by a change of residence. It is so well known that it needs no further showing, that consumption, that scourge of the North, can be cured, (if not radically, at least its fatal consequences postponed,) (if the patient is taken in hand in the early stages of the disease, and treated by a dose of the health and health-giving climate of Florida. It is so well known that thousands seek, and gain relief, by a temporary residence in that land of the "Fountain of Youth."

Perhaps that term, "the Land of the Fountain of Youth" has not already been used several thousand times; but no matter, it is very telling, when one would attract the attention by the use of sonorous phrases. But Florida deserves all such flattering titles as the above, and that of the "Land of Flowers," no matter how much her defamers may say to the contrary. There are thousands more who would be but too glad to avail themselves of the advantages accruing from a winter's stay there, could they but afford it. Consumption is so insidious in its approach that its victim is lulled by a fatal sense of security to postpone the day of departure until too late, and he departs only for the shadowy land. Any winter in the North, I advise myself, to a winter spent at a sufficiently early stage of the disease to warn the patient, and then—then only, is the time to profit by the knowledge, and leave a place of death for a country of health.

To those who are suffering, who are hesitating, dreading the annoyance and expense incident to a voyage to Florida; feeling that they would rather face the certain dangers of another winter in the North, I advise myself, to a winter spent at a sufficiently early stage of the disease to warn the patient, and then—then only, is the time to profit by the knowledge, and leave a place of death for a country of health.

"DEAR SIR:—I have read of some of your work in FOREST AND STREAM with great interest, as I take quite an interest in Florida. I should like to know if you are going out again this winter, and if so, if you employ any one in on this way to go with you, as I wish to go, but cannot afford to go on an expense to myself if I could get some kind of a situation to go in I should like it, if you know of any opportunity offering will please to let me know of it and you would oblige me very much."

It pains me very much that I cannot afford the writer of the above epistle an "opportunity" to luxuriate beneath the orange trees of the Flowery Land, but I can tell him how to do it by a small outlay of his funds, and that's what this long introduction is intended to fulfill the expectation aroused by my announcement at the head of this paper to treat one to a "three months' trip to Florida for a hundred dollars. I must assume that the tourist be tolerably strong and able to endure a sea voyage in a sailing vessel. That, you may say, is rather rough! Well, one can't get a dinner at Delmonico's or the Parker House for fifty cents, no more can he make the trip to Florida in a palace car for \$10.

PAGES.

Fifteen dollars will cover the cost of a "cabin" passage from New York to Jacksonville, in Florida. Fifteen dollars and two weeks time. Perhaps three weeks; may not consume but eight days; but two weeks is a fair average. Assume \$15 is expended for the passage down, twice fifteen (coming back) makes thirty dollars, leaving a balance of seventy dollars for other expenses for two months, (one month supposed to have been passed on the briary deck. Regarding the joys and delights of an ocean voyage in winter, I remain silent; that is a matter of taste, and individual taste does not come within the scope of this article.

There are people who revel in the beauties of an ocean storm; who climb out upon the bowsprit as the vessel rises and falls to get the full benefit of the plunge. To such, a trip to Florida in a schooner would be unalloyed bliss, provided cabin accommodations were good, and "grub" well cooked and varied. Again, there are those to whom the dreary monotony of sailing on and on is horrible, and to whom a storm but represents so much racking of bones, and so many dinners lost forever. These seek consolation within themselves, and draw upon their reserve fund of vitality fearfully.

Other routes are at the disposal of one not confined to a limited amount of cash, and for thirty-five dollars he can reach Florida by one of the many steamers that ply between New York and the South. These steamers run to Charleston and Savannah, and connect with other steamers that reach Florida. The accommodations are very good upon the majority of the lines, and the time consumed in the entire trip generally less than five days. All rail routes, there are, for those who dread the ocean, which make the distance in about a day less, and at a cost of about forty-five dollars. If the railroad building between Jacksonville and Savannah is completed in season for this winter's tourists, a saving in time of some twelve hours and much disagreeable travel, or dangerous railroad travel, will be avoided. The most preferable route, in my opinion, is by steamer to Savannah and thence by the new road direct to Jacksonville. Provided that is not opened and time is not an object, the "inside route," among the sea islands of Georgia, is very pleasant.

WHERE TO GO.

There are but three ports directly accessible by sailing vessel upon the east coast of Florida. Commencing with the northernmost, these are, Fernandina, Jacksonville and New Smyrna. The two first named have a large lumber trade with the North, and frequent opportunities are offered for passengers and freight upon the freights entered in the business. They go down light, in ballast, and are but too glad to receive any quantity of freight. This is why Jacksonville can furnish provisions and nearly everything else at New York prices.

Fernandina has many inducements to offer in the matter of out-door life. It has a magnificent ocean beach, pure air and delightful bays, harbors, creeks and rivers to sail and fish, close at hand, and many things to tempt its lower neighbors, but in the way of game it cannot approach some places on the lower coast and St. John's. It has direct rail communication with the west coast at Cedar Keys, fare about \$7, and steamboat communication with Savannah and Charleston by both the inside and outside lines. The town itself is orderly, pleasant and well supplied with markets and stores.

As a place from which one can reach the most attractive portions of the State, Jacksonville should be selected. Situated upon the St. John's, it has steam communication with every settlement upon that interesting river, and with St. Augustine, New Smyrna and Indian River, upon the coast. It has direct rail connection with Tallahassee, the capital of the State, with Cedar Keys upon the west coast, and thence with all the gulf ports, the Keys and Cuba, and with Savannah, the great circle route to the North and West. Being naturally so centrally and commandingly situated, drawing the trade and productions of the St. John's with its countless tributaries and lakes, it is the place of all places to obtain a first glimpse of Florida in its most flourishing condition. The climate of Jacksonville is not all that could be desired, for it does not possess that remarkable softness and warmth generally supposed to belong to Florida. It is subject to extreme colds, and in winter will chill a sensitive invalid to the bones with its nocturnal frosts. It has much that is desirable, however, in its bright warm days, and possesses a grand birdlight in the St. John's alone. Here the camper-out had better procure his outfit, except tent and personal effects.

From Jacksonville to Enterprise, 200 miles up the St. John's, the fare by steamer is \$12, and of proportionate price to intervening landings. To Salt Lake, the farthest point reached by steamers, (curious stern-wheelers,) it is about \$6 more; all freight at the rate of about \$1 per barrel; a small boat up the St. John's pays \$5 for passage upon the steamers. Indian River, the great game section, is reached via Salt Lake, from the St. John's, the distance across land at that point being but six miles.

New Smyrna, about one hundred miles from the mouth of the St. John's, has more inducements in fish and game, and rent enjoyable camping life, but lacks the many conveniences of diet and travel that the other places possess. Few vessels visit it, and these for lumber, chartered by live oak contractors. For a party in good health, with plentiful supplies, it is the best point one can choose for a few months stay, when the object is merely to gain flesh and have a good time hunting and fishing. Two large lagoons, thirty miles in length, enter the ocean at this point, and the south or Mosquito lagoon, can be reached the famous Indian River.

St. Augustine, though claiming attention from its delightful climate and the interest attached to its ruins, is not especially referred to, as not being in direct communication with the north. It has small sailing vessels, as well as has New Smyrna, connecting it with Jacksonville, and rail connection with the St. John's, but is a dear place to visit.

WHEN TO GO.

depends upon so many things that it is not an easy matter to advise correctly. If one wished merely to get rid of cold weather, then the first of December would be the time, being sufficiently early, and in season to catch a parting touch of the hot season. The months of January, February and March are probably the best to spend in Florida; being the pleasantest there, as well as the most trying to the invalid at the North. As to climate will be pertinent to the subject, and are accordingly produced. By reference to

my note book of three years ago I find that the temperature, in January ranged from 28, to 80 deg.; was more equable in February and March, with less extremes, though growing warmer. The mean temperature of January was about 60 degrees. According to the only tables at present accessible the mean temperature in Jacksonville, for the month of January, for 20 years, was 55 degrees, for February, 58 degrees, and for March, 63 degrees. In St. Augustine, for the same time and months, the means were, respectively, 57, 59 and 63 degrees, thirty degrees warmer than the mean temperature of West Point during the same period and months. At Key West, the extreme southern port of Florida and our Union, the range of the thermometer was nine degrees higher than at New Smyrna. The temperature is essentially modified, and on Indian River the change is much greater, temperature being several degrees warmer.

CAMPING OUTFIT.

With the object in view of spending two or three months in Florida at an expenditure of no more than a hundred dollars, the only mode of living practicable will be in the open air. To many of the readers of this paper, whose camp fires have gleamed in every corner of the Union, the proposition to camp in such a wild and delightful climate as that of Florida, would be hailed as likely to give the "substance of things hoped for." Let those who wish, patronize the hotels at a monthly expense exceeding our total outfit for the trip. Camping out, in Florida, is to be the manner of living, and to do this successfully, aid is needed. If desired, this luxury can be dispensed with, and a shelter constructed with the stalks and leaves of the palmetto. To one "handy" with an axe and knife, and an old campaigner, this house-building would be a small matter. It is assumed, however, that the party be ignorant of all that pertains to camp life and needs to go provided with a shelter from the elements. The shelter should be of any variety, but what is really needed is—first, a strong frame to withstand the weather, and the greatest amount of room consistent with weight and bulk. A tent, large enough for a party of four, with room for "traps," and provisions for two months, can be made at an expense of about \$15, if made by the party, and of light, waterproof drilling. It should be about twelve feet long, with walls about four feet high, and slatted across the roof, with ropes or chains fastened to the ground. Should be made so that it can be tightly closed at times. Fifteen dollars for a tent and thirty dollars for passage down amount to forty-five dollars already expended. Can we provision and provide for the welfare of the party with the remainder? Let us see.

After the tent poles are cut, at the place of camping, which should be upon fresh ground, in a rather dry situation, and tolerably near the water, the first thing to do is to have a habitation. If a party of four start together something is saved to each individual, as the labor and expense of freight, etc., is much less borne individually. While one is driving tent pins and another cutting wood for fire, another can be preparing the food for cooking, while the fourth is hunting for the long "Spanish Moss," (Tillandsia,) for bedding. Provisions demand the first attention, and in the winter months, much will depend upon the tastes of the camper-out. Having but fifty odd dollars, and having many wants to supply, some very close skimming must ensue between actual and imaginary wants. It will be admitted that we must have pork. Without that the camper-out could hardly exist. It fries his potatoes, (provided there be a fire,) cooks his flapjacks, (if he has any,) and spatters and sizzles his "light-wood" fire in a way that, in itself, is refreshing to a hungry hunter. Pork, then, must be taken, say fifty pounds; this may be enough and it may not; there may be an abundance of venison, when the pork will, of course, be consigned temporarily to solitary confinement; but the chances are, that pork will appear upon the table, or palmetto leaf, three times and more a day. Pork \$5; dry salted is best for transportation, and a course bag, denominated "gunny-bag," the best receptacle for it.

Every one persons may need to be told, is sometimes called the staff of life. That depends wholly where it is. In some places it is made of secondary importance to whiskey, and the true Floridian regards the fluid that cheers, likewise inebriates, as the real staff and mainstay of his existence. When the whiskey is gone he is gone. When the popularly known "staff" is gone, he can repair to the nearest lammock and cut a "palmetto cabbage;" but not satisfactory, so some extra balance remains over for the much loved whiskey. Flour for one person, two months, sixty pounds. Better take the self-raising flour, either Hecker's or Jewell Brothers', being in convenient packages, and ready for use by the addition of a little water and a stick, (not the metaphorical "stick," it is much prized, and saves a great deal of labor. With the flour costing about \$3, and a box of good crackers, (better than flour, because always ready cooked,) costing as much more, one will be prepared with all the farinaceous food he needs during his stay. A few pounds of meal, costing nothing worth calculating, should be added. A bushel or a barrel of good potatoes is necessary, and if those give out, sweet potatoes can be purchased at a dollar per bushel or less. Out upon the man who would exclude the potato as a luxury dispensable. We can afford it in the quantity desired, and with so small an expense, remaining over for hundreds of dollars. Who does not remember the delicious, delicate, fragile, conceptions of potatoes sliced and prepared at the higher class restaurants? At least, who does not remember reading of them? Two dollars fifty for potatoes, and as much more for coffee. Nothing so helps to strengthen one after a heavy tramp, or long hunt, as a cup of good coffee. Carry it in a double, wooden, iron, or tin tray pan, and put it in a shot-bag, or in an ax, and thus it is kept until needed, of refreshing strength and aroma. The condensed coffee is liked by some, and if it suits the taste, should be taken, as it saves much in bulk and preparation. A dollar more needs to be added for this substitute. A little sugar, of course, unless one prefers "log sweetening," which latter is more liable to loss, being un-pick-up-able when split. A single dollar, and a condensed milk, costing about three dollars, will last a single person a long time. If this is taken the sugar may be dispensed with; if it is not, then take three dollars worth of cut loaf sugar. In a land of sugar cane one need not be without sweetening for his coffee. Salt and pepper, a few pickles, or pickled onions, and a little condensed beef, in all not exceeding three dollars; to which may be added, very gratefully, a choice list of delicacies, such as condensed milk, and what we haven't got any further than the larder, and have expended sixty-eight dollars already. The indispensable cooking utensils are few. First, as the chief friend of

Ripe about the same time as the Catawba. The vine is a moderate growing one, by no means a rambler, yet it is exceedingly productive. The leaves are tender, and hot sunshin will sometimes scald them, particularly if the vine grows in very southern and southeastern locations. It is very desirable as a good grape, as it rarely rots, and does not mildew. You should grow this grape on northern exposures if you would have good, large, rich fruit. Set this vine into a rich, rather sandy soil, on either a northeastern or a northern exposure, and take good care of it, and we venture to predict complete satisfaction. A fine spicy wine can be made from this grape, and will keep growing better and better with age.

OLIPUD QUILL.

MANSTALL, of Tennessee.—"What is this said?"

It belongs to one of the most interesting species of ages past. It is, when strictly defined, one of a species of the infusoria, which existed before the deluge. This is the house of an antediluvian insect, whose extreme minuteness is such that sometimes more than a million of them are found in a cubic inch of chalk. They were so extremely small, and so miraculously prolific at the era of their "house-building," that those large mountains, made up of calcareous substances, carapaces, hold so important a place in the mineral crust of the globe. To the microscopist of to-day they stand revealed as the tripoli of commerce. Some of the tripoli are of a red color, and are familiar to every house painter. Our servants use the coarser sorts to scour and keep bright the kitchen utensils. It is called the osseous structure of the infusoria.

OLIPUD QUILL.

H. H. T. Esq., Randolph, New York.—I received your package containing the "grasshopper parasites." They are the same kind of an insect that I saw ten years ago, when they produced the most terrible mortality among the grasshoppers. At that period the whole of the grasshoppers disappeared; they were literally eaten up. It was, I recollect, a theme of every day comment, yet to the best of my knowledge there was no scientific examination made at the time. This parasite, according to my own investigations, is an unknown depredator upon grasshopper life. I will let you know the result of my future investigations upon this subject.

The Kennel.

THE WEBSTER SETTERS.

BY GEORGE W. BLUNT.

Being the person who had the first brace of these dogs imported into this country, I will give their history and pedigree.

While on a visit to Daniel Webster, Esq., at Marshfield, I had a pointer bitch which I bought of the Earl of Derby's game keeper. My friend Charles King, who was with me, had a pointer dog, a very fine one, and Mr. Webster was very much interested in their performance when after woodcock. I told him there was a breed of dogs in Scotland far superior—the Duke of Gordon setters—which I could not get, as I was not an F. F. V.; that he might get it if he went abroad. He said if he did he would try. I put it down among great men's promises, and soon forgot it.

In December, 1839, I received a note from Mr. Webster, who had arrived from England, stating that he had a brace of Duke of Gordon setters for me, which I found on board the London packet—John Griswold's line. The dog was named Rake, and the bitch Rachel. The pair were the handsomest I ever saw—gentle and intelligent, with most sound powers of scent.

The pair were sired out of different mothers by Regent, who was bought by the Earl of Chesterfield at Fattersall's as a stud dog, for seventy-five guineas. Rachel dropped eleven pups soon after she arrived in this country, which were distributed among the friends of Mr. Webster and myself.

The dogs, I may add, were obtained through Sir Henry Hallford, the King's physician. After shooting over them for one season, Mr. Webster (who went off politically with Mr. Tyler—I stuck to Mr. Clay) demanded a separation of the dogs, he taking to Rachel, and I taking to Rake as most appropriate. I have a picture of Rake, taken in the act of pointing, which describes him far better than I can write; but a handsome, more docile, intelligent dog never ranged a field. I have known him to point an English snipe over forty yards off. Rake died in 1844, but I kept up the breed, and shot over those of my own raising until 1856. Of Rake's "inourings" I know not.

THE PESTIFEROUS PRACTICE OF SETTERS RETRIEVING.

NEW YORK, 1874.

EDITOR FOREST AND STREAM.—

In direct contradiction to all theories and most experiences, your correspondent, E. S. Carman, tries to convince us of the utter uselessness of retrieving, and its ruinous effects on setters. The arguments he uses show that they cannot and will not be accepted as proof by others. Whether his experience is made up of exceptional, not applicable instances, I cannot say, but to judge from his confusions, and taking into consideration his previously expressed ideas on "reined nonretrievers," and his avowed preferences in that direction, it would not be the strangest thing were it true.

I fail to see what connection there is between staunchness and retrieving. Real staunchness, as I understand the quality, cannot be whipped into a dog; it is "bred in the bone," and under reasonable treatment—aye, sometimes even under the most improper usage—is sure to develop itself, if the first consideration of "blood" has not been neglected, and cannot be affected by the cultivation of the setter's instinctive love of fetching. If, however, by being permitted to retrieve, he is led to flesh in the end of point, make up your mind that by looking back you will find something radically and unalterably wrong!

That retrieving should effect a reversion from *snelling* and pointing to *seeing* and pointing, can just as little be sustained by experience. Who has not frequently seen a setter in the act of retrieving, when close on

to the bird, make dashes according to the varying current of air bearing the scent, showing conclusively that he was absolutely and literally *following his nose* and not *looking for the bird*?

While hunting last Fall I crossed a mountain that had been swept by fire, leaving the ground covered with whitish ashes, and an incident that seemed very much *appropos* in this connection occurred to me there: A grouse rose wild and was killed, falling in full view of where I stood. After reloading I gave my little *retrieving* setter—not much over two years old, the order "stand back." He had seen the grouse fall, and at this time well up he took the direction, and shortly pointed. Walking close up to him the bird was as plainly visible as the dog, but from the elevation of the dog's head it was unmistakably apparent that he did not see it. The scene was as "pretty as a picture," and while I stood in silent admiration, loath to break the charm, the grouse gave a convulsive flap and thus drew the dog's attention towards it, and he stood on at the close proximity of the bird was amusing; he fairly stared at it till ordered to fetch.

This is a single instance, which no doubt many a sportsman can multiply ad infinitum from his own observations.

The pointing before fetching is, to my mind, by no means essential; it is pretty and nothing more. The most killing and wonderful working dogs I have ever seen could not be induced to point dead, and they furnished the most unanswerable arguments against the theory that retrieving can only be obtained at the expense of staunchness, by invariably pointing any fresh bird that happened to be on their path while in search of the dead, their innermost scenting powers enabling them to discern between dead or wounded and alive, and never once *leading* them astray.

And, as a conclusion, I would draw to a great inconsistency in Mr. Carman's own arguments. He says in the enumeration of the points and virtues of a thoroughly house-broken dog: "He seeks, finds and fetches any article from a three cent piece to a handkerchief, ball, or hat." Why is such stress laid on this, when he intends to say to the dog in the field, for which he has with great care prepared him: "You shall not fetch; retrieving is not only a part, of a better's education, but it is a pestiferous practice that only leads to ruin!"

In those times of breed holders and general expeditionness, we cannot afford to waste precious moments in appearing personally in the role of retrievers, and I emphatically endorse your opinion that it is a vital part of a setter's education, and greatly enhances his value. GUY.

THE SETTER IN AMERICA AND ENGLAND.

BY "LIDSTONE."

IF a man keeps a setter in America, he wants a "general dog," as we call it in this country. By that an American means a dog that finds, and points, and retrieves, and that will go through thick underwood, thorns, and so on; but an Englishman does not look for *pointing* in his "general utility" dog; simply he wants a dog that ranges close, and drops to shot or "wing."

Years ago pointing dogs were used for pheasants as well as partridges, and almost all the old portraits represent them with a pheasant in their mouths. In the old *Sporting Magazine* there is an engraving of an old short-tailed pointer (the original was, I think, by the celebrated Abraham Cooper, the Royal Academician), who has one pheasant in his mouth, and is pointing another before he brings it back.

The retriever is a comparatively modern invention; our forefathers made their dogs do anything—but then, dog breaking was at its zenith. No gamekeeper could get a situation unless he could break pointers; and what is more, every man who shot knew how the dogs ought to be used.

It is a common opinion—indeed, it is my opinion—that you imperil the staunchness of a dog, and ruin his point, if you let him "retriever" a bird, overtake, and retrieve it, though a great deal depends upon the man himself; and unless the sportsman is thoroughly at heart a lover of the dog, he is very much tempted to "lie on" his dog directly he has shot at or crippled a bird, and to do so is ruin to the dog.

In my work on the dog I have been a little severe on those who profess to break setters with bells; but setters vary so much in temperament and general disposition, that I incline to the opinion they may be more readily trained to anything than any other dog in the world. There is also the undoubted fact that American sportsmen, second to no men who shoot in the four quarters of the globe, use setters for woodcock shooting in swamps and thorny brakes, and that they do their work well where the ordinary spaniel would be too slow. But especial training, as well as a marked fitness of disposition and constitution, is desirable for the purpose, and the physical fitness of the dog of the greatest consequence. Setters are not by nature dogs that thrust themselves through covert, and for such purposes it is better to have a dog that will creep under than go over thorns or furze.

If a setter is good, I have no prejudice about his breed or color, though I have about the purity of his blood, the form of his frame, and the texture of his coat. "Droppers," as dogs half pointer are called, are frequently good in their first generation, but I never saw the product of a dropper that was worth a shilling. I would never breed them, for it is decidedly the way to deteriorate never breed, as directly you let them out of your hands they may be used to propagate their race by unscrupulous or unprincipled persons.

I cannot recommend any special breed of setters for American shooting; it will not be the breed that will suit the Indian sportsman. As, however, the dog ought to be conspicuous, he should have a considerable portion of white about him, and failing that he would be, I should say, very hard to find when on his point, whether he wears bells or no; for, of course, just when the sound is most required the dog is motionless, and a white croquet collar, (such as is used to distinguish greyhounds, I believe,) would be a sore impediment in the American jungle. I am not recommending a dog to be retrained in retrieving setters to say whether they have a dislike to lifting woodcocks; but certainly English retrievers object to them at first, and some dogs never get over their antipathy. This might be got over by the early training of the setter to retrieve, and the accomplishments should be taught when he is not over four months old; whilst ordinary setters' work is not commenced until he is twelve or fourteen months, or even more.

I recollect breaking a capital black, blue and tan dog to retrieve, commencing with him at three months. He worked at retrieving until he was a year old, when he took his course of setter-breaking with the others. I sold him, on his merits as a setter, to an excellent sportsman, and heard nothing of him for a couple of years after, when his owner said, "in addition to his other qualities, what an excellent retriever he was." This year he disappeared quite by accident, and Robin now takes the place of two dogs on

the moors, and, though both retriever and setter, he is, I believe, as steady as ever, singly or in company.

On the moors I prefer the dog which finds a wounded or downed bird and points it, and which, if the man chases it, will drop and remain down until he returns. This shows a good deal of sagacity on the dog's part, and a confidence in the setter's steadiness; and I have frequently seen Scotch keepers do it, though contrary to my canon, that in shooting all excitement and hurry on the part of man or dog is a mistake, and the consequences are not uncommonly disastrous.

But with certain dogs—such as I saw worked in the Highlands last August by a friend's keeper, (who dogs, by the way, I subsequently purchased for Russia)—with certain dogs you may take any liberty, and David never hesitated to chase a cripple after one of his dogs had found it; and the only thing he did as he stalked back over the heather was to say in his deep bass voice, which seemed to me nearly as round and mellow as Labradie's, "Good dogs? seek about now." Still, though David was as good a man with dogs as it has ever been my lot to go with, and his setters were almost faultless, I experienced the sort of creepy feeling which comes over one when an amateur "sings flat," or the "gentleman who plays the fiddle so beautifully," (and who, by the way, is so lavish of it,) is "stopping" out of tune instead of stopping altogether.

I wonder what effect retrieving has upon the setter's run; but it is in general very contract for that in Scotland would be a fatal thing. Indeed, the English breaking in partridge fields has a tendency to spoil the sweep of a setter for grouse, and to make him too anxious to be within hail. I have seen many a good worker frightened at the long stretch of moor before him when first cast off on a hillside, and quite bewildered at finding himself, as David called it, "alone on the ocean." Some dogs have in this way been lost at once and forever. I remember especially one brace, purchased by a young member of the "Upper House," who thought he had got a bargain—and they were in one sense, for they never cost him anything to keep. They turned their backs to each other and raced off, one north, as his gillie told me, and the other "sooth," and he added, "As the world's round, if they go on long enough praps they'll joost meet." And did you never see them again, Sandy?" asked. "No," he replied, in gattural emphasis, "I won't tempt you to go, and with shrewd twinkle of his eye, 'but when the grieve on the next moor sold his dead lambs' skins next year, twa of 'em were liver and white!'"

I can imagine nothing more utterly hateful than a bad dog on the moors, where all your sport, possibly for the only fortnight you can spare, depends upon the dogs, which probably are short in number and shorter still in quality—a dog that won't range and can't catch the right of a group of dogs, or a Scotch sheep, at which he dashes with frantic bounds and loud yelps; or, if he has blundered up a grouse, which falls a few yards ahead, saunters up to it in a leisurely way, and proceeds to crack the bones.

I saw a liver pointer loosed from a bundle of dogs once in the next moor to ours, which commenced rolling instead of ranging, and so continued for about a quarter of an hour, when they caught him and ran him a-brother, (to all appearance) who could not even roll.

The dogs seemed a mystery to their owners as well as to us, and frightened at the kilts worn by their masters, (for the first time probably, judging by the whiteness of their knees); and upon making inquiry we found that they were English manufacturers—one of them, his English valet told us, "the largest tape maker in England." This information was vouchsafed as we overtook the shelties with the game masters, which was not contained, so our gillie declared, a good deal of heather and three grouse, though we heard a good deal of cannonading. The head gillie explained that he really thought the gentlemen might have killed more, only their dogs "wouldn't" let the grouse alone. "They shot one of their dogs," the stunted English-grown boy said, "but, (he added apologetically,) I don't believe as they aimed at him."

Can you reach for the truth of it, but they tell me the dogs were vaccinated daily, and that as every dog disappeared the tape-maker and his party did better. The reports of the guns as we now and then worked near their "dyke" much resembled file firing, and sometimes there was a volley. I suppose at a single bird: whilst now and then one of their best dogs would be seen full chase on the sky-line after a black speck which did not look more than a couple of feet from the gun. The dog would then be a sort of waddle and sliding match on the horizon, and the fluttering of a kilt in full pursuit. Yelps would then be heard faintly in the distance, from which we argued that a bird was wounded, that it had been overtaken by a dog misnamed or nicknamed a pointer, that the gillie had been also in hot chase, but that he had not come on the scene in time to prevent "Scamp yer brute" from bolting "feathers and all."—*London Field.*

THE DACHSHUND.—I was absent from the "old country," one-and-twenty years, occupied in racing, steeplechasing, and fishing. Whilst abroad I had a great fancy for this game little hound, and I have still. The first specimen I had was crooked in the leg, and all at elbow. Whilst shooting in one of the large government forests in Wiltshire, I came across a good old sportsman, over seventy years of age, who had been the greater part of his life in Germany. He assured me "my little hounds were all wrong—that they should not have crooked legs." He said, and in which I fully agree, that "the crooked fore-leg had come merely because they had been bred by a crooked and cared for in the first instance, and by breeding from faulty dogs or bitches." He procured me three very good specimens, but not quite straight. I bred from these, "in and in," keeping the straightest legged ones, and in five years had them as straight in the leg as gun barrels; they could go twice the pace of the crooked-legged ones, or my toy Bassets.

You may depend the crooked-legged *Dachshund* is not the correct article, and it is against all rules of dog anatomy to suppose it. Most of your readers are doubtless aware why the old English Turnspit was so deformed.

I am quite convinced, after many years study of this beautiful little hound, that he should be straight on the leg, in color black and tan, or red, with a coat as bright as silver.—*Bruce's Gazette.*

The Rogers-Roll Association of Canada offers \$500 in prize at the annual meeting to be held at the association range on the 20th and 21st of October next, open to all competitors, not excluding the Irish team.

B. & St. Joe R. R.) said to me last night that if it was possible for him to go he would do so; but he is not well, and being very busy there is scarcely any hope that he will go. He said in lieu, however, that anything that I wished, him or Mr. Towne (superintendent) to do should be done. Write me promptly, and say if dogs, guns, and supplies are to be looked after by me. Give me as full particulars as you can.

Come direct, on account of the shooting, and you can take your time going back. Don't fail to let me know the exact time of your arrival. I am more than pleased to learn that you are coming with them. Very truly yours,

G. W. DOMINAN.

Subjoined are letters received from the Winkle Club, of Lawrence, Kansas, and the Tecumseh Club, of Tecumseh, Nebraska:—

LAWRENCE, KANSAS, September 30th, 1874.

CHAS. HALLOCK, Esq.,

DEAR SIR:—Your favor of 23rd inst. was duly received, and immediately submitted to the club for its consideration. As the result of its action, I have to report the following programme:—A delegation of the club will meet the "team" on their arrival in St. Louis, and escort them to Kansas City via the St. Louis, Kansas City & Northern Railroad. At Kansas City a special car will be in readiness to take them to Peabody, on the Atchison, Topeka & Santa Fe Railroad, at which point we hope to meet the same good grouse shooting, although it is too late in the season to effect first class sport. From Peabody we will take them up the Kansas Pacific Railroad to the Republican Valley, where we can show them more game than in any other section of the State. We have secured a special rate for them from St. Louis to Kansas City, and through the country of the Kansas Pacific, and Atchison, Topeka & Santa Fe roads, are able to furnish transportation for the party free to the above points. Several of our club will accompany them, and place at their service all the dogs we have.

If this programme is acceptable to the gentlemen, we will be most happy to meet them, and will endeavor to make the trip an agreeable one. We do not propose to bore them with receptions, speeches, etc., but will take it for granted that they come out to see us as sportsmen, and as such we will extend them a hearty sportsman's welcome, and do the best we can for them.

Have telegraphed you to-day, and hope for a favorable reply on Monday. With much respect, yours truly,

FRANK S. EARLE, Secretary Winkle Club.

TECUMSEH, NEBRASKA, September 26th 1874.

EDITOR FOREST AND STREAM:—

The team will be just in time for splendid duck and geese shooting in Southern Kansas, and deer and antelope shooting in the Indian Territory, at or near Cherokee Reservation. Should any of the party come this way we will be more than pleased to extend to them a hearty sportsman's greeting, and if they decide we will send some of our members to St. Louis to escort them out here. Please accept the assurance of our kind regards and wishes for the success of the party in all its undertakings. We would be pleased to hear from you in regard to their movements. Truly yours,

E. P. BAILEY, Secretary.

[We hope to print next week some brief account of the success of our friends.—Ed.]

POT HUNTING ON LONG ISLAND.

A CORRESPONDENT on Long Island calls our attention to a practice common among the pot hunters of that region of "dusking" wild ducks, and by this means slaughtering them in large numbers in the most unsportsmanlike manner. The men who indulge in this species of amusement are as selfish as they are cruel, and though beyond the pale of the law—as such a crime is not punishable by the statutes of this State—yet they are amenable to the laws of society, and if no other means are available for their punishment we hope our sporting clubs will secure the names of these greedy savages, and ostracise them from the catalogue of sportsmen and gentlemen. The wanton destruction of game is of too frequent occurrence in all portions of the country to be tolerated any longer, for if it is permitted to continue, our woods, lakes, and streams will soon be cleared of all animals interesting to the angler or fowler. This crime seems to be confined principally to farmers in the vicinity of cities, who slaughter for the market. Game is to them only so much a providential means of increasing their coffers, yet in their selfishness they defeat their own purposes, for by their unnatural and illegitimate mode of hunting they soon drive the game from its haunts, so deprive themselves of a lasting commercial product, and our citizens of the means of spending a few days in the invigorating, health-giving exercise of the chase. Because Providence has been kind enough to stock our country with an abundance of game, it is no reason that we should destroy the gift as rapidly as possible, and satiate ourselves at present at the expense of future want. Even the naked savages of the plains are too logical to indulge in the wanton slaughter of animals useful to them; then how much more careful should civilized man be in the preservation of creatures that prove a source of both pleasure and profit to him. The suppression of the unnatural slaughter of game is a work in which all true sportsmen should unite, so we hope to hear, ere long, that the different clubs throughout the country have banded together for the punishment of those fellows who degrade the ennobling pursuit of the chase, and reduce it to an assassination as vile as it is unnecessary. Should any of our correspondents become acquainted with the movements of pot hunters, we should deem ourselves obliged if they would make the fact known to us, and we shall take such steps as will lead to their deserved punishment, if social or criminal laws can do it.

COMPETITIVE HUNTS.—The Forest and Stream Sportsman's Club of Olney, Illinois, is a pleasant organization named in honor of this journal. Mr. James Gardner is its President. On October 10th the members are to meet to arrange for an annual competitive hunt, to take place soon. We feel obliged to condemn these hunts, as tending to useless and excessive slaughter, not only of game animals, but of such as are not included in that category. We think, however, that a competitive hunt might be arranged on scientific principles, so as to exhibit the skill and field knowledge of the parties engaged—quantity not being made a standard of "points," but rather the method of capture or killing—points under an approved method to count more, of course, for one variety of game than for another. Supposing some

of our sportsmen contrive a field trial on new principles; that which would excite a noble emulation, without involving cruelty.

These competitive hunts have been quite in vogue in the southwest, but we think are now dying out from lack of natural supply of game.

Sporting News from Abroad.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

I REALLY have but little sporting news of any interest for American sportsmen this week, and I am not like Wikie Collins and Edmund Yates, who can write an amusing article about nothing, and make substantial ropes out of sand. As I passed through London I saw the photographs of the base ball players in the Field office window supported on one side by the skull of a red Indian and flanked on the other by a viper in spirits of wine, and a pair of antelope horns, whilst an enterprising vendor of Dark's cricket paraphernalia had gone in largely for the base ball bats and gear; so I imagine the game has "struck lie" somewhere. Curiously enough, Beecher and Tilton are everywhere "common talk," and it is not everyone that remembers, singularly enough, that the "Beecher, Stowe and Byron" scandal which monopolized the prurient sentimental table talkers' conversation a few years ago, was started by a member of this same family.

The grouse disease, like hydrophobia, and the foot-and-mouth, still baffles the scientific naturalist, and Dr. Farquharson, a savant of great repute, has been engaged in dissecting a large number of its victims. One exhausted bird picked up before its death, he found to be much emaciated, and a mere mass of bones and feathers. The liver was soft, friable, (query, like that of a calf?) and of a dirty greenish yellow color. I presume somewhat after the style of an old Anglo-Indian's, who has undergone a long course of jungle fever and brandy pawnee. The smaller intestines were found densely packed with tape worms. The coeca and larger intestines exhibited similar symptoms to those observed in cases of typhoid fever. They contained a moderate number of the "strongylus," small microscopic thread-like worms. In three diseased birds received later in the month of August emaciation had not reached anything like the same extent, but the morbid appearances differed slightly from those previously noticed. Hardly any of the tape worms were present, but the smaller parasites were very abundant, and an examination with the microscope revealed them in all the various stages of growth. The tenacity of life exhibited by the entozoa was remarkable. Dr. Farquharson's theory is, that the grouse disease consists essentially of a specific fever, propagated by epidemic or infectious influences, in the same way as cholera, typhoid or enteric fevers among ourselves. He finds brownish droppings in the spring to be a sure sign of coming disease, and remarks that as the birds are invariably found when dead from the disease in the neighborhood of water, and even half immersed in it, that this betokens a well-marked febrile condition. The results of his observations go to show that the disease occurs about every seven years, and generally follows successful seasons, from which it may be argued that overcrowding and underfeeding in some manner augment it. From the Doctor's notes W. B. Tegelmier, a well known judge of pigeons, and an experienced ornithologist, arrives at the conclusion that the only method to be adopted to rid the moors of this scourge is to shoot down and bury all diseased grouse as early as possible, to prevent their spreading the disorder, and to encourage birds of prey who only destroy the weak and sickly, and thus give great assistance in carrying out the sanitary laws of nature. I shall be glad to hear from any readers of FOREST AND STREAM if the ruffed or pinnated grouse of your prairies suffer from this disease, and if so, if it takes a similar form, and what means are adopted for its extermination. Editor has my address.)

Lawn tennis, badminton, and tilting at the ring, are fast rivaling croquet, but the latter game still seems to hold its own, and disputes the supremacy of the lawn with bowls and archery. Billiard matches are not very strong at present for America. The American game, with four balls, is much played at Manchester and our large manufacturing and seaport towns, where it has been introduced by visitors from the United States, that I fancy our game, which admits of losing hazards, is more scientific, and though spoilt amongst the professional set by "the spot stroke," it is more interesting to the looker on. The public matches are often played on the "flat" system, and the £200 a side is frequently all talk, whilst the winner had won before they broke the balls. I saw only the other day that the Field refused to insert the account of a match, because it had been played "on the cross," and sharp practice seems inseparable from the atmosphere breathed by markers. At one large underground establishment in London called "Galty's," there are over forty tables in one hall, and in every little country town there is more than one public billiard room. Since the days of wooden beds and no tops to the cues, we have changed very much for the better, and it no longer takes us six months to turn a single ball. W. Cooke, whom I have mentioned, is, I believe, a very straightforward man, and I do not wish my remarks to make him appear in any unfavorable light. He is, no doubt, the best player we have ever had, and plays a most marvellous all round game, besides being able to score several hundred in a break, if he once gets "on the spot." A short time ago a marker introduced the idea of "thumb and finger versus cue," spinning the ball between his finger

and thumb instead of putting it with his cue, but the thing didn't take, and I hear no more of him, though a rival of his still plays, I believe, a hundred up, and gives points, too, with an old umbrella!

A grant by Parliament is talked of to pay the Prince of Wales's debts; it is, however, gratifying to learn that they weren't incurred on the race course or at roulette and ecarte, like those of H. R. R. George IV.

THE GREAT ST. LEGER—THE FAVORITE SCRATCHED, AND APOLOGY WINS.

"George Frederick out of the Leger at 9:7 A. M." Thus ran the laconic announcement which flashed down the wires from London.

'Tis a great race, this St. Leger, and the last grand race of the season. Originated in 1770 it has survived the flight of time for close upon a century, and though the first race saw but six subscribers, last week their number reached nearly two hundred. Some of the most celebrated turf fights on record have taken place on the Doncaster course, and if George Frederick and Apology had gone to the post as fit as when they pulled off their respective triumphs in the Derby and the Oaks, the St. Leger of 1874 would have been a memorable one. As it is, it is unprecedented in the annals of the turf.

All through the hot summer months in the billiard rooms of the London clubs, at Tattersall's at the German Spas, at Baden Baden and gay Paris had George Frederick reigned supreme, since the scarlet jacket of Custance left every other comer far behind and landed an easy victory for his lucky owner. At one time happy was the plunger who had succeeded in booking the short odds of five to two about him, and his backers slept lightly and soundly, for they thought the bread they had cast on the water would return to them after many days. But there is on the turf a power capable of controlling horses and men, and against which many a gallant thoroughbred has struggled in vain. This power, which never fails in its judgment, and whose ways are inscrutable, is the "The Ring," and the ring had said that he should never win. They had been dead against him from the first, since he had run at Epsom. There was no real reason why he shouldn't win, as he had beaten directly or indirectly every horse in the race. Trent, the winner of the greatest French race, was pounds behind, and yet had beaten Apology. Atlantic, the two thousand guineas' winner had broken a blood vessel, and of all the rank and file which made up the field, not one of them boast of having been up to his girths.

Previous to the race it was rumored that one of his legs had filled, and his owner, Mr. Cartwright, would not risk him, though it is said he had backed him freely. Be thus as it may, Custance would not at first believe it, and though it came out subsequently that the horse had hit his leg at exercise, the men who had thrown their money to the winds were inclined to be very skeptical. Horror upon horror! his head accumulated when it was rumored that the mare Apology, who was the Public's second string, had pulled up lame. In the height of the panic she fell back rapidly from twelve to one, and even fifty to one was laid against her, and an even monkey that she did not start. Eventually she settled down to the comparatively long price of four to one as first favorite, and though lame just before the race, managed to win in quickest time ever recorded. It is as well to state that when her owner, an invalid gentleman in Lincolnshire, was informed of her mishap he replied that so much money was invested on her that she must start if she had but three legs, and this determination to give people fair play was amply rewarded.

All Yorkshire went mad on the occasion, for she is bred on the borders of the county and her owner is, I am told, very popular in the neighborhood, and a good old sportsman of four score years and two.

After one failure the starter got them well away. Blantyre taking the lead and cutting out the running at a slapping pace, Atlantic and Leolinus following and to them succeeding Trent and Lady Patricia. Volturino and Apology bringing up the rear. As the road the mare became absolute whipper-in, and here ten fives were laid against her. Meanwhile Atlantic was pulling hard but soon succumbed, having burst another blood vessel, and from the mile post Leolinus forged ahead, some outsiders being still in the van. Between the six furlong post and the "Red House," the mare began to mend her pace and Blantyre giving way was pulled back and knocked Lady Patricia out of her stride. Glendarn also having been forced against the rails by the retiring Atlantic. Trent and Apology had been compelled to make wicish tracks, owing to the erratic course taken by Blantyre, but they ran respectively fifth and sixth round the bend into the straight. Here Rostrevor and Pea D'Amour hung out signals of distress and Leolinus was leading the field. As they neared the judges' box Johnny Osborne brought Apology, and sailing still on the mare, entered in a length and a half to the good, Sir R. Bulkeley's Chester Cup winner being second and Trent third. Atlantic walked in with the crowd. Not a vestige of Apology's lameness was apparent, although she was said to have stood with her leg in hot water all the morning. Such has been the St. Leger of last week, and it has surpassed all other Leger in varied phases of excitement. The mare has been won five times in the last eight years by mares, including Achievement, Formosa and Hannab, and this goes to prove the superiority of the gentle sex at this period of the year. It is a rare thing since Black Bonny's time to see a mare running in the Derby.

The Lincolnshire Field Trials, under the patronage of the Kennel Club, take place this week. There is a great dog show at Nottingham, but the absence of "circuit judges," as they are called, from the fact of their sending all the principal dog shows, is to be deplored, and the conduct of the Committee in depending on gentlemen who may be called "amateurs," though original, is scarcely calculated to give satisfaction to the exhibitors, and has caused a fierce discussion in the sporting papers.

LOSTONE, JR.

CREEDMOOR.

THE excitement about Creedmoor was never before so intense as during the past week, and for this interest manifested in all pertaining to it, we are, in a great extent, indebted to the international contest, and the participation in the subsequent matches, of any importance, of the leading Irish and Canadian shots. Every one in the city interested in rifle practice, and who had the time to spare, thronged to the ground, and bravely withstood the drenching storms, or the gusty, disagreeable winds, that they might be witnesses of such marksmanship as the world had never before seen. Even the fair sex was out in exceedingly large numbers, and their gay toilets, contrasting, as they did with the showy uniforms of the National Guard and the sombre black of the citizens, gave a most pleasing animation to the scene. Our city regiments were well represented in all the contests, and their scores, as a whole, will compare favorably with the shooting of the English Volunteers, and in several instances the best efforts of the latter were excelled. This interest in rifle practice has now become quite general throughout the country, but in no place is it so manifest as among the citizens of New York: a fact which is quite evident by a glance at our shooting galleries, and the numbers trooping to Long Island every day of the exercises. The result of the comparatively limited practice of our citizen-soldiers is quite satisfactory, for on no previous occasions has their shooting, everything considered, as good as during the past week, though the opening of the contest augured the most unsatisfactory sequences, owing to the condition of the weather; yet the bright, sunny days which smiled on the leading matches caused a reversion of the prediction, and the consequence is, that though some rather poor shooting was done at first, the total result is in the highest degree satisfactory, and one of which our riflemen may well feel proud. The prizes competed for were numerous and very valuable, certainly far superior to those given in any other portion of the world. They numbered in all about one hundred and seventy, and were valued in the aggregate at \$8,292. All our leading gun manufacturers, many of our leading merchants, several of our division commanders and staff officers having contributed largely to the fund. The most important prize was that of James Gordon Bennett of the *Herald*, a gentleman who has done as much to foster all athletic exercises that can improve body, or eye, as any person in the country. This consisted of a silvery trophy and cash, which was valued in the aggregate at \$1,100. This was won by Mr. Rigby of the Irish Team, so that our genial Celtic visitors take home with them the most valuable prize of the American Wimbledon.

The entire programme was carried out in the most satisfactory manner, and for the fair play displayed, and the good order kept, the officers of the Rifle Association, prominent among whom are Colonels Wingate and Gilder-sleeve, deserve the congratulations of the participants and the public.

The shooting opened last Tuesday amidst a disagreeable storm of rain, but this did not seem to dampen the ardor of the riflemen. The first competition was for the prizes in the Judd Match, which were valued at \$245. This was open to all rifles; but the pull of trigger was not to be less than six pounds. There were two hundred entries for this match, but owing to the storm only a small portion competed. The shooting as a whole was poor, owing to the gusty winds and other atmospheric causes, so that even our crack shots failed to count little more than half their usual score. The following are the winners:

Name.	Total.	Name.	Total.
Capt. H. B. Smith, Co. D, 12th Regt.	33	George Hughes	21
John May, 2nd Regt.	22	Private Wm. Johnston, 7th Regt.	20
Capt. Joseph Ross, 24th regt.	22	Lieut. Col. Reuger, 33d regt.	20
Joseph H. Fisher	21	J. A. McGee	20
Alexander Smith	21		

The next was a cavalry match, open to teams of five from any troop of the National Guard; distance 100 yards; position, standing; ten rounds; weapon, Remington breech-loading carbine, State model; pull of trigger not less than six pounds. The first prize was a handsome silk guidon, to be given to the troop making the highest score. The shooting on the whole was fair, considering the day. Following is the score:

Name.	Total.	Name.	Total.
Captain Harper	27	J. H. Christopher	18

Polz Kruscher	19		
George Giehl	13		
Michael Hoffman	19	Total	101

Wednesday was one of the most important epochs in the Creedmoor calendar to the National Guard, as regiment was pitted against regiment, and division against division. All the leading regiments had their representatives present, who fought gallantly for victory; yet, the shooting was not as good as it might be if the weather were more propitious. The first contest was the division matches, open to "teams" of twelve from each regiment or battalion in the First and Second Divisions; weapon, Remington Rifle, State model. Five shots; position, standing at 200 yards; any position at 500 yards. The prizes competed for were valued at \$450. Following are the regimental scores:

Regiment.	200 Yards.	500 Yards.	Total.
*Twelfth	140	143	283
*Seventh	131	92	223
*Seventy-ninth	133	109	242
*Twenty-second	139	102	241
Seventy-third	129	76	205
Lieut.	129	88	217
Ninth	115	43	158
Fifth	104	33	137
Eighty-fourth	105	33	138
Fifteenth	74	8	82
Ninety-sixth	52	2	54

SECOND DIVISION MATCH.			
*Twenty-third	70	101	207
*Forty-ninth	123	41	164
Thirty-second	119	43	162
Forty-seventh	104	49	153
Twenty-eighth	113	43	156
Thirtieth	110	13	123
Fifty-fifth	47	13	60

Under the rule that any one of a team that does not make eight points at 200 yards is debared from shooting at the 500 yards distance, the Eighth, Twelfth, Seventy-first and Twenty-second each lost one man; the Eighty-fourth, six; the Ninety-sixth, five out of its eight men; the Ninth, three; the Fifth, three, and the Eleven, nine.

From this showing it will be seen that the Twelfth did some splendid shooting. The Sportsman's Match, which followed, was open to all comers; any rifle; distance, 200 yards; position, standing; seven shots. The winners of prizes were—

Name.	Total.	Name.	Total.
Joe. Turner, U. S. Engineers	27	D. E. Vanett	22
J. L. Price	23	W. T. Davis	21
P. D. Wain	22	T. B. Collins	21
Wm. Robertson	22	Otto Schnebeck	21
P. H. Holton	22	Leon Becker	20
General T. S. Haskin	22	H. H. Medley	20

The State Match was one of great importance to the regiments, for besides the laurels gained, the trophies were valuable, the best being one presented by the Governor, and valued at \$500; hence the best men were brought to the front. Following is the score, from which it will be seen that the Twenty-second won the first prize, the Twelfth and Seventy-ninth following in order. The total prizes in the contest were valued at \$2,650.

Regiment.	200 Yards.	500 Yards.	Total.
Twenty-second	148	137	285
Twelfth	138	139	277
Seventy-ninth	149	118	267
Seventh	131	128	259
Twenty-third	146	108	254
Forty-ninth	148	97	245
Forty-seventh	128	91	219
Seventy-first	120	77	197
Eighty	138	62	200
Thirtieth	128	47	175
Eighty-fourth	116	49	165
Twenty-eighth	109	50	159
Forty-ninth	112	29	141
Thirtieth	119	26	145
Fifth	118	29	147
Ninth	127	16	143
Nineteenth	105	37	142
First	96	21	117

The Officers Match was open to all general, field and staff officers in the N. G. S. N. Y., brought out only a few competitors, who made the following score:

Name.	200 yds.	Total.	500 yds.	Total.	Grand Total.
Adjutant Barker, 12th Regt.	3 2 4 2 0	11	4 3 4 0 4	15	26
Captain Murphy, 8th Regt.	2 3 2 3 2	12	2 0 3 4 3	12	24
Lt. Col. Gilder-sleeve, 12th Regt.	2 2 2 3 2	12	3 2 2 0 2	11	23
Colonel Scott, 8th Regt.	3 0 2 2 2	9	3 2 3 0 2	9	18
Lt. Col. Hillebeck, 9th Regt.	3 3 2 4 2	14	0 0 0 0 0	3	17
General Staff, First Div.	2 2 2 3 2	13	0 0 0 0 0	2	15
Lt. Col. Mitchell, First Div.	0 0 4 3 3	10	4 0 0 0 0	4	14
Colonel Jensen, First Div.	4 0 2 0 2	8	0 0 0 0 0	0	8
Colonel G. Gilin, 33d Regt.	3 0 2 0 2	8	0 0 0 0 0	0	8
Major Davenport, 8th Regt.	0 0 0 0 3	3	0 0 0 0 0	0	3

The Army and Navy Journal Match, open to teams from all regularly organized military organizations in the United States, including the regular army, navy and marine corps; weapon, any military rifle; distance, 500 yards; position, any; rounds, seven. First prize valued at \$750. The following teams competed, the Seventh Regiment winning:

Name.	Score.	Total.
A. P. Hiker	2 4 2 0 4 0 3	15
Corporal McMillan	2 0 2 3 4 4 4	14

*Disqualified on account of not using the ammunition issued by the State.

The Gatling Match, open to teams of twelve from each regiment of the State National Guard; weapon, Remington Rifle, State model; distance, 500 yards; rounds, seven; position, any. The first prize a Gatling Gun, to be given to the regiment making the highest score, and to be retained if won twice in succession—though not necessarily consecutively. The total prizes in this match footed up \$2,275. The following are the winning teams:

Seventy-ninth Regiment	296	Twenty-second Regiment	156
Twelfth Regiment	291		

The following gentlemen in this match won prizes for the best individual scores:—

Name.	Total.	Name.	Total.
-------	--------	-------	--------

Captain Ross, 7th Regt.	25	D. Cameron, 7th Regt.	23
William Hunter, 7th Regt.	24	Lieut. Heide, 8th Regt.	23
A. H. Raker, 7th Regt.	23	Private Barry, 23d Regt.	22
E. H. Sanford, 7th Regt.	23	W. Stevenson, 7th Regt.	21

The Press Match brought out several representatives of our daily journals, and even Canadian reporters, at least those who were duly authorized to act as such by the Dominion newspapers. The prizes were gold and silver badges amounting in value to \$147. The distance was 500 yards; weapons, any military rifle; rounds, seven. The following were the prize takers:

Name.	Total.	Name.	Total.
-------	--------	-------	--------

T. Lloyd	27	J. E. Whitley	17
Captain Mason	26	G. O. Gessing	19
J. H. G. H. G.	25	H. G. O. G.	19
F. Werner	23	F. W. Jones	14
L. C. Bruce	18	P. W. Brunsler	12

The All Comers' Match brought out a large field; and the Consolation score of the best shots on the ground. Following is the score:—

Name.	200 yds.	500 yds.	Total.

The most exciting event of the week was the competition for the Bennett Long Range championship, as the best shots of the representative Irish, Canadian and American teams were pitted against each other. The contest from the beginning seemed to be between Mr. Rigby of the Irish, and Mr. Fulton of the American team, and so close were they in their scores that it was a hard matter to decide which

The Horse and Course.

—The York Trotting Association hold their annual meeting on their grounds at York, Pa., on October 6, 7, 8, and 9. The Association have recently improved their grounds and increased the size of the track, so some good trotting may be expected. The sum of \$1,250 is offered in premiums.

—The trotting at Fleetwood Park, Friday October 1, was characterized by much enthusiasm, as the track was in excellent condition, the day fine and the entries quite numerous. The first race was for a purse of \$500 for horses that had never beat 2:30. The animals starting were—Arthur, Midget, Linnie Case, Cheston, Gordon, Alexis, Little Nell and Richards. The former won; Midget and Linnie Case getting second and third money. Time—2:36½, 2:37½, 2:37, 2:37½. The second race for a purse of \$250 free to all, mile heats, best one in five in harness. This brought out American Girl, Camors, Sensation, and Henry. The former was the winner. Time—2:24½, 2:25, 2:23½, 2:25. The American Girl was the favorite throughout, having brought \$200 in the pools to the \$90 and \$41 of her opponents. Some good trotting occurred at Fleetwood Park October 2d. The first contest was a matinee \$1,000 between D. Ramsey's brown mare "Laura," and E. Fowler's black gelding "Black Diamond." The former won in three straight heats. Time—2:53, 2:57½, 2:56½. Second race was for a sweepstake of \$300; mile heats, best three in five in harness. The entries were—John Murphy's s. g. Sorrel Jake, John Hastell's m. m. Mauna and T. Trimble's Lady Trimble. The former won, having gained the first, third and fifth heats. Time—2:39, 2:37½, 2:39, 2:42½, 2:45½. This race was well contested, and so closely run that betting often changed from one to the other according as they came in winners of a heat.

—The Autumn meeting opened at Jerome Park last Saturday under the most favorable auspices, as the best stables in the country were represented, the track was in splendid condition and the attendance was very large, a very great number being representatives of the fair sex. There were five capital races during the day, and each was well contested. The first was a dash of three-quarters of a mile; the second, the Jerome stakes for three-year-olds; the Nursery stakes for two-year-olds, one mile; the Manhattan handicap, one and a quarter miles, and a selling race of one and one-eighth miles. There were five entries for the first, namely—Countess, Lotta Moore, Audubon, Warminster and Harry Bassett. The latter was the favorite, but Countess won in 1:16½. For the Jerome stakes there were seven starters, namely—Acrobat, Brigand, Bananah, Anson, Pennington, Hoxner, and Grinstead. Acrobat, a powerful steed, and the favorite, won the purse and race in 3:37½. The stake, including the plate, was valued at \$4,950. The Nursery stakes for two-year-olds of \$100 each, half forfeit with \$1,000 added, second horse to receive \$200, was closed with forty-three nominations, but of which only eight started. The winners were—Oltipia, Chesapeake, Rhadamanthus, Bayminster, James H. Leader, Athlete, and Australand. Mr. Hunter's stable represented by Oltipia, who was the favorite in the betting, and the accuracy of those cognizant of the good qualities of the mare was evident when she came in winner in 1:46. Chesapeake second, followed by Rhadamanthus; stakes were valued at \$3,550. The fourth race, the Manhattan handicap, closed with ten nomination, and that number went to the starting post. The competitors were—Mate, Survivor, Castesby, Josie B., Lizzie Lucas, Rutherford, Leamington, London, Gray Planet, and Dublin. The mile and a quarter was run in 2:14, the fastest time it was ever made in; value of stakes \$1,310. The fifth race was for a purse of \$400, the winner to be sold at auction, and if offered to be sold for \$1,000. The starters were—Mary Buckley, Mollie Darling and Binghamton. The contest was most exciting as the horses passed or lapped each other from time to time. Mary Buckley was the winner by a length, Mollie Darling second. Time—2:02½; distance, one and one-eighth miles.

—A trotting race, best three in five to harness, came off last Monday at Deerfoot Park, Long Island, for a purse of \$1,000, with \$1,000 added. The competitors were—the American Girl and Copperbottom, the former won, best time made 2:25. A race between Dan and Whitestone for a purse of \$100 was run on the same day and was won by the former in three straight heats.

—At Beacon Park the horse Ingotmar was matched against on the 4th inst., for \$1,500, the endeavor being made to beat the best ten miles trotting time ever made, viz., 28:02½. The attempt was a failure, the distance being made in 29:10½.

—The trotting at the Catskill course on

the 8d ult. brought out several horses. The first race was for a purse of \$600 for horses that never beat 2:58, miles heats, best three in five to harness. There were seven entries, but Sandy won. The second race, for horses that never beat 2:35, was won by Trout. Best time made, 2:33.

SHOOTING SUITS.

We have received from Mr. W. H. Holabird, of Valparaiso, Ind., one of his celebrated shooting coats, made of best English duck, which is both water and mildew proof. It is very convenient, having an abundance of pockets, and it is large enough to place outside the ordinary coat. Sportsmen will find them very useful.

SHOOTING PROPERTY ON THE EASTERN OR
Shelburne, Maryland, for sale. The property consists of four hundred acres of land and marsh—about one hundred under cultivation—with new, two-story house. It is the center of the best goose and duck shooting on the coast, lasting from October to March. No better quail shooting than on the upland. The owner will also sell, if the property is disposed of, his entire shooting tackle, consisting of one eight and one ten bore W. & C. Scott's & Sons' complete. Also six wild live geese decoys, duck decoys, and two new duck boats. The property is only offered in consequence of ill health of the owner. For further and full particulars, and to see m. p. of place and chart of the Bay, apply to Mr. E. K. BAXTER, of Bangs, Merwin & Co., 626 Broadway. Oct 8-36

1776. 1876.

INTERNATIONAL

EXHIBITION.

OFFICE OF THE

UNITED STATES CENTENNIAL COMMISSION.

In accordance with the several Acts of the Congress of the United States, providing for the celebration of the

Centennial Anniversary

of American Independence, there will be held in FAIR-
MONT PARK, Philadelphia, in the year 1876, an

INTERNATIONAL EXHIBITION

of Arts, Manufactures, and Products of the Soil and Mine.

The Exhibition will be opened on the 19th of April and closed on the 19th of October.

APPLICATIONS FOR SPACE.

To secure space for exhibits in the Buildings or on the Park, early application should be made. The necessary forms of application, together with the instructions for Exhibitors and needed information, will be forwarded on application to the Office of the Centennial Commission.

A. T. GOSHORN, Director General.

J. L. CAMPBELL, Secretary.

HOMES!

HEALTHFUL, CONVENIENT, LOVE-
LY! Just think! Only 23 minutes, and seven cents fare, commutation, to Liberty street, New York, from FAIRHART, whose gently rising land, from the crown to the shore of New York Bay on the one side, and New York Bay on the other, unfolds a panorama of such exquisite beauty, such charming sunsets, and ocean views far in the distance, that for a home, one finds it, in its every sense, of fancy and reality, in this lovely place. Removed from the noise and dust of the great city, yet so near that the time and expense of transit thereto is less than from Wall to Broadway street. Fishing, boating and bathing unsurpassable. Lots in the most beautiful locations rapidly sold, the choicest will soon be taken up, while the cost of purchase will again be far advanced, owing to the rapid appreciation of property here. Delay in securing two losses: First, the choice of a building site; second, the price at which it can now be obtained—on \$25 monthly instalments. When \$250 is paid in, a nice house will be erected at cost for the lot purchaser, and only the same amount of monthly instalment required. Thus you own your house and lot for less than you are paying rent. J. OS. HALLOCK, Forester and Surveyor Office, 17 Chatham street, Oct 1-4.

AMERICAN WILD FOWL SHOOTING.—BY J.

A. W. LONG. A practical treatise on the haunts, habits and methods of shooting, also specific explanations for building blinds, blinds and decoys, the training of water retrievers, and other valuable miscellaneous information, by a professional duck shooter. 12mo, 250 pages, cloth, illustrated. \$2.00. To be had of all booksellers and the leading gun stores, or will be mailed to any address, post paid, on receipt of the price, to J. B. FORD & CO., Publisher, Ready Sept. 25th. 37 Park Place, N. Y.

SPORTING BOOKS.

HIRAM WOODRUFF'S—THE TROTTER HORSE

OF AMERICA. New edition (the 15th), with nearly 100 pages of entirely new matter by C. J. Foster, bringing the work down to May, 1874; with a new record of performances, giving the best times made in the last fifty years and with seven new full-page engravings of celebrated horses. Cloth, black and gold, \$2.50. This is the standard book on the subject, and the additions just made add greatly to its value and interest. Every horse lover should own a copy.

STONEHENGE'S—THE HORSE IN THE STABLE

AND THE FIELD. By J. H. Walsh, F. R. S. C. ("Stonehenge"). Thoroughly revised and Americanized by R. M. McClure, M. D., V. S., and with an essay on the Trotting Horse, his breeding and training, and with full tables of pedigrees. Illustrated with nearly 100 engravings. \$2.50. This is universally admitted to be the best horse book ever published.

DR. McCURE'S—THE AMERICAN GENTLE-

MAN'S STABLE GUIDE. Giving full directions for the management and care of stables, horses and carriages and harness. By R. M. McCURE, M. D., V. S. A practical manual for every stable owner.

THADDEUS NORRIS—THE AMERICAN AN-

GLER'S BOOK. The Natural History of sporting fish and the art of taking, with instructions in Fly fishing, Fly making, Rod making, &c. With 50 engravings. 8vo, cloth, gilt top, \$5.50. A classic on fishing by the best fisherman in America. Should be in the hands of every sportsman.

STONEHENGE'S—ENCYCLOPEDIA OF RURAL

SPORTS. Comprising Shooting, Hunting, Fishing, Hawking, Athletics, Yachting, Boat racing, Racing, Pederastism, and the various rural games and amusements. By J. H. Walsh, F. R. S. C. ("Stonehenge"). Illustrated by 200 engravings. Revised and Americanized. A sine qua non to sportsmen. Crown 8vo, Cloth, black and gold, \$5.

BREECH LOADING GUNS
A SPECIALTY.

We would call the attention of the public to our extensive assortment of

Breech-Loading Shot Guns,
Manufactured by the following celebrated makers:
Messrs. W. & C. SCOTT & SONS (winners of the International Gun Trial of 1873); P. WEBLEY & SON,
W. W. GREENER, WESTLEY RICHARDS, J. HOLLIS & SONS, and other makers.

A full line of fine
PISTOLS AND RIFLES CONSTANTLY ON HAND.
DIXON & HAWKLEY'S SHOOTING TACKLE.

To insure good shooting from Breech-loading Guns, we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,
manufactured by the Union Metallic Cartridge Co., Bridgeport, Conn. These shells are the cheapest and best in the market, can be easily re-packed with ordinary caps, without the use of the implements necessary in priming all other styles of shells.

BUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the most complete and convenient arrangement yet in carrying cartridges. The weight is so evenly distributed that it is scarcely felt. The pockets are made of the finest material, and the vest is so constructed that it is easy to put on and take off. The vest is made of the finest material, and the pockets are made of the finest material. The vest is made of the finest material, and the pockets are made of the finest material.

Made and repaired with the utmost despatch.

ALSO, CONSTANTLY ON HAND

THE BEST SELECTION OF TROUT AND SALMON RODS, REELS, LINES AND FLIES.

Medals awarded at the World's Fair and American Institute for our superior Artificial Flies.

Miscellaneous.

This arm was submitted in competition with over one hundred different systems, American and European, to the Board of United States Officers, appointed by Act of Congress, 6th June, 1872, for the purpose of selecting the best arm for the service, and of which Brig. Gen. A. Terry was President. It successfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for the military service by all nations is only a question of time; that whenever an arm shall be devised which shall be as effective as a single breech-loader, as the best of the existing breech-loading arms, and shall at the same time possess a safe and easily manipulated magazine, every consideration of public policy will require its adoption."

Resolved, Further, That the experiments before the Board with the Ward-Burton Magazine System have so impressed the Board with the merits of this gun, that they consider it as more nearly fulfilling the conditions above specified than any other tried by them or of which they have any knowledge, and it does recommend that a number of magazine muskets be made on the plan for further trial in the field." (See Ordinance Report.)

We are now receiving orders for these guns, and due notice will be given in this paper when they are ready for delivery.

The following is our scale of prices: Special Magazine for large game, carrying from 3 to 8 cartridges, 70 to 85 grs. of powder, 550 to 400 grs. of lead, 10 to 10 lbs. weight, from \$50 and upwards, according to finish. Special Long-range Magazine Rifle for Creedmoor shooting, 40 grs. of powder, 480 grs. of lead, carrying 3 to 5 cartridges, weighing 10 lbs., from \$100 and upward. Magazine guns for general use, carrying 3 to 9 cartridges, 60 grs. powder, 350 grs. lead, from \$40 and upward. Single Breech-Loader, Creedmoor shooting, for long range, 90 grs. powder, 480 grs. lead, general use, 6 to 7 lbs., 60 grs. powder, 350 grs. lead, from \$30 and upward. The calibre of all our rifles, unless otherwise specified, will be 45-100, in.

J. & W. TOLLE'S

BREECH LOADING GUNS.

Manufactured by Pioneer Works, Birmingham, Eng.

These guns are built with every improvement for American sport, and are the cheapest guns of guaranteed quality and shooting powers sold in the United States. They are made in six qualities, each gun being branded with one of the under mentioned names, which denotes its quality:

Pioneer, - - - \$65 Gold.
Toller, - - - 90 "
Standard, - - - 115 "
National, - - - 140 "
Challenge, - - - 160 "
Paragon, - - - 225 "

Any one of the above may be selected with confidence, as

gun bears our name which we cannot thoroughly guarantee in every respect.

For Forest and Stream.

SONG OF AUTUMN.

YOU love Nature? Then greet crisp October—
Let us welcome its advent with glee,
If old Winter be sullen and sober,
His youth is most janny and free;
If Summer enchants and beguiles us,
With sunshine and bird melody;
If Spring ever wins and bewiles us,
With many a sweet mystery,
Let us still have a heartfull forever,
For the glorious days of the Fall,
When the gold of the sun will not sever
Its hues from the rain on the wall;
When the tints of the fair Summer flower—
Live again in the haze of the air,
And the dreams of voluptuous hours
Are seen in the colors they wear;
When valley, and mountain, and lakelet,
Are crested with foliage so bright
That we feel that the blessings of Summer
Were never so fair as their flight.

L. W. L.

THE PROUD RED GROUSE.

BY ROBERT POWERS.

SOON as the sun peeps o'er the hill,
And birds are piping merrily,
When mists of night at morn distill
In dewdrops pure and pearly,
Then from the covert where he dwells,
Among the purple heather-bells,
The grouse leads forth to bracken dells
His hungry brood right early.

The capersidzie and curlow
May speed across the mosses;
The darting snipe, that dips in dew,
May haunt the hags and fosses;
These tempt us not to greet the sun,
And range the heath with dog and gun.
This day the proud red grouse alone
Our sporting craft engrosses.

We long to see him upward spring
And spread each russet feather;
And with the wind, on whistling wing,
Sweep crouching o'er the heather.
Then haste we now into the hill
Where roams the game old grouse at will;
His fate, foregone, we shall find all
Ere home we hie together.—*Lippincott's Magazine.*

For Forest and Stream.

In the Wilderness.

WE are encamped at Little Round Lake, Hamilton County, N. Y. For ten days and nights we have dwelt in the heart of the woods. We were three days wending our way to this remote corner. Up the river by boat all day to Albany, thence to Fonda, where we peacefully reposed on feather beds. Next morning to the busy village of Gloversville. After a homely dinner we left for Northville in a rickety stage. No episodes, save the advent of a colossal passenger occupying the middle swing seat, giving a wide margin for the support of the spine at the expense of pigmies. Northville is a quiet village of one long shady street lined with ancient pillared homes. Early the following day we were alert for the drive up the mountains; broke our fast by candle light. At last we were under weigh, drawn by a pair of antique sorrel cobs; but we cared little for speed, surrounded by a landscape surpassing show, startling peaks, exquisite sky, etc., and all that sort of thing—at any rate, creating appreciation, defying expression; beside, landscapes have been overdone. At Lake Pleasant there are three stalwart brothers, Scandinavians, who have been bred hunters and fishermen. Inured to hardship, they not unfrequently pass the rigorous winters trapping along the banks of the streams. They can despoil the waters of their finny denizens when all craft of the novice fails, so skilled are they in piscatorial art. Provided with blankets and clad in bloomers, and head gear, a calico sun-bonnet—my consort in corduroys and cow-hide stogas—we were driven on a buck-board three

miles as far as Elm Lake. For a comfortable vehicle over an undulating cow-path commend me to a white ash buck-board; it so pliantly accommodates itself to the mysterious ruts.

Our guides led the van with an ox hauling a sled, in which were conveyed our food and utensils. I was snugly stowed away with the potatoes, kettles, salt and bread; however, not before inspecting the blackened ruins of a fine old house recently destroyed by fire, built sixty years ago by Mr. Rhineland of New York. The site is something enchanting. There was state and gay company from the South and East culling this retreat by a silvery lake swarming with trout, and at that time deer in every thicket. Now rank grass overruns the foundations. The barn boasts a sky light, and the wily spider weaves unmolested among the rafters, but the hand of man could add naught to the serene loveliness of this clysium. They say it was haunted, but we must push on, it is beginning to rain. In this region the sun is hidden, damp clouds concuss and the rain descends trippingly; the astonished wayfarer, who has scarcely forgotten the blue dome that would more than construct a garment for a cat, of a few brief preceding moments, is unromantically deluged. Our brave ox plunges through bushes, brakes and over decayed logs, crasling, toppling. The men sturdily walk. The rain increases, and I take refuge under the blanket spread over the sledge.

The firmament lowers darkly, and now hail sharply pelts us; still I am a somewhat suffocated, unwilling prisoner. The gentleman ahead has donned a picturesque bandanna havelock and stalked into the brush in quest of partridges. Presently is heard the echo of a shot gun, and three fluttering birds are brought down. This causes much excitement. I emerge from the wet blanket, put on my calico sun-bonnet, raise my umbrella and resolve to witness this sporting prowess or perish. The rain slackens—the sun peeps forth for a second—bang! bang! and two more hapless fledglings are triumphantly strung up for our supper. Woe is me! my balmarol is soppy, my hair is horribly dishoveled and plastered around my eyes. The pung tints recklessly and pours rusty rivulets from the skillet upon my shivering anatomy; however, we hear the cheerful shout of the advance guard, who has not goaded Bright, the faithful ox. It tells us that deliverance is at hand. We now come into a clearing one and one-half miles from our promised haven. I stamp about to get warm; the ox is tethered for the night and we hopefully go up the hill, the vines and leaves dripping in our faces. Over some marshy places the herculean guide nimbly carries me, lest I sink too deep in the mire. A boat is taken from a hollow and we skim across an azure lake hemmed in with gigantic trees that spread away up some steep hills into dense jungles.

How fatigued and hungry we are. I scramble impetuously after the drone of a guide, (man of all work,) and we discover a birch bark shanty the shape of a Dutch oven. About three feet in front of the large open side is a stone fire-place. Very soon enormous beech and spruce half tree trunks are blazing there, and we recline upon the balsam boughs "shingled" on the ground of the hut. How grateful is the warmth, and the delicious odor of the hemlock buds permeates the air! We dried our clothing so hastily that a certain pair of corduroy unmentionables were scorched a beautiful brown in a short time, and the stogs curled and frizzled in the ashes. Our supper of fried potatoes and the birds was highly relished. If you want a good cup of tea, drink it without milk from a tin cup. Never was sleep sweeter or more profound; awakening to grope back to consciousness, seeing the spruce sparks sputter and watching the stars through the trees.

Our ablutions are made in the brook below, the inlet of the lake. Sometimes we there surprise a portly squirrel titivating—arranging his whiskers over the molten surface, preparatory, I shrewdly suspect, to paying court to some sweet-voiced blue jays, who give matin concerts just as the sun trembles upon the rim of the horizon. Nor is he their only listener. The butterflies softly sway their jaunty

wings, the chipmunk pauses in his deprecation upon our cup-board, and his frogship catches every note as he gutturally applauds from the edge of the lake.

Entomology might be studied profitably here, had we the requisites—a gauze flapper or sharp instrument to transfix the legions of insects. By the inscrutable laws of nature, (see Mr. Darwin,) they are furnished with appliances for gaining sustenance, weapons offensive and defensive, streaked, speckled, grizzled, striped and indented, parasites of moss, tree bark and leaves; winged monstrosities, with bodies like a canon, in prismatic colors, go booming wher ever their sweet will and the expanse of the Adirondack Park invites. The mosquito is abroad early and late, winding his blithesome horn; he is accessory to the attacks of the "punkies" that rejoice in jumping with stinging tiny feet upon one's nose, ears and hands, when slumber prevents resentment of such murderous familiarity. The insinuating centipede threads the fragrant balsam shoots, and small worms, looking like fir twigs, until they propel by drawing up their backs, crawl leisurely in the punk-wood. Some ungainly artful beetles will be stricken dumb upon the slightest provocation, and pretend to be dead. Poke them never so gently and they seem stiff and stark, but keep a look out and after a time you will see Sir Beetle revive and steal away. Bats whirr near the fire in the dusk, and the dull hoot-owl shrieks dismally. We are told that panthers and wolves are not far distant on the mountains, so I at once get into a frenzied alarm, and imagine I hear the wolves bark. There is a State bounty for the panthers, so they are diminishing.

In the cool early dawnings we go out fly-fishing. Sometimes a bait is attractive, and we have tried trolling with a spoon-jig. The luck of the amateur angler varies according to the time of year, the direction of the wind, &c. Veterans will coolly inform us that such and such a pool isn't up to time for fish just now. Their logic is, that if we had arrived a fortnight earlier, or had postponed our visit, perhaps until after the frost, "I don't say but what you might o' ketched slathers o' fish." Query, were we not born under the wrong planet? Possibly ours is not a game temperament. What are we to rely upon, when some people aver that there are no temperaments? Well, nothing daunted, we gaily anchor, unearth our fly-book, discuss the merits of the scarlet ibis fly, grey hackle and white miller; untangle the leader—peer into the depths, then courageously whip out in hope of "getting a rise." We see the ripple of "a break" here and there; real flies come to the surface, those whose wings have stirred, and others ready to leave the chrysalis, when they start into the air seeming to know pleasure in the use of their bluish-tinted, filmy wings, and are lost in ether. Now what joy is ours, when we hook a trout, perhaps not large, but so pretty; its mottled sides glistening with red and canary-colored spots. Wait a while; don't scare them. Ah! the slender rod is bent nearly double with the antics of the scaly unseen, violently swishing to and fro. See! there are two fish, one on the hackle. fie! an insignificant chub. The guide inserts finger and thumb under its gills and contemptuously throws it away. Poor chub! its neck is broken. The heavy one is a slippery customer. I have much ado to secure him; he is a beauty, (scarlet fish was his destruction,) peach-blow and orange, with vivid blue and cherry dots. He is appetizing in his last moments—floundering, gasping on the floor of the boat. His jaws are torn and bleeding. Dear troutling! it seems pitiful, but you must succumb. This is "natural selection," if you please. At noon-time we return to camp for luncheon, seldom more than tea, bread and butter, and for those who affect them, an onion. The bag of Bermudas, here by my foresight, is jealously guarded. We have two irregular meals daily, i. e. when we can get them. The fish are strangely capricious. But this very precariousness adds zest to the situation. Were we to bring delicacies and modern patent cooking vessels, the charm of eking out our living would be dispelled. We learn the following from the chief guide—"The growth of the trout quite naturally depends upon ample food and clear water. Experiments he has made in this wise:

While fishing one year he threw back about eighty trout weighing four ounces each, or a little under, first cutting a narrow strip from the top of the back fin or a corner from the side fin. The next year he caught fifteen or twenty thus marked, weighing from one-half to three-fourths of a pound.

At certain seasons a fresh spring bubbling from the earth in the middle of a lake may be the head-cause for hundreds of trout. Quietly the hail descends in their midst—a lot of wriggling angle worms. An unsophisticated little fellow nibbles at it, is carried up some distance, squirms off the hook, or takes it down to "carry the news" to his kin-folk. Then all effort to inveigle them during patient hours proves unavailing. They "lie low," or temporarily disperse. One egg in a thousand becomes a fish, because they prey upon the spawn. Every portion of course has its best time for success. We have polished the lures of four or five squirrels at old poverty-stricken times, but I have issued a fiat that we marauders shall subsist on "bread alone" rather than interfere with their innocent devices. At twilight the hazy sunbeams still linger, the branches of the trees all growing toward the lake, crowd each other to catch the light and absorb the moisture, and are reflected in exquisite molasses of Nile green, the lustrous sheen of the big blue, the pinkish green of the small and the mud and the turned to crimson and ochre, all repeated in one gleaming mass. It is so silent here that our every word is echoed from hill to hill, and each day we fear that the axe will drive away any stray deer. They are ever on the alert and have signals of warning to their brethren. Something of their habits I gather while luxuriating, prone upon the earth, comfortably snuffing the invigorating smell of the morning cones, burs and leaves, then applying my ear to the ground, try to interpret the pleasant small sounds of the forest. I am content to remain in ignorance, when an uncouth spider with prying eyes and seven legs menaces me. Meantime camp life goes on and is delightful. An acquisitive hedge-hog travels nightly to our vicinity to lap up any appearance of salt, and field mice and ferrets make a clean sweep of fish bones and bread crumbs cast aside. The cabin is rim by 8 A. M., and the red and the blue and the green and the orange. The "smudges" at the proper stifling pitch blemishing the blood-thirsty bugs and turning the bipeds—a rare London smoke. I adorn the joists of our house with dainty yellow lilies and astrigent choke berries, but we are happy? Nay, verily! the heart of man is singularly grasping. We are perishing to capture a deer, to decoy a buck into our delectable clutches.

Through secret evenings we have blinked over the fire and heard fabulous tales of lunts, and we longed to figure in such happy excitement, so on these dark nights "at the hour of fairy ban and spell," we have stealthily put out, intent upon slaying the guiltless venison. One ear is muffled and used as a paddle; noiselessly we glide along the shore; the hunter, armed to the teeth, is crouched in the bow under the jack, (a piece of bark holding two lighted candles.) They twinkle and reveal ghostly shadows among the foliage which the night breeze is different. "Hush!" we are a floating enigma. We breathlessly strain our vision and crane our necks that we may be first to find him eating of the great velvet lily pads. Anxiously and doggedly we swing around the circle, but the bounding gazelle may have chosen other scenes for his midnight puppy feast. Clearly the mosquitoes are in this case reprehensible in not desperately goading him. In the interims we are so conversant with the nature of the principal wood, we shall be out very early, that the daily routine may not reach their covert. But our precautions were futile. I had got to the pass of settling with my conscience for, perhaps, despatching with an ear a timid fawn rushing past our boat, on the watch. We decided in solemn convulsion to send for some hounds. Seventeen hours were passed in feverish expectation. Two noble dogs arrived, quite eager for the fray. Men were stationed down in the clearing by the creek, and the last plodded through fern and fen to find the track. The day wears on. From a great distance we occasionally hear the baying dogs. We fast more or less, as at any moment we may see the raft of them in hot pursuit, but, alas! the fates are leagued against us, our game dinner is a delusion and a snare. Night falls and the hunters return. One outlier, a novice, declares that he detected the deer within a few rods of him, but all denied him and accuse him of sleeping at his post; then we retire in dudgeon to the seclusion of our blanket. It rained all the next day. We were obliged to sit like Turks, (no chairs in camp,) and anoint our faces with penicillin oil, in order to withstand the onslaught of heavy detachments of midges. After supper the dogs returned, their heads pierced with porcupine quills. They invariably go back to the spot where they first put upon the scent. They were abused and whined piteously.

We have but a few more days to stay. Our last expedition was to the "Oregon," four miles distant, after fish. The coarse sodden grass was trodden down, it was said, by bears that come down from the mountains and spend their evenings there in social accord, and mildly feed upon raspberries. Unlike the bears of baby memory, these run away upon the approach of man. They "den up" and liberate it in November. The creek had been "whipped" extensively, so we were content with sixty-five trout. I patiently sat for five mortal hours upon a very hard board, passed the fly-book, expressed oracular opinions concerning the theories of Mr. Isaac Walton, and observed the animated attitudes of a bright-haired youth with unalloyed satisfaction. Now that we are going away I fancy that the lumps behind our ears and blisters on our cheeks are the most terrible. We have not supported by a frame of Indian tobacco, which I have interviewed the guide about other desirable localities and this is the digest. From Lake Pleasant to Lacquette Lake, thirty-five miles by the State road. For a tramp, this is the route—From here to Jessup's River, thence to Indian Lake, from Indian Lake Falls to Jackson's Hotel on Cedar River, up the river ten miles to Blue Mountain Lake, fifteen miles to Lacquette, thence to Long Lake, down the outlet to Stony River, thence to the Saranac. This distance is one hundred miles. Indian Lake is the reservoir for Jessup's River, Cedar River is the outlet of Cedar lakes, named for speckled trout. Lacquette, the largest inland lake, is full of salmon trout, and at Long Lake may be had bass and pickerel. The best guide at Lake Pleasant is Burr Stargis.

We are home now at the hotel. We have heard the ravens croak for the last time this year. We bade reluctant good-bye to the little cabin. The allurements of sky

and mountain, on the way and from the piazza, are like a changeable face, scarcely twice the same. There is a new carpet for the parlor and it has been stretched with a pitchfork.

Two deer have run into Elm and Lake Pleasant in our absence. After all said and done we cannot wish to exchange our stock of brawny hinds for a glimpse of them, so we are glad we went. Deer really are plenty, that is the aggravating side of it. The requirements are, no wind, no moon, then in the dim religious light demolish your deer. The other Sunday a good divine was discoursing of the Better Land to the boarders and some farmers, when an unclean with bare feet and cap aloft bounced into the room shouting, "There's a deer in the lake!" If walls have ears then the worthy man of God had auditors after this thrilling statement.

The people here are mostly indigent. No wheat is raised because of the short summers. Trapping for four months of the year is lucrative. The animals follow the trail of the trapper, who pulls a rabbit, a piece of venison or a bird wing by a rope along the path. Muskrats are caught in steel traps set in the water. The fisher, a species of cat, lives on the banks and is a most voracious animal. These, with martens and otters, are enticed by hunger into "dead falls." Three stout sheds of wood are driven into the earth in a square, then brush is piled over the top, three withies in the shape of a figure four, the bait on one end, are propped up in the centre of this little cage. A log proportionate in size is then placed across the withie. The beast, coveting the morsel, has but one mode of ingress through the snare aperture under the log. When it is broken or it is instantly killed. It is not unusual for one man to have set fifty steel traps and twenty-five dead falls at one time. So it takes constant toil, a hardy constitution and a practiced eye to find the "blazed" trees that mark the course. There are fur-traders who come up here and barter for the pelts.

Towing on the lake is agreeable exercise, and we rest in the shade of "The Spectator," a mountain that frowns at us from the attitude of three thousand feet. The angular school mistress does not "board around," but waits at table for the city-bred. If perchance, we dawdle after the lark soars from her nest, this august pelant raps us up savagely, that she may proceed to the educational edifice. Here there is charming unconsciousness of any plane where social distinction draws conventional lines, but the weary and misanthropic are rejuvenated and find potent panacea in the marvellous efficacy of the canoe.

Oct. 11th.—After having outlived the disappointment of missing all the deer, at camp, I enthusiastically chronicle the fact that we have got one at last, amid jubilant rejoicings. This morning there started for the Sacandaga River three gentlemen and four guides. The hunt occupied all day. It was doubtless stupid enough maintaining such quiet for weary hours; with a broad rod and a small flask, perhaps a book, it is made endurable. In course we were all resigned to total failure, but at sunset there was vociferous demonstration and the partner of my earthly span loomed up in the road bearing high in air the head and antlers of a magnificent buck which he had shot. We shouted triumphantly, insisting upon specific detail of the affair—how the deer looked while pursued, etc., etc. It is too bad that we "feminites" could not have been "in at the death." The poor solitary fellow is securely packed away in the capacious ice-house, and his head shall be preserved as a trophy. And we will have an old-fashioned barbecue when we return home.

SARAH GODFREY.

SHOOTING WILD PIGEONS.

ALTHOUGH I have been reading your paper for nearly a year I have seen little in its columns concerning the wild pigeon, its habits and the country which it selects for its habitation during the winter months, and its nesting places in summer.

Although not strictly a game bird, I esteem it one of the most interesting birds in the country as regards its habits, with some few of which I am acquainted, and being very desirous of becoming more familiar with it, I know of no better place to seek for information than in the columns of your valuable paper; I would, therefore, ask any of your correspondents, to whose eye this may come, to add by a future letter to my information.

At this season of the year the Allegheny Mountains are literally alive with pigeons, and to even nothing in the best locations can be heard but the sharp crack of rifles and the heavier sound of shot guns. Every one seems to be impressed with the idea that he must make the finest bag of the season, and consequently every one that can procure a gun, no matter of what kind, sallies forth to wage an indiscriminate war upon the poor pigeons that have visited our hills and valleys to feed upon the acorns and wild cherries which are found in the greatest profusion on the top of the Alleghenies in a strip of country called the Glades. These Glades are open spaces devoid of trees in the midst of unbroken forests covered by tall grass and alder bushes; they extend for perhaps fifty miles on top of the mountains, and are from fifteen to twenty miles in breadth. This section of the country seems to be the favorite ground for pigeons in the fall of the year, when they are making their way from the northern frosts to find a more congenial clime in the Southern States.

Hearing of the immense quantities of pigeons in this section of our State, my friend J. and myself determined to take a little trip to see if we could not kill a few of the countless multitudes that were swarming in the mountains. We took the afternoon express on the Baltimore and Ohio Railroad from Cumberland, and after a two hours ride arrived at Deer Park, a small town on the line of the Baltimore and Ohio, and no sooner had we stepped upon the platform and cast our eyes about us, than we saw large flocks flying in every direction. We left the station and walked about one hundred and fifty yards in the woods, when I succeeded in bringing down the first pigeon; that shot seemed to open the ball, and we never ceased to load and fire until darkness closed the day. Although late in the evening when the moon commenced shooting, and the birds being difficult to find on account of the thick jack oaks, our bag contained fifty pigeons.

We stayed all night with an old gentleman named Friend, and the next morning, just as daylight began to wake a sleeping world, we hurriedly dressed, and for fifteen or twenty minutes had delightful sport; as the pigeons left the roost for their feeding grounds we stood in an open field, and as flock after flock passed over each one con-

tributed to our bag. In half an hour not one pigeon could be seen, and although we hunted diligently all day, some thirty pigeons rewarded us, until four in the evening, when the gorged birds began to seek their roosting place of the previous night. We selected one of the glades, of which I have before spoken, where the grass had been mowed, and the pigeons sweeping over its surface gave us splendid sport as they most we should not have found. But all things must have an end, and so had our hunt here; but on counting our pigeons for the afternoon, found we had bagged ninety-four.

We determined that wearied nature needed repose, and our old host, Mr. Friend, insisting upon our staying, we took up our quarters for another night with him, and the next morning being Sunday, we started for home. The moral sense of the community was shocked, and nothing that we could do or say seemed to have any effect upon the highly religious people of Cumberland. No express wagon could be found to transport our game to our respective homes, and necessity compelled us to brave the world's censure and carry our own game, which we did, regardless of those envious ones who blamed us for what they were sorry they had not done.

Yours, OBSERVER.

"COME, YE DISCONSOLATE."

"There's not a day but to the man of thought
Betrays some secret that throws new repress
On life, and makes him wiser."

THERE is some truth in the above lines, and we might make many other quotations of a like dismal sentiment from the pen of Dr. Young. We say some truth, but far from being the whole. Heaven has indeed furnished the only panacea for these sore and multiplied ills. Still, there are partial reliefs of a subordinate character that are not to be overlooked in our efforts to augment the sum of human happiness. Great as the yearning of the soul for human effort cannot reach their full measure of the Divine—they are good as far as they go. It is good to find out the nature of that ailment that is spreading such a cloud of sadness over the face of your fellow man; and when you have found out, see what can be done to roll off the cloud from his face and the burden from his soul.

Had that worldly-minded Doctor, in lieu of lamenting "your earthly correspondence with the earth," led forth to the forest and stream, in their beauty and majesty, he might have found more frequent occasion for a smiling thought and have learned at least to know

"How sublime a thing it is
To suffer and be strong."

We must confess to a liking for the name of your journal. It awakens in our mind those pleasant scenes. The forest, field and stream have furnished our needful recreation for more than thirty years of severe professional life; and hence it is that the very name comes to us embalmied with pleasing recollections no pen can describe.

There is something suggestive of a nobler and manlier way of unbending from the mental and physical tug of life than the too common method of following a crowd in the old beaten path to some "wild lick" or other place, hourly with the stories a thousand times repeated, of dissipation and folly.

Although your correspondent can boast a "home" in one of the most favored spots to exercise one's skill in the use of "gun or rod," he must not, and cannot, if he would, be enrolled in the category of sportsmen; still, on their part, he has never been refused whatever there may be of sport and manly athleticism in the broad domain of field and forest, lake and stream. We have ever found the genuine sportsman a genuine gentleman, all unlike what Frank Forester has yclept "pot-hunters."

So far as our observation goes—frankness of speech, urbanity of manners and honesty of heart, devoid of all cant and cockneyism, defines the true sportsman. But whether we are able to give the real sportsman his true position or not, one truth stands boldly out, challenging the consideration of every thinking man, that some kind of relaxation from the exhausting effects of too close application to study and business are imperiously demanded. What shall they be? We answer emphatically, field sports, if we would preserve a sound body, sound mind and sound heart; or if more to the taste, while equally exciting and less fatiguing, learn to handle the rod and the troll. One need not ask, "Where?" No such matter as ours, for the latter sport is on the globe. In all the Northern States from Maine to the Rocky Mountains, our lakes and mouths of large rivers abound with the sea trout, the bass, maskalonge, pike and pickerel. If you prefer that of all fish, the "speckled trout," learn to throw the fly, and practice the art piscatorial upon the cold streams that flow the bluffs in Minnesota and Wisconsin, and through various channels mingle with the dark waters of the Mississippi.

It is pleasant to know that professional men—especially city pastors—are spending their vacations on the shores of our northern lakes, or among the cliffs of the mountains, boating, fishing and enjoying the free air of heaven "without money and without price." It may be replied that this kind of sport will answer for the ministers. It will; and we hesitate not to affirm that the most active and effective men in the American pulpits have been, and are, with few exceptions, those who have sought renewed energy in the field, on the streams or lakes. We never pass among the Thousand Islands of the St. Lawrence, or revisit them in imagination, without associating with the whole scene, the name of the eloquent Bethune. We never shoulder the "trusty gun" and go forth to the wooded hills without thinking of the lamented Dr. Todd, who added years of usefulness to his working life by indulging heartily and frequently in these manly sports. To the man born in, or habituated to, a condition of mental and physical torpidity, who would feel no more quivering of the nerves at the leaping of a trout from the foaming basin in a mountain gorge, than at the fall of a "Tumble Bug" from his little hillock of mud, we say of such an one, who never felt the recoil of a brain struggle in the study or on the platform—who never once gave exercise to a bone knows no number for these safety valves in the life of the earnest, toiling man. They see no demand for the FOREST AND STREAM. They cannot understand it. They cannot. They never had a throb in their own breasts, and never produced one in the soul of a fellow man. They cannot see why President Lincoln felt compelled at times to tell a story or die; or why others with less talent than his to the forest or stream, or there at the time of his death, were willing to more than such are to be pitted. Except, they may have been, and ever will be, from a single paroxysm of mental

anguish—and this they may credit to their philosophy, rather than stolidity. One thing they cannot do. They can never credit themselves with one generous gush of joy.

Hoping that you will receive that patronage from a generous public, which will insure success to your noble enterprise, we close, in the hope of sending you a better article at no distant day.

For Forest and Stream

GREAT PECONIC BAY.

HAVING two weeks since passed a short time at the village of Peconic, and, while living there, fished in the company of good men and true, an account of our trip and luck may be of uninteresting to your readers. I left your city in the company of Count Shorb, better known to the readers of your companion in sporting matters (the *Turf*) than possibly to your own. The Count was suffering from that troublesome but not dangerous malady, "hay fever." My other companion was Harry Durell. Don't know him? If not, allow me to introduce you. Imagine a gentleman of eighty in years, but still in heart a boy; facial looking and jovial in action; of medium stature, clean shaven face, bright, clear blue eye, which age has not dimmed, nor has age changed as yet the color of the iris of his eyes; hair white and soft, and plenty of it; a good companion—can tell a good story, and enjoys one told by others; a good shot, even now; a lover of a hunting dog, and you have old Harry Durell! To my shooting man in the vicinity of your city he is as well known as was Hiram Woodruff to the lovers of the trotter. Unfortunately, he was also suffering from the same nose-irritating disease as the Count. We were bound for a fishing excursion in Peconic Bay. Scott Rodman was to be our host, and a host we found him.

We arrived at Peconic late in the evening, and had but little time to spend after supper. Through with this, the fishing prospect of the morning was not very anxiously discussed. Boat and bait had been seen to, our waders engaged, and ought to be done save to get tackle in order, and adjust rods and reels for those who fancied pole fishing, and get ready lines and sinkers for those who chose drop lines. Up betimes, we found breakfast ready, and although eaten by artificial light—how short the days already grow—it was heartily eaten. The wagon awaited us at the door, and, before the sun was up, we jump in and sail ourselves in lap blankets and horse coats for our two mile ride to the bay. A heavy sea fog was rolling in from the ocean, and hung damp and dark over the salt meadows. The only sound we heard was the shrill whistling of a flock of "yelpers," the more plaintive whistle of the plover.

Getting out at the port of New Suffolk, we soon have our horse in the water. The fish is a Jolly Scotchman, who has drifted here seaward, and now keeps and owns the hotel which is the headquarters of all the fishermen and duck shooters of this great bay, which bay is, in fact, an inland ocean. Here we got our fiddlers, bait for blackfish; shrimp for our kingfish, and a hard shell clam or two for a change of bait if desired. Ben Webb was the captain of our craft, and Ira Brewster Tuttle our man Friday.

Now this is a craft which knows everything, too; is as familiar with every nook of the bay and Long Island Sound as the most of us are with our A B C's. He can tell you all the good fishing grounds of both waters. He can sing a song, dance a jig, sail a boat, and, in fact, I do not know what he can't do, and what's more, do well. A jolly companion is this same Ira. The clam bait was on Ira's fishing craft, and he and myself stole away in the boat. Ira, before picking up the bait, had already returned to the cabin of the little craft, and as the morning was damp, and the air chill, took something to clear our throats and keep out the fog. A little five year old apple, a dash of lemon, and a modicum of sugar, we found an admirable specific. So successful did we find it that, despite the impatient shouts of our companions, we had to repeat the dose. Gathering hastily the hard clad molluscs, we went back to the boat, and were at home for the day. Her white sails flapped savagely and did service from the loosened whip which held her, as the ball from the cannon's mouth. The breeze was fresh, and our ten mile sail was a delightful one. The heat of the rising sun dispelled all fog, and it melted into "thin air" speedily. As Ira and Ben Webb attended to the boat, our party had nothing to do but lounge, and lounge we did successfully till the morning fog, which grew so thick, that we left the bay for a northern shore of three days' duration, which only broke the day we left your city, had driven them off. Bluefish and striped bass had not yet come, and our only hope was the kingfish. Coming up in the wind the lead-way of our craft is checked, and our anchor dropped. The first fish is the honor to be gained, and all lines are quickly baited and dropped in many fathoms water. The wind sails away, and the water is smooth, and the smooth, deep blue surface. A shout from the Count, and a surge upward, and then a hand over hand pull, announces a catch.

"First fish," he shouts.

Al, me! that I have to tell it. A cloud-compelling sneeze—dire result of his catarrhal affection—interrupted his steady pull, and the attention his nasal organ demanded distracted him from the duty of his fish. No man can serve two masters. "Under which king, Bezonian?" fish or nose. The nose had it. His pull stopped, his line relaxed, and away sailed Mr. Fish, with no doubt slightly lacerated jaws, to nurse on the uncertainty of bait. No more "swamp" for him. In unison with Dundreary, that fish no doubt found it hard to sit shrimp. That game old pebble Durell was the next in luck, and announced the success of his snare as the Count. The excitement was too great for these sickly landlubbers, and the ticklish nature of their noses answered each to each. Old Harry, however, with his forty years' experience of the disease, was too well seasoned to be unnerved, and despite his sonorous sneezes landed his fish. A beauty, too, of at least two pounds weight. And what a pretty fish it is. Silvery gleam its scales as it flashes from water to air, and the scales, in the sun, are as the Count's. A change of light, as swinging for a second, it turns and turns in the sun. So a bird's plumage changes in mid air as sunlight or shadow falls across the varied color of feather and of plume. Scott, fishing with rod and reel, speedily raises from the depths fish after fish, but all small, running from a few ounces up to half a pound.

Ira, hidden under the lee of the half dropped jib, sings out, "Boys, boys, look out there, Harry! haul in your line! You'll foul me! Be careful, will you!

A-a-a-h! what a rusher! Look at that! Will you look?

Of course we all looked and looked. Eyes fairly started from their sockets, and the Count and old Harry sneezed in chorus. Ira danced around on that small forward deck till all rang again. His rod, albeit a stout one, bent like a light bamboo, or tip, and the savage rushes of the fish were exciting in the extreme. Keeping his sinister thumb firmly pressed down he reels as rapidly in as the vigorously struggling fish permits. Anon, with a rush like a whale, the pull has to be relaxed, and the reeling in all to be done over again. Five, ten, twenty minutes elapse, and the excitement is ever on the increase. Each and all tell Ira how to do it.

"Now, Ira, snub him, old fellow; turn him now; he'll stand it," as the fish pauses for a moment. Before he can act on the advice, off he goes again. We wonder what manner of fish it is, and speculation is seen in the eyes of all. Anxiously the moments speed by, and if only that fish had come to our hook how quickly we would have had him "comfortably settled for life." The thing was becoming monotonous. Ira evidently thought so, and once again his pull commenced. Slowly, but steadily and surely, foot after foot of line was reeled in, and we all peered with anxious looks through fathoms of water. A yard more home, and a streak of morning light flashes like a meteor through the blue. Steadily the pull is kept up by Ira. We all crowd to his side to watch the rush of this three feet long denizen of the deep as he approaches the surface. Ira looks as if the fate of nations depended upon his success. Nearer and nearer his hook comes the great heathen, and at last, with a roar, he comes, and Harry sneezes in concert. The half drowned, half submerged fish, in this unearthly sound, with one half expiring rish snapped the line as if it were paper twine, and sought fresh fishes and marine pastures new. Ira sank savage and exhausted against the mast, while the protiest scene of mutual crumination took place between the three. "Twas you that did it. It was not I. I say it was!" Well, this talk is no exception to all that has been said, and Harry sneezes in concert.

Fishing after this exciting episode was tame indeed, and the few dozen small kingfish we took did but little to sweeten our soured tempers. The catching of a dogfish by Scott, and a toothfish by the Count, was the last weight that disabled the already suffering camel. Up anchor, stop fishing, and all hands vote for a sail. All wanted to be sailors—no more fishermen in that party. So the clamorous hunt, which had been going on for some little time, ten yards parts the water with her bow in musical murmurings. Ben steers a straight course for the further side of the bay. The sun slowly sets in a blaze of glorious color, while already the silver softening light appears at opposite points. The breeze is scarce six miles an hour, yet how lovely it all is. We are bound for Canoe Place, situated at the head of Shinnecock Bay, on the South Side. Arriving at the head of Peconic Bay, and dropping anchor once again, our small boat come into requisition, and Capt. Ben lands us all on the soft sandy beach. The island here is a scant half mile wide, and a walk of that distance over the sandy dunes, scarce held together with bunches of wiry beach grass, brings us to Buddington's. Here is the paradise of duck and goose shooters in late November. Live decoys are owned by every fishing farmer, and the ducks, geese, hunt, which are the coming season, are the first flight of the *B. Canadensis*. Here our worthy Recorder, John K. Hackett, renews his youth season after season. The hotel is scarce a hundred feet from the bay. A long, low, rambling log building, it looks of the sea, salty. Small pines 6x6 still give scant light to hall and to room. Everywhere is sand and salt. Huge heaps of oyster and clam shells stand as ornaments on the sandy beach used for a lawn as flowers do in the garden. A row of trees, basket willow, stand as sentinels between tides and house. The low wash of water is heard unceasingly. From a ripple to a roar, as the wind blows easily or angrily, the transition is great. The foliage of the willows shows white gauze-like, lace-like, as the dried spray here leaves its salty deposit.

Our supper here was clam fritters, and cooked as only those who are brought up on the beach can cook them. To say justice was done to those fritters is to say but little. Six hungry men made sad havoc, and a new pile of shells attested to the prowess of our company. Adjoining after supper to the cover of the low-hung, pillar-supported porch, the age of old Harry Durell was brought up for discussion. The topic was scarce started as an old salt stepped up and stated he was just as old as Harry, and marked down the years, and how these old veterans came to life and to earth. Scarce through with this, when along comes another youngster of a year's more growth. Durell was waxing with that any one could carry age as well as he, in spite of his sneezing affection, when our landlord, Buddington, who was at least sixty-five, heard the discussion, and stepping up said, "wait till I call father." Answering to his call, an old gentleman, little the worse for wear, walked from the porch to the piazza steps, and was introduced to us. Upright and erect, with hair and beard as white as white could be, and somewhat supporting his erectness with an ivory cane, stood an aggregate of ninety-four seasons, and good at least for a dozen more. Here was richness—four men whose united age was three hundred and seventy-five years. The experiences of these old veterans as they talked of each other, and wanted to the reader from the porch to the piazza steps, and was introduced to us. Upright and erect, with hair and beard as white as white could be, and somewhat supporting his erectness with an ivory cane, stood an aggregate of ninety-four seasons, and good at least for a dozen more. Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

FISH CULTURE FOR NEWFOUNDLAND.

THE people of Newfoundland, notwithstanding the fact that they own some of the finest marine fishing banks in the world, have taken the preliminary steps to establish river pisciculture as one of the most prominent industries of the country. They, like ourselves, feel the importance of this movement, so we have little doubt that when they have gained the preliminary experience they will make the industry a success. The following letter in the *Standard* shows what the organizers of the movement have done thus far.

"We are, at present, in communication with C. G. Atkins, Esq., of the Bucksport Salmon Breeding Works of Maine, United States, and others, with reference to this matter; also, one of our members of the St. John's Lodge, No. 5, is at present on a tour through Canada and the States, where he intends visiting the fish breeding establishments of those countries, and I trust that upon his return, we shall have much practical information which will greatly assist us in the construction of our hatching house, mode of manipulation, &c. The great difficulty we have now to contend with is the want of the necessary funds for the purpose of erecting a suitable building for carrying on our operations. These works, we allow, will cost about £100 or £150, and that sum, I fear, we shall be unable to raise, unless the Government or men of capital come to our assistance. If we can succeed in procuring our necessary requisites, this Fall and Winter, we propose importing from the Bucksport works a quantity of salmon ova; and I doubt not that before very long we shall succeed in turning into our waters millions of young fish.

We have many obstacles to overcome—imperfect knowledge, want of means, and men—who, from their position, should be foremost in such an undertaking—giving us the cold shoulder. We have very few sympathizers in Conception Bay, though, I am happy to say, many influential and working men have joined us in St. John's. It is our intention to appeal to the Government for aid in the erection of the required building; and I believe its leading members will afford this national project all encouragement in their power."

THE GRAYLING AGAIN.—One of the most interesting departments of the Michigan State Fair was that devoted to the exhibition of fish. This was much better than any person could reasonably anticipate, as such exhibitions are of recent occurrence in this country, and especially in the West. All the principal species indigenous to the Michigan waters were represented, but the first prize, the blue ribbon, was awarded to the grayling (*Thymallus tricolor*) for its powers of endurance; for though subject to the hardships of being transported over four hundred miles, and confined to bad water, yet when placed on exhibition it showed more sprightliness and energy than either the bass, brook trout, California salmon, bass, and the salmon family of New England, though the latter were often more favorably situated and better attended. While several of all the latter species died, not one of the *Thymallus* showed even signs of debility. From this fact we should deduce that the grayling having greater power of endurance than any of its congeners, is about the fittest of the ichthyic order to be transported long distances, and that it will thrive where other fish species cannot. This is an important fact to fish culturists, for they know now which species is best adapted to withstand the rough usages of travel and the unfavorable conditions of impure water.

MASSACHUSETTS ANGLERS' ASSOCIATION.—A regular meeting of this society was held at their elegant room in Boston on Tuesday evening 7th inst., President Ordway in the chair. Quite a number of members were added to the roll, and more received for consideration. M. Julius Eichberg of the Boston Conservatory of Music, a member of the Association, presented to them an elegant engraving entitled "Great Expectations." The engraving, which is very fine, consists of four children hovering about a boulder on the bank of a small stream, all intent upon a baited hook which one of the group has cast into the placid waters beneath. A very handsome pen and ink tray of antique piscatorial design was also presented by another member. In both of which instances a vote of thanks was presented. Attention was called by the President to the elegant paintings and engravings presented during the Summer vacation, which adorned the walls, and that books, papers &c., would be very acceptable for the reading room. It was voted that a special committee be appointed to use its influence against any change in the present smelt law, and to look after the interests of the lobster, cod and haddock, before the next legislature. The chair appointed as the committee, Messrs. James P. Richardson, S. M. Johnson, Charles E. Pierce, John F. Mills, James Walker. The President was unanimously chosen chairman of the committee. Mr. S. M. Johnson of the Executive Committee made some remarks upon the lobster question. He thought that the law now in force had been satisfactory in its working. He regarded license as better than prohibition in regard to lobsters as well as some other things. He agreed with the President that the law was somewhat imperfect. He advocated the passage of the same law in New York which prevails in this State, inasmuch as lobsters under size are taken in Massachusetts waters and shipped to the New York market. Several other gentlemen made remarks of the same tenor.

IS FISH CULTURE PROFITABLE?

EDITOR FOREST AND STREAM:

Your item of my interest in fish culture not being a profitable business, hardly hits the point. Not curious of salmon calling out the inquiry, but a question of dollars and cents. And to explain: We have been to considerable expense to procure a good stream with abundance of water, and have in stock some 12,000 trout, grayling, salmon and black bass, propped and hatched the past year. During this time Mr. Perkins has been fishing, and we have made many inquiries as to its being profitable to grow trout for market, but I must say that, up to this time, we have not been able to find the first man that has made anything by it in that way. Money has been made in selling the spawn and young fry, &c.; and I would now put the question to your home office—Will it pay to raise them for market? If so, where is your proof, other than figures, or who is doing it? Do not think I would throw cold water on an enterprise new to us, and one in which I feel a deep interest, but would find a practical demonstration of its results.

If any of our pisciculturists can show that fish culture for market is profitable, we should be pleased to hear from them, as we think it is, or at least can be made so.—ED.

Natural History.

THE BLUE FISH PARASITE.—A short time ago we sent Prof. Vertill, of Yale College, a parasite taken from the stomach of a blue fish, and requested him to classify it and give us its specific name. The following courteous letter furnishes the needed information:—

NEW HAVEN, October 24, 1874.

EDITOR FOREST AND STREAM:—

The specimen of parasite from the stomach of a bluefish, sent by you was duly received. It proves to be the *Distoma clavatum*, a parasite that has been described by Meneghini from the tunny, bonito and corbena, but not found before in the bluefish, so far as I know. I found a similar one last Summer (but larger and longer) in the stomach and gill cavity of the "bill fish," and there are over 250 species of the genus already described. They occur in animals of various classes, but especially in birds, reptiles and fishes. The creature has a large sucker in the middle of the body for firm adhesion, but the mouth is in the bottom or center of the small sucker at the front end of the body. Although somewhat resembling a leech externally, it really belongs to a very different class of worms. Its internal anatomy is entirely unlike that of a leech.

Very respectfully yours,

A. E. VERRILL.

CAN FISH HEAR.—Mr. G. H. Jerome, in the query "Can Fish Hear?" relates the following curious incident relative to the fish recently on exhibition at the Michigan State Fair:—

"The large aquariums, containing the fish, were assigned by the committee of arrangements to 'Music Hall.' And when the piano, the harp and melodeon were in active blast, coupled with the invading music of the extemporized rival choirs, the fish would start up from their semi-lethargic repose, move about with greatly increased rapidity, in a manner showing a delirium of pleasure and gratification. And as the waves of the 'concord of sweet sounds' died away, the finny audience gradually subsided to their previous condition of composure and quiet."

BRAINS OF MEN AND ANIMALS.—At the recent meeting of the British Association the Dean of Clonfert, Dr. Byrne, made a very praiseworthy attempt to trace to the anterior, middle, and posterior portions of the brain-hemispheres or cerebrum, the various mental faculties which we see successively developed in those lower animals most nearly akin to man. He pointed out that in the rabbit, dog, ape, and man, certain portions of the brain are relatively of larger development as we pass from the first to the last, and that accompanying this development we have the development of new psychical powers. In the rodents and ruminants there is first perceptible the power of thinking of a series of connected acts. In the carnivora there is a power of design, and in the anthropoid apes a sense of general principles. Cues were cited to support these propositions, and it was suggested, in accordance with the corresponding anatomical arrangements, that the anterior lobes of the cerebrum belong to the act of thinking of single objects of sense; those of the middle lobe to the act of thinking of such objects, with a sense of their succession, and of each as a part of the succession; and those of the posterior lobe to the act of thinking of the co-existence or succession of them as a general principle.

AN "AQUARIUM FIGHT."—The inhabitants of Havre seem to be making bad use of their fine aquarium, by setting octopods and conger eels to fight. A number of spectators assembled the other day to witness the disgusting exhibition, among whom was a correspondent, who declares the affair, which was advertised as a "combat," to have been a mere slaughter. The octopods, formidable as they are to many of the denizens of the deep, are far from being a match for the agile and voracious congors. Accordingly, no sooner did the eight-armed combatants perceive their antagonists than they endeavored to escape from them by throwing out the inky fluid which is their chief resource in the hour of danger; but the eels knew where to find them, and a shocking scene then ensued. The congors seized the tentacula of the octopods in their powerful jaws, dragged the helpless creatures round and round, till their feelers were so twisted that a violent wrench was sufficient to tear them off, and pursued the systems till nothing remained of the octopods but their bag-like bodies, which the victors then devoured. One octopod alone distinguished itself by an energetic resistance, and tore out the eye of a conger, but the result was the same, and the eight-footed champion went the way of his colleagues.

STRANGE BREAK OF NATURE.—Some youths in the vicinity of Eagle, near Wallacestown, Ont., captured a raccoon the other night that had three perfect ears on one side of its head and one on the other. It can hear with equal distinctness with all four ears.

A long-lost American mammal, a black footed ferret, has just been ferreted out in Kansas.

HOGS TRAILING RATTLESNAKES.

WOBURN, Mass., October, 1874.

EDITOR FOREST AND STREAM:—

Reading in FOREST AND STREAM of September 17th the account of black snakes devouring woodcocks, recalls to mind an instance in my own experience. When a schoolboy, with another lad, I was one day out in the woods where we discovered a dead tree with a woodpecker hole in it. My "chum" climbed the tree and sat his head as high as the hole, when, with a sudden change of countenance, he fell to the ground, the cause being the sudden appearance of a black snake at the hole, where he doubtless went to gobble up the young birds.

But speaking of snakes, reminds me of what an old "Forty-niner" told me. He said when he had reached the mines he saw many strange sights, none of which astonished him more than the following: One morning he saw two large hogs—heads down, tails up, a *la poleto*—trailing through camp, acting as they were on a trail. Asking an old settler the meaning of their actions, he was told that they were trailing rattlesnakes, and that they would catch and eat them every time. I have sometimes read of an eccentric Englishman who shot woodcocks with a hog trained for that purpose, but never heard such a snake story from anyone else, did you?

—The use of carrier pigeons for press purposes is on the increase, and the breed is rapidly improving. By careful "selection" and allowing the "survival of the fittest," powers have been developed which a few years ago would have been thought impossible. They can be specially trained to fly over 500 miles, and it is no uncommon thing for despatches to be brought to London from Paris, Lisbon, or Brussels. *Land and Water* records a case of interest. An ocean "hoopoo" bird of great docility, intelligence and spirit, has been found in Iceland which flies at the meteoric speed of 150 miles an hour. A pair of these birds whose present home is in Kent, within ten miles of London, recently carried despatches from Paris to their home in one hour and a quarter. Press pigeons carried on the despatches to London, and the whole journey of the despatches from Paris to London occupied only one hour and a half. Press pigeons, however, are not the ordinary carrier pigeons, but are bred by Messrs. Hartley, of Woolwich, from prize birds selected from the best lofts of Antwerp, Brussels, and Liege.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Oct. 11, 1874.

Animals received at Central Park Menagerie for the week ending October 10th, 1874.

Two Barred Doves, *Geopelia striata*. Hab. India.
One Spider Monkey, *Alouatta palliata*. Hab. South America.
One Sooty Mangkey, *Cercopithecus fuliginosus*. Hab. West Africa.
One Yellow Bird, *Chrysomitris tristis*. Presented by Martha Gabriel B. Osborn.

One Opposum, *Didelphys virginiana*. Presented by Mr. Calvin C. Atwood.

One Conure, *Conurus peritauris*. Hab. Brazil. Presented by Miss Miller.

W. A. CONKLIN.

BIRDS AS THE FRIENDS AND CO-LABORERS OF THE GARDENER.

A SHORT extract from a letter from a friend now traveling in Vienna says: "All the principal men among our best agriculturists here have come to the conclusion that many of our birds are a necessity to agricultural prosperity."

Here there are to be found, as is well known to many of our readers, in great abundance and variety, both game and other birds, many of which are migratory, and are, as accurate observation has verified, very beneficial to the small as well as extensive gardeners and fruit growers. The wanton destruction of the migratory, useful birds, has been very great, and now the question of their preservation is of great practical interest. In the absence of any game or protective laws, such as we have in the United States, every one deems himself "a law unto himself," and, consequently, accountable to no one. Here is to be found that gamey bird called the meadow lark, so familiar all over the world—a fine game and good eating bird. This is one of the useful birds that should be spared and protected. The lark is one of the earliest returning game birds of the migratory season, and is one of the earliest visitors to Germany in Spring. This bird is a great devourer of insect pests, and is one of the most numerous multitudes of noxious insects every hour you allow him to work, and may truly be called the friend of man. If they work as hard on the borders of the shore, in the uplands, and in the German gardens as they do in America, they should be called the "benefactor bird." I have seen one pair of larks in the space of an hour pick up, as close as I could count, over two hundred insects. These birds are not to be despised. It is a great devourer of insects near the salt marshes, and is considered very "mouthy" by all epicures and lovers of game. In some sections of Europe they abound in multitudes almost without number, and on the great plains of Leipzig they are killed in great numbers as market birds, and always find a ready sale. These birds are also found in great numbers on their migratory passage from Italy to the entire Moscovian ranean coast. These birds, numerous as they are, are just beginning to be appreciated for the great good they perform as the destroying enemy of the numerous pests which infest our gardens. With us, this bird, although not so numerous as in the countries above cited, are nevertheless becoming more plenty every year, and in places where they are not molested they are found both in our meadows and gardens. Although rather a shy bird, ready to take wing at danger quite remote, yet they will acquire confidence and boldness in man. I have found them year after year in a meadow not far from my grounds, and they seemed to know me from strangers, for I could approach within short pistol shot of them before they would rise, and then they would only fly a short distance from me before alighting, and were not frightened at my approach. When accompanied by a stranger they seemed to be as well aware of the fact as myself, and we could not approach them nearer than a long gun shot range before they were up and off in double quick time. At this time these birds can be found in goodly numbers upon the Ipswich salt marshes. They are quite fat, and are affording good sport of a morning, especially on one of our hazy,

partially cloudy days. On such days they sit close and still, and if the sportsman is careful, and a good shot, he can easily fill his bag.

This species of bird is only one among many which may be welcomed as valuable aids to man in the protection of the fruits and vegetables of the garden. We shall take occasion from time to time to speak of quite a number of others of our familiar bird friends, and their uses and abuses in and about our gardens and fields, and try to point out quite a number of them upon which it would be a sin against good sportsmanship ever wantonly to draw a bead.

OLIPHANT QUILL.

ANSWERS TO CORRESPONDENTS.

MINKIE DEVERAUX, Marblehead, Mass., writes to know the necessity of the winter cultivation of the mignonette, (*Reseda odorata*.)

This is a native of Egypt, and, strictly speaking, is an annual plant, growing from one foot to fourteen inches in height. It is quite hardy, and although it will not survive our Northern Winters, may nevertheless be readily made to accommodate itself to quite adverse situations. With a little care we can have all the orders of this fine Summer flower, and pluck the same for bouquets during February, March and April, and after enjoying in full its sweet perfume during the Winter we can cut back the flower stalks on the 1st of May and plant it out in the garden, and it will grow with inspired and stimulated energy. I have found the following to be the very best manner to grow the mignonette in Winter, and when I took the necessary pains I have invariably succeeded. I obtain some thin boxes of an oblong, or square shape, or have them made sometimes of a length sufficient to span the window seat, and generally from eight inches to a foot and five inches in width. I have always found charcoal, when in bits the size of a walnut to an egg, the best drainage to be found, as it is clean, porous, and exceedingly well adapted to the culture of the mignonette, besides many other plants. The soil should be one half garden earth, one quarter well rotted stable manure, and one quarter leaf mould from the wood or peat; add to these one pint of coarse sand, or fine road soil, mix closely, and fill the box nearly full. If for the window, you should bake the soil thoroughly for an hour, for the purpose of destroying all ova and embryonic life that might in future trouble you with forms of worms. Your soil being prepared, fill your box to within one fourth of an inch of the top, giving a gentle pressure only to the soil. Be quite particular to drop your seeds at an even distance from each other, and do not sow too thickly. Have a fine sieve, and drop very evenly and carefully a little pure sand over them, and your work is done so far as planting is concerned. Wet four thicknesses of common newspaper and cover the boxes, setting them, if possible, in the sun. As soon as the seeds come up, remove the papers, and if you have some panes of window glass fit them very well to place the same over them for three days. After the plants are well out of the earth you need not fear for their future, as they can then take care of themselves. When three or four leaves appear stir the soil about the plants with a sharp pointed piece of wire, and carefully thin out, leaving them about three to four inches apart. As they gain in height, you will notice their demands and requirements. Do not neglect to hang them with small neat stakes, to which you will carefully tie them. Do not water too much, for too much is worse than a little. Your plants will now go on during an entire Winter, gladdening your hearts with their greenness of leaf and fragrance of blossom. If you carefully observe the above rules, you can have good and strong plants for May.

OLIPHANT QUILL.

The Kennel.

THE GILDERSLEEVE SETTER BLOOD.

SOME time since we published a short account of the Gildersleeve setters, but since its appearance in the columns of the FOREST AND STREAM, we have learned more interesting facts relative to this stock, and the transmission of its blood to the setters of the present time, and we are of the opinion it has done much towards the improvement of our breed of American field dogs; for in the many pedigrees, perfect and in part, that we have lately looked over, we directly trace back the descent to the celebrated bitch Tip, of Mr. Gildersleeve, of Canterbury, Delaware, noted over thirty years ago as the best in that State. Of Tip, no satisfactory pedigree can be given, but from her appearance and wonderful qualities, among which, marvelous nose, great speed and staunchness, stood prominent, we doubt not she was of good blood. In color she was a deep orange and white, with black nose and dark eyes, and her puppies seemed to be stamped with the great individuality of the dam, who was first bred to a noted setter of like color, widely known as "the Carter dog," belonging to a gentleman of that name at Canterbury. From the union came "the Bonwell bitch," and she in turn became the mother of Mr. G. A. Benson's Bruce, and Mr. Horace Smith's Bruce—both remarkable dogs—by a setter of Capt. Sipples, of Frederick, Md., said also to have been the best dog of his time in that State. From the same litter Mr. James T. Massey procured a bitch which he named Tip, after the grand dam, and Mr. E. Abbott, of Philadelphia, also one, which a Mr. Fitzgerald, of Camden, N. J., afterwards owned, and called Fashion. These three bitches were all that were ever raised from Mr. Gildersleeve's Tip, and from them started the three branches of the stock which thus far had always been bred to color, producing invariably the characteristic orange and white, or orange roan, in the offspring. Mr. Massey's Tip was bred with a large liver-colored setter owned by Mr. Gatzmer, and we now see in her descendants dogs resembling the sire, as in Mr. Daniel Elmer's Nannie, we, likewise, noted liver, and liver and white whelps in litters from a daughter of Nannie, although sired by an orange and white and an

almost white dog, thus showing a breeding back to the shade of Gatzmer's Jim. Of Fashion's descendants, little if anything is known, as no record has been kept, and the blood can now only be traced through the Bonwell bitch, and Massey's Tip, or their offspring. We find it in Mr. Theo. Morford's orange and white setters at Newton, N. J., through Mr. Horace Smith's Bruce, and in the latter gentleman's stock, and other strains by the same source, and we judge Mr. Morford has had the favorite color of his breed more firmly stamped by this introduction of Gildersleeve blood. There are at the present writing two grandsons and one granddaughter of the Bonwell bitch living. Buster, fast drawing near to his end, owned by Mr. Geo. Twadell, of West Philadelphia; Hark, belonging to Mr. John Twadell, and Nellie, the property of Peter Rose, Esq., of West Philadelphia, the three nearing to ten years of age, and all sired by Mr. G. A. Benson's Bruce. The breed has been in Dr. Henry Twadell's hands for many years, and with him a favorite one.

It is only of late that our sportsmen have been paying attention to the keeping of records of the descent of their field dogs, and we would strongly urge for the future the preservation of such pedigrees, that it may, in a great measure, tend to improving our stock of setters and pointers.

МОНЕ ГИДРОФОБИЯ.—The learned doctors who so scientifically analyzed the symptoms of hydrophobia last summer, and proved to the satisfaction of the public that they knew nothing about it, have now a new subject to theorize about, one which bears a close affinity to that which agitated them during the heated months. A boy named Hake, who lived in Chicago, attempted to punish a very docile cat for some misdeed, but such treatment being objectionable to the feline it turned and bit him, and from this, apparently, trifling wound he died in a few days. The wound in itself could not have been necessarily fatal, so we must conclude that the cat in its anger generated poison in the saliva of the mouth, and that this was the cause of death. If this be true, would it not simplify the hydrophobia theory to assert that the anger of animals is liable to poison their blood by a violent disarrangement of the vital fluids; that a person bitten by an animal in this condition is very apt to be poisoned so seriously as to cause his death, or at least to endanger his life; and, in conclusion, that it does not follow that animals should be virtually stark mad—though admitting that anger is a temporary madness—to render any wounds they might make with their teeth extremely dangerous to mankind. By arguing from this premise, it would, apparently, enable one to account for many of those peculiar and anomalous conditions which could not be satisfactorily accounted for by the investigations on hydrophobia, which were so frequent last summer; and so technically pompous when they were reported to the public. If the theory of poisoning from the effect of anger be true, it must follow that muzzling dogs during the hottest months of the year is an extremely cruel act, both unwise and unnecessary. It would also seem plausible to suppose that if a chemical analysis of the saliva of rabid or angry animals were made, its deadly compound would be detected and some antidote found for its fatal power.

THE PROPOSED MATCH BETWEEN DASH AND SANCHO.—We trust the talk of a match between Mr. Scott Rodman's veteran Dash and Mr. T. Furman Taylor's Sancho, familiarly known as "the one-eyed dog," may take place during the present October flight of snipe, so that the sportsmen interested in the inauguration of public field trials can witness that which will undoubtedly lead to other friendly canine contests. Dash has for some years had the reputation of being the snipe dog of the country, and his right to the honor has never been publicly disputed until lately, but we would rather have him a little younger, in order that he might more successfully compete with his justly noted rival, Sancho.

We fancy a very interesting trial of skill for setter puppies, under twelve months old, on quail, could be gotten up for November, and would propose that Mr. Theo. Morford should come forward with Duke and Mr. Horace Smith with one of his best. We add the pedigree of Sancho, as far as we can get it, and it can be seen he is from good and tried stock:

Mr. T. Furman Taylor's "one-eyed setter"
SANCHO, of Colli's Neck, N. J.
Il. F. Jones' Sancho. G. C. Colburn's
Irish setter, Kate.
Maj Vredenburg's Dash. Vanderhoff bitch of Freehold, N. J.
Imp. o and w setter of Daniel Schanck. Imp. Rose, of Daniel Schanck.

THE POINTS OF SHOW DOGS.

THE GORDON SETTER.

HEAD a little heavier than the English setter, more fleshy; deeper in chest and body, and, and heavier all through; more bone, and certainly more lumber to carry; therefore we cannot believe them to be such "lasters" in work. The Gordon setter is longer in the body, not so beautiful and symmetrical in shape as the English setter, but is judged by the points as near as possible to the English dog, only allowing for his being heavier. Judges principally go by quality of coat and color, being a glossy black, with clear tan of a rich red, but of course all must be symmetrical. At the present day they are not fashionable, not having the go-a-head qualities now required.

THE IRISH SETTER.

Head narrow, widening a little in the forehead, skull slightly arched; ears a fair length, slightly folded, hanging straight, set well back in the head, and moderately feathered; eye hazel or brownish, with a sensible and loving look, not prominent; nose dark flesh color or black; chest but moderately wide, with great depth; back straight, but slightly receding to the hip, with good loins and well-set stiles. Stern carried slightly up, not much flagged, but slightly; coat inclined to be harsh, not soft and silky, smooth, or wavy, and thick, but not too long; color a deep mahogany red, but not any black; white, however, is allowable in some Irish breeds on chest and legs and neck.

THE IRISH WATER-SPANIEL.

Head should be rather long, but a broadish skull, and somewhat poddleish, with a long powerful jaw; forehead very prominent, with a well-defined and capacious top; knot hanging down the centre of forehead, not spread out, but coming to a point between the eyes, with a crisp and curly appearance; body well developed, with good loins, coat curls, but longer in curls than the curly-coated retriever; in fact a different style altogether; legs, in proportion to body, longer than any of our field spaniels, with a deal of feather of a ringlet description; well-webbed feet; stern showing a slight curve upwards, but not coming over the back, without feather; color liver; whole appearance a "devil-may-care" look.

GAME IN SEASON FOR OCTOBER.

Moose, <i>Alces Macchis</i> .	Snipe and Bay Birds, <i>Willetts</i>
Elk or Wapiti, <i>Cervus Canadensis</i> .	<i>Carolinus</i> , <i>Turdus Rangifer</i> .
Ears, brown and gray.	<i>Ears</i> , <i>Carolinus</i> , <i>Turdus Rangifer</i> .
Wild Turkey, <i>Melospiza gallopavo</i> .	<i>Buffalo</i> , <i>Carolinus</i> , <i>Turdus Rangifer</i> .
Woodcock, <i>Scopus americanus</i> .	<i>Squirrel</i> , red black and grey
Trout, <i>Salmo trutta</i> .	<i>Quail</i> , <i>Oreortyx</i> , <i>Tringa</i> .
Belemnite, <i>Nautilus</i> .	<i>Curlew</i> , <i>Xanthopus Argus</i> .
Parrot, <i>Chlorodactylus</i> .	<i>Pheasant</i> , <i>Tringa</i> .
Plover, <i>Chlorodactylus</i> .	<i>Willetts</i> .
Godwit, <i>Limosa</i> .	<i>Reed or Rice birds</i> , <i>Dolichopus</i> <i>or</i> <i>orzy</i>
Rails, <i>Rallus Virginianus</i> .	<i>or</i> <i>orzy</i> .
Wild Pigeons.	<i>Wild Duck</i> , <i>Geese</i> , <i>Brant</i> , &c.

[Under the head of "Game, and Fish in State" we can only specify in general terms the several varieties, because the laws of States vary so much that we are unable to specify in detail the laws of each State. We publish these entire sections that relate to the kinds of game in question. This would require a great amount of space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

GAME IN MARKET.—There is nothing new to report in the game market, the prices being the same as those of last week, and the arrival of birds about the same. Venison is somewhat more common and retails at twenty-five cents per pound. Ruffed grouse, from the interior of New York State, at \$1 per brace. Not very abundant. Wild pigeons are abundant, and sell at \$2 per dozen. English snipe retail at from \$2 to \$2.25 per dozen; but the large yellow-leg variety brings \$3, and upland plover the same price. The latter are in excellent condition. Teal are worth seventy-five cents per brace; mallards, \$1.25; red-heads the same; widgeons seventy-five cents. The West is the principal source of supply at present. Prairie chickens are coming in from the Western States, Iowa, Illinois and Missouri being the largest shippers. The supply is large for this season. Hares being in season, they are quite abundant and sell at \$1 per brace.

NEW JERSEY.—Game is abundant throughout the upper portion of Union Hill, and the place is thronged every day by sporting men anxious to bag the superior snipes.

—The existing game law of the State of New Jersey prohibits the killing, exposing for sale or having unlawfully in possession the kinds of birds and animals below described, within the periods respectively stated, and under the penalties in each case named, viz.:

KIND OF GAME.	PROHIBITED TIME.	PENALTY FOR EACH BIRD OR ANIMAL.
Quail.....	Jan. 1st to Nov. 1st.....	Fifteen dollars.
Ruffed Grouse (Partridge).....	Dec. 15th to Oct. 1st.....	Fifteen dollars.
Wild Pigeon.....	Jan. 1st to July 4th.....	Ten dollars.
Wilson or Grey Snipe.....	May 1st to Oct. 1st.....	Ten dollars.
(English snipe).....	Jan. 1st to Aug. 1st.....	Ten dollars.
Upland Plover.....	Jan. 1st to Sept. 1st.....	Five dollars.
Rail or Red-bird.....	Jan. 1st to Nov. 1st.....	Five dollars.
Hare or Rabbit.....	Jan. 1st to July 1st.....	Five dollars.
(Grey, Black or Fox).....	Jan. 1st to July 1st.....	Five dollars.
Pinnated Grouse.....	Until Nov. 1st, 1880.....	Fifty dollars.
(Prairie chicken).....		

The penalty for taking, at any time, any ruffed grouse, (pheasant or partridge), quail or woodcock, by means of any blind, trap, snare, net or device whatever, is ten dollars for every bird so trapped, snared or taken.

MARYLAND.—Doer Park, Oct. 12.—Pigeons are still plentiful some six or eight miles from here, but are scarce near town, although they fly over in the morning and evening to and from the feeding grounds.

On Wednesday I bagged sixty-two in about two hours. Immense numbers of birds have been killed, and quite a number of gentlemen have been here from Baltimore, Cumberland, and two the best shots and keenest sportsmen from Bedford Springs, Va. Some of these gentlemen have not been successful, for they came too late for the shooting near town, and had not time to go any distance. Two or three men, whose names I don't know, have been netting pigeons for the past two or three weeks, and you may judge of their luck from the fact that they shipped 300 dozens of birds in the first two weeks of their being here. I do not know whether they were the law of Maryland, but it is against those of fairness and humanity.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

THURSDAY, October 15th.—Trotting at Henderson, K., Gardner, Me., Parkins Landing, Pa., Leesburg, Va., New Haven, Conn., Deerfoot Park, Boston, Mass., Joliet, Ill., Lancaster, Ohio, Keene, N. H., Deerfoot Park, St. Paul, Minn., Paducah, Ky, and racing at Boise City, Idaho Territory.

FRIDAY, October 15th.—Trotting at Henderson, Ky., Deerfoot Park, Boston, Mass., Lancaster, Ohio. Keene, N. H., Deerfoot, L. I., Paducah, Ky., Piqua, Ohio—Racing at Boise City—Tournament at Piqua, Ohio.

SATURDAY, October 17th.—Trotting at Lancaster, Ohio, Piqua, Ohio, Deerfoot, L. I., and racing at Boise City.

TUESDAY, October 20th.—Fair at Alleghany Valley, W. Va., and Penn. Cumberland.—Georgia State Fair.

WEDNESDAY, October 21st.—Trotting at Bethel, Vt., Portsmouth, Ohio, Providence, R. I., Lawrence) Mass., Massillon, Ohio, Poughkeepsie, N. Y., Cambridge City, Ind.—Georgia State Fair—Horse fair and shooting tournament, Champaign, Ill.

THURSDAY, October 22d.—Trotting at Portsmouth, Ohio, Providence, R. I., Lawrence, Mass., Massillon, Ohio, Poaghskeepsie, N. Y., Paterson, N. J., Danville, N. Y., Denver, Col., Cambridge City, Ind.—Tournament at Bedford, Ohio—Horse fair and shooting tournament, Champaign, Ill.

FRIDAY, October 23d.—Trotting at Poaghskeepsie, N. Y., Cambridge City, Ind., Massillon, Ohio, Paterson, N. J., Fleetwood Park, N. Y., Danville, N. Y., and Denver, Col.

JEROME PARK FALL MEETING.—One of the most brilliant seasons that the always brilliant Jerome Park has enjoyed was the Fall meeting, which has closed this week, as the track was in fine condition, the attendance very large, a great number being ladies, and the best stables in the country were represented. The racing was characterized by close competition and large fields; two of the most important adjuncts to the success of such contests. One feature noticeable about it was the rapid downfall of the favorites of past years, and another, the exceedingly good time made by the winners, the average being equal to the best of former years.

The great improvement in the speed of our running and trotting horses is becoming more evident every day, and if in the years coming they can make the same progress as in a few past, the steeds of America must prove successful competitors in the race to attain the position of Eclipse, and even the ideal equines of the Arabs. The last meeting at Jerome has also proved a financial success, so that the managers may be congratulated on the brilliant termination of their effort.

—The mean temperature in Florida during the past month was about 80 deg.

CENTRAL PARK ZOOLOGICAL GARDEN.

IT has been the aim of all European cities, of metropolises and provinces, to set apart a portion of the public land for parks and gardens, in order that their citizens might have an opportunity of beholding something more picturesque than the wearying brick, or dazzling, though monotonous petal columns of stone which form their architectural structures, and to enable them to enjoy those beauties of Nature represented by unbragooed trees, the emerald grass, and the rich hues of her lovely flowers. This attention to æsthetic tastes is founded on the highest principles of philosophy, for it is a well defined fact that cities deprived of those purifying retreats are, as a general rule, much more infected with crime than those possessing them, and for the very simple reason that the vagabond and vicious classes, if they have no place of resort but vile dens, are always on mischief bent in moments of idleness. Public parks are for all classes, but they are appreciated by none better than the latter, for they give them the only vistas of pastures green that they get from one end of the year to the other. But as parks are intended to become educational institutions, to a certain extent, as well as *sanatoria*, they should embrace, as much as possible, all that imparts instruction, as well as that which pleases the eye and appeals to a cultured taste; and it is for this reason that they are made the receptacles of such treasures of Nature as the person of average means seldom sees elsewhere. No portion of a park has as much interest for the general public as that devoted to wild animals, for they possess a power of attraction unknown to inanimate objects, no matter how beautiful they may be in form and color. Such being the case, it is the duty of all interested in the welfare of the cities in which they dwell to encourage zoological gardens, for they repay in manifold shapes all the care and expense required for their establishment. The only city in the Union that has paid any attention to this subject, until recently, is New York, and the efforts made here are puerile, indeed, compared with its wealth, importance and great resources. As this is not only the Metropolis of the country, but also the intellectual centre, and the place from which all great enterprises, whether of finance or intellect are supposed to emanate, it is not much to our credit that our cherished park is so sadly deficient in it in its zoological department. True, it possesses a fair amount of the quadrupeds and larger birds peculiar to the North American continent; but even that is meagre to what it should be. The only living representatives of the foreign fauna which it owns are confined to a few lions, tigers, hyenas, monkeys, and camels, and four or five species of the bovine family. All the higher order of animals, such as the giraffe, elephant, rhinoceros and quagga, are the property of importers or proprietors of menageries who have kindly loaned them for a short time. If the authorities who have the power to improve this department of the park could see the eager throngs which press around the cages every afternoon, and especially Sundays, they would soon become convinced that any money spent for its improvement could not be expended to better advantage, or in a way which would be more highly appreciated by the public. The menagerie is a constant source of pleasure to all classes, hence, it should, at the earliest moment, be raised to the importance which it deserves.

The Commissioners do not make any appropriation for its support, so that its Superintendent has to draw from another fund the means required for even feeding the animals. Not a cent is allowed for the purchase of any animal, no matter how cheaply it may be bought, or how interesting it may be to science. The consequence of this niggardliness is that no addition of foreign fauns is made to the collection; and that it is entirely dependent on the contributions of the public for any increase in its collection of the natural history of our own country. For the present efficiency of the department, the public are more indebted to Mr. Conklin, its Superintendent, than to any person or any official body of men, for to him is its improvement a labor of love. No man better fitted for the position than he is, can be found in the country, as he brings to his aid ardent, close observation, and a large experience which has extended over a space of fifteen years. Few gentlemen are better versed in the habits of animals than he is, for few are as attentive to duty, and as close observers.

The amount of money required to place the zoological garden in such a position as to make it worthy of this great city is very trifling, if the expenditures are made gradually and with discrimination; so we hope that the Legislature, at its next session, will pass a bill making yearly appropriations for its support and improvement. Every person in the State should be as much interested in its welfare as the citizens of the Metropolis, as its advantages and pleasures are open alike to all. Of one portion of the department of natural history we can speak in the highest terms, and that is the Museum, which has now become public property through the liberality of its former owners. This is the finest collection of both native and foreign fauna on the continent, and, as it is arranged in groups and divisions, it affords ready facilities of investigation to the student or mere observer. A new building to contain these treasures is now in process of erection on the corner of Eighth avenue and Seventy-sixth street, and that, when completed, will be fully adequate to meet all demands upon it for years to come. It is to be a plain, solid, and commodious structure, arranged specially for the purpose for which it is to be used. It will cost the sum of half a million dollars, so we may expect such an edifice as will be worthy of the city and the high duties for which it will be employed.

But while this mortuary collection is worthy of all care and expense, yet, our authorities should bear in mind that the living representatives are also entitled to their serious consideration; that they are in fact the first in importance, as the study of their habits is interesting alike to *fleur* or naturalist, and the means by which we can judge of their adaptability to the use of mankind. Any appropriations our legislators may make to increase the living fauna of the park will meet the approbation of the public, and this fact, combined with the necessity of making the collection worthy of this city, should induce them to take prompt action in the matter, for a work of such excellence cannot be commenced at too early a day.

THE LESSON OF THE RIFLES.

THE competition for supremacy between the manufacturers of different rifles is exceedingly vigorous at present, both in this country and Europe, as each is bringing forward a mass of facts and testimony to prove that his rifle is superior to all others. This active canvass of the merits and demerits of each weapon is sure to result in good, as it will inform us of the faults and advantages peculiar to any one, and by this means we shall know how to unite those qualities of excellence which all may possess, and thus produce a perfect arm.

In England the fight is between the Metford muzzle loader and the Martini-Henry breech loader, but both seem to have so many apparent faults that the final conclusion must be that neither is adapted to the present exigency, and must, therefore, give way to a superior weapon. The merits of the former are its fine finish and accuracy of fire, and of the latter its simplicity and the readiness with which it can be loaded. The former has been the victor in the principal Wimbledon contests, while the latter is said to have produced a score even inferior to the Snider rifle. It is also said to kick badly, so much so, in fact, as to give a large number of those who use it a lame shoulder. This is a most radical defect, if the statements are true, and one which must more than counterbalance any merits it may possess. At the Wimbledon matches the Metford and Rigby muzzle loader rifles have borne off the palm of victory most frequently; but, though they may possess accuracy, and prove better for target practice than the breech loader, it does not follow that they are superior for general work, especially military work, nor that the breech loaders cannot be brought to their state of perfection.

The Whitworth rifle, when first brought out, was deemed almost incapable of improvement, yet, when the Rigby style of grooving was introduced and its superior merits made known, the former was withdrawn entirely from public use, and its more successful competitor adopted. Could the Metford or Rigby rifles retain the accuracy as breech loaders, that they do as muzzle loaders, they would, in all probability, be the acme of perfection; but as we have not heard that the experiment of transformation has been tried, we must conclude that their makers do not think the feat possible. Although the muzzle loaders have thus far proved victorious in the larger number of contests, we must not deduce that breech loaders equally as good cannot be made. The recent contest between the Rigby and Sharp and Remington rifles at Creedmoor proved naught so far as it went, or if anything, it was that the Irish were the best marksmen.

To prove with weapons were the best, they should have been fired from fixed rests, and then the mean deviation from the "bullseye" noted and compared. The result would then have been more satisfactory, and would have, to a certain extent, proved which was the superior weapon. The Rigby and Remingtons, for instance, use broad, and the Metford and Sharp narrow grooves, and each have often been the winners in matches, but we cannot from this fact prove that one style of grooving is better than another; nor neither can we prove, other conditions being equal, that the muzzle loader of the same make as the breech loader is superior to it.

We can assure with confidence, and we believe prove it satisfactorily, that our American breech loaders are fully equal to the best of the muzzle loaders, and certainly far superior to the best English make of the same pattern, as they are grooved on higher scientific principles. If we mistake not, the characteristics of the latter are deep grooving, and using hard balls in order to resist the power of the deep twist. The American arms, on the contrary, have very light grooves, and use a soft ball. By a comparison of the effect of both principles - or characteristics, we must deduce that the latter are the best; for the light grooving is undoubtedly as effective as the heavier, and superior to it in the fact that it offers less opposition to the expulsion of the ball, and, therefore, has less friction, so that the missile is not deviated from its course, while the latter, on the contrary, must resist it with such force as to lengthen it out, and by this elongation change its centre of gravity, and, as a natural sequence, its accuracy. If, then, our American weapons combine the best qualities of the muzzle loader with the simplicity and quickness of loading and firing of the opposite style, we must conclude that they are the best in the world, not only for sporting but for military purposes.

There are other rifles manufactured in this country, probably, equally as good as those mentioned, but not being acquainted with their good qualities we cannot cite them as examples. The fact that arms manufactured in the United States possess the merits of all those of other countries is highly creditable to our inventors. So, possessing good weapons, it must follow that with practice our people must

become the best shots on either continent, and, therefore, occupy the position of premier marksmen or riflemen. That it is not fallacious to make this deduction is evident when we know how general the use of fire-arms is in this country, and what abundant opportunities there are for practice.

We may arrive at the conclusion, then, that we have the best arms for general work yet manufactured, as they combine the accuracy of muzzle loaders with the simplicity and facility of loading of the breech loaders; that this being the case they are equal to any occasion, and that our amateur riflemen need not fear to meet in friendly competition any body of men, provided they learn the principles on which accuracy is founded, and the peculiarity of their weapons.

COLLEGE CLUBS.

THE leading colleges are already taking action for the organization of the rowing clubs which are to represent them at the inter-collegiate regatta of 1875. The college of the city of New York has called a meeting of the alumni and students for that purpose, and the friends of the Wesleyan College have contributed over two thousand dollars to aid the next club in paying their expenses while preparing for the contest. The Wesleyans have strong hopes of being able to carry their lavender colors to the front on a future occasion, so to realize their dreams have already commenced the preparatory movements of organization. This alacrity is well, for if the champion colleges would grace their library they must work with determined steadfastness to win it.

Harvard, with its fifteen banners of victory, has also paid some attention to the preliminaries for the next contest, and Yale, with its usual *esprit*, is not behind the others in preparation. The interest in boating among our future scholars and statesmen may be inferred from these movements; so it is evident that the great regatta of the country will be better contested in 1875 than at any previous time. Amherst College, which failed to be represented at the last competition, is said to be urging a regatta between the colleges of New England alone. If it is intended to make this secondary to the greater event, there can be no objection to it; but if not, we must say that it would be a display of sectionalism or provincialism entirely at variance with our broad national creed, and one which would be unworthy of a moment's consideration. The great interest in the inter-collegiate regatta arises from its national character; for as each club has its own friends, who are proud of its achievement, they aid and encourage in every way possible the development of the athletic pursuits so essential to students who would attain the position specified by the classical sentence. We hope no effort will be made to supersede this great event, for any such movement would only bring its originators into disrepute, and fail in accomplishing its purpose.

THE NEXT INTERNATIONAL MATCH.

THE next international contest between the American and Irish riflemen, is already attracting the attention it deserves, and some of our most public-spirited citizens are ready to contribute the amount required to defray the expenses of our men on their tour. It is estimated that the sum of \$7,500 will be necessary to meet all demands, but as this is a very insignificant sum for this wealthy commonwealth, it will, no doubt, be raised with the prompt alacrity, for where national reputation is at stake our people yield the palm to none in generosity and even profuse lavishness. Messrs. Hawk & Weatherbee, proprietors of the Windsor House, at which the Irish gentlemen stopped while here, have opened the subscription by sending Col. Wingate a check for \$250. This is a liberal donation, so we hope to see other citizens equally prompt and generous, for if the sum raised is larger than that actually required, it can be used for other purposes appertaining to the rifle association, which require liberal support.

Our riflemen will leave no effort untaken to make themselves worthy of any honor bestowed upon them, and to enhance the national reputation. They have to submit to many inconveniences to perfect themselves as marksmen, for they have to leave their business entirely, or in charge of some other person, while they devote themselves to practice. They must be out windy and rainy weather, as well as in burning sunshine, that they may learn atmospheric effects, and be prepared to meet all exigencies. This self-denial and labor can have but one propelling motive, and that is to sustain our national honor, and for this reason they should be sustained and encouraged in every way possible. They have now gained a reputation for themselves as riflemen, that they do not wish to lose as Americans; nor will they, if patient, persevering energy can prevent it. They will practice on all possible occasions during the winter, both in a body and individually, so we may hope that victory will again wait them.

As it is intended to make the next match a thoroughly representative one, the Amateur Rifle Club earnestly call upon citizens in every portion of the country to organize "teams" in their own vicinity, and then send the best scores to the Secretary of the Amateur Association in this city. Some excellent shots can be found in the West and South, so they are requested to practice, and if they are found worthy they will find a willing place in the next "team." The Amateur Rifle Club will send any needed information to those desirous of organizing clubs, and if necessary, afford them every opportunity for practice.

It is to be hoped that the next "team" will be a thoroughly representative one; and if it is to be, now is the time for those desirous of honoring their country abroad to take the preliminary steps for practice and organization.

CANOEING EXTRAORDINARY—A SECOND JASON.

THE moderately long journeys heretofore carried out in tracking a river from its source to its mouth, or the erratic cruises made by the master of the Rob Roy, are likely to be challenged by a new Jason, who in a frail argo, will endeavor to reach the southern extremity of Florida, starting from the St. Lawrence.

In June last we gave a brief notice of a clever book entitled "A Thousand Miles Walk," written by Mr. N. H. Bishop, which told of the bold performances of this gentleman when a lad and how he tramped away across the Pampas of South America.

Mr. Bishop, who paid us a visit recently, thus describes his canoe itinerary to us. In June of this year he launched his craft—a cedar built boat holding two persons, in the St. Lawrence River, above Quebec, and in July arrived at Albany. Here he determined to use a paper canoe to carry but one person, and Messrs. Waters & Son, of Troy, are now building him one. The canoe will be 14 feet long, 28 inches beam, 94 inches depth of hold midships, and will weigh 60 pounds. It will contain all the traps necessary for a long voyage, stove, provisions, etc. On or about November 1st, Mr. Bishop will sail down the Hudson to Jaritan Bay, then by canal will go to Bordentown, N. J., then down the Delaware to Delaware City, thence across by Canal to Chesapeake Bay, and then lay his course for Norfolk. From Norfolk he will take Currituck Sound to Cape Fear. Then skirting along the coast of North Carolina, through the islands, his next port will be Georgetown, S. C. From Georgetown he will pass between the Sea Islands and the main coast of South Carolina and Georgia. He believes that in Florida he will have to make but one portage before reaching Key West, his track being from the head of St. John's, from Salt Lake to Sand Point on Indian River.

Several attempts have been made in the United States to prosecute long voyages in canoes, but most of these adventurous spirits have come to grief. Barring the accidents of the seas, these southern shores and river courses are terribly malarious. Mr. Bishop's course will be, however, mostly on the sea board, and his travels in Florida will be undertaken during the healthy season.

We believe if this trip is successfully carried out it will be counted among the memorabilia of canoeing. We believe Mr. Bishop to be thoroughly competent to accomplish this rather perilous undertaking, having early in life showed his physical endurance, and how pluck and spirit could carry him through a long and arduous journey. It is not precisely the spirit of adventure which leads this gentleman on a cruise which may not be concluded before March 1875. Mr. Bishop has naturalistic talents of a high order, and the study of birds, beasts and fishes along the route, will occupy much of his attention. We trust that having interested our readers in this canoe cruise, to be able from time to time to give in the FOREST AND STREAM notices of Mr. Bishop's movements.

WESTON'S FAILURE.—The failure of Weston to walk 500 miles in six days is now an accomplished fact, despite all the care and attention of nurses and physicians who tried to doctor him into an impossible compound of steely muscles. While we cannot blame the pedestrian for working for that \$1,000 which he was to receive in any case, or the \$5,000 if he fulfilled his mission, yet, we feel almost chagrined at a public that went to visit him, for it is tending aid and encouragement to a species of cruelty which should receive the attention of Mr. Bergh. These failures of Mr. Weston are so frequent as to make his name synonymous with non-success, and perhaps a term somewhat coarser, so we hope to hear that this will be his last effort, in that line at least, until he has been transformed into a more enduring muscular compound. Of course he has the right to do as he pleases in the matter, but he would save much pique by following this bit of suggestion. Notwithstanding his failure, we are led to believe that there are men in this country who can accomplish the effort he essayed, and while we would not encourage such trials, yet we should like to see some brawny, determined pedestrian try it, just to test the extent and power of human endurance.

—One of our sportsmen invited a number of ladies and gentlemen to dine with him a few days since, and the termination of the dinner was so comical as to be worthy of note. Having been disappointed in regard to his prairie chickens, a substitute of chicken pot pie was made. This was excellent and required the replenishing of the platter. Biddy was called and ordered to refill it. "Faith, mum, an' it is all gone." The lady was surprised, and said it was impossible, as she left plenty on the stove, and asked her what she had done with it. "Arrah! and I thought yiz had plinty, so bedad I fed it to the cow."

—THE FIRE in our office about that time destroyed many of our issue of FOREST AND STREAM of February 12th, 1874, and our friends having copies of that date will greatly oblige by forwarding them to us. We will cheerfully pay double price for them.

—Talking of college oarsmen, John Paul says it's a great thing now-a-days to be "a gentleman and a sculler."

THE TENNESSEE STATE SPORTSMEN'S ASSOCIATION.

We publish this week a very interesting letter from our special correspondent, on the bench show and parade of dogs at the meeting of the above society, and such other matters as occurred up to the time of writing. This is one of the most important displays of the kind ever held in this country, and we are pleased to note that it was a success in every detail. Such action will do more to improve our sporting dogs than any private efforts, so we hope to hear that other States have followed the lead of Tennessee. A special dispatch to the FOREST AND STREAM from our correspondent states that the proceedings of the remaining days were equally as interesting as the first, and that the entire display was a grand success in every particular.

[From our Special Correspondent.]

THE BENCH SHOW.

MEMPHIS, TENN., October 7, 1874.

This, the opening day of the State Sportsmen's Annual Tournament, witnessed one of the finest exhibitions of dogs, in the Bench Show of Pointers and Setters, that has ever been seen on this continent, and one that will compare favorably with the famous bench shows of the mother country. There were present at the exhibition representatives from Illinois, Wisconsin, Ohio, Indiana, Tennessee, Mississippi, Kentucky, and several other States, all of whom pronounced the dog parade the finest they had ever had the pleasure to see. The entries numbered a few less than sixty, and arranged as they were in a large hall at the Fair Grounds and during fair week, more than the usual interest was devoted to the canines, and I might say that they were the principal attraction of the day, and this your readers will more fully understand when I state that scores of ladies left the grand stand during the show to see the dogs, a majority of which were owned in the western portion of this State. After the selection of judges—L. C. South of Kentucky, H. N. Sherman of Wisconsin, and Doctor Allen of this city, for class one—they made the circuit of the hall, examining each contestant carefully, and finally awarded the prize for the best setter dog over twelve months, to J. H. Acklin's entry, giving him the full number, 100 points, and gave the certificate to A. J. Hays' entry, "Joe." For the second class, or best setter bitch over twelve months, Messrs. J. H. Dew, William Bowles and Jerry Cockrell, judges, attached the blue ribbon to Doctor Erskine's entry, Zula, giving her 93 points, and gave the certificate to Doctor Thornton's Mabb, with 92 points. Doctor Sanders and Mr. Pritchett, judges for class number three, best setter puppy under twelve months, awarded the silver goblet to Bryson's entry, Maude, giving her 100 points, and in this connection I might add that she is a direct importation, her genealogy dating back some eighty years, to the famous English "Leicester," owned by R. Le Purcell Llewellyn, Esq., and which carried off the first prizes, the dam being "Blanche," owned by the same gentleman. The certificate in the class named went to Sanders' Nora. The fourth class, best pointer dog over twelve months, was judged by experienced gentlemen, who gave Miller's "June" the ribbon, and Lightburn's "Sandy" the certificate. Class five, for best pointer bitch over twelve months, brought Sander's entry to the front for the ribbon, and Miller's for the diploma. Class six, best pointer puppy under twelve months, was given Miller's "June," diploma to Miller's "Sport." The sweepstakes to all ages or sex, was taken by Bryson's Maude, mentioned previously.

THE SHOOTING MATINEE.

For \$400; class match. Ten single birds; 21 yards rise, 81 yards boundary. First prize, \$150; second, \$100; third, \$75; fourth \$50, and fifth, \$25, brought to the front twenty-three knights of the trigger, who, after depositing their entrance fee, \$30, prepared themselves. Among the number were several crack shots, including H. N. Sherman of Beloit, Wis.; J. H. Dew, J. K. Hughes, J. H. Acklin, W. E. Watkins and T. F. Perkins of Tennessee; F. H. Green of Mississippi; B. Bray and W. J. South, Kentucky, and others, besides our own club shooters. The following is the

Name.	Score.	Score.	Total.
H. N. Sherman	1 1 1 1 1 1 1 1 1 1	10	10
R. C. Terry	0 0 1 1 1 0 1 0 1 0	6	6

It becoming then quite dark, and neither Dew nor Acklin caring to shoot by starlight, the shooting off was continued until Friday.

CREEDMOOR.—Preparations are being made to close the Creedmoor matches of this season still undecided. These are the competitions for the *Turf, Field and Farm* Challenge Badge, the Remington Diamond Badge, and the Leech Cup. All promise to be interesting, as the best shots in the National Rifle Association will undoubtedly try their skill, for it is no small honor to win any of the enumerated prizes. The first badge is to be shot for at a distance of 200 yards; position standing; any rifle within the rules; that is, it must not weigh over ten pounds, have telescope sights, nor have less than a three pound pull of trigger. The ninth competition comes off at three P. M. October 31st, and the tenth competition November 29th at the same hour. This has to be won three times to enable the victor to hold it; but after that it is his personal property. The winners thus far are the following gentlemen: Capt. J. Bodine, 17 points; Col. Geo. W. Wingate, 18 points; J. T. B. Collins, 16 points; L. M. Ballard, 16 points; Col. Geo. W. Wingate, 16 points; E. H. Madison, 18 points; J. T. B. Collins, 16 points; E. H. Madison, 17 points.

From this score it will be seen that Messrs. Wingate, Collins, and Madison have won it twice. Should either of them tie in the next contest it will be given to the one making the best general score.

The sixth competition for the Remington Diamond Badge, will come off October 17th at eleven A. M., and the seventh competition November 14th at the same hour. This also, has to be won three times ere it becomes the personal property of the victor. The distances at which it is to be shot for are 800, 900, and 1,000 yards. Such a prize is sure to elicit a lively competition, so we may anticipate some capital work at the next meeting. The following are the winners up to the present time:—

	500 Yds.	800 Yds.	900 Yds.	Total.
R. Omond	23	25	22	70
Col. J. Bodine	25	24	21	69
A. P. M. Richards	28	21	22	71
A. V. Canfield, Jr.	24	26	23	73
L. L. Hepburn	26	27	25	78

A glance at this table will show that the competitors made most excellent shooting, the last being quite an unusual score. Good as this seems, we expect to see it excelled at the next meeting, as the practice since that time must have improved the men in almost geometrical ratio.

The final match of any importance, during the present season, will be for the Leech Cup. This handsome tankard is valued at \$600, being made of pure Irish silver, by the best artist in the Gem of the Sea. It was presented by Major Leech, of the Irish team, to the Amateur Rifle Club, to be competed for by American riflemen. The Executive Committee of the Amateur Rifle Club are preparing the conditions for which it is to be contested, and will submit them at as early a day as practicable to the donor for approval. The probability is that the cup will be made a perpetual challenge cup, out of compliment to Major Leech, and to give proper encouragement to long range rifle practice. The first competition will take place some time in November, as Major Leech, who is now absent in the West, enjoying the pleasure of a hunt among the prairie chickens, is expected back in two or three weeks. This handsome prize is open to all citizens of the United States, who may use any rifle within the rules, the distances being 800, 900, and 1,000 yards. As a compliment to the genial captain of the Irish team, the Amateur Rifle Club have made him an honorary member of their Association, a courtesy which will, no doubt, be highly appreciated by the gentleman thus honored. The Bennett Cup, won by Mr. Rizby, is also being suitably engraved for presentation to the winner on his return from the West.

The Executive Committee of the National Rifle Association met at the rendezvous of the First Division, No. 7 West Thirtieth street, on the 14th instant, to hear and decide upon all protests entered at the last contest for the Gatling, All Comers' and Cavalry matches.

THE J. H. STEWARD PRIZES.—Mr. J. H. Steward, of London, the appointed optician to the National Rifle Association and National Artillery Association, of England, tendered to the National Amateur Rifle Association for competition, three prizes, after the programme for the second annual prize meeting had been made up. These prizes were therefore added as follows:—

1st. To the highest aggregate score in the first or second division matches, and the State and Gatling match, a Steward's New Camp Blazer Field Glass, as used officially at Wimbledon. Value, \$45.00.

This aggregate prize was won by Col. Gildersleeve, 12th Regiment, who, in the three matches, made 81 points.

2d. To the marksman making the highest aggregate score in the "Sportsmen's," "All Comers' and "Bennett" matches, a Lord Bury Telescope. Value, \$10.00.

This prize was won by Lieut. Henry Fulton, of the 12th Regiment, with an aggregate score of 225 points.

3d. To the marksman making the highest score in the third stage of the Bennett match, a Steward's Improved Watch Aneroid Barometer, for measuring mountain heights, for forecasting weather, with the addition of Compass and Thermometer. Value, \$50.00.

Won by Captain Mason, of Canada, with a score of 52 points.

4th. A third prize was added in Competition VII., the officers match, as follows:—To the third highest score, an Officer's Dress Sword, to be selected by the winner, presented by Horstmann Bros. & Allen. Value, \$40.00.

Won by Lieut. Col. H. A. Gildersleeve, 12th Regiment, N. G. S. N. Y., by a score of 23 points.

THE FIRST SUBSCRIPTION.—The following letter from the proprietors of the Windsor House, of New York, expresses the feeling of all those interested in our riflemen, and we hope that others will be equally generous in their contributions, so that our team may have more than a

stinted enough to defray their expenses to the Green Isle:—

WINDSOR HOTEL, NEW YORK, October 10th, 1874.

Colonel GEORGE W. WINGATE, President Amateur Rifle Club:

DEAR SIR:—In common with all Americans we have been greatly interested in the International Rifle Match at Creedmoor, and while proud of the success which has been achieved by the American team, are glad that the honors of the contest were so equally divided as to reflect no discredit upon their gallant opponents, who crossed the ocean to shoot this match.

The circumstances connected with this contest have been of such a character as to do much to create a friendly feeling between the two nations, and to render it wise to encourage such contests in the future. We are, therefore, pleased to see that you have on behalf of the Amateur Rifle Club, and of American riflemen, accepted the challenge of Major Leech to shoot a return match in Dublin next year, and have been so kind but what you will be able to secure a team that will uphold the credit of America upon such an occasion.

Regarding the proposed club, in taking this step, are simply acting in a representative capacity, and that, to enable him to carry the matter to a successful conclusion, ample funds should be provided to meet all expenses, we have been advised as a mark of the interest we take in the match, and as a token of our respect and esteem for the gentlemen of the Irish team and their friends, who have been our guests at the Windsor, to contribute \$200 (for which we enclose a check), to be devoted by your club toward defraying the expenses of selecting and sending an American team to Ireland to shoot this match.

Trusting that the ensuing competition will be marked by the same fairness and friendly feeling as the recent match, and prove the birthplace of many similar contests between the riflemen of America and other countries, we remain yours, very truly,

HAWK & WINGATE.

THE IRISH RIFLEMEN.—The Irish riflemen are now in Kansas or the Indian Territory, engaged in slaying prairie chickens and such other game as they may encounter. They have been treated with the most distinguished courtesy wherever they went, the railroads vying with each other in honoring them. They are accompanied by Mr. Hallock, editor of this paper, who has attended to the arrangements of their tour. We learn that they are receiving the most profuse courtesies throughout the country, and that preparations are being made in Chicago, St. Louis, Toledo and Hannibal, to give them enthusiastic receptions on their return homeward, which will be in a couple of weeks.

—The following is the result of six shots fired from six different kinds of guns by members of the Nassau Sporting Club, all using the same quality of ammunition. Target, 8 inches diameter, distance, 45 yards, 1 1/2 oz. of No. 8 shot (Tulham's).

First—12 gauge gun, 30-inch barrel, weight, 7 1/2 pounds, 3 drachms of powder. Highest number of pellets at one shot.....	30
Lowest number of pellets at one shot.....	9
Average of the six shots.....	15 1/2
Second—10 gauge gun, 30-inch barrel, 8 pounds weight, 3 1/2 drachms of powder. Highest number of pellets at one shot.....	25
Lowest number of pellets at one shot.....	10
Average of the six shots.....	13
Third—11 gauge gun, 30-inch barrel, 7 1/2 pounds weight, 2 1/2 drachms of powder. Highest number of pellets at one shot.....	12
Lowest number of pellets at one shot.....	6
Average of the six shots.....	8 1/2
Fourth—10 gauge gun, 30-inch barrel, 9 pounds weight, 3 1/2 drachms of powder. Highest number of pellets at one shot.....	15
Lowest number of pellets at one shot.....	8
Average of the six shots.....	10 1/2
Fifth—12 gauge gun, 30-inch barrel, 5 drachms of powder. Highest number of pellets at one shot.....	18
Lowest number of pellets at one shot.....	10
Average of the six shots.....	12 1/2
Sixth—14 gauge gun, 7 pounds weight, 30-inch barrel, 2 1/2 drachms of powder. Highest number of pellets at one shot.....	10
Lowest number of pellets at one shot.....	2
Average of the six shots.....	4 1/2

S. A. L.

GAME PROTECTION IN NOVA SCOTIA.—The Game and Inland Fishery Protection Society of Halifax deserve credit for the energetic manner in which they have set about a very laudable undertaking. They have published a pamphlet containing the constitution of their society, also a copy of an Act passed at the last session of their local legislature, entitled an "Act for the preservation of useful birds and animals." The 1st and 7th sections of this Act prohibited the killing or chasing of any moose or beaver from three years from the first of September, 1874. As the new Act is one of considerable interest to sportsmen we publish three sections alluded to:

2. No person shall take or kill, or attempt to take or kill any partridge between the first days of January and October in any year, or shall sell, buy or attempt to sell any partridge so taken, between such last mentioned days, both inclusive, and no person shall take or kill, or attempt to take or kill, or have in his possession any woodcock, snipe, blue-winged duck, or teal, between the first days of March and September in any year. The possession of any such bird during the close season prescribed in this section in respect of such bird shall be presumptive evidence of such bird having been illegally killed or taken. No person shall kill any woodcock before sunrise, or after sunset.

3. The killing, taking, or having as aforesaid, each partridge, woodcock, snipe, blue-winged duck, or teal, shall be deemed to constitute a separate offence; and any person violating the next preceding section, shall be liable to a penalty of not less than five nor more than ten dollars for each offence, and an additional penalty of one dollar for each bird so taken or killed after or in addition to the first bird.

4. All penalties imposed by this Act may be recovered in a summary manner before a Stipendiary Magistrate or before one or two Justices of the Peace, in the name of any person who may sue for the same, and when recovered shall be paid, one half to the informer, and the other half to the prosecutor; and in case the amount of penalty and of costs be not paid, the defendant shall be committed to jail, and shall not be admitted the benefit of the chapter of the revised statutes, third series, for the relief of insolvent debtors, until he shall have undergone an imprisonment, without jail limits, of one day for each dollar of such penalty and costs.

This latter provision is certainly sufficiently emphatic, and the penalty severe. In commenting upon the above the *Toronto Sporting Times* says:—

The reckless manner in which game of all descriptions has been in past years slaughtered, in all the over provisions, calls not only for legislative interference, but also for the appointment of suitable officers to enforce the law. Even in Ontario, where some very useful legislation has been inaugurated for the preservation of game and fish, there is

not that respect for the law exhibited which would be the case if there were somebody's special business to carry out its provisions. We know that several of the finest trout streams in the country have been nearly ruined this season through the wilful carelessness of mill owners in throwing their sawdust into the water, and if such recklessness is permitted another year or two none of these rivers will be worth fishing. It is all very well to say that neighbors should inform against the offender, but very few men care to breed a bad feeling in their neighborhood by acting as an informer, and rather than play what they consider an ignoble role they look quietly on and refuse to interfere. It is to be hoped that more active legislation will be induced in this direction, because if our Legislature will not appoint one or two active overseers the people will soon be made to respect the law and assist in preserving what they now appear anxious to destroy.

The great obstacle to the enforcement of law in every country seems to be the fear or reluctance on the part of officers and others to arrest or inform against offenders. Hence the appointment of suitable men becomes imperative; who are not afraid to do their duty, but whose pay shall at least approximate to an equivalent for their police duties. When people find that offenders cannot escape and that penalties are to be enforced, they will respect the game laws much as any other laws. At present most persons cannot understand that the first rule of public property; but they must be taught, ever will severity that the legislation that protects them is constitutional and wise, and for the universal good.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides* *interpretans nigricans*
Striped Bass, *Morone chrysops* *Wentworthi*
Bluefish, *Menidia menidia* *Sutorius*

SOUTHERN WATERS.
Pompano, Trout, Black-bellied, Sheep-head.
Shad, Drum (two species), Tailorfish.
Groupers, Kingfish, Sea Bass.
Rockfish, Striped Bass.

FISH IN MARKET.—Mr. Blackford, of Fulton Market, reports smelts as quite plentiful. They hail from Maine. The blue fish, which is coming in quite freely from New Jersey, retails at eight cents per pound; and salmon-trout and white fish, which are sent here from Sandusky, Ohio, sell at eighteen cents. Small striped bass, weighing from two to three pounds, are very abundant and sell at fifteen cents, but the larger variety, weighing from seven to twelve pounds, is very scarce, and brings twenty-five cents. These are shipped from Rhode Island. Eels, from the coast of Massachusetts, are very plentiful at fifteen cents per pound. Soft shell crabs are scarce, and bring in \$3 per dozen, but the hard shell variety is abundant at from \$2 50 to \$3 per dozen. In the language of our informant, now is the time to enjoy "devil'd crab." The only uncommon type of the fishes family on Mr. Blackford's tables was the "triple tail," (*Lobates Surinamensis*) which was caught off the coast of Long Island. This is a very rare visitor to our market, so is interesting from its scarcity. According to DeKay, this has an elliptical form, deepest opposite first dorsal ray. The scales are moderately large, adherent, forty-five in a longitudinal row, and thirty in a vertical line. The edges being ciliate. The head is covered with scales, except on the snout and end of jaws; the lower jaw being somewhat projecting. The dorsal fin is long, with twelve subequal spines, and fifteen soft rays, the longest of the latter reaching nearly to the middle of the caudal fin. The pectoral fins are small and oblong, and the caudal is rounded. The color of the back and sides is a rusty bluish; abdomen dingy rufous, variegated with black and yellow spots. The dorsal and ventral fins being slightly tinged with yellow.

—Frank Buckland, Esq., of *Land and Water*, has been studying the anatomy of the tunny, (*Scomber Thynnus*), and has besides been eating of it. He says:—

"In order to get at the skeleton, I had to cut off all the flesh; this was red like beef, exceedingly firm, no fat, but oily like salmon. I distributed this among my friends. My secretary, Mr. Searle, made his supper off of it, and he reports that, fried in thick slices, it resembles very tender veal cutlets; when boiled and pickled, is very much the flavor of salmon. Those who have never tasted tunny should try the tin of potage tunny that can be obtained at any provision warehouse. The vegetable is very strongly set together, and bound together by extremely firm ligaments."

We, too, have just been eating tunny. The only objectionable point about tunny is, that the flesh is dark in color. The meat, however, was short and crisp. Tunny put up in cans and cooked in oil would be a most desirable article of food. The small tunny, (*Oreogadus Thaumalea*) is not uncommon now in market, but finds no purchasers.

New Jersey.—*Burnegat*, Oct. 10.—Sheepshead gone; plenty of white fish, blue fish, blue fish, blue fish reported from the branch, South to reach us. We are expecting our turn soon. A few good catches of striped bass are reported this week. Our gunning season commences on the 15th. Do you want a big day's shooting? KINSEY.

—Jersey fishermen have had a good "catch" of Spanish mackerel during the present season.

—William Green, while fishing in front of the Pavilion Hotel, Long Branch, caught the largest Spanish mackerel ever caught in those waters. It measured three feet and a half in length, and weighed 1 1/2 pounds.

—A remora, or sucking fish, about eight and a half inches long, was caught near the Gosnold Mills, West Bedford, recently. When found he was on his back, fast to the upper surface of a log.

—The catching of smelt with the use of a light pole, hook and line, with shrimp bait, is now engaging the attention of anglers in the waters and estuaries of Massachusetts Bay. Seventy dozen to a tide is reported as the catch of an expert fishing from a row boat and tending two poles. It is fun.

SHAD OF ALL SIZES TAKEN WITH BAIT OR FLY.

EDITOR FOREST AND STREAM.—

The following letter, from a brother of the angle, I have no doubt will interest both you and your readers. As he requests a reply, I will do so through your columns, and try to throw some light on points not generally apprehended:—

WASHINGTON, September 24th, 1874.

DEAR MR. NORRIS:—

I want you to decide a decidedly knotty problem for me. I will commence at the very beginning. About two weeks ago my brother-in-law let a small fish with me. He had a basket full of the same sort, and all nearly of a size. The fish was I should think about six inches long. I never and took it to the Smith-union the next day, and a few days afterward H. told me that Prof. Gill said it was a shad. These were caught with worm bait. Now for the next fact. For the last week or ten days we have been catching from the Long Bridge, and in boats—fish with minnow bait, very small, and just below the surface—the greatest quantity of fish of the *Alosa* genus that I ever saw. These fish, I think, average nearly fifteen inches in length. Some of them are nearly, if not quite, as large as the shad we buy in market in the spring. Prof. Gill calls them the *Alosa sapidissima*.

Now for another fact. I can go out almost any evening, and with a small fly catch little shad of a couple of inches in length—this year's hatching, I presume, from the eggs of the last season. These shad, when I catch them in the fresh water for two years after they are hatched, then go to salt water, and come back the third year full grown, growing about five inches the first year, and eight or ten the next. Myer says that according to your book and other authorities, the *A. sapidissima* is the same as the *A. preslethi*, or shad, but I am so engaged that I cannot verify it from actual personal observation. If that is true, we have at the present time, here in fresh water, all sizes of shad, from the full grown down to the baby, and that's just what bothers me. They have either changed their habits, or the authorities are wrong. The net fishermen, and many others hereabouts, call the fish we are now taking fresh water tallois, and I must say that they look very much like them to me, the only noticeable difference being that in the cost of a tallois at the Smithsonian it has a number of black spots, running in a line from the gills, and is taken from a fish full of eggs. Possibly the difference in the season may account for that difference. How do you account for the foregoing? Is the *A. sapidissima* and the *A. preslethi* the same fish?

P. S.—They are the same fish I ever caught; take the bait right by the head, and make a fly rod "hump" itself. Await your reply with great anxiety. Truly,

G. A. BRAUNT.

In reply to the fact stated by Mr. Braunt, I would say that many of the anglers, when I fished with a bow-line dippy for perch in August, I occasionally took young shad of the size mentioned by Mr. B., i. e. six inches long, in water from fifteen to twenty feet in depth, and have since heard of their being taken in the same way. These fish were undoubtedly the produce of shad that spawned early, say in May or June. The smaller fry, those of two inches, which are so easily taken with a small fly, are from the Long Bridge, are from the ova of the late spawners. I have also known perch-fishers, on the "Hen and Chickens," a rocky shoal in the Delaware, eight or nine miles above Philadelphia, when fishing for perch in September, to take shad varying from twelve to fifteen inches in length. They would come in schools and bite voraciously at the worm bait and not far below the surface. This corresponds with the second fact recorded in Mr. Braunt's letter.

At Theodorus, near the Massachusetts Fish Commission has thrown more light on the growth of shad and their migrations, to "and from sea, than all other writers on this subject. From information gained from old net-fishermen, and from his own observations, as shown in his various reports, he has clearly established the fact that shad go to sea the autumn of the same summer they are hatched. That the female shad lay their eggs, and that many of the males happens all of them, return to their native rivers when not over a year old, as they are then pubescent and the reproductive instinct impels them to the rivers. When varying in length from nine to twelve inches, they are known on the Connecticut as "Chicken Shad." In one of the reports alluded to, mention is made of the great numbers of such young shad that are taken in herring seines and netted and sold as herrings, or properly speaking, as "chickens," for the herring purer, although called by that name, do not enter fresh waters. That young shad will rise at an artificial fly is natural, for flies and have are their natural food. Mr. Lyman has detected and given the scientific names of such fish taken from their stomachs. This naturalist has also discovered that young shad have teeth, which the adults have not. The male salmon, as well as the male shad, is pubescent a year earlier than the female. That shad remain in the rivers two years, go to sea, and the following summer return full grown fish, is a notion that is now obsolete with intelligent people who have given the matter attention and thought. When female shad return from sea the first time they weigh from two to two and a half pounds, are not mercurial fish, and hence, are not brought to market. It is almost certain that the shad mentioned in the second fact given by Mr. Braunt, as well as those taken at the "Hen and Chickens" on the Delaware, were "Chicken Shad"—males.

Lappidissima is a specific synonym of our shad. It is more generally known as *A. preslethi*.

THADDEUS NORRIS.

NEWFOUNDLAND COD AND SEAL FISHING.—From the reports of the Newfoundland Chamber of Commerce we take the following:—"For 1873, the export of codfish reached 1,369,205 quintals, or an increase of 148,049 quintals on the quantity exported in 1872. Accounts from Labrador indicate a favorable commencement of the fishery in the Straits of Belle Isle and on the southern part of the coast, (a later report extending a like success farther north.) The seal fishery presented the novel feature of young seals being found in an immature condition a fortnight later than in the average of years. The destruction of old seals, particularly by steamers on second trips, is considered by many to be more injurious to the future of the fishery than killing the young in the first part of the season; and the startling and exceptional features of the spring are, by some, attributed to the great number of old seals destroyed in the two preceding seasons. The catch of seals in 1873 was 463,351, producing 6,835 tons of oil; whilst the catch of the present spring was 355,158 seals, calculated to provide about 4,000 tons of oil, or a deficit of 2,835 tons, as compared with '73, the deficit being more apparent in the yield of oil than the relative number of seals would indicate."

ROOM FOR NEW ENTERPRISE.—The Jacksonville *Republican* says the State of Florida has a mine of undeveloped wealth in its oyster beds. The oysters of Matanzas Inlet, Cedar Keys, Apalachicola, and Pensacola are unsurpassed by any in the world in size and flavor, and they offer a fine field for lucrative investment. An extensive trade is done at Cedar Keys and other points in shipping in the shell, but if they were canned it would be more profitable, and there would be no limit to the extent to which the business might attain. And in this connection the *Republican* further says that the business of canning meats, fish, fruits and vegetables has become very extensive in all sections of the country, and is enlarging every year. In Florida they have an abundant supply of green turtle, fish and oysters, which offer a good field for investment and enterprise in the canning business. Such vegetables as corn, peas, beans, and tomatoes can be grown and put up in many parts of Florida with profit. In a few years we may expect to see a lucrative business in canning guavas, pine-apples, bananas, figs, grapes and other fruits. The Southern oyster is by no means to be despised. There is a tendency in oysters to grow in longer shells South than North. Around Savannah we have eaten very fair oysters, called from the peculiar color of the meat, mulattoes. Prawns and shrimp might be put up at the South, and sold advantageously in our Northern markets.

—We take the following fish items from the Cape Anne *Advertiser*:

On Saturday last, some hundreds of porpoises unfortunately for themselves, got into the shallow water between the shore and the bar in that town, and were attacked by a battalion of boats. A large number of the fish were caught—perhaps two hundred—and each will yield eight to ten gallons of oil.

Schooner Mary L. Hart, of this port, took 150 barrels of mackerel at one haul, on Tuesday of last week, about half way between the Shoals and Whalesback. A large force of extra hands was hired to take care of the fish, but at dark the schooner's decks were still covered.

Schooner John Atwood of Provincetown, has landed in the last five weeks 750 barrels mackerel, making 2,000 barrels landed by this vessel this season.

Schooner Ware, Captain Kelly, has arrived at Plymouth from the banks with 850 qts. fish—the first full haul which has arrived here this season.

Late arrivals at Harwich report a heavy gale September 7th, upon Bank Quo. Schooner Magnolia lost dories, oil, tongues, etc., and had a narrow escape. Another vessel lost mainboom, gaff, dories, foresail, etc. The fleet report a scarcity of fish, such as has not been known for years.

A correspondent at Boothbay says: "The fishing season along the shore is fast drawing to a close, and the mackerel fleet have about all gone West, although mackerel are still caught in considerable numbers. Boats with one man, within a week, have caught from two to four barrels each, the fish being very large and fat. The vessels have been in too much of a hurry to get West, and therefore have got ahead of the fish."

The Port Hawkesbury *News* of the 2d inst., says that there are about thirty sail of mackerel catchers at the Magdalen Islands, and that they are doing well. At East Point, P. E. I., there are about one hundred sail of vessels; mackerel are reported to be plentiful, but no bite.

THE GLOUCESTER FISHING BUSINESS AND MARKET.—During the week ending September 26, fifty-two vessels reported at Gloucester, Mass., twelve from George's Bank, with 210,000 pounds of codfish; eight from Grand and Western Banks, five with salt codfish, aggregating 480,000 pounds, and three with 41,000 pounds of halibut; thirty from mackerel trips; twenty-eight from off shore with 3,475 barrels; two from the Bay of St. Lawrence with 400 barrels, and two freighters from Canoe with 2,500 barrels of mackerel. George's codfish is in good demand and scarce, with an advance in price and firm at \$5.50; Grand Bank, \$5.25; Western Bank, \$4.50. Fresh halibut is very scarce and wanted very much. The few arrived this week sold for eleven cents per pound for white and six cents for gray. Mackerel off shore are in light receipts. The market is kept clear, selling as fast as received at \$13 to \$9 for ones and twos. Bay is scarce, selling at \$10 and \$8 for ones and twos. Smoked halibut is eleven cents per pound. Cod oil fifty cents per gallon, and the market is firmer in oil.

A strange fish, about the size and shape of the herring, is being caught in large quantities in the Potomac River, near Washington. The *Star*, of that city, wants them investigated, to determine what species they belong to.

—A special dispatch of the 12th ult., from Quebec, says that intelligence has been received from Magdalen Island, North Shore, to the effect that the fishing of all kinds has been very poor, particularly the cod-fishing. Should the catch not improve before the close of the season, there will be much distress in the fishing district.

PICKEREL VS. TROUT.

SARANAC LAKES, September 25th, 1874.

EDITOR FOREST AND STREAM:—The decrease of trout in the Adirondack waters is a frequent subject of remark. This splendid game might now be abundant enough to satisfy the wants of all true anglers, but for the greed of fishermen, who, blind to the local interests, have pursued it to excess, and by the destructive methods. Another enemy to the trout now exists here in unlimited numbers. Six years ago, last January, thirteen pickerel were put into Long Lake, Hamilton county. The fatigues waters below this point now swarm with this voracious fish. The following fact is reported for the purpose of throwing light upon the relations of pickerel to the trout. On the 24th inst., Charles Erickson, a Saranac guide, and by the name of Raquette River a pickerel, which rose several times to the surface so that he was able to seize it with his hand and take it into his boat. The fish was brought to this place (Barlett's) and inspected by several persons. It had swallowed a large trout, whose tail was yet in its mouth! The voracious fish had misestimated the capacity of its stomach. The pickerel was twenty-four inches long and weighed four and one-half pounds. The trout—a female—was sixteen inches long and weighed one and three-quarter pounds.

I will add here that another supposed enemy of the trout, the black bass, which were put into the headwaters of Raquette Lake a few years ago, have not, as yet, been heard from. W. W. E.

THE SALMON FISHERIES OF OREGON.

THE enormous wealth of the salmon fisheries of the Pacific Coast can be appreciated only by those acquainted with the region, and to them it seems incalculable.

Every stream from Alaska to Central California, which is connected directly or indirectly with the ocean, teems with the finest types of the salmonidae known to science during the spawning season. The greater number of the species are fit for commerce were they properly prepared by canning or barreling; but the fact that only one variety is caught and exported, and that 1,000,000 fish were captured in the Columbia River alone, in four months, proves the abundance of this denizen of the deep. This catch averaged sixteen pounds each, which would give a total weight of 16,000,000 pounds—a quantity apparently sufficient to supply our people with all the piscatorial pabulum required; yet it does not even supply a tithe of the demand.

The fishing, which commences in April, lasts four months, and employs in that time two hundred and fifty boats and about five hundred men, exclusive of those engaged in preparing the fish for market. The catch was very large the last season, and its profits are evident, when we learn that it was valued at \$1,952,000.

Each boat engaged in the fishery is valued at \$250, and allowing that the paraphernalia costs as much more, we find that the total value of all the bateaux engaged in the business is \$125,000. The fishermen receive twenty-five cents for each salmon, when delivered on the wharf of the company for which they work. According to this calculation, the five hundred men engaged in the fisheries last season averaged \$500, or about five dollars in gold per diem for every day of labor, which, exclusive of Sundays and holidays, would be about one hundred days in the four months. This is an excellent salary for laboring men, and one from which they should, in a few years, be able to lay by a sum that would enable them to engage in the exportation of the salmon themselves. Some enterprising men have now made an effort to utilize the salmon that run in the rivers of Northern California, and though these streams may not afford as good localities for the development of the fishing industry as the Columbia and its tributaries, nevertheless, they have conveniences enough to make it a very profitable one. This business cannot be overdone, for a constantly increasing demand exists for the prepared salmon of the Pacific, and the demand comes not only from the Atlantic States, but also from Europe, the Sandwich Islands and the leading nations of the Orient. Thousands of dollars could be invested in the enterprise with the utmost safety from even temporary embarrassment, and the profits would, apparently, be reckoned by the hundreds per cent, instead of the simple numerals.

The salmon fisheries of the Pacific are yet in their infancy, but when capital is directed to their development, they will be found one of the best and most profitable enterprises in the country, as the supply of fish is always large enough to furnish all that can be prepared, demands for fish are always brisk, and finally, all the business is on a cash basis. These are elements of success that will be appreciated by all engaged in commerce.

Rational Pastimes.

—The contest on the private grounds of the Knickerbocker Club at Hoboken on October 12, attracted the largest assemblage of spectators seen at a Knickerbocker game for many years, the gathering including many of the old admirers of the game who had not visited a ball match for years past. The veteran nine opposed to the old Knickerbockers included Bixby, the old pitcher of the Eagles of 1855; and the old school of ball tossers, who in the '50s: Thorpe, the veteran pitcher of the Empires, as also Miller, their old second baseman; Cohen, the old catcher of the Gothams of 1861; Leavy, a scout of the Empires, and Stoken and "Frank" of the Gothams. Among those present was Cameron of the Empires, old Mr. Holt of the Excelsiors, Venn of the Gothams, Yates and Howe of the Eagles, and a number of the old school of ball tossers, who not seen the game played since the old time contests of a dozen years ago. As a matter of interest to all base ball players, we append the full score of this novel contest:

KNICKERBOCKERS.				VETERANS.			
Davis, P.	3	1	0	Bixby, 3d b.	2	0	1
Kissam, I. f.	4	2	0	Libon, p.	4	3	2
Purdy, 1st b.	3	1	0	Grimm, s.	0	4	1
Stratton, 3d b.	1	0	0	Miller, 1st p.	0	3	0
Wenman, c. f.	2	3	0	Stoken, I. f.	1	2	0
Slate, c.	3	2	0	Cohen, c.	3	1	0
Betted, s.	1	3	0	Scott, 3d b.	0	4	1
Thompson, 3d b.	1	1	0	Frank, c. f.	3	3	0
Highmer, C.	1	2	4	Leavy, r. f.	1	3	0

RUNS MADE IN EACH INNING.

Inning	1st	2nd	3rd	4th	5th	6th	7th	8th	9th	Total
Knickerbocker	1	2	4	2	3	4	3	4	2	23
Veteran	6	4	5	10	1	5	5	4	1	51

Umpire—Mr. Chadwick. Time of game—1 hour and 30 minutes. First base by errors, Knickerbocker, 3; Veteran, 11. Runs scored—Knickerbocker, 3; Veteran, 7. After the game the Knickerbockers handsomely entertained their guests at Duke's Hotel, Hoboken, where about twenty sat down to a sumptuous feast.

—The best game of base ball played in this vicinity this season was that between the Red Stocking and Atlantic clubs, on the Union Grounds last Wednesday. The score at the end of the ninth inning was a "tie," each side having scored three runs, so that a tenth inning had to be played. This exciting score raised the interest of the game, although the Athletics made three good hits, their last

man being put out by a beautiful throw. An eleventh inning was then resorted to, but before it was completed, the rain, which had been threatening all day, came down in torrents and stopped the playing. The game at the close stood three each, so neither club won. The champions in this game were easily outplayed, both at the bat and in the field, by the Athletics, who, but for their very poor batting, would have won the game. Sweetser, of the old Red Stocking club, played second base for the Athletics in this game, and showed himself to be the best second baseman the Athletics have had for many years. They also presented a new catcher in the person of Fleet, formerly of the Chelsea club.

—The championship record up to October 14th is as follows:

Club.	Games won.	Games lost.	To Play.
Hartford vs. Baltimore, at Hartford.	10	15	15
Mutuals.	40	19	11
Athletic.	28	18	5
Chicago.	28	11	2
Philadelphia.	26	22	22
Chicago vs. Mutual, at Baltimore.	10	10	10
Athletic.	36	31	21
Hartford.	30	26	26

—Mr. D. O'Leary, Chicago's great pedestrian, has just completed a remarkable feat of walking in St. Louis, one which throws Weston completely in the shade. Being asked by some friends if he could walk two hundred miles in forty hours—an effort which Weston engaged but failed in—he responded affirmatively, and accomplished it in thirty hours and thirty minutes, 29 minutes. The following is his walking time: First fifty miles, nine hours, twenty minutes; second fifty miles, nine hours, seventeen minutes; third fifty miles, nine hours, thirteen minutes; fourth fifty miles, eight hours, thirty-nine minutes.

—The following professional games were played since our last issue:

October 1—Boston vs. Athletic, at Boston.	29 to 0
October 1—Hartford vs. Baltimore, at Hartford.	10 to 15
October 2—Mutual vs. Baltimore, at Brooklyn.	4 to 1
October 3—Athletic vs. Mutual, at Philadelphia.	6 to 4
October 3—Atlanta vs. Baltimore, at Baltimore.	10 to 2
October 3—Boston vs. Hartford, at Hartford.	10 to 6
October 3—Boston vs. Hartford, at Hartford.	7 to 4
October 3—Baltimore vs. Mutual, at Baltimore.	10 to 2
October 6—Mutual vs. Athletic, at Brooklyn.	17 to 1
October 6—Mutual vs. Athletic, at Brooklyn.	2 to 0
October 6—Boston vs. Hartford, at Hartford.	10 to 6
October 6—Boston vs. Hartford, at Hartford.	10 to 6
October 7—Philadelphia vs. Chicago, at Chicago.	13 to 9
October 7—Chicago vs. Philadelphia, at Philadelphia.	13 to 9
October 12—Boston vs. Baltimore, at Boston.	7 to 3
October 12—Athletic vs. Athletic, at Philadelphia.	7 to 3

—A Boston paper says "various rumors have prevailed regarding Chicago's position in next season, most of which are without foundation. The two Wrights, McVey, Leonard, O'Rourke, White and Schafer have already signed contracts to play with the Boston next season. Ball is going to the Philadelphia club, and Manning will probably be one of the substitutes for the Boston. Beals has received a flattering offer to play second base for the Athletics, but his decision is not yet known. Barnes will probably be re-engaged. While the Boston would be tempted by \$2,500 to join the White Stockings, Spalding's engagement is reported somewhat in doubt, and in case of his going elsewhere, it is likely Matthews will be engaged as pitcher."

—One of the best lacrosse matches of the season was played on the Jarvis street grounds, Toronto, Canada, last week between the Toronto club and a team of Royal Canadian Onondaga Indians. The ball was faced off shortly after three o'clock, and was thrown almost immediately to the Indian goal, where it struck Mr. Shaw's cross and fluked between the legs, scoring one for the red men. The second game lasted only two minutes, and went to the Toronto men by a clever throw of Mr. R. Mitchell's from point. The Indians won the third game in eight minutes, and to balance the books, Mr. George Boyd sent the ball home for the fourth game in two minutes. The decisive struggle was concluded in about ten minutes, Mr. R. Mitchell again making the successful throw. The match was thus won by the Toronto club.

—About 2,500 persons were present at the game between the Athletics and Mutuals, played on the Union grounds last Wednesday. The contest opened well for a very small crowd, as neither side was able to get a man across the home plate before the sixth inning. In fact the Athletics were unable to get a runner past third base during the entire game, so beautifully did the Mutual's team play together. In the sixth inning, when with two men on bases it looked as if they would certainly score, but they did not, and the game at the close stood Mutuals 3, Athletics 0. This is the second time this season that the Athletics have been "choked."

—A game of hand ball was played at Chicago October 9, between Alderman O'Brien of Chicago, and Sheahan of Toledo, against Peron of Chicago, and Carney of Toledo. Best of eight out of five games. The former were the favorites. They won the first game with the score of 21 to 4; their opponents the second, with a score of 21 to 9, and the third with 21 to 10, but the former won the latter two games, scoring respectively 21 to 9, and 21 to 4. A large number of spectators witnessed the match.

—The St Louis Base Ball Association is an established fact, and the new club is now prepared to engage first-class players who can show a clear record for honest, faithful services, such as Joe Stump, and players like "old honesty" on display. Al Wright, the scorer and secretary of the Athletics club, has been engaged as manager, and players should address him.

—No more exciting game than that contested by the Boston and Mutual nines on Friday afternoon on the Union grounds has been played in this vicinity this season. The two clubs are so close in the race for championship honors that their games excite much more than ordinary interest. The Boston won by a score of 4 to 3.

—The return match between selected tens of New York and Brooklyn was played on the Capitoline Grounds on October 5th, on which occasion New York again won by 5 to 3. The gate money was shared by the amateur contestants.

—On October 7 the Eastern club visited Philadelphia and astonished the Athletics by taking them into camp to the tune of 7 to 3. The contest was a thoroughly decided Philadelphia nine by 11 to 4, and the Athletics by 5 to 3.

—The Mutuals were similarly surprised by the Baltimore club on the morning of October 5, when the Canaries captured the green stocking nine by a score of 4 to 2.

—All the Red Stockings are now out of the market for 1875, Harry Wright having wisely re-engaged all of them, and all have signed papers to that effect except Geo. Hall, who goes to the Athletics.

—Spalding has the best record as a pitcher for 1874 thus far. He beats Matthews in the Boston and Mutual games by three to one. He is the most gentlemanly and educated pitcher in the fraternity.

—The return base ball match between the Amity and Nassau clubs was played at Prospect Park last Saturday in the presence of 4,000 people. The former were the winners by a score of 13 to 3.

—The third game between the St. Louis "Reds" and Empires took place October 4, on which occasion the Empires scored a signal victory by 8 to 1.

—The Athletics beat the Athletics at Philadelphia October 12, by a score of 4 to 2, and the Boston beat the Baltimore the same day by 7 to 4.

—Higham, Rensen, Carey and Burdock have signed papers to play in the Hartford nine next season, so it is said.

In a game of base ball between the Boston and Hartford clubs last week, the former won by a score of 7 to 6.

—The Philadelphia beat the Chicago on the White Stockings' grounds October 7, by a score of 13 to 9.

—The Red Stockings and Franklins, amateurs, played at Chicago last week. Latter won by a score of 32 to 7.

—The Graces have scored "centuries" no less than thirteen times in single innings this past season.

—In a match, Oril vs. Wadhams, at Oxford, the Orils scored 382 in their first innings, of which Mr. W. H. Game made 234, not out.

—In the contest Morisbury vs. Clifton, in which the latter eleven scored 427 in one inning, W. G. Grace made 259, the next highest score of the season.

—No less than 442 runs were made by the Ninety-fifth Regiment eleven in one inning in their match with the officers of "Garrison's" Class. In this game Mr. R. O. Cotton scored 225 in the first innings.

—In the match Thornbury vs. Sneyd Park, the Thornbury eleven scored no less than 463 in their first innings, of which W. R. Gilbert made 254, not out, G. F. Grace 91, and J. W. Fleischer 87, not out.

—The biggest scoring in cricket during 1874 was that of the Northwood eleven in their match with Freshwater, in which they scored 535 in one innings, Mr. E. W. Collins currying his bat out for the unprecedented total of 238.

—An interesting game of cricket was played between the U. C. College and Oakville clubs (of Canada) last week, upon the grounds of the latter, which resulted in an easy victory for the College club, they scoring 44 to the 31 of their opponents.

—An Italian named Giuseppe Ricci walked recently from Constantinople to Alexandria, which he had not the means of paying his way by steamer. His tramp occupied 158 days.

—They have opened a Swedish gymnasium in Boston, where ladies and gentlemen practice athletic exercises, and where bayonet, foil and sword fencing is taught.

ATHLETICS AT PRINCETON.

PRINCETON, N. J., September 28th, 1874.

EDITOR FOREST AND STREAM.
The opening of this college year finds Princeton much further advanced in athletic sports generally, than any previous period in her long existence. Boating has received a new impetus from the glorious success of our Freshmen crew at Saratoga. The interest in base ball is none the less on account of our defeat last season at the hands of Yale and foot ball bids to be as popular as ever. Probably it will be more of a favorite game than ever before, as there seems to be more of a universal inclination in its favor. The new students generally seem very much inclined toward all athletic sports, while the old students are as enthusiastic as ever, some of them having acquired new zeal in these pastimes.

Boating is fast becoming one of Princeton's favorite sports. Every day crews can be seen playing their oars on the canal, some indulging in the diversion simply for the exercise and pleasure to be derived from it, while others are striving to obtain a position on one of the two representative crews which Princeton expects will do her credit at the regatta next summer. The boating association has been reorganized, with A. Alexander, class '75, of New York, as President, and B. Hall, class of '75, of New York, Vice President. A committee of three from each of the three upper classes was appointed to select the captain of the university crew. B. Nicoll, class '77, captain of the freshmen crew last year, was the one unanimously chosen by the above committee to fill this responsible and highly honorable position. It is generally believed that he will not be more than one or two members of last year's unfortunate crew will be returned. Captain Nicoll, having proved his efficiency and ability, will do doubt select men fully competent and capable to fill the vacant places in the crew. A method similar in some respects to the one adopted last year is to be used in selecting the men. All who wish to be candidates are requested to hand in their names to one of the officers of the association. After these men have been thoroughly tried, the captain will make the final selection next spring of six men for the crew, and of two substitutes. The latter provision is a new one. Last year an executive committee chose the men, which caused considerable dissatisfaction. In order to avoid any trouble of that nature this year, the above new article was added to the constitution of the association. The freshmen are taking active steps toward forming a crew. They have already had some of their candidates tried in the canal. As they have plenty of good material and several experienced oarsmen among their number, there is no reason why they may not be as successful next summer as their predecessors were last July.

The prospects for a good ball nine are very fair indeed. Though it will be hard to replace Beach, Fred Van Dyke and Williams of last year's nine, we do not regret the loss of these great credit in the ball arena. Bryner, our first baseman of last year, having taken a past graduate course, still retains his position. Then there are five of the old players still in the nine. The new men, having had but little chance yet to display their good or bad qualities, but little can be said against them. Bradford, the new right fielder, did himself great credit in his first games of the season with the Staten Island Club, on the 25th inst. The game, though but six innings were played, was a very good one indeed, and much fine playing was evinced by both nines. The score for the six innings was 6 to 3 in favor of the Staten Islanders. As this was the first game our new nine had played we were not at all disappointed at their defeat, but very much elated at their success against such a noted nine as their opponents.

Cricket has been introduced here, and has already found many devotees. We have some very fine cricketers in college from Philadelphia and vicinity, so no doubt they will succeed in keeping up the interest already manifested in this game.

The foot ball twelves have not been formed as yet. There is no doubt but that Princeton will be able to retain the championship in foot ball, however, as it is still almost her greatest favorite among her many outdoor amusements.

The foregoing is the present condition of field sports at Princeton, and there is no reason to believe that her fame as a great teacher and promoter of physical development, as well as of mental progress, may not be greater during the coming year than ever before.

BOOKS RECEIVED.

FIELD, COVER AND TRAP SHOOTING. By A. H. Bogardus. New York: J. B. Ford & Co. publishers.

This handsome and convenient volume is the latest addition to the field literature of the United States. The author, Captain Bogardus, is undoubtedly the best authority in the world on all the topics of which he treats, for his experience as a hunter and crack shot has ranged over a period of twenty years. He is now the acknowledged champion of the United States in either field or trap shoot; hence his advice to young sportsmen, and his opinions as to the best habits of birds are worthy of study. This book is a storehouse of observation and careful analysis. One feature very evident about the work is its plain, unadorned style, and the simplicity with which the facts are stated. The first chapter opens with a prefatory sketch of the causes leading to an increase of field shooting and its pleasures, the experience of the author in the pursuit of ruffed grouse and woodcock in his earlier years, and sketches of the habits of various families—their nesting places, and such other matters as a close observer would note. His chapter on game, well considered, and the deductions are the logical sequence derived from a large and varied experience. Old or young sportsmen will not act amiss if they read this work with care. The habits of the plumaged grouse and the mode of hunting it is treated with the breadth and detail the subject deserves, and we can, from personal experience, state that the opinions expressed are truthful and as thorough as need be, except in one instance, and that is scarcely necessary to refer to, as our case might have been deduced from an exceptional experience.

These are followed by chapters on quail, woodcock, ruffed grouse, snipe, geese, turkey and duck shooting, each of which is quite thorough in detail. The art of shooting on the wing is treated broadly, and the information is quite interesting to all, whether experienced or not, for no matter how good a sportsman a person may be, he can afford to accept information from one who has attained the highest rank as a field shot, and who has made a profession of what is to another but an occasional pleasure. The aim of the work is to impart to lovers of field sports that practical knowledge of doves and birds which will enable them to hunt successfully, and to obtain with their good results, a more intelligent and enjoyable sport. The editor of the book, Mr. C. J. Foster, uses a trenchant pen, so that they may not be ashamed to compete in friendly strife with older or more experienced shots. This purpose it fulfills; it must, therefore, meet with a ready sale and receive the appreciation which it really merits. The editor of the book, Mr. C. J. Foster, uses a trenchant pen, hence it is devoid of either ambiguity or verbiage. It is neatly printed, bound and illustrated, and at \$2 per volume, it will, no doubt, meet with the ready sale to which it is entitled.

THE MAGAZINES.

The *American Naturalist* for October opens with a chapter on experiments on the supposed auditory apparatus of the mosquito. Prof. A. M. Mayer treats this subject with most painful detail. The result of his studies of the anatomy of the mosquito, which must be interesting to entomologists, and to those persons who think that a mosquito cannot hear them when they go to camp at night in the dense woods, may be summed up in his concluding paragraphs, where he says:

"That the male should be endowed with superior acuteness of the sense of hearing appears from the fact, that he must seek the female for sexual union either in the dim twilight of the night, or in the darkness of day, but her sharp humming noise can serve him as a guide. The necessity for an equal perfection of hearing does not exist in the female; and, accordingly, we find that the organs of hearing are less developed in the female than in the male. In these views we believe ourselves to be borne out by direct experiment, in connection with which we may allude to the greater difficulty of catching the male mosquito."

"In the course of our observations we have arrived at the conclusion, that the antennae serve to a considerable extent as organs of touch in the female; for the palpi are extremely short. Their antennae are very movable, and nearly equal the proboscis in length. In the male, however, the length and perfect development of the palpi would lead us to look for the sense of touch to be less acute in the female than in the male. The antennae of the male are also very movable, and comparatively free from hairs; and the relative motion of the remaining joints very much more limited."

The cause for the failure of persons to kill the musical male is now made apparent, so hunters should act according to facts gleaned. This is followed by interesting chapters on the gossamer spider, the nesting of certain birds, the metamorphoses of the grasshopper, and other kindred matters. This is the only magazine of its character, and which must be interesting to all, and which it deserves the patronage of all interested in the higher studies of the natural sciences.

Lippincott's Magazine for October contains the usual assortment of well selected essays, tales and adventures. One of the most interesting of the latter is, the experience of Robert Somers, Jr., among the grouse in Galloway, Scotland. In this picturesque bit of description the reader enters into the details of a Scottish shoot, and the story of the region visited, and the characteristics of his companions; and all are related in a quiet, slyly humorous manner. In one of his pleasant moods he makes O'Shaughnessy sing the song of "The Proud Red Grouse," a ditty as quaint as it is full of scenic similes. This will be found on the first page of the *FOREST AND STREAM*.

The *Overland Monthly*, California's representative magazine, contains a large and varied number of good contributions, and all are written with that peculiarity of manner indigenous to California, and which might be called the sugary and vinegary, according to the subject under consideration. We see several new names among the contributors; a fact much to the advantage of both the magazine and its readers. Livingston Stoue has a very interesting article in it on the first aquarium car in California, which is terse and replete with facts.

The *Peoples' Monthly*, published at Pittsburgh, Penn., is replete with interesting matter this week. The lovers of the chase will find a wail written in it on "Chamolis Hunting," by Marco Polo, Jr., and the lover of adventures an exciting sketch about Simon Girty, the well known knight of the border during the earlier portion of the present century.

ANNOUNCEMENTS.

We have received from J. W. Schenckhorn & Co. the *American Educational Annual*, a compendium of all matters appertaining to our schools and colleges.

ORANGE CULTURE IN FLORIDA is the title of a pamphlet written by J. H. Fowler, of Port Orange, which treats of the soil, climate, resources, and orange culture of Florida. The facts are arranged concisely, each important matter being "sub-headed," so that each topic can be found at a glance. These persons interested in that general Water report will find this little work a most interesting *read meum*.

ILLUSTRATED ANGLER'S HAND-BOOK FOR 1875. We have received from the publishers a copy of this German work. The author, Max Von den Borne, treats of all matters appertaining to angling with most thorough detail, and every important point is explained by well executed wood cuts. The work bears the impress of a Berlin, Prussia, printing house. It presents a handsome topographical appearance, and should be interesting to our German sportsmen.

The Horse and Course.

—The second day of the Jerome Park races was one of the most interesting in the turf annals of that course, from the fact that the best horses in the country competed for the liberal purses offered, and that a large field generally went to the starting post. Out of the fifty-one entered, forty-three started in the six events of the day.

The first race, a dash of one mile for all ages, proved the power of the competitors. The winners of \$1,000 or more carried seven pounds over their weight for age, beating maidens, if four years old or less, receiving an allowance of seven pounds, five-year-olds or more receiving an allowance of twelve pounds. The starters were Quix, with 165 pounds; Preakness, 135 pounds; Audubon, 106 pounds; Picolo, 95 pounds; Governor, 98 pounds; Marnion, 98 pounds; Stanford, 108 pounds; The Hoaxer, 88 pounds; Gray Planet, 121 pounds; Padladdeen, 118 pounds; and Rosebud, 95 pounds. The lot presented a handsome appearance as they came around the first half mile in a bunch, but on the homestretch Padladdeen dashed onward, and won the race in 1:43, Preakness second.

For the Hunter Stakes, a dash of a mile and three quarters for three-year-old fillies, only four started out of the twenty-three nominated, viz., McDaniel's Madge, Cottrill's Bonaventure, Sanford's Lava, and Lewis & Co.'s Vandallite. The pool Cottrill had the call until the very last pool, when, through rivalry on the part of bidders, Madge was forced up to the first choice. The race was won by Madge in 3:10, Bonaventure second, and Vandallite third. Considering the pace of the first three-quarters of a mile, it is the best race ever run by 53 seconds. Remorseless ran it in 1:57 in 3:14½.

The Maturity Stakes, three miles for four-year-olds, was shorn of much of its interest by the disability of all the supposed great ones entered for the stake. Ex-Governor Bowie started Catesby, M. A. Littell Wildside (his first appearance since a two-year-old), Babcock & Ransom's Ransom, and John Coffee's B. F. Carver—all decidedly second class in character. Catesby came in winner by three lengths in the good time of 5:36, Wildside second, and Carver third.
